They are not creative, but wonderfully intelligent at imitation, painfully industrious and frugal; they never lead, but always follow; they are not energetic, enterprising, or fearless, as is strikingly illustrated by the history of their immigrations. Though the great island of Formosa was within 20 leagues of their shores and the Philippine islands within 150, twenty-five centuries of their national existence had come and gone before they discovered them, and then only by accident. For one hundred and fifty years afterward they allowed those countries to remain unmolested, and not until in the last quarter of the sixteenth century, when the western nations, in circumnavigating the globe, discovered and conquered them, having caused the soil to be tilled, established manufactures, and created commerce, was the cupidity of the Chinese excited, and they were anxious to possess what their supineness and cowardice had hitherto prevented them from acquiring. Then commenced their immigration, and then as now they went forth "not fleeing from despotism, nor for principle's sake, not as religious propagandists, not as conquerors to build new empires, nor as colonists to found new societies and erect therein their homes and altars," but leaving their household gods behind them, they went as parasites to subsist upon the vitality, to absorb the substance created by others.

This view is strikingly illustrated by the reply of a Chinese statesman to our late distinguished minister, John Russell Young. When asked by that gentleman why they did not colonize a portion of their redundant population in Africa, this was the significant reply: "My people are not colonists, they have not the faculty for colonization, which has built up so many countries in various parts of the world under western influences. They can not take the lead, they must live upon civilization of some kind or other, seek it out and attach themselves to it." Here, sir, in the concrete, is the character of this people, and the substance of this question.

Their early immigration was influenced by the same reason and for the same purpose as is their present, to seek out vitality and live off of it, to gather the fruits of the industry of others with which to return to the Middle Kingdom to live and die and lay their bones by the side of their ancestors. Their early immigration, as now, was followed by their invading and permeating every avenue and alley of industry, driving forth the native peoples from their inheritance, absorbing all they came in contact with, fearing no competition, knowing its physical impossibility, and disseminating the vices of a pagan civilization and over-populated country; transmitting diseases that taint the blood for generations, and kill both physically and mentally—a moral and physical pestilence.

The history of Chinese immigration during the period of two and three-quarter centuries and over, from 1602 to the present time, is not only instructive, but startling, as an illustration of their fixed and unchangeable character. The effect of their immigrations has ever been attended with the same results. Whenever and wherever they have gone they have remained a distinct people, without change, demonstrating that their older civilizations in no instance has or will give way to or assimilate with the newer wherever or whatever the change of environment and conditions, they have remained the same—a distinct people apart from others; wherever they have gone they have antagonized the economic interests and the moral sentiment of the native populations, and their presence has been universally execrated. They tamely submit to persecution, outrage, and massacre, and in despite of all laws and obstacles persistently continue their peaceful invasions. Quietly they come, quietly they go gorged with the substance of others, only to be replaced by others of their kindred to fatten in the same fields, so great is their cupidity as to withstand all resistance, and to forget the severe lessons of the past. It will require but a brief glance at the history of their immigration to convince us of the absolute truth of the foregoing.

In 1603 they numbered 25,000 in the Island of Manilla, the incentive and conditions under which they immigrated I have already stated. Even at that early date were used the same arguments pro and con in regard to their restriction as we are using to-day. The monopolists availed of their cheap labor, "and corrupt officials accepted of bribes for the evasion of the law" until the outraged inhabitants, driven to desperation, arose and massacred 23,000, and the balance were deported. Again, in 1639, forgetting in their greed for the substance of others, the horrors of 1603, they had again accumulated to the number of 30,000; again they were persecuted, and they revolted, when for months their massacre went on, and 24,000 more were sent to join their ancestors. Yet, again, in 1672 they were ordered to leave the island, and not complying over 12,000 were massacred. In 1709 they were finally expelled from the island by an edict of the Spanish Crown in response to petitions that had been repeatedly made during the previous half century; again, in 1762, they had increased to large numbers; being persecuted they revolted, and an order was issued to put to death all remaining, "which order was generally executed," says the historian. The number so executed is unknown, but amounted to some thousands.

In the Island of Java they repeated the same persistency, when in 1740 they had so grown in numbers as to presume upon their strength, and they attempted to subjugate and control the Government, whereupon ensued a war with all the attendant horrors and atrocities that has ever attended the "conflict of races." "Prisoners were invariably put to death, fire and devastation marked its course, no quarter was given, fire, murder, rapine, victims and executioners were everywhere seen under the conflagration of the burning cities," resulting in a massacre of ten thousand Chinese at Batavia; and war and rebellion continued to desolate this fair island for fifteen years. Such in brief and in part is the history of the early immigrations of this people.

In the present century, when by the genius of the western nations time and space have been practically annihilated, when vast oceans can be traversed in a short time and at small cost, thus rendering it possible for the "little brown man" to emigrate to distant lands, he eagerly and quickly avails of the opportunity. Steadily and persistently this conservative people have and are elbowing their way throughout the civilized world, carefully eschewing the uncivilized as they would a pestilence, ever seeking strength and sapping its vitality.

In Singapore they in twelve years have added to its population 85,000 Chinese; they are immigrating into the countries south of Indo-China at the rate of 150,000 per annum. Chili and Peru contain over 200,000. In the South Sea Islands they have swarmed; they control and dominate the Gilbert Islands; they are overrunning Samoa and Hawaii; in the United States, Australia and New Zealand, and British Columbia they have accumulated to tens and hundreds of thousands, and are still increasing, notwithstanding their severe restriction acts. And from all comes the same cry for deliverance that was heard in all the countries of their early immigration nearly three centuries ago: "Deliver us from the unequal struggle between two types of civilization! Free us from a competition of labor so severe as to render life to us not accustomed to it, not worth the having! Free us from a frugality that to us means starvation!" and to which we add, not worth the purchase at the sacrifice of our civilization! And though the present sentiment has not yet culminated to any great extent in their massacre and while the effect is comparatively silent, yet it is irrepressible and at no distant day will history repeat itself and the massacre of races will occur, unless prevented by wise legislation.

The Rock Springs massacre is but a forerunner of what an aroused, exasperated, and indignant people will do when the protection of the laws are denied them.

The homogeneity of a people actuated by similar motives and governed by the same impulses is necessary to national life. Two non-assimilative races can not exist side by side; one must be exterminated or practically enslaved. History makes no record of the existence of a nation composed of a mongrel or heterogeneous people that has ever maintained its peace or independence, but furnishes many examples showing the impossibility of the assimilation of distinct races and civilizations.

African slavery has been abolished, at what cost to life and property it is unnecessary to state. Has the negro become homogeneous with us? Has the conflict between us terminated? It has not, nor will it. Observe the present condition of the remnants of the American Indian tribes. What have centuries of contact with us resulted in? Are they not a distinct people and have they not almost entirely given way before our civilization? Glance at the ancient civilizations of Peru and Mexico at the time of the Spanish invasion, and look at them now. Are they not races with the vices of both and the virtues of neither?

Sir, we must conclude that the results following Chinese immigration have ever been the same without an exception; that what has occurred is certain to occur again under the same conditions and for the same reasons. History will continue to repeat itself under like conditions and be controlled by the fundamental and immutable laws made by the great Architect of the Universe and over which no puny will or statute of man will prevail. Shall we ignore the teachings of all his-

tory and the effects of a mixing of heterogeneous people? If we are so unwise we shall suffer the consequences.

Would you preserve the western type of civilization and further develop it? Would you preserve individual liberty, this Government, its principles and institutions, its peace and prosperity? If so, you must protect it from the influence of the eastern type of civilization which has for over forty centuries known no change and has kept its people morally, mentally, and physically enslaved. You can only do so by the interdiction of the further immigration of this people. Would you protect the Chinese from massacre and outrage, yourselves from paying indemnities for the same? Nothing short of the exclusion of this people will accomplish it.

The French Spoliation Claims.

SPEECH

OF

HON. ROBERT T. DAVIS,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, August 21,. 1888,

On the bill (H. R. 10896) making appropriations to supply deficiencies in the appropriations for the fiscal year ending June 30, 1888, and for prior years, and for other purposes.

Mr. DAVIS said:

Mr. CHAIRMAN: I had not thought to participate in this debate, but the course of the discussion in opposition to the payment of these claims has led me to say a few words in their defense.

I believe these claims to be not only valid, but that the reason for their payment are stronger, and appeal more forcibly to our sense of honor and justice than any other class of claims pending before Congress.

Three generations of claimants, each impressed by this conviction, have unremittingly urged them upon Congress. For more than sixty years committees of the Senate and House, charged especially with the duty of examining them, have made more than forty reports in favor of their payment, and within that time no committee has made an adverse report.

Under these circumstances, the delay for so long a time in providing for their payment increases the strength of the claims and the duty of Congress to discharge a just debt so long resting upon our conscience and honor.

These claims of American citizens were originally against the French Government for spoliations prior to July 31, 1801. The ships and cargoes of our citizens were seized and destroyed or confiscated while engaged in honorable and peaceful commerce on the high seas in defiance of the laws of nations and of our treaties with France. There is no doubt of the wanton and indefensible character of these outrages continued for a period of more than seven years, or of the fact that the sufferers had a just claim for compensation arising from them. They were especially and urgently pressed upon the attention of France. That Government never denied their justice, but, on the contrary, substantially and even explicitly admitted their validity, which was solemnly affirmed by the greatest of Frenchmen in his last days at St. Helena. No man who reads the history of these transactions can fail to be convinced of the earnestness and sincerity of our Government in demanding indemnity for the outrages, or its belief in the justice of these claims. This is proved by the measures which were adopted by Congress of a retaliatory and hostile character, wholly because of these spoliations; for we had no other grievance against France.

It is well known that the French presented counter-claims against our Government for its failure to fulfill certain stipulations of the treaties of alliance and of amity and commerce concluded between the two countries when France drew her sword in our favor and contributed most effectually toward securing our independence.

Those treaty stipulations on our part bound us to guaranty the integrity of the possessions of France in America in the event of war between her and Great Britain. This guaranty involved very important and serious consequences, and, in the language of our Secretary of State at that time—

Exposed us to the risk and expense of war or to disputes and questions concerning our national faith.

We also undertook to protect and defend by our ships of war or convoy any or all vessels belonging to French subjects, under certain circumstances—

Against all attacks, force, and violence in the same manner as they ought to protect and defend the vessels of the citizens of the United States.

We stipulated to open our ports to French ships of war and privateers with their prizes, and to close them against those of any power at war with France. And we agreed to allow French privateers—

To fit their ships, to sell what they had taken, or in any other manner whatsoever to exchange their ships, merchandise, or any other lading.

But privateers of a nation at war with France were not allowed to victual in our ports, and it was finally provided that French consuls should have jurisdiction on board French vessels in our ports in civil matters. A war broke out between France and Great Britain and the time had arrived when the terms of this treaty became operative. Did we observe them? No, we failed wholly to do so. Not one of these stipulations was observed by us. We issued in 1793 a proclamation of neutrality, which Chief-Justice Marshall declared was—

Intended to prevent the French ministry from demanding the performance of the guaranty contained in the treaty of alliance.

That was followed by Jay's treaty with England, which was in many respects inconsistent with our treaty obligations with France and made it impossible to observe them. This last act of our Government was denounced by France as unfriendly, ungrateful, and in violation of our pledged faith. And she proceeded to resent it by continuing more vigorously and offensively her assaults upon our commerce.

It can not be fairly denied that France had a degree of justification for this hostile attitude. We had receded from guaranties which were in terms continuing and perpetual, and which Thomas Jefferson and James Monroe declared we could be rightfully called upon to execute, and we deliberately placed ourselves, by a treaty with her enemy, in a position where we could not lift a finger in the defense of our recent ally, to whom we had bound ourselves by the most sacred obligations.

At the most critical period of the Revolutionary struggle, after the dreadful winter at Valley Forge, when even Washington despaired of success, France came to our aid. She sent fleets and armies in support of our cause, and she gave us her powerful and indeed indispensable assistance until the close of the war. In addition to the large naval and military forces she sent across the ocean to our assistance, she expended $280,000,000 in the cause of American independence. This enormous expenditure taxed her financial resources beyond the capacity of an already impoverished treasury. The king was compelled to summon the states general in order to provide means to supply this deficit. The student of history knows that the assembling of this body was the opening of the French revolution. That tragic and tremendous episode in modern history was precipitated by the necessities of France, resulting from her efforts in our behalf, and much of its defiant strength, which shook Europe and unseated dynasties from the Mediterranean to the Baltic seas and from the Atlantic Ocean to the western boundaries of Russia, was derived from the inspiring influence of our own successful struggle in which she had so nobly participated.

And still, if I understood the gentleman from Georgia, he took the ground which has been taken by others, that the occurrence of the French revolution obliterated the claims of France against our Government. Neither equity, common sense, or international law can sustain for a moment such a proposition.

These claims were not owed to a dynasty or any particular form of government for the time being. They were owed to the French nation, which, despite all internal changes, then lived as it had existed from the days of Pepin and Clovis, and still survives through many vicissitudes to maintain the standard of republican ideas in the presence of monarchical Europe. The gentleman referred in terms of contempt and indignation to the execution of the French king. Now, I do not wish to defend the excesses of the French revolution, but for that particular fact there is a parallel in English history to which we are accustomed to refer in terms of commendation.

The execution of Charles I is regarded as one of the triumphs of English liberty, and we have been taught to believe that the same blow which beheaded him destroyed the *jus divinum* of kings, and that the stately and immortal form of constitutional freedom rose from his gory scaffold. And the English sovereign was by far the nobler character, and his many splendid qualities secured the enthusiastic devotion of a large portion of his subjects and caused his memory to be cherished with affectionate loyalty by more than one generation of Englishmen. But the Nemesis of nations is justly blind to individual merits when exacting retribution for long-continued crimes against humanity.

The king or kaiser must stand or fall with the system he represents. It is but a step from the throne to the scaffold when tyranny is confronted with the outraged majesty of the people and human nature demands an example and a sacrifice. The wrongs and injuries suffered by the English people under the Stuarts were as nothing to those endured for generations by France under the despotic, corrupt, and infamous rule of the Bourbons. Corrupt and dissolute kings and nobles debauched the morals, destroyed the substance, and annihilated the rights of the people, and when starvation was added to all other horrors they rose in their frenzy against their oppressors and the French revolution ran its awful course.

Sir, when we consider the causes of that great struggle we will not lay the responsibility for its offenses on the ignorant and famished population of Paris, but upon those long, continued and accumulated wrongs and infamies which finally produced unbridled revolt.

But, sir, internal changes of government, however radical, can not extinguish the just rights and claims of a nation against other governments. Forms of government are often transitory. Nations are permanent. It is the inherent right of a people, which we have solemnly recognized in the Declaration of Independence, to alter or abolish at their pleasure any particular form of government, and with the exercises of that right foreign nations have no concern when it does not

directly menace their own interest. We would not forego claims against France or any other country on account of a change, however radical, in its government. And no valid reason can be given why the rule should not be reciprocal.

The chief objection urged against the payment of these claims is the alleged existence of war between the two countries. This objection has been fully met over and over again, and I shall only state a few facts and considerations which show that while the relations between the two countries were disturbed, and hostile acts were committed by each, no general war existed during that period. No declaration of war was made by either country; and as Congress alone possessed the constitutional function of declaring war and failed to do so, this fact alone furnishes conclusive evidence that war did not exist. During all the time covered by these hostile proceedings negotiations were being carried on between the two countries with a view of settling their differences, and no representative of our Government, whether President, Secretary of State, agent, or commissioner, ever claimed that the two Governments were at war at that time. The diplomatic position of the French Government and its action were based upon the assumption of peace between the two countries.

It would be strange, indeed, if war had existed that parties involved were not aw re of the existence of such a grave fact. Various acts of Congress recognized the existence of hostililities on the part of France and provided for retaliatory measures, but we were careful not to declare or in any manner admit the presence of war. The act of May 23, 1798, authorized the seizure of any armed vessel which had—

Committed depredations on the commerce of the United States and captured vessels and property of citizens thereof on or near the coast.

I quote from Mr. Sumner's report to show the attitude of Congress on this question:

Another act, bearing date the same day, authorizes a provisional army, "in the event of a declaration of war, or of actual invasion of their territory by a foreign power, or of imminent danger of such invasion discovered before the next session of Congress." The act of June 13, 1798, to continue in force only till the next session, and renewed July 16, 1799, for a limited term, suspended commercial relations between the two countries, under penalties of forfeiture; but such acts, however menacing, are absolutely inconsistent with an existing state of war, which of itself, without any additional act, suspends commercial relations between the belligerent parties. The act of June 25, 1798, authorizes our merchant vessels "to subdue and capture any French armed vessel from which an assault or other hostility shall be first made." The act of July 6, 1798, respecting alien enemies, begins with the words of limitation, "Whenever there shall be a declared war between the United States and any foreign nation." The act July 7, 1798, declares the treaties as no longer "legally obligatory;" but if war existed, such an act would have been superfluous. The act of July 16,1798, authorizes augmentation of the Army "for and during the continuance of the existing differences between the United States and the French Republic." The act of March 2, 1799, also authorizes augmentation of the Army "in case war shall break out." Another act, passed the next day, provides that certain troops already authorized shall not be raised, "unless war shall break out between the United States and some European prince, people, or state." And as late as February 10, 1800, while the negotiations were proceeding, another act was passed providing that further enlistments should be suspended, "unless in the recess of Congress and during the continuance of the existing differences between the United States and the French Republic war shall break out between the United States and the French Republic." All these cumulative measures refer to war, not as actually existing, but only as a possible future contingency. Meanwhile there were "existing differences" only. And finally, on the 14th of May, 1800, four months before the signature of the convention, and when the plenipotentiaries on each side were at a dead-lock, as has been already amply shown, another act was passed authorizing the abandonment of the military preparations set on foot in contemplation of the contingency of war. Such is a synopsis of the testimony from Congressional legislation on this point.

I quote further from the same report to prove that the position of the executive branch of our Government harmonized with that of Congress, and the position of the French Government also negatived the idea of war:

The declarations of the Executive are as explicit as the declarations of Congress. In the instructions to our plenipotentiaries at Paris, under date of October 22, 1799, the Secretary of State, after reciting the spoliations of France, says: "This conduct of the French Republic would well have justified an immediate declaration of war on the part of the United States; but desirous of maintaining peace, and still willing to leave open the door of reconciliation with France, the United States contented themselves with preparations for defense and measures calculated to protect their commerce." (French Spoliations, 1826, page 561.) These plenipotentiaries declared to the French plenipotentiaries, under date of April 16, 1800, that "the act of Congress, far from contemplating a co-operation with the enemies of the Republic, did not even authorize reprisals upon merchantmen, but were restricted solely to giving safety to our own, till a moment should arrive when their sufferings could be heard and redressed." (*Ibid.*, page 583.) Again, in the instructions to our minister in England, under date of September 20, 1800, the Secretary of State, who was none other than John Marshall, says: "The aggressions of one and sometimes another belligerent power have forced us to contemplate and to prepare for war as a probable event." (*Ibid.*, page 452.) Not as an actual event already arrived, but only as a probable event. In the face of such declarations, who can say that war existed?

On the part of France the declarations are equally explicit. It is true that on the 12th September, 1800, in conversation, the French plenipotentiaries let drop fitful words to the effect that "if the question could be determined by an indifferent nation such a tribunal would say that the present state of things was war on the side of America, and that no indemnities could be claimed." (*Ibid.*, page 633.) But the context shows that at that moment, in order to avoid the payment of these indemnities. the plenipotentiaries were driven to every possible subterfuge, and the whole suggestion is contrary to all the admissions of the French Government, both in the executive and legislative branches. Indeed, these very plenipotentiaries of France, in a formal communication to the American plenipotentiaries, under date of August 20, 1800, declared that "the state of misunderstanding which had existed for some time between France and the United States, by the acts of some agents rather than the will of the respective Governments, has not been a state of war, at least on the side of France." (*Ibid.*, page 616.) We have already seen that it was not on the side of the United States. These same plenipotentiaries, under date of December 12, 1801, contented themselves with characterizing the relations of the two powers at this period as almost hostile. (*Ibid.*, page 559). Already at an earlier day, Talleyrand, as minister of foreign relations, had written, under date of August 28, 1798: "France has a double motive, as a nation and as a republic, not to expose to any hazard the present existence of the United States. Therefore it never thought of making war against them; and every contrary supposition is an insult to common sense." (*Ibid.*, page 649.) When the convention, in its final form, was laid before the legislative assembly of France, one of the French plenipotentiaries charged with its vindication announced in a speech, November 26, 1801, that "it had terminated the misunderstanding between France and America," which, he said, had become such "that the reconciliation should be hastened if it was desired that it should not become very difficult." A report was also made to the Legislative Assembly by M. Adet, formerly French minister to the United States, in which it is declared: "There has not been any declaration of war. Commissions granted by the President to attack the armed vessels of France are not to be regarded as a declaration of war. The will of the President does not suffice to put America in a state of war. It requires a positive declaration of Congress to this effect. None has ever existed."—*Code Diplomatique, par Portiez*, tome 1, pages 39-57.

It is not denied that hostilities on the part of France and the retaliatory acts committed by our Government might constitute an imperfect and limited condition of war, to which belligerent rules would apply so far as the facts would come within their scope. This would be the case with armed vessels, and armed vessels only. Where no general war existed, calling into operation that great body of neutral and belligerent rights and obligations, private vessels engaged in peaceful commerce would be exempt from the rules of war. If war existed, it would extinguish the claims on either side, and the repeated and long-continued negotiations relating to them would have been unnecessary and absurd. The conclusion is inevitable that war between our country and France was not present at any period of the controversy, and therefore these claims were valid against the latter country.

In closing I wish to advert to the argument of the distinguished gentleman from Pennsylvania, that our Government should only be liable for the value of the claims at that time in European markets, which, he asserted, was merely nominal. I disagree wholly with this position. The value of the claims to a speculator would be no criterion of their value to our Government. The supposed value to a purchaser would include the risk of collection, the inability or disinclination of the French Government to pay them, and the possible, and what has proved to be the actual, prolonged delay in securing payment.

When they were used as a set-off by our Government none of these considerations would affect their value, and they would be, and undoubtedly were, used to the full extent of their par value in effecting a settlement which forever released us from the counter-claims of France. We are therefore responsible, if responsible at all, for the face value of these claims. It is certainly to be hoped that Congress will at last decide to pay these just but long-deferred claims to the representatives of the men who in the early days of the Republic carried its flag fearlessly upon the high seas and relied upon the honor and good faith and justice of their Government to protect the property over which it floated.

The French Spoliation Claims.

SPEECH

OF

HON. DANIEL KERR,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, August 21, 1888,

On the bill (H. R. 10896) making appropriations to supply deficiencies in the appropriations for the fiscal year ending June 30, 1888, and for prior years, and for other purposes.

Mr. KERR said:

Mr. CHAIRMAN: I avail myself of this opportunity to present a few objections to these claims that I have not heard presented. First of these is their very great age. The wrongs which it is sought to remedy occurred nearly a century ago. They ought to be barred by the statute of limitation. When a claim comes over from another generation there should be strong presumptions of its invalidity. And we have some others presented by Maryland and Virginia amounting to hundreds of thousands of dollars. It is true these claims have been presented before. They have even some of them passed Congress and been vetoed by former Presidents; but we have not heard that they received any approval by the men who controlled the Government for the first thirty years after they occurred. There were times then when the Treasury was overflowing and when the surplus was distributed to the States; but these claims were not then deemed valid claims against the Government by the men in control of affairs, and who should be presumed to know more about them than we can possibly learn at this late day.

Originally these were claims against France. They were not claims that France ever admitted. To be just, France was engaged in a life-and death-struggle with Great Britain, and both nations resorted to measures that can not be justified by the rules of war. The men who navigated the seas did so at their peril. The rewards of successful ventures were very great and were inducements for daring. Napoleon, by the Berlin and Milan decrees, was endeavoring to prevent

the rest of the world from obeying an arbitrary order of Great Britain that sought to compel the whole world to give her their trade. The measures of France were defensive measures. They could be justified as measures of defense and on no other grounds. In seeking to evade these measures certain men were captured by the French and losses sustained. France never admitted that she was in the wrong in sustaining her decrees or in preventing their evasion. The measures of France were either justifiable or they were in fact acts of war. And that proposition has never been settled; but whichever they were there was in neither case a foundation for a claim for damages.

France claimed to be the owner of land in America, and we paid them for that land, as I understand, $14,000,000 in cash and relinquished all claims that we might have against her. France had been practically driven from the seas, and whatever claims she might have had to territory on this continent she was no longer able to maintain, and was glad to get $14,000,000 for territory that but for this would surely have fallen into the hands of her ancient enemy. That the nominal amount of the claims for damages was placed at $3,000,000 is a matter of no consequence as fixing any liability on this Government. The fact that France also relinquished her claim for damages for violation of the treaty of 1778 is entitled to very little consideration. General Washington did not regard the treaty of 1778 as imposing an eternal obligation to fight everybody for the sake of France and compelling us to guaranty the possession of the American territory of France. This obligation of amity imposed on the United States by that treaty could not be regarded as a foundation for a money demand any more than any other pledge of friendship, which is always regarded rather as a confession of friendly sentiments than as the foundation of a financial obligation. These declarations are valuable. They are beyond computation, and they have been redeemed in the friendly feelings that have always existed between France and the United States. They were redeemed in the purchase at a critical moment of territory that France would inevitably lose, and which would at the same time subject us to an environment little short of destruction. But, as I said before, the great statesmen of our early day saw the futility and impossibility of a perpetual alliance with France, offensive and defensive; and if such an obligation could have been of any force, by the rules of international law France had abandoned the claim, first, by the act of the Legislative Assembly of 1789, which virtually declared the independence of all her colonies.

It may be said that this act was the act of visionaries, and that it was repudiated by the act of the more practical Napoleon. But the abandonment was a release of the obligation of the United States, whatever that obligation was, for we could not be expected to maintain for her a right that she had herself abandoned, and no law of nations would compel us to assert for her a right to possessions which she had first proclaimed free, and only asserted her right after she had been swept from the seas and was powerless to enforce her claims. And yet these fanciful obligations are now asserted as the just foundation for a claim against this Government that was ignored by all the early statesmen, and after the lapse of nearly a century. The argument in favor of these claims is in no way strengthened by the fact that we have a surplus in the Treasury. I send to the Clerk's desk to have read a statement from the Star of yesterday, from which it will appear that we are in no condition to make any extravagant appropriations. It is as follows:

THE SURPLUS FOR 1889—OFFICIAL ESTIMATES REDUCE IT TO POSSIBLY BELOW FIFTEEN MILLIONS.

The following statement has been prepared at the Treasury Department in regard to appropriations for the fiscal year ending June 30, 1889, made at the present session of Congress in the regular appropriation bills:

Bills.	As passed by House.	As passed by Senate.
Bills finally passed	$222,733,190	$222,733,190
The sundry civil appropriation bill	23,332,406	28,506,999
Army appropriation bill	24,639,300	31,531,800
Navy appropriation bill	20,003,024	20,193,222
Fortifications (pending in Senate)	3,725,000	3,725,000
Fortifications (pending in House)	3,539,434	3,539,434
Total	297,972,405	310,229,716
Permanent and indefinite appropriations	115,640,799	115,640,799
Total appropriations	413,613,204	425,870,515

Estimated revenue, including $57,563,734 for postal revenue, $440,563,734; estimated surplus, $26,950,530 based on House appropriations, and $14,693,219 on Senate appropriations.

From this it appears that we will, even in case there is no change in the prosperity of the country, have only a surplus of $14,000,000, even if no additional bills are passed, and no further relief given, although justly demanded, to our soldiers. We will be under the obligation of asking a recall of the Mills bill from the Senate if there is much more of this kind of legislation. For we have a debt of over $200,000,000 which will mature in 1891 with no provision for its payment, unless we resort to the new method of depletion and destruction of the sinking fund, as is recommended by members at the other end of the Capitol.

Chinese Immigration.

SPEECH

OF

HON. WILLIAM W. MORROW,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 18, 1888.

The House having under consideration the bill (S. 3304) to prohibit the coming of Chinese laborers to the United States—

Mr. MORROW said:

Mr. SPEAKER: I apprehend that it will not be necessary, in connection with the bill now before the House, to enter into a discussion of the evils of Chinese immigration. It is only pertinent at this time to explain why new legislation is demanded for the protection of the people of this country against those evils.

The policy that the laboring classes of China should not be permitted to invade this country and destroy American labor was declared and adopted by this Government when it negotiated the treaty with China dated November 17, 1880. The difficulty has been in placing in effective operation the necessary and proper legal machinery to carry that policy into execution. It is not the principle of exclusion, but the urgent necessity of providing a suitable method of exclusion that brings us to the consideration of this particular measure. I shall not therefore detain the House with a restatement of the reasons for closing our gates against this undesirable immigration, but content myself, for the present at least, with an explanation, which I will make as brief as possible, showing how, notwithstanding the treaty, our efforts have seriously failed in that direction.

The first treaty negotiated with China by the United States is known as the Cushing treaty, dated July 3, 1844. This treaty opened five Chinese ports to the commerce of the United States, as they had been by a previous treaty opened to the English. These ports were Kwang Chow (Canton), Amoy, Foochow, Ningpo, and Shanghai. The second treaty is known as the Reed treaty, dated June 18, 1858, which opened two additional ports to our commerce, namely, Swatau and Tai-Wan, in Formosa.

The third treaty was the Burlingame treaty, dated July 28, 1868, of which the ratifications were exchanged at Peking November 23, 1869. The fifth and sixth sections of this treaty related to the right of the citizens of the one country to voluntarily migrate to the other country for the purposes of curiosity, trade, or permanent residence. The two sections are as follows:

ARTICLE V.

The United States of America and the Emperor of China cordially recognize the inherent and inalienable right of man to change his home and allegiance, and also the mutual advantage of the free migration and emigration of their citizens and subjects respectively from the one country to the other for purposes of curiosity, of trade, or as permanent residents. The high contracting parties therefore join in reprobating any other than an entirely voluntary emigration for these purposes. They consequently agree to pass laws making it a penal offense for a citizen of the United States or Chinese subjects to take Chinese subjects either to the United States or to any other foreign country, or for a Chinese subject or citizen of the United States to take citizens of the United States to China or to any other foreign country, without their free and voluntary consent, respectively.

ARTICLE VI.

Citizens of the United States visiting or residing in China shall enjoy the same privileges, immunities, or exemptions, in respect to travel or residence, as may there be enjoyed by the citizens or subjects of the most favored nation; and, reciprocally, Chinese subjects visiting or residing in the United States shall enjoy the same privileges, immunities, and exemptions, in respect to travel or residence, as may there be enjoyed by the citizens or subjects of the most favored nation. But nothing herein contained shall be held to confer naturalization upon citizens of the United States in China, nor upon the subjects of China in the United States.

These two sections of the Burlingame treaty have been made the subject of much unfriendly criticism as being the cause of Chinese immigration to the United States. The criticism is not justified by the actual fact. The total Chinese immigration into the port of San Francisco from 1850 to December 31, 1887, was 345,977. Of this number 141,800, or nearly one-half of the whole number, came before the ratification of the Burlingame treaty. Immigration had commenced under former treaties and was then going on without any legal restraint. There was no occasion at that time for any provision being made for the admission of voluntary Chinese immigration, but the point was on the part of our Government to provide against involuntary immigration and put a stop to the importation of contract or servile labor.

It was against what was then known as coolie labor that the Burlingame treaty directed its prohibition, and to secure the aid of the Chinese Government in preventing such objectionable immigration the declaration was made concerning voluntary immigration. The declaration was unfortunate in tying the hands of our Government so that it could not freely legislate against an invasion coming under the guise of a voluntary immigration, but the treaty did not provide or even encourage such immigration. There was on the contrary a significant

provision against naturalization, which indicated that there was to be a line drawn somewhere between the people of China and the people of the United States. In view of recent discussion it will be well to remember that the concluding sentence in Article VI, of the Burlingame treaty provided as follows:

But nothing herein contained shall be held to confer naturalization upon citizens of the United States in China, nor upon the subjects of China in the United States.

The next treaty was dated November 17, 1880. Articles I and II of this treaty provided as follows:

ARTICLE I.

Whenever in the opinion of the Government of the United States, the coming of Chinese laborers to the United States, or their residence therein, affects or threatens to affect the interests of that country, or to endanger the good order of the said country or of any locality within the territory thereof, the Government of China agrees that the Government of the United States may regulate, limit, or suspend such coming or residence, but may not absolutely prohibit it. The limitation or suspension shall be reasonable and shall apply only to Chinese who may go to the United States as laborers, other classes not being included in the limitations. Legislation taken in regard to Chinese laborers will be of such a character only as is necessary to enforce the regulation, limitation, or suspension of immigration, and immigrants shall not be subject to personal maltreatment or abuse.

ARTICLE II.

Chinese subjects, whether proceeding to the United States as teachers, students, merchants, or from curiosity, together with their body and household servants, and Chinese laborers who are now in the United States shall be allowed to go and come of their own free will and accord, and shall be accorded all the rights, privileges, immunities, and exemptions which are accorded to the citizens and subjects of the most favored nation.

Mr. HOOKER. Are you reading from the law?

Mr. MORROW. No; I am reading from the treaty of 1880. Now, it was clearly the duty of Congress in the proper execution of the provisions of this treaty to have immediately provided for the enforcement of its stipulations by proper and adequate legislation. The treaty was sent to the Senate at the third session of the Forty-sixth Congress. The Congress was Democratic in both branches. The Forty-sixth Congress adjourned without any action being taken on the treaty and without any provision being made for its execution. The Forty-seventh Congress convened December 5, 1881. In this Congress the House was Republican and the Senate evenly divided, with Senator David Davis, of Illinois, holding the balance of power. Legislation was almost immediately proposed and considered, and the result was the passage of the restriction act of May 6, 1882. That act suspended Chinese immigration for the period of ten years and went into effect August 5, 1882. The first and second sections provided as follows:

That from and after the expiration of ninety days next after the passage of this act, and until the expiration of ten years next after the passage of this act, the coming of Chinese laborers to the United States be, and the same is hereby, suspended; and during such suspension it shall not be lawful for any Chinese laborer to come, or having so come after the expiration of said ninety days, to remain within the United States.

SEC. 2. That the master of any vessel who shall knowingly bring within the United States on such vessel, and land or permit to be landed, any Chinese laborer, from any foreign port or place, shall be deemed guilty of a misdemeanor, and on conviction thereof shall be punished by a fine of not more than $500 for each and every such Chinese laborer so brought, and may also be imprisoned for a term not exceeding one year.

The bill contained fifteen sections. The remaining sections which I do not quote contained provisions in detail for the identification of those who being in the United States should depart therefrom with the intention of returning. The identification was to be by means of a certificate to be issued by the collector of customs at the port of departure.

The act at first gave promise of being effective. From August 5, 1882, to December 31, 1882, only 39 Chinamen presented such evidence at the port of San Francisco as entitled them to land and come into the United States. The number, however, soon began to increase, and during the year 1883 there were landed at the port of San Francisco 3,014. Many of these arrivals presented return certificates which had been issued by the collector of the port, and which, of course, entitled them to return. But there was another class who had no return certificates, but who claimed the right to return on the ground that they were in the country at the date of the treaty, and had departed before the passage of the act of Congress providing for the return certificates. The right to return was claimed under the following provision of Article II of the treaty:

And Chinese laborers who are now in the United States shall be allowed to go and come of their own free will and accord.

The collector of the port refused to allow such persons to land because they did not produce the return certificates provided by the act of Congress. The Chinamen thereupon sued out writs of habeas corpus in the United States court, and producing evidence that they were in the country at the date of the treaty they were landed by the court. It was evident that the permission to land and come into the United States being conceded to this unidentified class, the door was left open to further immigration by means of false personation. Almost any Chinaman could prove, certainly by his own testimony, that he was somewhere in the United States on the 17th day of November, 1881, and the claim was of that character that it could not always be satisfactorily disproved.

The Government was really unable to maintain a negative and could do nothing but cross-examine the petitioner as to the particulars of his former residence and his knowledge of the country. The only other checks on fraudulent impersonation were the books of the steam-ship companies showing the number of departures on each vessels, and the books of the Six Companies, copies of which were obtained by the court at an early date, showing some particulars concerning each person who had departed from the country. But this evidence was not sufficient to prevent many Chinamen who had never been in the country from proving prior residence. The number of those who had left the port of San Francisco after November 17, 1880, and prior to August 5, 1882, was 12,816. Under the decision of the court these were all entitled to return, and by the method of personation which I have just described this privileged class could be multiplied indefinitely.

During the year 1884 the arrivals numbered 6,602. This rapid increase being brought to the attention of Congress, it was determined to amend the act of 1882 so as to prohibit the landing of any Chinese laborers in the United States who could not produce return certificates. The law was amended for this purpose, but not in a way to reach the evil. It was, for instance, provided in the act of 1882 that the return certificate issued to the departing Chinaman should—

Entitle the Chinese laborer to whom the same is issued to return to and reenter the United States upon producing and delivering the same to the collector of customs of the district at which such Chinese laborer shall seek to re-enter.

The act of 1884 amended this paragraph by adding thereto the following provision:

And said certificate shall be the only evidence permissible to establish his right of re-entry.

The purpose of Congress in this amendment was doubtless to provide that no Chinese laborer should be permitted to land or come into the United States unless he could produce the certificate required by the act of 1882. An amendment expressing this purpose would have cut off the claim of prior residence where a certificate could not be produced. In the case of Chew Heong, on habeas corpus in the United States circuit court at San Francisco, Mr. Justice Field held that the amendment had that effect. He decided that—

A Chinese laborer who resided in the United States on November 17, 1880, and who departed therefrom before the restriction act of 1882 went into operation, can not re-enter the United States since the amendatory act of 1884 went into operation without producing the certificate provided for in such act. Parol evidence of his former residence is inadmissable.

Judge Sawyer, the circuit judge, with whom concurred Judges Hoffman and Sabin, district judges, dissented, holding the contrary view. The opinion of Judge Sawyer is lengthy and discusses the questions involved very fully. The case was taken to the Supreme Court on a certificate of division of opinion, and the judgment of Mr. Justice Field, sitting as circuit justice, was reversed (Chew Heong *vs.* United States, 112 United States Reports, 536.) The Supreme Court held that—

The fourth section of the act of Congress approved May 6, 1882, as amended by the act of July 5, 1884, prescribing the certificate which shall be produced by a Chinese laborer as the only evidence permissible to establish his right of reentry into the United States, is not applicable to Chinese laborers who, residing in this country at the date of the treaty of November 17, 1880, departed by sea before May 6, 1882, and remained out of the United States until after July 5, 1884.

This decision destroyed the value of the amendment, and the claim of prior residence continued to be an available method for Chinese laborers to gain admission into the United States. The return certificate was the only evidence permissible on the part of the person producing it, but for those who could not produce such evidence by reason of departure from the country before the act of 1882 went into effect, other competent testimony was admissible. The act of July 5, 1884, failed to do that which was expected, namely, to provide that the claim of prior residence should not be available to Chinese laborers without return certificates.

We now come to the year 1885, when 9,049 Chinese laborers were landed at the port of San Francisco on certificates and on parol proof of prior residence.

The press of San Francisco denounced the workings of the law in the severest terms. The people of the Pacific coast were indignant. It was plain to be seen that the Chinese were coming into the country in utter defiance of the restriction act. They came into San Francisco on false testimony as to prior residence. They came into the country across the frontier without any evidence of a right to come. The people became exasperated over this condition of affairs and in some instances resorted to effective exclusion measures. In Washington Territory, where the invasion could be seen and understood, the people rose in self-defense and ordered the invaders out of the country. In this year the unfortunate collision occurred at Rock Springs, Wyo., for which Congress has voted an indemnity of $147,000.

The situation was serious and required immediate action. A meeting was held at the Palace Hotel at San Francisco, to which were invited the collector of the port, the naval officer and surveyor, the United States circuit and district judges, the Senators and Representatives from California, and others familiar with the subject of Chinese immigration. The whole subject was thoroughly discussed, and it was determined to prepare certain amendments to the acts of 1882 and 1884 that would effectively carry out the purpose of Congress and close the doors against the Chinese laborers who were coming in on the claim of prior residence supported by parol testimony. A bill was accordingly pre-

pared which received the approval of all the officials familiar with the subject.

It provided, among other things, that Chinese laborers who having been in the United States, had departed therefrom and remained absent from the United States for a period of two years, should be deemed, taken, and held to have elected to remain permanently out of the United States and to have waived and abandoned their right to return thereto. This was a very simple provision and would have effectively cut off the claim of prior residence, as the act of 1882 had then been in force three years and those who were then making that claim on parol testimony had of course been absent for a longer period than three years. The claim asserted was that they had left before the act of 1882, and were therefore not provided with return certificates. This limitation of two years was in accordance with our treaties with many countries respecting naturalization where it is provided that—

The intent not to return may be held to exist when the person naturalized in the one country resides more than two years in the other country.

There did not seem to be any good reason why the Chinaman should not be subject to the same limitation as a German, for instance, respecting his intent to return to the United States. The bill contained other provisions carefully drawn to cure the defects in the acts of 1882 and 1884. One, for instance, provided that Chinamen with return certificates should not come to the United States in any greater number than one Chinaman to every 50 tons of the registered tonnage of the vessel. I introduced this bill in the House December 21, 1885—the first bill day of the Forty-ninth Congress—and it was referred to the Committee on Foreign Affairs. The California Representatives appeared before that committee, urged the early consideration of the bill, and explained its provisions. The same bill was introduced in the Senate by Senator FAIR, of Nevada, March 29, 1886, referred to the Committee on Foreign Relations, where it was considered and reported favorably, with only some few verbal amendments, by the unanimous vote of the committee. The bill was reported to the Senate April 29, 1886, and on June 1, 1886, was debated and passed the Senate, without a dissenting vote.

In the course of the debate Senator SHERMAN, who reported the bill, said:

The bill has been carefully examined in the Committee on Foreign Relations, and as far as I know every provision was assented to with entire unanimity.

Senator MITCHELL, of Oregon, who it is well known is extremely radical against Chinese immigration, said:

This bill is a great improvement, permit me to say, in my judgment, upon any bill that has ever heretofore at any time been reported by any committee of either branch of Congress upon this question.

The bill came to the House and was referred to the Committee on Foreign Affairs June 3, 1886. In the meantime the House bill had been considered by the Committee on Foreign Affairs. It was amended in some minor particulars and ordered reported favorably, and was so reported to the House May 1, 1886.

The Senate bill was never reported to the House by the committee, and the House bill was never called up for consideration in the House, although the Representatives from the Pacific coast repeatedly urged such action. It was said that the Secretary of State was negotiating a new treaty upon the subject of immigration covering the whole subject, and that the passage of the bill would interfere with such negotiations.

The year 1886 closed without anything being done for the relief of the Pacific coast. The invasion continued, and the number of Chinese laborers landed at the port of San Francisco during the year was 6,714. The courts were overrun with Chinese habeas corpus cases and the people became impatient and more than ever exasperated because of the failure of Congress to take action in the direction of an effective exclusion. Six years had passed since the treaty was ratified providing for a suspension of immigration and still the immigration continued.

The second session of the Forty-ninth Congress came, and still no action was taken to amend the law. Mr. BELMONT then, as now, chairman of the Committee on Foreign Affairs, did, however, on the 8th of February, 1887, call up a bill (S. 2225) to indemnify certain subjects of the Chinese Empire for losses sustained by the violence of a mob at Rock Springs, in the Territory of Wyoming, in September, 1885. In the course of the debate which occurred on this bill I interrogated Mr. BELMONT as to his purpose concerning legislation in regard to Chinese immigration, and he replied, as follows:

Mr. MORROW. Will the gentleman allow me to ask whether after this bill has been disposed of it is proposed to bring forward the bill that also came from the Senate providing amendments to the act restricting Chinese immigration.

Mr. BELMONT. It is not. The gentleman, of course, will desire to know the reason.

Mr. MORROW. I do; and I think the House and the country would like to know why you do not propose to place an effective restraint upon the immigration now coming into this country, contrary to the stipulations contained in the existing treaty.

Mr. BELMONT. The members of the committee, when this matter was before the House last session, declared in almost every instance their opinion that the immigration of Chinese coolies should be prohibited; and I believe that is their opinion to-day. I do not know how far it would be proper to declare to the House what negotiations there may be pending on this subject; but there have been communications made to Congress which for a time were secret, but from which the seal of secrecy has now been removed, and to those I can refer as indicating the disposition of the Chinese Government; and I can say that nothing has changed in regard to the statements there made by our late minister to China, Mr. Young. I refer to pages 43, 64, and 65 of Executive Document (confidential), Forty-ninth Congress, first session. We are assured in this correspondence that the Chinese Government does not desire to embarrass the relations with this country by a continuance of the immigration, and that there is a disposition to modify the treaty to bring about results much more effective than can possibly be accomplished by legislation. Having that in view, the committee do not intend to bring up this matter to-day.

Mr. LONG. That has nothing to do with the present bill.

Mr. BELMONT. That has nothing to do with the present bill, excepting it might be said that if Congress should do this act of justice and meet the Chinese Government in this matter in the same spirit in which they have met us it would undoubtedly be much more easy to accomplish what is desired by negotiations, although of course there is no desire to make this a condition-precedent. The gentleman from California [Mr. MORROW] will see at once that should we press the measure in which he is interested it would retard rather than hasten the very purpose of the legislation which he advocates.

Mr. MORROW. I do not so understand.

Mr. BELMONT. I think perhaps the House would desire to hear what this communication is. To save time I will read from it a few lines. Our minister in 1884 said, among other things:

"In my dispatches Nos. 376 and 382, dated respectively March 7 and March 14, 1884, I had the honor to point out the difficulties attending the presentation of any grievance to the yamên arising out of the workings of the act governing the emigration of Chinese laborers to the United States. So far as our information went, there was no evidence to show that the Chinese authorities had connived at any evasion of that treaty. I said, also, that such acts would naturally take place in Hong-Kong or Macao.

"It was also my duty to show that the policy of the Imperial Government, so far as the emigration of their people was concerned, was a policy of indifference, if not of direct opposition. This was shown, as I explained in my dispatch No. 392, dated March 24, 1884. The Chinese authorities at Canton had gone so far in their restrictions upon emigration as to compel the bankruptcy of one of the most prominent houses in China."

Mr. MORROW. I would like to ask the gentleman what the House is to infer from what he has said respecting an agreement between this Government and China in regard to immigration.

Mr. BELMONT. I would be very careful not to overstep what I consider a proper statement. I can not assure the gentleman that negotiations have been completed, but he must himself know from observation and from the interest he has taken in the question that there is every reason to suppose that negotiations are pending and will be successful.

Mr. MORROW. This has been the promise for years; it has been so ever since this question has been under discussion.

Mr. BELMONT. I think, Mr. Chairman, the House will appreciate the gentleman's remarks. He intimates that there have been assurances and negotiations for some time past without performance. But undoubtedly one of the main difficulties in the way of a modification of the treaty has been the constant legislation, ineffective legislation, upon the subject, and the attempts at legislation in violation of the treaty, which must always receive the veto of the President, and which have for their principal result the embarrassment of the treaty-making power.

Mr. MORROW. The difficulty, Mr. Chairman——

Mr. BELMONT. I do not think I can yield any further. I will reserve the remainder of my time.

The bill providing for the payment of $147,000 to the Chinese as an indemnity for the Rock Springs outrage passed the House and became a law, but no action was taken upon the bills amending the restriction acts, the majority of the Committee on Foreign Affairs refusing to act for the reasons stated by Mr. BELMONT; and the Forty-ninth Congress expired on the 4th of March, 1887, without anything being done in that direction.

The Fiftieth Congress convened December 5, 1887. Bills were again introduced in the House and Senate providing for the repeal of all treaties with China relating to immigration and absolutely prohibiting any further Chinese immigration. The situation had become more serious than ever in San Francisco. The number of Chinese laborers landed at that port during the year 1887 reached 11,572, or nearly 3,000 more than the average arrivals before the treaty of 1880.

The attention of the Administration was called to the unfortunate state of affairs prevailing on the Pacific coast respecting the failure of the law in preventing Chinese immigration. It was again said that a new treaty was being negotiated that would prove satisfactory to our people. The House Committee on Foreign Affairs was not disposed to move in face of such a declaration. Accordingly on the 27th of February I introduced the following resolution in this House, which was referred to the Committee on Foreign Affairs:

CHINESE IMMIGRATION.

Mr. MORROW submitted the following resolution; which was referred to the Committee on Foreign Affairs:

"*Resolved*, That the President be, and he hereby is, requested to communicate to this House, if in his opinion not incompatible with the public interests, what, if any, steps have been taken in the direction of treaty stipulations or otherwise to prevent the continued immigration of Chinese laborers into the United States, notwithstanding the provisions of the treaty of November 17, 1880, between the United States and the Empire of China, and the laws of the United States passed in pursuance thereof suspending such immigration."

The resolution was ordered reported favorably by the committee, and was so reported, and passed the House March 1, 1888.

The same day the Senate adopted the following resolution:

Resolved by the Senate of the United States, That in view of the difficulties and embarrassments that have attended the regulation of the immigration of Chinese laborers to the United States under the limitations of our treaties with China, the President of the United States be requested to negotiate a treaty with the Emperor of China containing a provision that no Chinese laborer shall enter the United States.

The President responded to these resolutions by transmitting to the Senate, March 16, 1888, the treaty under which the bill now under consideration was framed. It is as follows:

Whereas on the 17th day of November, A. D. 1880, a treaty was concluded between the United States and China for the purpose of regulating, limiting, or suspending the coming of Chinese laborers to, and their residence in, the United States; and

Whereas the Government of China, in view of the antagonism and much dep-

recated and serious disorders to which the presence of Chinese laborers has given rise in certain parts of the United States, desires to prohibit the emigration of such laborers from China to the United States; and

Whereas the Government of the United States and the Government of China desire to co-operate in prohibiting such emigration, and to strengthen in other ways the bonds of friendship between the two countries: Now, therefore, the President of the United States has appointed Thomas F. Bayard, Secretary of State of the United States, as his plenipotentiary; and His Imperial Majesty the Emperor of China has appointed Chang Yen Hoon, minister of the third rank of the imperial court, civil president of the board of imperial cavalry and envoy extraordinary and minister plenipotentiary, as his plenipotentiary; and the said plenipotentiaries, having exhibited their respective full powers found to be in due and good form, have agreed upon the following articles:

ARTICLE I.

The high contracting parties agree that for a period of twenty years, beginning with the date of the exchange of the ratifications of this convention, the coming, except under the conditions hereinafter specified, of Chinese laborers to the United States shall be absolutely prohibited.

ARTICLE II.

The preceding article shall not apply to the return to the United States of any Chinese laborer who has a lawful wife, child, or parent in the United States, or property therein of the value of $1,000, or debts of like amount due him and pending settlement. Nevertheless, every such Chinese laborer shall, before leaving the United States, deposit, as a condition of his return, with the collector of customs of the district from which he departs, a full description in writing of his family, or property, or debts, as aforesaid, and shall be furnished by said collector with such certificate of his right to return under this treaty as the laws of the United States may now or hereafter prescribe, and not inconsistent with the provisions of this treaty; and should the written description aforesaid be proved to be false, the right of return thereunder, or of continued residence after return, shall in each case be forfeited. And such right of return to the United States shall be exercised within one year from the date of leaving the United States; but such right of return to the United States may be extended for an additional period, not to exceed one year, in cases where by reason of sickness or other cause of disability beyond his control, such Chinese laborer shall be rendered unable sooner to return—which facts shall be fully reported to the Chinese consul at the port of departure, and by him certified, to the satisfaction of the collector of the port at which such Chinese subject shall land in the United States.

ARTICLE III.

The provisions of this convention shall not affect the right at present enjoyed of Chinese subjects, being officials, teachers, students, merchants, or travelers for curiosity or pleasure, but not laborers, of coming to the United States and residing therein. To entitle such Chinese subjects as are above described to admission into the United States they may produce a certificate from their government or the government where they last resided, viséd by the diplomatic or consular representative of the United States in the country or port whence they depart.

It is also agreed that Chinese laborers shall continue to enjoy the privilege of transit across the territory of the United States in the course of their journey to or from other countries, subject to such regulations by the Government of the United States as may be necessary to prevent said privilege of transit from being abused.

ARTICLE IV.

In pursuance of Article III of the immigration treaty between the United States and China, signed at Peking on the 17th day of November, 1880, it is hereby understood and agreed that Chinese laborers, or Chinese of any other class, either permanently or temporarily residing in the United States, shall have for the protection of their persons and property all rights that are given by the laws of the United States to citizens of the most favored nation, excepting the right to become naturalized citizens. And the Government of the United States reaffirms its obligation, as stated in said Article III, to exert all its power to secure protection to the persons and property of all Chinese subjects in the United States.

ARTICLE V.

Whereas Chinese subjects, being in remote and unsettled regions of the United States, have been the victims of injuries in their persons and property at the hands of wicked and lawless men, which unexpected events the Chinese Government regrets, and for which it has claimed an indemnity the legal obligation of which the Government of the United States denies; and whereas the Government of the United States, humanely, considering these injuries and bearing in mind the firm and ancient friendship between the United States and China, which the high contracting parties wish to cement, is desirous of alleviating the exceptional and deplorable sufferings and losses to which the aforesaid Chinese have been subjected; therefore, the United States, without reference to the question of liability therefor (which as a legal obligation it denies), agrees to pay on or before the 1st day of March, 1889, the sum of $276,619.75 to the Chinese minister at this capital, who shall accept the same, on behalf of his government, as full indemnity for all losses and injuries sustained by Chinese subjects as aforesaid, and shall distribute the said money among the said sufferers and their relatives.

ARTICLE VI.

This convention shall remain in force for a period of twenty years, beginning with the date of the exchange of ratifications; and if, six months before the expiration of the said period of twenty years, neither government shall formally have given notice of its termination to the other, it shall remain in full force for another like period of twenty years.

The correspondence accompanying this treaty does not confirm the statement made in 1886 that a treaty was being negotiated at that time on the subject of Chinese immigration, nor is there anything to show that any such negotiations were pending as late as February, 1887, when the debate on the Chinese indemnity bill occurred in the House.

In a letter addressed to the Chinese minister by the Secretary of State, dated December 28, 1887—after the commencement of the present Congress—the attention of the Chinese minister is called—

to certain late disclosures in the course of judicial proceedings at San Francisco, in which certain Chinese subjects were arraigned for violation of existing laws of the United States relative to the restriction of the immigration of Chinese laborers, passed for the enforcement of the existing treaties with China.

From the published letters of the judges—

The Secretary goes on to say—

and the public report of the proceedings in these trials the facts seem to be established that a systematic evasion of the restriction upon the immigration of Chinese laborers, imposed by laws passed in pursuance of the treaties, has been and continues to be practiced by Chinese professing to have gone away from the United States and claiming the right to return hither under the provisions of the treaty.

* * * * * * *

The systematic violation of the treaty of 1880, and of the restrictive act of the United States passed in 1882, was averred by the eminent judge (Hoffman) before whom part of the cases were tried, and were also stated by another judge (Sawyer) in a published letter to Hon. Mr. MORROW, M. C., dated November 21, 1887.

The Secretary then compliments the minister upon the intelligent vigilance which he exercises over the affairs of his countrymen, and concludes as follows:

In considering the remedy I have great satisfaction in finding a complete accord between the Government you so honorably represent and that of the United States in desiring an absolute prohibition of Chinese laborers from coming into the United States from China.

A conventional arrangement to this end has already been proposed and measurably discussed between us, and a draught of such a treaty placed in your hands. Let me therefore invite your excellency, under the powers already held by you from your Government, to proceed with me at your earliest convenience in framing a just and wise convention in which China and the United States shall deal with the subject in a manner consistent with their sense of mutual respect and duty, and calculated to cement their amicable relations.

With this view I now hand you inclosed herewith a draught of a projet upon the basis of which we can hopefully proceed to an agreement.

The Chinese minister replies to this communication under date of January 30, 1888, and this is what he has to say concerning the negotiations for a new treaty:

As to your proposition for a conventional arrangement and the draught of a *projet* inclosed by you, I beg to recall to your attention the fact that this identical *projet* was sent to me with your note of April 11, 1887, and that I had the honor to send you on the 16th of August last a memorandum note containing a detailed reply to your draught of treaty, with a proposition by me for two additional articles which I regarded as essential to acceptance by my government.

It thus appears that the negotiations for this new treaty did not, in fact, commence until April of last year. There is not a particle of evidence that there was anything in the direction of negotiations even proposed during the sessions of the Forty-ninth Congress. The question will then naturally arise, why was legislation opposed in that Congress on the pretense that negotiations were pending?

We will now see what was the result of these long-delayed negotiations.

The treaty appeared in the newspapers soon after it was sent to the Senate. An examination of its provisions disclosed the fact that it did not provide against the defects in the former treaty or the acts of Congress passed to carry that treaty into effect.

The first article, it will be observed, provides:

That for a period of twenty years, beginning with the date of the exchange of the ratifications of this convention, the coming, except under the conditions hereinafter specified, of Chinese laborers to the United States, shall be absolutely prohibited.

This starts well and sounds strong and comprehensive, as indeed it is. It is substantially the first section of the act of 1882, as follows:

That from and after the passage of this act, and until the expiration of ten years next after the passage of this act, the coming of Chinese laborers to the United States be, and the same is, hereby suspended; and during such suspension it shall not be lawful for any Chinese laborer to come, or, having so come, to remain within the United States.

The difference between the first article of the treaty and the first section of the act of 1882 are, first, the term of years provided in the treaty is twenty, while in the law the term is ten years; second, the treaty provides that the coming of Chinese laborers is "absolutely prohibited," while in the law the coming of such persons is "suspended." These words, however, have no relation to the defects in the former treaty or the act of 1882.

The difficulty with this first article of the treaty is the difficulty that occurred with the first section of the act of 1882, namely, that it is subject to the conditions provided in Article II, as the first section of the act was subject to the conditions of section 3 of that act. Now, Article II of the treaty provides as follows:

The preceding article shall not apply to the return to the United States of any Chinese laborer who has a lawful wife, child, or parent in the United States, or property therein of the value of $1,000, or debts of like amount due him and pending settlement.

The third section of the act of 1882 provided—

That the two foregoing sections shall not apply to Chinese laborers who were in the United States on the 17th day of November, 1880, or who shall have come into the same before the expiration of ninety days next after the passage of this act.

The treaty merely adds to the qualification of prior residence the requirement that the returning Chinaman shall have one of the following qualifications:

1. A lawful wife in the United States; or
2. A child in the United States; or
3. A parent in the United States; or
4. Property therein of the value of $1,000; or
5. Debts of like amount due him and pending settlement.

What the situation required and now requires is that the claim of prior residence shall not be admitted on any terms; for once being admitted any one of the qualifications provided in the treaty can be as easily established as that of prior residence.

What was before merely evidence of prior residence, to be accepted by the court or not, as tending to prove such prior residence, became when proven under the new treaty an established right to return.

Manifestly the new treaty was in aid of the Chinaman's claim of a right to return.

After providing in the first article for an absolute prohibition, as has been stated by the gentleman from Kentucky [Mr. McCREARY], the treaty proceeds in the next article to make such exceptions as virtually destroy the value of the treaty. Providing for an excepted class whose qualifications might be established by parol testimony was simply to keep the door open to those Chinese laborers who would come in and prove that they had the required qualifications.

We had the door closed before except that certain classes were entitled to come by showing that they had been in the country before. But this article does not close the door at all. The bill which I introduced in the last Congress disposed of the claim of prior residence on parol testimony by providing a period of limitation for return, which could have excluded absolutely all those who could not produce a return certificate, and as to those who could produce such certificate they were not to be permitted to return in greater numbers than one passenger for every 50 tons of the registered tonnage of the vessel. This would have been an effective method of exclusion, but this treaty as it was originally framed was no better than the present treaty, in fact, not as good, for it provided a never-failing method of proving prior residence.

When this new treaty was published I took the liberty of advising the Senate Committee on Foreign Affairs that the treaty did not reach the difficulty encountered in California in enforcing the present law, a difficulty that had been pointed out by the Supreme Court of the United States in more than one decision. As my communication to the committee has been made a public document, I may be permitted to insert it in the RECORD at this point. It is as follows:

CHINESE IMMIGRATION.

HOUSE OF REPRESENTATIVES, *Washington, D. C., April* 10, 1888.

SIR: Assuming that the full text of the new treaty with China has been published, I venture to call your attention to the fact that it is fatally defective in not providing in positive terms against the return of a class of Chinese former residents who are not now in the United States, but who will certainly continue, either in person or by proxy, to assert the claim of a right to return, if such a claim can be made available under the new treaty as it has been under the present treaty. To point out distinctly the probable effect of this omission, permit me to call your attention to the real difficulties encountered in enforcing the provisions of exclusion contained in the treaty of November 17, 1880, and the laws of Congress passed in pursuance thereof. The treaty of November 17, 1880, was negotiated for the purpose of suspending Chinese immigration. It had no other object in view. It was the response of the Government to the urgent and often repeated demand of the Pacific coast that an effective barrier should be raised against the imminent peril of an overwhelming Chinese invasion of the Pacific coast. But unfortunately the treaty was not as comprehensive in its execution as it was in purpose.

In the second article of this treaty it was provided among other things that—

"Chinese laborers who are now in the United States shall be allowed to go and come of their own free will and accord."

If there had been some means for the immediate identification of the Chinese laborers then in the United States, or if the proper return certificates of identification could have been immediately issued to all those who should thereafter depart from the United States, the treaty would perhaps have been of some value as a measure of exclusion, but unfortunately it was not until May 6, 1882, that Congress passed the act carrying into effect the provisions of the treaty, and even then the law did not go into operation until ninety days thereafter, or August 5, 1882. During this period of nearly two years, between the date of the treaty and the law of Congress, the Chinese swarmed into the country from every direction. The steam-ships from China were crowded to their utmost capacity by an eager mob hurrying to get in before the gate should be closed against them. The arrivals at San Francisco from Hong-Kong from November 18, 1880, to August 5, 1882, were 45,952. The average previous immigration for a like period was less than 16,000, so that here was an excess of immigration over the previous average of 30,000 in twenty months.

This was one of the unfortunate results of the effort to secure an exclusion that did not at once exclude, and for the time being the purpose of the treaty was not only defeated, but its negotiation caused a large increase in Chinese immigration. But bad as was this defect in the proceedings, it was by no means the worst feature of the situation. The bringing of Chinese into the United States during this period was a rich harvest for the steam-ship companies, and on the return trips of their vessels they were able to offer cheap transportation to those who could find it convenient to return to China. The result was that during the same period the records show that 12,816 Chinamen left the port of San Francisco for Hong-Kong. No one supposed at the time that these departing Chinamen would be the cause of breaking down the restrictions of the treaty, but in the practical working of its provisions such came to be the actual result.

As before stated, the treaty provides that Chinese laborers who were in the United States should be "allowed to go and come of their own free will and accord." Those who departed after August 5, 1882, took with them return certificates, as provided for under the law; but the 12,000 who departed after the treaty and before the law, took no certificate; yet under the decisions of the Supreme Court they are as much entitled to return to the United States as those who are provided with and produce the return certificate. Now the point is that Chinamen who were never in the United States are coming into the country on the claim that they were here at the date of the treaty, and our courts are now overrun with cases of habeas corpus involving this claim. It is manifestly impossible to prove in many cases that the Chinamen were not in the country on the 17th day of November, 1880, since persons having knowledge of their presence elsewhere would nearly always be beyond the process of the court.

The practical effect of leaving our doors open to Chinamen who will assert and prove this claim of prior residence is to defeat the whole purpose of treaty stipulations and legislation on this subject, since it can be easily demonstrated that the immigration will be continued under the disguise of the privileged class. The fact that we close our doors is proof positive to the excluded Chinaman that there is some advantage or benefit to be obtained by getting into the country, and he is so further informed and persuaded by those who would profit by his immigration. He is instructed to purchase a return certificate or assume the character of a prior resident, and with proper drilling he crawls through the meshes of the law as a privileged person.

The statistics of Chinese immigration into the port of San Francisco will prove interesting in this connection. From the year 1852 to November 17, 1880 (the date of the treaty), the total Chinese immigration into the port of San Francisco was 253,035, or an annual average of 8,725 for the twenty-nine years when there were no restrictions whatever. It was to stop this immigration that the treaty of November 17, 1880, was negotiated, and it was to protect the people of the Pacific coast from the evils arising from the continuance of such an immigration that Congress passed the act of May 6, 1882, carrying into effect the provisions of the treaty. Now, what has been the result? The following is a statement of the arrivals of Chinese at San Francisco since August 5, 1882:

From August 5, 1882, to December 31, 1882	39
For year ending December 31, 1883	3,014
1884	6,602
1885	9,049
1886	6,714
1887	11,572
Total	36,990

It will be seen that the average annual arrivals for the whole period since the restriction act went into effect is but little less than it was before the act, while for the last year (1887) the arrivals are greatly in excess of the former average, showing a steady increase, until the immigration has again reached proportions of the most dangerous and threatening character. It is not claimed of course that this increase of arrival is made up wholly of those who are landed on the claim of prior residence. The greater number are in fact provided with the return certificates issued under the act of May 6, 1882, but here again the purpose of the law has been defeated by the fraudulent issue of certificates to Chinamen who did not leave the country, but who merely acted as dummies that the certificates might be procured, sent to China, and sold to immigrants.

Again, certificates are issued to departing Chinamen, who may sell the certificates in China, and on their return without a certificate they are landed on the claim of prior residence, which they are perfectly qualified to assert and prove by satisfactory evidence. There are other methods of defeating the law, but enough has been stated to show the necessity for an absolute exclusion to effect the purpose in view when the Government sets out in earnest to exclude Chinese immigration. It is no longer a question as to the policy of closing our doors against Chinese cheap labor. That question has been determined by the present treaty on more than one principle of protection to our people and our form of civilization. The doors must be closed, and the only problem remaining is how to do it. The new treaty will not accomplish that purpose if the text, as published, is correct. But I note that Mr. Bayard, in his letter to the President transmitting the treaty, referring to the first article, says:

"This precludes the return of Chinese laborers who are not now in this country, and forbids the coming into the United States of Chinese laborers from any quarter whatsoever."

This is precisely the character of an exclusion for which we have been contending these many years, and if the treaty only contained this paragraph in appropriate and comprehensive terms it would have been a very decided step in the direction of solving this difficult problem. Now, the question is, what can be done to cure this defect? If the Secretary of State has correctly interpreted the purpose of the convention in the paragraph just quoted, then the treaty simply fails to express that purpose, and it seems to me that it would be entirely proper for the Senate to so advise the President and propose such amendments as would accomplish that purpose. I would not make this matter a subject of political controversy, but co-operate with the Executive in improving the opportunity to secure some decided and practical results. From what has been said, I think it must be apparent that the object to be obtained in any treaty stipulations that may be agreed upon is to secure entire exclusion, or, failing in this, to limit, as far as possible, the classes of Chinese persons who shall be entitled to come into the United States, expressing such restriction in terms so plain as to prevent any evasion.

The Secretary of State, in his letter referring to the terms of the new treaty, says:

"Existing treaty privileges of travel and sojourn in the United States to Chinese officials, teachers, students, merchants, and travelers for curiosity and pleasure remained undisturbed, as well as the transit of laborers, strictly to be exercised under United States regulations."

The admission of so-called "merchants" and the privilege of coming into the country accorded to Chinese laborers claiming to be in transit across the territory of the United States have been much abused privileges under the present treaty. The first effort to break the barrier of exclusion was upon the claim that the immigrants were all "merchants." This led to an amendment of the law (act of July 5, 1884) providing "that nothing in this act nor in said treaty shall be construed as embracing within the meaning of the word 'merchant' hucksters, peddlers, or those engaged in taking, drying, or otherwise preserving shell or other fish for home consumption or exportation." This amendment had the effect of transferring the pressure to other weak points.

The records of the Treasury Department show that many Chinese laborers have been landed in the United States on the claim of being in transit who have not taken their departure, or if they have, their identity has been so completely lost that, with an eye to profit, they have been able to carry off return certificates for sale or future use. It would have been well if some further provision had been made against an immigration under the disguise of merchants and persons in transit, but perhaps these two points may be covered by proper legislation and regulations; and in view of the great necessity for further security at other points this feature of the new treaty may be dismissed without further comment.

The most serious complaint made against the present treaty is the clause providing that Chinese laborers who were here at the date of the treaty should be permitted to come and go at pleasure. As I have before explained, with this door open we find ourselves, at the end of nearly eight years, without any practical relief from this troublesome question; and the new treaty absolutely ignores this important point about which so much controversy has been had in court and before Congress in appeals for further legislation. The new treaty attempts to limit the number of Chinese laborers who shall be entitled to return, but the difficulty is that the courts may hold that this restriction only applies to those who shall hereafter depart, leaving the door open without this restriction to those who are now absent, but who may claim the right to return on their present certificates, or on prior residence, without such certificates. Assuming that Congress may provide such a form of certificate under the new treaty as will properly identify those hereafter departing and who shall be entitled to return, there still remains a necessity for providing against the return of those now absent, which I repeat is for the purpose of preventing the immigration of Chinese laborers who were never in the country. To accomplish this object, which is the real point at issue, I would suggest the following amendments to the new treaty:

"Amend Article I, as follows:

"Add to the end of the article the following: 'And this prohibition shall extend to the return of Chinese laborers who are not now in the United States, whether holding return certificates under existing laws or not.'"

The article would then read as follows:

"ARTICLE I. The high contracting parties agree that for a period of twenty years, beginning with the date of the exchange of the ratifications of this convention, the coming, except under the conditions hereinafter specified, of Chinese laborers to the United States of America shall be prohibited. And this prohibition shall extend to the return of Chinese laborers who are not now in

the United States, whether holding return certificates under existing laws or not."

The article thus amended would terminate the life of several thousand return certificates, but in view of their fraudulent use, their destruction is not only proper, but necessary to secure the enforcement of the terms of exclusion proposed in the new treaty. It would also put an end to the claim of prior residence, or residence here at the date of the treaty of 1880 which would give to the new treaty its chief value as a measure of exclusion. Furthermore the article, if so amended, would then provide for the terms of exclusion mentioned in the letter of the Secretary of State.

The next difficulty will occur in the identification of the privileged class of laborers who will be entitled to return under the new treaty; that is to say, "the identification of the Chinese laborer who has a lawful wife, child, or parent in the United States of America, or property therein of the value of $1,000, or debts of like amount due him and pending settlement."

I do not think much of the restriction contained in this qualification, for it will probably be developed that all who want to return to the United States will be thus qualified by the aid of the company to which the Chinaman belongs, but there will be a decided advantage in even restricting immigration to such persons as may hereafter depart from the United States; and to make such restriction effective I would suggest that it would be well to make it perfectly plain that Chinese laborers not provided with the return certificate, authorized by Article II, shall not be entitled to return or re-enter the United States. To do this an amendment in harmony with the recent decision of the Supreme Court, in the case of Jung Ah Lung, would be required, as follows:

"Add to the end of Article II the following:

"'*Provided*, That no Chinese laborer shall be permitted to enter the United States by land or sea without producing to the proper officer of the customs the return certificates herein required.'"

The next point to which I invite your attention is the failure to provide protection against the abuse of the privilege accorded to certain persons in Article III.

What, for instance, is to prevent any Chinese person from procuring the necessary certificate and coming into the United States under the claim of being either an official, teacher, student, merchant, or traveler? If the doors are closed elsewhere I am afraid this one will be forced open; but to provide as far as possible against such a proceeding, I would suggest the following amendment:

"Amend Article III as follows

"Add after the word 'depart,' in the fourteenth line (as published in the New York Times), the following:

"'And should the description of the person, or the representations as to the character, profession, or business of the person to whom such certificate is issued, fail to correspond with the character, profession, or business of the person producing such certificate, or if said certificate is proven to be false, the right to enter the United States thereunder, or of continued residence therein, shall in each case be forfeited, and no Chinese subjects, whether officials, teachers, students, merchants, or travelers, shall be permitted to enter the United States by land or sea without producing to the proper officer of the customs the certificate required herein to identify such person as privileged under this treaty to enter the United States.'"

With these amendments incorporated into the treaty, and proper legislation by Congress carrying the provisions of the treaty into effect, I think we may reasonably hope for a much better condition of affairs on the Pacific coast, in dealing with this difficult and troublesome question; but I must say, in justice to myself, that I have not changed the views I have heretofore expressed in urging legislation terminating all treaty stipulations and absolutely prohibiting all Chinese immigration.

This, in my judgment, is still the better course; and everything I have written is secondary and subordinate to such judgment. I am now only indicating the acceptance of a situation not by any means satisfactory, but out of which some practical, beneficial results may possibly be obtained. I therefore make these suggestions with the fullest reservation to urge measures of total exclusion, not only as the better, but the only effective course.

Very truly, yours,

WM. W. MORROW.

Hon. JOHN SHERMAN,
Chairman Committee on Foreign Relations,
United States Senate.

The decision of the Supreme Court of the United States in the case of United States *vs.* Jung Ah Lung, referred to in the foregoing communication, is reported in 124 United States Reports, page 622. In discussing the provisions of section 4 of the act of 1882 providing for a return certificate the court says:

It [section 4] does not say that the Chinese laborer returning by a vessel shall not be permitted to enter the United States without producing the certificate. In this respect there is a marked difference between section 4 and section 12 of the same act in regard to a Chinese person entering the United States by land. Section 12 provides that no Chinese person shall be permitted to enter the United States by land without producing the certificate mentioned in section 4 of the act. This distinction of language is very marked, and we think that, in the absence of like language in section 4, in regard to a Chinese laborer arriving by a vessel, it was competent for the district court to receive the evidence which it did in the case of a certificate claimed to have been actually lost or stolen, and that its conclusion of law was justified by the facts which it found.

Here the court points out distinctly the language necessary to be used to exclude all persons who can not produce return certificates. It was therefore necessary to amend the treaty in accordance with this decision to exclude the class who had destroyed the value of the former treaty. The Senate accordingly amended the treaty by adding to Article I the following amendment at the end of the article:

And this prohibition shall extend to the return of Chinese laborers who are not now in the United States, whether holding return certificates under existing laws or not.

But Article I was still subject to the provisions of Article II, which said that—

The preceding article shall not apply to the return to the United States of any Chinese laborer who has, etc.

The amendment to Article I did not seem therefore to have entirely covered the ground; so, to make the exclusion certain and to conform to the decision of the Supreme Court in the case of Jung Ah Lung, the following provision was added at the end of Article II:

And no such Chinese laborer shall be permitted to enter the United States by land or sea without producing to the proper officer of the customs the return certificate herein required.

The first two articles as amended, therefore, stand as follows:

ARTICLE I.

The high contracting parties agree that for a period of twenty years, beginning with the date of the exchange of the ratifications of this convention, the coming, except under the conditions hereinafter specified, of Chinese laborers to the United States shall be absolutely prohibited; *and this prohibition shall extend to the return of Chinese laborers who are not now in the United States, whether holding return certificates under existing laws or not.*

ARTICLE II.

The preceding article shall not apply to the return to the United States of any Chinese laborer who has a lawful wife, child, or parent in the United States, or property therein of the value of $1,000, or debts of like amount due him and pending settlement. Nevertheless, every such Chinese laborer shall, before leaving the United States, deposit, as a condition of his return, with the collector of customs of the district from which he departs, a full description in writing of his family, or property, or debts, as aforesaid, and shall be furnished by said collector with such certificate of his right to return under this treaty as the laws of the United States may now or hereafter prescribe and not inconsistent with the provisions of this treaty; and should the written description aforesaid be proved to be false the right of return thereunder, or of continued residence after return, shall in each case be forfeited.

And such right of return to the United States shall be exercised within one year from the date of leaving the United States; but such right of return to the United States may be extended for an additional period not to exceed one year in cases where, by reason of sickness or other cause of disability beyond his control, such Chinese laborer shall be rendered unable sooner to return, which facts shall be fully reported to the Chinese consul at the port of departure and by him certified to the satisfaction of the collector of the port at which such Chinese subject shall land in the United States. *And no such Chinese laborer shall be permitted to enter the United States by land or sea without producing to the proper officer of the customs the return certificate herein required.*

It must be plain that these amended words were absolutely necessary to give the treaty any effect whatever. Without them the defects in the previous efforts at exclusion remained.

The gentleman from Kentucky [Mr. MCCREARY] deprecates the action of the Senate in placing these amendments on the treaty. The gentleman is too good a lawyer not to know the value of a few words sometimes to cure a defect in a contract or agreement. A few well-selected words may be sufficient to cover a world of difficulty if placed in the right place. This is the case with this treaty and these two amendments. They make the treaty say distinctly that the claim of prior residence shall not be admitted hereafter on parol testimony, since after this treaty is ratified no Chinese laborers are to be admitted into the country without the return certificate required by the treaty. But the gentleman says the amendments cause a delay in the ratification of the treaty. If the treaty has been sent to China because of these amendments they must have materially added to its provisions.

If the treaty without the amendments could have been ratified without being sent to China, then the treaty with the amendments could have been so ratified, if they do not materially change its conditions. The fact, however, is that the treaty had to go to China to receive the approval of that government before it could go into effect, whether amended or not.

The bill now under consideration is drawn under the provisions of this treaty and conforms to its restrictions. It provides some additional safeguards for the identification of those who shall depart intending to return, and requires that they shall be admitted only at the port from which they departed. It provides, also, that—

No Chinese person except diplomatic or consular officers and their attendants shall be permitted to enter the United States, except at the ports of San Francisco; Portland, Oregon; Boston, New York, New Orleans, Port Townsend, or such other ports as may be designated by the Secretary of the Treasury.

This restriction as to ports of entrance is in accordance with the restrictions imposed upon our people by the Chinese Government with respect to admission into that country. This restriction has the further purpose of preventing further immigration across the frontier from Canada, and particularly from British Columbia.

It is provided in section 12 that—

The collector shall in person decide all questions in dispute with regard to the right of any Chinese passenger to enter the United States, and his decision shall be subject to review by the Secretary of the Treasury and not otherwise.

The purpose of this provision is to do away with the legal machinery now in use in determining the right of a Chainaman to land and come into the United States. It is believed that the custom-house authorities are properly qualified to make the investigation subject to an appeal to the Secretary of the Treasury.

The next important provision is one providing for the deportation of Chinese persons found unlawfully in the United States. If the ports are closed Chinamen will most likely seek to enter the United States by land, coming over from British Columbia and Mexico. No satisfactory method has yet been devised for absolutely preventing such immigration, but it is believed that by prescribing certain ports of entry for the admission of Chinese laborers entitled to come into the United States, and providing for the deportation of those found unlawfully in the United States, a reasonably effective bar has been raised against such immigration.

This bill receives the approval of the people of the Pacific coast, because they believe it is a step in advance of any previous statute on the subject. But it is proper I should say at this time that neither the treaty nor the law meets with the entire approval of our people, because they believe that this Government should reserve to itself the sovereign right

to legislate whenever the occasion or circumstance may require against any foreign invasion which may threaten the best interests of this country. They believe that we should not be compelled to ask China for a treaty providing against the emigration of her undesirable subjects to this country. If our hands have become tied by previous stipulations so that we are prevented acting as freely as we should, the sooner we cut loose and place ourselves in position for self-defense the better. This Government should by proper declaration, by legislation, or otherwise reserve to itself the right to legislate at any time upon this subject of Chinese immigration to the extent it may deem necessary.

Why, Mr. Speaker, if a person presents himself at your door whose company you do not desire, you do not go to the house of the unwelcome visitor and arrange by agreement or stipulation that he will not intrude himself upon you or your family. You close your doors against the invader and you instruct your servants to say that you are not at home for him. Is there any question about your right to protect yourself in such a case? Certainly not. In this respect a nation is like an individual. It should have the right to close its doors instantly and protect itself against improper intrusion.

Because this Asiatic tramp forces his way through the western gate of the continent contrary to the spirit and purpose of our laws are we going to ignore his persistent invasion of our territory, or at most toy with the question, and forgetting the rights and demands of American labor, surrender to the vice and demoralization of Chinese labor? This is the whole question, turn it as you will, and our duty appears to me to be plain.

Mr. Speaker, we have placed upon the statute-book laws respecting the immigration of paupers, lunatics, convicts, contract laborers, and other objectionable classes. We did not apply to any foreign government for treaty stipulations giving us permission to pass such laws, and no government has raised any objection to our course. We considered it our inherent right to protect ourselves in this respect. We acted upon the highest law known to man, the law of self-preservation. I therefore say with respect to this Chinese question that it would be better for us at this time, by some general law, or treaty if you please, to untie our hands, and, freeing ourselves from all obligations, place ourselves in a position where we can act with freedom and provide legislation covering the whole subject. With such proper freedom we could change our laws to suit emergencies. In the last Congress bills having this object in view were introduced in both Houses. It would have been well if such a statute had been passed, and, in my judgment, it is the next step we should take in behalf of American labor and American civilization.

Mr. HERMANN. The gentleman will allow me to say that, while this bill has my hearty approbation, yet in listening to the gentleman's remarks I have not yet discovered any reference by him to the difficulties which at present prevail on the border line between our country and Canada or British Columbia.

Mr. MORROW. I am very glad the gentleman has called my attention to that subject, as I want to make a further suggestion upon that point.

Mr. HERMANN. The gentleman's remarks have been directed in general to the clause in the bill providing that Chinese immigrants to this country shall not be permitted to enter the United States except at the ports of San Francisco, Portland (Oregon), Boston, New York, New Orleans, Port Townsend, or such other ports as may be designated by the Secretary of the Treasury. The gentleman's remarks have been directed especially to the prevention of the landing of Chinese in the United States through our own ports. But let me ask him what particular relief can be expected under this bill as to the immigration into this country of Chinese who land at Victoria or other ports of British Columbia, passing thence along the line of the Canadian Pacific and thence into Washington Territory and Oregon, over several well-known trails across the mountains, and spreading themselves all over the Pacific coast. I ask this question with special view to the fact that, according to ample testimony, Chinese immigrants are now constantly passing, in violation of existing treaty and law, over the British Columbia line into our country by the routes I have named.

Mr. MORROW. The section to which the gentleman from Oregon has referred is designed to accomplished as much as we can in this direction under the present treaty. It provides that—

> A Chinese laborer possessing a certificate under this section shall be admitted to the United States only at the port from which he departed therefrom, and no Chinese person, except Chinese diplomatic or consular officers and their attendants, shall be permitted to enter the United States except at the ports of San Francisco, Portland, Oregon, Boston, New York, New Orleans, Port Townsend, or such other ports as may be designated by the Secretary of the Treasury.

Mr. Speaker, this bill, if properly enforced, will not permit the entrance of Chinese laborers into this country except at the ports named. Therefore the coming of any such Chinese person over the border line from Canada will itself be a violation of this statute. It will be necessary for Chinese persons entitled to enter the United States, and desiring to do so, to present themselves at one of the ports named in this bill.

The suggestion made by the gentleman from Oregon indicates, however, one of the great difficulties connected with this question; and it is proper we should admit right here that it is one of the questions we have been unable to solve satisfactorily. The special committee which has been created for the purpose of inquiring into foreign immigration has already determined to visit the Pacific coast, particularly San Francisco and the northwestern part of the United States, to ascertain what can be done in this respect. It is true that Chinese persons are now coming into British Columbia and from there they cross the frontier into the United States; and many of those are not entitled under our laws to enter this country. Perhaps there may not be a great number of such cases now; but if our ports are closed effectively they will certainly try the Canada line. The fact that the law is evaded by any number of persons in this way will be sufficient to destroy the confidence of the people in the act, if not in the good faith of Congress in dealing with this question. Therefore it is incumbent on Congress by law, or on the Administration by treaty, to provide some effective measures against the immigration of Chinese across the frontier. Thus far the provisions of section 7, prohibiting the entrance of Chinese laborers except through certain ports, and the provisions of section 13, providing for the deportation of Chinese persons found unlawfully in the United States, are the only restrictions that have been devised in that respect.

A bill was introduced in the last Congress by my colleague [Mr. FELTON] providing for a registration within six months of all Chinamen in the country, with the view of enabling every such person entitled to be in this country to provide himself with legal evidence of that right; so that whenever the right might be questioned he could either show the evidence of his right to be here or in default of that to be deported from the country. That would be an additional and perhaps a most effective means of preventing immigration across the frontier. The provisions of that measure have not been incorporated into this bill. But we shall have to meet that question undoubtedly very soon. The most effective method of exclusion in this direction would be to induce Canada to adopt such action as would prevent this immigration into that country. If the British or the Canadian Government should absolutely prohibit Chinese immigration into Canada that would of course meet the difficulty.

Mr. FELTON. In view of the action of those countries in the past, has the gentleman any idea that they will ever do anything of that kind?

Mr. MORROW. I am not able to answer that question except by referring to the action of Australia. The people of that British colony have acted with considerable force in this matter; they have determined that they will not have Chinese immigration. If Canada should adopt the same course and act in harmony with the United States in this matter, the difficulty so far as this continent is concerned would be practically solved.

Mr. HERMANN. Let me ask the gentleman from California whether that will not be the only absolute relief in the case?

Mr. MORROW. The only absolute protection we can get against Chinese immigration across the frontier is some action on the part of Canada in harmony with the action on the part of this Government in that direction.

Mr. VANDEVER. Will my colleague permit me to ask him a question?

Mr. MORROW. Certainly.

Mr. VANDEVER. Is it not a fact that the entire Chinese immigration coming to this country comes from the port of Hong-Kong, which is a part of the British dominions?

Mr. MORROW. Yes, that is so.

Mr. VANDEVER. They come from the port of Hong-Kong, which is British territory, and even in case of any prohibition being enacted on the part of Canada against Chinese immigration it would not prevent Chinese emigrants leaving the port of Hong-Kong and coming into ports in the British dominion upon the Pacific coast and, following the usual trails, come within our own territory.

Mr. MORROW. That is substantially the difficulty which has been suggested by the gentleman from Oregon, and all we can say is that the restrictions we here seek to enact into law will have the effect to stop this immigration from the port of Hong-Kong as well as from other ports. The prohibitions of the bill are directed against Chinese laborers coming from any direction, and not merely against these persons coming from Chinese ports.

I wish now to return to the question alluded to by the gentleman from Kentucky [Mr. MCCREARY], that Chinese immigration into this country began with the negotiation and ratification of the Burlingame treaty with China. The gentleman is in error in that respect, as there was a very large Chinese immigration into this country before that treaty. The first treaty with China, as I said before, was the treaty of July 3, 1844. It was called the Cushing treaty, having been negotiated by Mr. Caleb Cushing. Next came the treaty of 1858, negotiated by Mr. William B. Reed under the administration of James Buchanan. These two treaties did not provide in express terms for Chinese immigration to this country, nor was it necessary that any such provision should be made to induce immigration. It was only necessary to have the usual treaty relations to invite them here. Our ports were open to the whole world, and why should not the Chinamen come? They did come. They commenced coming in 1850. The statistics of Chinese

immigration into the port of San Francisco prior to the Burlingame treaty is as follows:

Year.	Number.	Year.	Number.
Prior to 1852	10,000	1862	8,175
1852	20,026	1863	6,432
1853	4,270	1864	2,682
1854	16,084	1865	3,095
1855	3,329	1866	2,242
1856	4,807	1867	4,290
1857	5,924	1868	11,081
1858	5,427	1869	14,990
1859	3,175		
1860	7,341	Total	141,800
1861	8,439		

The Chinese immigration into the port of San Francisco from the Burlingame treaty to the treaty of November 17, 1880, was as follows:

Year.	Number.	Year.	Number.
1870	10,870	1877	9,264
1871	5,540	1878	6,675
1872	9,770	1879	6,959
1873	17,075	To November 17, 1880	5,495
1874	16,085		
1875	18,021	Total	121,235
1876	15,481		

The Chinese immigration into the port of San Francisco from the treaty of November 17, 1880, to August 5, 1882, when the first restriction act took effect, was 45,952.

The Chinese immigration into the port of San Francisco from August 5, 1882, to December 31, 1887, was as follows:

August 5 to December 31, 1882	39
1883	3,014
1884	6,602
1885	9,049
1886	6,714
1887	11,572
Total	36,990

RECAPITULATION.

Arrivals prior to Burlingame treaty	141,800
Arrivals between date of Burlingame treaty and treaty of November 17, 1880	121,235
Arrivals between November 17, 1880, and August 5, 1882	45,952
Arrivals between August 5, 1882, and December 31, 1887	36,990
Total arrivals	345,977

The above statistics show that a very large part of the Chinese immigration was before the Burlingame treaty. Mr. Boulger, in his recently published history of China, gives an interesting account of this early emigration to the United States. He says:

The first years of Heinfung's reign witnessed what was an entirely novel event in Chinese history—the exodus on a large scale of the Chinese people to lands across the sea. * * * The Chinaman only requires a sufficient inducement to attract him from his own country, and in 1852 that inducement had been supplied in a way that it had never before been by the discovery of the gold fields in California and Australia. Once the example was set the people flocked across the Pacific in their thousands. Each emigrant vessel carried from five hundred passengers to as many as one thousand; and for a time it seemed as if the supply of these persistently-industrious and never-desponding laborers was not merely inexhaustible but would never cease.

Within a few months of their first arrival nearly twenty thousand Chinese had landed at San Francisco. Nor were they unable to take care of themselves or to do justice to their own interests. They were bound together, not only by their common race in a strange land, but by the terms of a labor association which afforded them a much more effectual protection than any possessed by their white fellow-laborers. * * * These emigrants were not lost to their own country. A certain number, possibly a high percentage of them, died; but even then their bodies were conveyed to their homes for burial. But a very large number returned, carrying back with them their savings, which represented, for their wants, a sum by no means inconsiderable. China was so much the richer by the wealth they imported; she could hardly be said to have suffered from their absence.

It is difficult, perhaps impossible, to say what were the true views of the Chinese Government on the subject. They certainly did not interfere to check the emigration, as they could easily have done. They seemed rather disposed to take the view that those who were willing to leave their country could not be of much use to her if they remained. When the movement attained its largest proportions the Peking authorities were too much occupied with other matters to give it the heed that the fact in itself deserved: but the regular return of the emigrants after a more or less brief absence with the results of their labor, gradually reconciled their rulers to the annual migration. It was satisfactory for them to perceive that they felt none the less Chinese because they had sojourned for a period in a foreign land, and among races regarded as having views of very doubtful friendship towards the Celestial Empire.

The only benefit this English historian finds to have been derived from this migration, by the countries to which it was directed, was the profit resulting from the employment of the "cheapest laborers in the world." This may be the English notion of national wealth and prosperity. It is not American and has not met with favor on the Pacific coast. We require labor to develop the hidden resources of our mountain slopes and valleys, but it must be homogeneous and in accord with the institutions of the country to bring substantial prosperity.

The Burlingame treaty has embarrassed us in securing necessary legislation, but it was not the cause of Chinese immigration.

The policy of the country has been declared upon this subject, and it only remains for us to carry out that policy with such wisdom as we can command. The new treaty will by its terms go into effect upon the exchange of ratifications. The present treaty will then be abrogated and the existing statutes will fall with the treaty.

If Congress should adjourn without passing this bill and the ratification of the new treaty be exchanged prior to the next session of Congress, there would be no law left on the subject and the Pacific coast would be in a deplorable condition. As I have explained before, the difficulty with the present treaty was the negligence of Congress in not providing legislation for carrying it into effect immediately upon its ratification. We should avoid that mistake and have this law upon the statute-book on the very day the treaty goes into effect, so that the restrictions in this bill may operate in harmony with the treaty. There should be no departure of any number of unidentified persons after the treaty whose return would destroy the value of the law. I hope the bill will pass. [Applause.]

Mr. DAVIS. I understand this bill originated in a Republican Senate and was passed by a Republican Senate. Am I wrong?

Mr. MORROW. This bill came from the Senate. It is a Senate bill.

Statues of Richard Stockton and Philip Kearny.

SPEECH

OF

HON. HERMAN LEHLBACH,

OF NEW JERSEY,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, August 21, 1888.

On the presentation of statues of Richard Stockton and Philip Kearny by the State of New Jersey.

Mr. LEHLBACH said:

Mr. SPEAKER: New Jersey, in presenting to Congress the statues of two of her illustrious citizens, has made an appropriate and wise selection. Both heroes and patriots, they are the representatives of different times. The honored Stockton, so prominently connected with the formation of our Government, is a fitting representative of the early days in the history of our country, in which New Jersey bore so conspicuous a part. His sad death, caused by the cruelty of his confinement by the British, was a loss greatly deplored at the time and deeply felt throughout the entire country. His life has been briefly, but eloquently told here by my colleagues, and it would be but a repetition again to refer to it.

The gallant Kearny! Could New Jersey have gone among all her heroes and selected one more worthy, more endeared to her people, more the representative of her bravery, valor, and devotion to the country than he? His early career has been given; and while we may admire the bravery and skill of the young soldier during his brilliant service, we must turn from it and behold him in the great struggle for the life of the nation in order to fully appreciate the man. When the first war notes were sounded Kearny was living abroad, and he at once returned and tendered his services to the Government.

We all remember the difficulty the soldiers really competent had to obtain recognition during the early period of the war. Kearny, eager and willing to serve his country, an accomplished and experienced soldier, was absolutely denied that privilege. He first applied for a commission to the governor of New York, on the recommendation of General Scott, but failed to obtain it. Shortly after this failure the First New Jersey Brigade was formed. The material was most excellent. Many had been active members of the militia organizations, and all had volunteered their services. At the earnest solicitation of leading Jerseymen, Kearny was placed in command of this brigade on the 25th day of July, 1861. He proceeded at once to bring his command to the highest state of efficiency, and it was soon conceded to be the best disciplined in the Army.

He was grateful for his appointment, proud of his troops, and determined that New Jersey, of which State he was a citizen, should not regret that he had been selected to lead her sons. The following extract from "Foster's History of New Jersey and the Rebellion" shows the character of Kearny:

The spirit with which General Kearny entered the Army, may be inferred from the following extract from a letter written by him shortly after taking command of the First Brigade. After speaking of the difficulties experienced in organizing and disciplining the troops, he continued: "But I ought not to complain of this. My position here was not ambition, but I felt that I was paying an early debt I owed to the country. My only hope is, not to live, but that I may not be killed early in an engagement. If I am not, New Jersey shall have no cause to be ashamed of me."

While he was a most exacting and strict disciplinarian, and at first there might have been occasional murmuring here and there, yet it

was not long before he had won the esteem and confidence, and what was more to him, the love of both officers and men. He looked with just pride upon them, and when tendered the command of a division, though glad to accept, he refused because he could not carry his brigade with him. The enthusiasm of his men when he returned to camp after this declination was unbounded, and it was fully shared by all citizens of New Jersey. The brilliant actions of the First New Jersey Brigade under Kearny are well known. It was ever found at the front, and though its losses were severe it was never known to have wavered.

During the Peninsula campaign a vacancy occurred in a division in Heintzelman's corps while it was actually under fire. Kearny was ordered to take command. Here he was compelled to sever his connection with the men he loved so well, but duty called and he obeyed. After assuming command of the division his career was the most brilliant; he was known to the whole Army and almost worshiped by it. After General Pope was compelled to retire across Bull Run, and in order to save the Army it was necessary to repulse and check the enemy, he (Pope) selected three divisions for this daring work, among them the one commanded by the gallant Kearny.

Here, at Chantilly, he fell; he had hurled his troops against the advancing lines of the enemy and had checked them, and during a lull in the battle, going forward unattended for the purpose of inspection, he was shot. His loss was felt and mourned by the Army and the whole country, but nowhere more sincerely and earnestly than in New Jersey.

The old soldiers of New Jersey will rejoice that Kearny, the embodiment of their bravery and courage, should have been selected as one to represent the State in the collection of statues in the old Hall of the House of Representatives.

Chinese Immigration.

SPEECH

OF

HON. GEORGE G. SYMES,

OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, August 20, 1888,

On the bill (S. 3304) to prohibit the coming of Chinese laborers into the United States.

Mr. SYMES said:

Mr. SPEAKER: The exclusion of Chinese immigration from this country has been an important question for many years. It is a subject of much congratulation to those whose experience taught them many years ago that public policy and public necessity demanded the exclusion of the Chinese from our shores that it is no longer a doubtful question in the opinion of the people generally in any part of the country or their representatives.

The two days' debate on this bill shows that each party is vying with the other for the credit of bringing forward and passing this legislation. There will probably not be one vote cast against the bill. Nearly all now concede the necessity of protecting the laboring men of this country from the competition of the hordes of Mongolians liable to overwhelm them and deprive them not only of the bright hopes of the American laboring men, of bettering their condition in life, but deprive them of the very means of subsistence for themselves and their families.

Mr. Speaker, the people of the Pacific coast and the Rocky Mountain country saw the necessity of excluding the Chinese many years ago. They saw the intelligent miners who had been receiving from three to five dollars per day discharged and their places filled with these imported Asiatics, who worked for one-third their wages, lived huddled together in shanties, and subsisted on a few cents' worth of rice per day. They saw the American and European laborers and artisans driven from their employments in the cities and factories by these half-civilized Pagans after they had expended their all in crossing the then unsettled half of our continent, before the railroads penetrated that region, to the promised land of gold, silver, and high wages.

The municipal authorities saw thousands of these Chinamen congregating in their midst and adding barbarism, pestilence, and crime to their before peaceful and Christian communities. The thousands that had already come constituted probably only the advance guard of millions yet to follow. There was no limit to the number that an empire containing from 360,000,000 to 450,000,000 could send to our shores.

In this condition of things, Mr. Speaker, it is not surprising that the people of that part of the country should cry out against it and demand that this immigration, or rather invasion, should be stopped by national authority. Sir, it was not made a party question by those seeking relief from this plague which threatened the destruction of their social, industrial, and political institutions. The Democrats and Republicans in that part of the country met on common ground and espoused a common cause. By the united efforts of the people of the Pacific coast and the Rocky Mountain States and Territories the evils of Chinese immigration has been continually illustrated and shown to the people of the other portions of the country until all now unite in the policy of exclusion.

The object of this debate seems to be to show who discovered the necessity of restricting Chinese immigration. In other words, what party or politicians or statesmen first became sound on this question, and at what particular period did the true light first come to them on this important measure of public policy?

Mr. Speaker, the policy and necessity of excluding Chinese did not originate with either party, or with the politicians of either party. It originated in the minds of the people of the Pacific coast and the States and Territories that witnessed and experienced the ill effects of this immigration.

As much of the time consumed in this debate has been devoted to showing the records and positions of gentlemen on this question, I may be permitted to state my own position on the restriction of Chinese immigration in the past. Eighteen years ago in the Territory of Montana the question was agitated and discussed. It was debated in the Republican Territorial convention at that time, and a resolution was adopted almost unanimously in favor of the absolute exclusion of Chinese.

I was a member of that convention, and spoke in support of that resolution. It was very clear to me then, and it has been ever since, that the importation or immigration of large numbers of Chinese tended to the very destruction of American social and industrial institutions. Quite a number of Chinamen were being brought into Montana at that time. They were being put to work in some of the placer-mining camps. They took the places of the most intelligent and best paid laboring men in the world.

Mr. Speaker, I would emphasize the statement that the precious metal miners of the Rocky Mountains and Pacific coast were then and are now the most intelligent and best paid class of laboring men in the world. I have had an active experience among these men for nearly twenty years. In education, general intelligence, practical knowledge of the world and of men and things they are remarkable. Their patriotism and the interest they take in the well-being of their communities and country are of the highest order.

It was, as a rule, the brightest, most energetic, and courageous young men of the East who crossed the plains (then called the Great Desert) and mountains; fought the Indians; submitted to the hardest privations to develop an empire before not even conceived of. These men created communities and established and enforced laws and government without the aid of legislatures or courts. Meetings of these miners in log-cabins and in the open air created and adopted rules and customs, which had the force of law, that governed the acquisition of title and the holdings and transfer of mining properties worth millions upon millions. Miners' judges, chosen and elected at these miners' meetings, decided controversies where mines worth fortunes were involved. Lawyers of ability practiced before these mining judges. Their decisions and judgments were enforced with as much unerring certainty as the decrees and judgments of any courts in the country. No codes of law were ever enacted that better protected the weak against the strong, or the innocent from the frauds of the guilty than these miners' rules and customs. They were found to be so just and equitable and applicable to the condition of things that when the Legislatures of the different Territories afterwards came to legislate on these subjects, they adopted generally these miners' rules and customs, and gave them the force of statute law. And years afterwards, when Congress first legislated upon the subject of the title to mines and mining property, it adopted these rules and customs. These mining communities were among the most prosperous, progressive, and happy in the whole country.

Is it to be wondered at that such communities rebelled against being revolutionized by the importation of hordes of Chinese? Is it surprising that they revolted against having their social and industrial progress overturned by the Mongolians? Is it strange that they made active efforts and took active measures (some of which were pretty strong and heroic) against this invasion of what they knew to be their dearest rights and privileges and prosperity in the future?

Mr. Speaker, it is not strange or surprising. Such intelligent communities as these are always alert to ward off whatever threatens their welfare and happiness. The principle of self-preservation applies to intelligent communities the same as to individuals.

It thus became the province and the duty of the people of the Pacific coast and the Rocky Mountain country to commence a crusade of public opinion in the Middle, Eastern, Southern, and Western States against Chinese immigration. They commenced this crusade and appealed to their fellow-citizens in other parts of the country for protection from this Chinese plague. The people at a distance could not at once appreciate or comprehend the difficulties or necessities of the situation and did not see the need of national legislation excluding the Chinese from our shores for some time. By the persistence and earnest-

ness with which the matter was pressed upon the people all over the country by those specially and directly interested progress was made, slow at first, afterwards more rapid.

It is characteristic of the people of this country to sympathize with any particular community suffering from a present or threatened wrong or danger. The people of this nation appreciate that an injury to any particular class of the people or community must result in an injury to the whole. And the historian of the future will give the credit of bringing about the now approved national policy of preventing Chinese immigration to the people of the Pacific coast and Rocky Mountain States and Territories. History will not award the origination or enforcement of this beneficent policy, so necessary to the preservation and purity of our republican institutions, to any particular politicians or to any particular political party. The most that any of them (outside of the States and Territories so immediately interested) can claim is, that they followed the wishes and opinions of the people.

Mr. Speaker, this hasty review of the origin, progress, and adoption of the policy excluding the Chinese from this country should teach us a lesson applicable to a most important branch of the same subject now pressing upon the country. It is said that "history is philosophy teaching by example." The history of Chinese immigration should be enough to teach us that there are other kinds of immigration to this country which it is as necessary to prevent as the Chinese. The investigation of the importation of cheap, degraded, and pauper labor now being made by a committee of this House has shown a startling condition of things. It shows that degraded contract and pauper laborers have been and are being imported into this country by the tens of thousands; which is as dangerous to our social and economic system as the immigration of Chinese.

It shows that the laboring men of this country have as much to fear from direct competition with the lowest and most degraded classes of Europe as they of the Pacific coast had to fear from the Asiatics. During the last decade thousands of the most intelligent class of artisans and laborers have been discharged from factories and other industrial works throughout the Eastern and Middle States and their places supplied by the cheapest and most degraded kinds of imported labor. Thousands of Poles and Italians have been imported under the contract system and taken out West to grade and build railroads, and after the roads are completed they have been, so to speak, "turned loose" without employment, a burden to the towns and communities where they congregate.

Towns and cities are beginning to have their Italian or Polish suburbs, almost as distinct from the balance of the community as the "Chinatown" suburbs of the Pacific coast cities.

These imported contract laborers have almost driven the intelligent laboring classes from the mining regions of Pennsylvania. I quote what Mr. Powderly stated before the committee of this House on that subject:

Hungarians had driven many American miners from the mines in Pennsylvania. In fact more than half the miners in Pennsylvania were Hungarians. The latter live on pork and water and sleep like hogs in a pen. In opposing the theory advanced by the circular recently issued by Henry Clews & Co., to the effect that the majority of laborers were evidently bettered by the arrival of large ship-loads of foreigners, Mr. Powderly grew eloquent. He said:

"I do not consider a man can ever become a good citizen who travels over the Pennsylvania Railroad with a brass tag hung to the band of his trousers. These people never learn the English language. They bring their filthy customs with them, and observe them while they stay among us. They never learn to read the Constitution of the United States, and, in my opinion, no man should be allowed the right of franchise until he first learns to read the Constitution. They will take starvation wages and live on the vilest food. If they run short of food they will steal."

Mr. Powderly presents only one of the numerous facts and illustrations which show that this character of immigration must be stopped.

This country might as well be made the dumping-ground of the Chinese as the asylum for millions of degraded paupers and criminals of Europe. To the laboring men it is immaterial whether their high wages and prospects for the future, of themselves and their families, are destroyed by the importation of degraded pauper labor from Europe or the influx of the Chinese from Asia—the moral, social, and industrial condition of our communities are as much injured by the one as the other. Either tends to subvert the boasted theory of equal rights for all and special privileges for none. Either tends to destroy the policy and opportunity of the intelligent and industrious laboring man to support and educate his children and give them equal chances in the race of life.

These things lie at the very foundation of our social and industrial systems. Low wages and ignorant, degraded laborers will, unless prevented by wise laws and measures, become the greatest menace to our free republican institutions. If we are to judge by the oral utterances of our politicians, either in legislative assemblies, on the stump, or in convention platforms, there is no differance of opinion upon the proposition that all our laws, measures, and public policy should be adapted and made to conform to this paramount object—the lifting up and bettering the condition of our laboring classes.

But many of these politicians have peculiar ways of attempting to carry out these abstractly and generally expressed principles. Many who avow their sympathy with the laboring man and say they are in favor of any policy or measure that will better his condition advocate free trade as the remedy, or such additions to the free-list as must greatly increase the importation of the products of cheap pauper labor and bring them in direct competition with the products of American labor. Why this free-trade policy will not result in flooding American markets with the products of cheap foreign labor and lower the wages of our laborers is not and can not be explained.

There are others who for years have been expressing their sympathy for the laboring man and advocating protective tariff for the only purpose, they said, of keeping American wages above the foreign standard, but who did not appreciate or have ignored the fact that unrestricted importation of contract pauper labor must lessen the earnings of the wage-worker and degrade his moral and social condition as much as the free importation of the products of such foreign labor.

Mr. Speaker, I said it was immaterial to the artisans, and other laboring men of this country, whether their wages are reduced to the foreign standard by the importation of degraded foreign labor from Europe or the immigration of Chinese. So it is of little consequence to these wage-workers whether their earnings are reduced, factories and mines closed, and they thrown out of employment by the importation of cheap pauper labor or the free importation of the products of such labor.

Our laboring classes can only be properly protected by the restriction of both the importation of the products of the cheap foreign labor and the cheap labor itself. "This is the stern, unyielding logic of the condition that confronts us." It is no longer a theory. It demands immediate action. If some of the men who have lent all their energies in this debate in attempting to show what man, or what party, first advocated restricting Chinese immigration, had devoted their ability and time to devising practical measures for preventing the importation of contract labor they would have rendered better service to the country and their constituents.

Mr. Speaker, I would not restrict the immigration of those industrious and thrifty foreign classes, who have in the past done so much towards settling up and adding to the industrial wealth of this great country. To all those who come here of their own accord to better their condition, who adopt our customs, assimilate with our institutions and people, become citizens, send their children to our free schools and raise them up to be useful members of our Republic, I say thrice welcome to our shores.

These classes of our foreign-born citizens are as strictly opposed to the importation of degraded contract labor as the native American. They came to this free land to escape from the evils of social and industrial systems that produced such degraded pauper labor, and they object to having the evil follow them here.

Mr. Speaker, I have attempted to draw a lesson from the history of the subject of this debate, and apply it to a threatened and pressing danger. I have not time, and it would not be relevant to the pending bill to discuss the means and measures that ought to be taken to restrict the importation of this pauper contract labor. I hope, however, the opportunity will soon be presented to Congress to perfect and adopt such measures as will protect our laboring people and our social and industrial institutions from this evil.

Statues of Richard Stockton and Philip Kearny.

SPEECH

OF

HON. ALBERT C. THOMPSON,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, August 21, 1888,

On the presentation of statues of Richard Stockton and Philip Kearny by the State of New Jersey.

Mr. THOMPSON, of Ohio, said:

Mr. SPEAKER: This is an occasion when I feel especially privileged to speak. As a company commander I followed General Philip Kearny, from that day, in front of Yorktown, when he took command of the First Division of the Third Corps, Army of the Potomac, down to the day of his death at Chantilly, and to-day as I looked upon his well-remembered features, shown so true to nature in the beautiful bronze here presented to the nation by the State that claimed him as a citizen, I again saw him, as in life, riding at the head of his charging columns through the "slashings" of Fair Oaks and across the blood-stained fields of Manassas, bridle in teeth, saber in hand, and that dread light in his eyes, which to us was the sign of desperate and deadly battle, and I remembered how, in the rush and fury of the fight, amid all its appalling surroundings, we turned to him for guidance, for the assurance of victory, and for approval of what we had done, and I could not refrain from adding my feeble tribute to the memory of my old commander. His division was composed of troops from Maine, Rhode Island, New York, Pennsylvania, Ohio, Indiana, and Michigan,

and was known as the "Red Patch Division," because of the red patch each officer and soldier was required to wear on his hat or cap, a device of General Kearny's by which the men of his division were distinguished from all others, and which was the origin of the corps badges afterwards prescribed for the whole Army. To us he was "Brave Phil Kearny," as he was to the "old Army," when as a lieutenant he lost his left arm at the San Antonio gate of Mexico, and no soldiers ever followed a leader more devotedly than did the men of the old "Red Patch Division" General Kearny.

Sorrow for his death never ceased in the hearts of these men, and to-day among the survivors of that famous division the mention of his name brings to the cheek the unbidden tear. While the organization lasted his name and fame were cherished by it as something within its personal keeping, and in his honor a division decoration was adopted known as the "Kearny Cross," of which General Birney, who succeeded to the command of the division, in General Order No. 48, dated May 16, 1863, spoke as follows:

> The brigadier-general commanding division announces the following names of meritorious and distinguished non-commissioned officers and privates, selected for their gallantry, as recipients of the "Kearny Cross," the division decoration. This cross is in honor of our old leader, and the wearers of it will always remember the high standard of a true and brave soldier, and will never disgrace it.

And it never was disgraced, but was conspicuous in the front of every battle from Chantilly to Appomatox. Upon the cross worn by the officers was inscribed the motto "*Dulce et decorum est pro patria mori*"—a noble sentiment; a sentiment worthy of Kearny. The devotion of patriotism expressed in this motto is not, however, mere sentimentalism, but has had substantial illustration in every age and land, and nowhere more gloriously than in this land and upon the battle-fields of the rebellion. Every village and hamlet, and almost every fireside, in the loyal, liberty-loving North contributed its sacrifice to this love of country, and each succeeding year the flowers of May are showered upon the graves of thousands of as pure and unselfish patriots as ever honored mankind.

Men who voluntarily left home, wives, children, and loved ones, and endured exposure, hardships, sickness, battle, and death, not to further personal ambition or the desire for fame, but to protect and preserve "a government of the people, by the people, and for the people," and to guaranty to all men, white and black, that equality proclaimed by the Declaration of Independence. These men came from every walk of life, and abandoned the prosperous employments of peace to die, if need be, for country. The lessons of patriotism taught by them—the "boys in blue," as in tenderness we love to call them—should be constantly impressed upon the youth of the nation, and no higher or more important duty devolves upon the survivors of the grand army of the Union than that of bringing up their children in that respect for authority, that reverence for the Constitution, and that love of country which so distinguished them in the days of '61.

General Kearny loved his men, and was always solicitous for their comfort, but in battle required the utmost of them. There he seemed to be omnipresent. He saw every movement of his division, and there was a feeling among the men that his eye was always upon them, and that the conduct of each individual soldier was known to him, and no man wearing the "red patch" dared to be a skulker. He led the battle, but required his officers to be in the front of it with him. His General Order 15 was characteristic of the man. In it he says:

> Shoulder straps and chevrons, you are marked men; you must be ever in the front. Colonels and field officers, when it comes to the bayonet lead the charge. At other times circulate among your men, and supervise and keep officers and men to their constituted commands; stimulate the laggard, brand the coward, and direct the brave.

He himself was an exemplar of the duty he thus required, and with such leadership no man could ever be found wanting. He loved the battle! The sound of the cannon was a call to which he never failed to respond. He threw himself into the battle with an *abandon*, which is well described by one of the poets of the war, in the following lines:

> When the battle went ill, and the bravest were solemn,
> Near the lone Seven Pines, where we still held our ground,
> He rode down the length of our fast crumbling column,
> And our hearts at his war-cry leaped up with a bound;
> He snuffed, like his charger, the scent of powder,
> His sword wav'd us on, and we answered the sign,
> Loud our cheer as we rush'd, but his voice rang the louder,
> "There's the devil's own fun, boys, along the whole line."
>
> How he sat his brown steed: How we saw his blade brighten,
> In the one hand still left—and the reins in his teeth!
> He laughed like a boy when the holidays heighten,
> But a soldiers' glance shot from the vizor beneath;
> Up come the reserves to the melee infernal,
> Asking where to go in, through the clearing or pine?
> "Oh, anywhere! Forward! 'Tis all the same, colonel,
> You'll find lovely fighting along the whole line."

Brave, gallant spirit you still live in the hearts of the men of the old "Red Patch Division!"

Mr. Speaker, I must content myself with these few words. It was not my intention to address myself at length to the resolution before the House.

Tariff—Tin-Plate, Sheet-Iron, and Sheet-Steel.

REMARKS

OF

HON. OSCAR L. JACKSON,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 3, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration bill H. R. 9051, and the subject of discussion being the section relating to tin-plate and sheet-iron—

Mr. JACKSON said:

Mr. CHAIRMAN: Judging by experience, I have but little expectation that the majority here will change any part of this tariff bill by reason of discussion, yet I assure you that what I say on the subject under immediate consideration I say in the utmost good faith. I am fully persuaded that if any impartial body of men interested in the welfare of the whole country would fully inform themselves of the facts that they could not fail to become convinced that this bill, so far as it concerns sheet-iron, sheet-steel, and tin-plate, is all wrong, and ought to be changed.

But a Democratic caucus, with more than kingly authority, has decreed that there shall be no amendments to this bill except such amendments as the Democratic members of the committee in charge of the bill shall first approve of, and no arguments offered on our side of the House have any effect.

It is well understood that the committee in charge will not consent to any amendments except in cases where an amendment is absolutely required to secure Democratic votes in doubtful Congressional districts.

It may as well be known once for all that whilst the men who originated this measure are in theory and principle in favor of free trade out and out, that practically this bill is to be molded on the most extreme sectional basis to favor particular localities.

First, and above all, it guarded by high protection the Southern interests of sugar and rice. At a later date it is shaped to save the coal and iron ore of Tennessee and Virginia. Glass is partly saved in the interest of Missouri, and the wood-screws of Connecticut must be taken care of because they are located in a doubtful State. In the course of the general debate on this bill it was not possible for me, even in the liberal time granted to me, to refer at any length to all the interests that I felt were likely to be injured by the passage of this bill. The subject of sheet-iron and tin-plate I consider a most important one, and I am glad of the opportunity I now have of placing myself on record as opposing this bill in all of its provisions affecting these industries.

This bill proposes to admit tin-plate free of duty, and also to reduce the duty on different other classes of sheet-iron and steel.

Tin-plate is but an iron sheet coated with tin, and if the sheet, whether of iron or steel, is coated with a mixture of tin and lead it is terne plate. In either case more than 97 per cent. of the product is iron and steel. Tagger's tin is simply tagger's iron coated with tin.

A large part of tin-plate is used for roofing, so that it comes in direct competition with sheet-iron and sheet-steel. If this bill should become a law two things are apparent. First, we must abandon all hope of encouraging the manufacture of tin-plate in this country; and second, as a large part of the sheet-iron made in this country is used for roofing, the manufacture of sheet-iron must be abandoned. It will be impossible to manufacture and use sheet-iron in competition with free tin-plates.

The sheet-iron industry in this country has not been prosperous because the present tariff allows taggers' iron and tin and terne plates to be imported at 1 cent a pound duty.

The result when tin-plate comes in free is not hard to predict.

It is true, Mr. Chairman, that at present we do not manufacture tin-plate in the United States. But we have demonstrated in the past that we can manufacture it successfully with adequate protection.

Last year we bought from Great Britain $17,000,000 worth of tin-plates. The money to pay for it was sent out of our country and made us that much poorer. It ought to have been kept at home and paid out largely to workmen making the product.

This is an immense industry. It ought to give employment to thousands of our citizens at good wages.

Great Britain makes the greater part of all the tin-plate used in the world, and she has to buy a very considerable part of the tin she uses to make it out of. As I have stated, the tin is but a small part of the material used, and if necessary we could buy it as cheap as Great Britain. But we do not need to buy. Later discoveries show that we have an abundance of tin in this country. Dakota, Wyoming, and other places are rich in this mineral. Let us by protection encourage this industry. It has a great future if Congress will only deal fairly with it. It means an increased production of iron ore, of limestone, coal, coke, and pig-iron. I can anticipate with proper legislation great prosperity in the near future growing out of this industry. But I can

come a little nearer home and to the present in observing the effects of this bill. We have men now engaged in the manufacture of sheet-iron and sheet-steel. Thousands of our citizens are dependent on these industries for their daily bread. If this bill becomes a law they will be driven out of the business and compelled to abandon it.

I assure you that laborers and workmen as well as owners of mills and forges view with apprehension and dread the possibility of this bill becoming law.

I ask to have read by the Clerk as a part of my remarks letters I have received on this subject from practical men engaged in the sheet-iron business, in the district I have the honor to represent on this floor. I know these men to be reliable, and that their statements are entitled to great credit, and I invite special attention to what they say. I know it to be to the interest and welfare of all the citizens of the cities in which their works are situated that their business should be so protected that it may be continued.

But to continue the manufacture of sheet-iron and sheet-steel, and to build up a great tin-plate industry in this country, protection is necessary, and why? Simply on account of the difference in wages between this country and Great Britain. If labor was as cheap here we could make tin-plate as cheap as Great Britain. We ought to be thankful that labor commands higher wages in the United States than in any other country, but if we want to continue good wages we must save our own markets for our own people.

It is said that for several years we have purchased from England nearly two-thirds of her product of tin-plate. Talk about the markets of the world! The very best of them are right here in the United States.

In six years we have paid England over $200,000,000 for tin-plate that should have been made at home.

I am heartily in favor of the amendment striking tin-plate from the free-list. In fact the present duty should be increased, and I urge on the attention of the committee the propriety of protecting the manufacture not only of tin-plate but of sheet-iron and sheet-steel. They are kindred industries and must to a great extent stand or fall together.

In illustration of the remarks I have made on the subject of wages, I will print a statement showing the difference in wages between Great Britain and the United States in the manufacture of plates and sheets.

Occupation.	Amount of work.	Wages.	
		Great Britain	United States.
Roller	100 boxes, IC	$6.87	$23.00
Doubler	do	5.51	11.05
Furnaceman	do	5.20	10.00
Catcher	do	3.02	(*)
Shearer	do	2.17	11.00
Weigher	do	.48	1.08
Roll-turning	do	.48	1.34
Picklers	do	1.46	4.25
Cold rolling	do	1.21	3.60
Catching	do	.22	.56
Opening, girls †	do	.18	.50
Annealing	Per week	17.50	51.25
Tinman	100 boxes, IC	6.00	12.00
Washman	do	6.00	12.00
Cradler	do	2.00	5.00
Helper	Per week	5.46	9.50
Boxer	100 boxes	1.01	2.40
Assorter	Per week	9.72	18.00
Lighting fires	do	4.38	9.00

Mill manager	do	15.79	38.50
Openers, girls †	100 boxes	1.65	3.50
Pickers-off, girls	Per day	.48	.75
Scourers, girls	do	.48	.75
Dippers, girls	do	.48	1.00
Dusters, girls	do	.36	.75
Carriers, girls	do	.24	.50
Reckoner, girl	do	.48	1.00
Total		122.18	274.90

* Included in roller.

† In this country the most of this work would be done by young men and boys.

This list of wages covers only that part of labor employed from bars of iron or steel to the finished plates, and shows the American rates to be 125 per cent. higher than those of Great Britain. The difference in wages in the production of bars in each country is in about the same ratio.

BEAVER FALLS IRON COMPANY,
Beaver Falls, Pa., March 29, 1888.

DEAR SIR: We desire to call your attention to the items in the bill as reported by a majority of the Committee of Ways and Means, which, if passed, would practically paralyze the sheet-iron manufacturer in this country. The new bill proposes to admit tin-plates free, and as about one-third of the sheet-iron made in this country is used for roofing and siding in competition with tin-plates, the business of iron-roofing and siding would have to cease, as it would be impossible to use sheet-iron made in this country in competition with free tin-plates.

There is about 200,000 tons of sheet-iron and tin-plates used in the United States annually for roofing and siding, and out of this only about 50,000 tons is of sheet-iron made in the United States, the balance, or 150,000 tons, being tin-plates and sheets imported.

If with the present duty, three-fourths of all the material used in the United States in this one branch of business can be used from imported material, what would become of makers of sheet-iron for this purpose with tin-plates admitted free?

The bill also proposes to reduce the duty on all light gauges of sheet-iron from No. 20 to thinner than No. 29. We do not think that any manufacturer of sheet-iron in the United States can truthfully say that he is making any money on sheets, or that he has been for a long time; yet in the face of this there is a reduction proposed of $2.24 per ton on No. 20, $2.24 on from Nos. 21 to 25, and $5.60 on from Nos. 26 to 29.

In our case it is a serious matter, as at least two-thirds of our product is used for roofing and siding, the balance is of gauges from Nos. 26 to 29. Should the bill as reported pass, we would be driven out of business and compelled to close up.

We ask that you give the matter your consideration and use your influence to avert the calamity that threatens our business, and instead of letting tin-plates in free have the duty increased to $17.04, as proposed in Mr. RANDALL'S bill, and let the present duties stand as they are on sheet-iron, and have the question disposed of without any more delay than is absolutely necessary, as the long discussion demoralizes business and its hurtful influence can only be exceeded by the passage of the bill as reported.

Yours, respectfully,

BEAVER FALLS IRON COMPANY,
E. C. EWING, *Secretary.*

Hon. OSCAR L. JACKSON,
Washington, D. C.

NEW CASTLE, PA., *March* 14, 1888.

DEAR SIR: Would respectfully call your attention to the proposition to place tin-plates on the free-list and the great damage it would be to the sheet-iron manufacture. If the tin-plates are imported free, it will entirely destroy the iron roofing and siding industry, which now uses over 50,000 tons of sheet-iron annually, at least one-third of the product of the sheet mills. Indeed, I am free to confess that if the roofing trade was taken away from my mill, it would of necessity be compelled to shut down. Not only that, if we had not had the roofing orders, the mill would not have run half time during the year 1887. Instead of being placed on the free-list, tin-plates should be advanced to 2½ cents per pound duty, the same as it is on galvanized iron, and correct an incongruity in the present tariff. If possible, would like to see this change made in the tariff bill as prepared by the Republican minority of the Ways and Means Committee, and would think it advisable to call Mr. RANDALL'S attention to it. Tin-plates imported free of duty means absolute destruction of the iron-roofing industry and a reduction of almost one-half of the number of sheet-mills in the country.

Yours, respectfully,

GEO. W. JOHNSON.

Hon. O. L. JACKSON,
Washington, D. C.

Oklahoma Territory.

REMARKS

OF

WILLIAM S. HOLMAN,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, August 29, 1888.

The House being in Committee of the Whole on the bill of the House No. 10614, to organize the Territory of Oklahoma, and for other purposes, the pending amendment being as follows:

"Strike out the words 'that the price of $1.25 per acre,' in the twelfth and thirteenth lines of section 5, and insert the following:

"'Under the homestead law only, except section 2301 of the Revised Statutes: *Provided, however*, That no person seized of any lands in any State or Territory, or who shall have sold land in any State or Territory within three months before the time of the taking effect of this act, shall be authorized to enter any of the lands covered by the provisions of this act. The Secretary of the Interior shall prescribe all needful rules to give full effect to this provision. *And provided further*, That all provisions of law touching the rights of soldiers and officers who served in the Army of the United States during the late war, entering public lands, shall apply to the lands embraced in this act'"—

Mr. HOLMAN said:

Mr. CHAIRMAN: The subject of opening up portions of the Indian Territory for settlement has been exciting interest for several years. There are men of the present generation who indulged the hope that the humane policy of our fathers would be carried out in good faith, and that what was known as the Indian Territory, extending westward from the western boundary of Missouri and Arkansas, as far west as our old international boundary—I believe the one hundredth meridian—should be forever dedicated and set apart as the home of the Indian, so as to form in the progress of time a great Indian community, an Indian commonwealth where the remnants of the once powerful tribes might be gathered together and form one of the States of the American Union. A noble purpose, worthy of the great men of a former age whose memory the American people delight to honor.

The spirit which animated President Jackson and his contemporaries in setting apart that land for that purpose was noble, patriotic, magnanimous; and I think the people of the United States, when the his-

tory comes to be finally written of the policy of our Government towards the Indians, will regret that that magnanimous policy was not adhered to, and that when we had taken their once vast possessions we did not allow them the opportunity to develop in their own way their capacity for progress and civilization under the paternal shelter of our Government.

But, sir, it became too manifest a few years ago that that policy could not be carried out; that the great States of Kansas, Arkansas, Texas, and Missouri, lying contiguous to this Indian country, found it an impediment in the way of their progress, and accordingly, on their demand, Congress adopted a provision of law prohibiting the President of the United States, who had the power prior to that time to settle friendly Indians in that Territory, from removing any more Indians into that Indian community. And from that time to this that policy has ceased.

The measure abandoning the old policy was not well considered. It was passed on an appropriation bill without discussion, and did not receive that careful consideration which its importance deserved. There has been no reason to hope since then that the humane policy of our fathers could be revived. Our people wanted the land. In view of that fact those who favored treating the Indians justly, if not magnanimously, considered the policy of at least setting off a part of that Territory for these Indians and securing, in a just and honorable way, the balance for the settlement of white people. The 41,102,280 acres constituting the Indian Territory and 3,600,000 acres constituting the Public Land Strip we acquired from Texas are large enough to form two States. It was suggested that the eastern portion should be forever secured to the Indians, while the western portion should be given up to white settlement, progress, and civilization. The western half, with the Public Land Strip, would make a State larger than the State of Indiana.

Two propositions have been before the House since the beginning of the last Congress. The one was in a general way the suggestion of the President, and the bill was drawn up by the late Secretary of the Interior. While the measure embraced all of the Indian tribes and reservations, its provisions related especially to the Indian Territory. It involved an able commission to treat with the tribes and exercise important powers on all Indian questions, including the surrender of lands to the United States. While its general application was to all the Indian lands, it was to have special application to the Indian Territory.

I indulge the belief if that bill suggested by the President had become the law in the first session of the last Congress this trouble over the Indian Territory would have long since terminated. Negotiations would have been entered into with these Indian tribes, and the western portion of the Indian Territory, or a large portion of it, would have been opened up to settlement by our white people, and it would have all been accomplished without any injustice, hardship, or harsh policy towards the Indian tribes, treating them with the justice and magnanimity which inspired our fathers in setting apart this territory for them more than half a century ago.

But the gentlemen favoring the Oklahoma bill were not content with that policy, expressed by the bill drawn up by the Secretary of the Interior; they were not satisfied with anything less than the immediate organization of the Territory of Oklahoma; treaties to be made with the tribes after the Territory was organized, instead of before—either that or there should be no legislation on the subject at all.

That is the condition in which we now stand. Thus this work has been delayed nearly three years. For myself, having visited that Territory with other members of the House as a member of a committee ordered to do so by act of Congress, having had conferences with these various Indian tribes and with their chief men, I am satisfied the policy proposed by the Secretary of the Interior substantially should have been adopted and carried out. It was a just and honorable way to accomplish the purpose which this bill seeks by indirection. Although I shall not vote against the present proposition if the amendment proposed by the gentleman from Illinois [Mr. PAYSON] shall be adopted, I regret sincerely that gentlemen would not accept the honorable, direct, and practical method proposed by the Secretary of the Interior. They have not only postponed the settlement of this question for years, but they have left the ten thousand people on the Public Land Strip utterly without a government.

Mr. BLOUNT. I wish to ask if the Secretary of the Interior is in favor of the present bill?

Mr. HOLMAN. The Oklahoma bill, you mean?

Mr. BLOUNT. I mean the pending bill.

Mr. HOLMAN. The late Secretary of the Interior favored and prepared the bill to which I have referred, and which I had the honor to introduce.

Mr. BLOUNT. So I understood, but what I ask is if he favors the pending measure?

Mr. HOLMAN. Oh, with reference to that I can not answer, for I do not know. I never, I think, heard him express his opinion of it. I do not know the views of the present Secretary of the Interior on the bill I introduced, either, or on the pending bill. Although that bill was prepared by the late Secretary I reported it from the select committee appointed by the House in the Forty-eighth Congress to inquire into Indian affairs. I have thought proper to state this much, Mr. Chairman, in order to place this question in its proper attitude before the committee. If any one complains of delay they will readily see in the foregoing statement the cause of it.

There is much feeling upon this matter, especially in the Northwest. Everybody understands that, and the question has been between the two conflicting methods of procedure for the accomplishment of the same purpose. The question now is whether the pending bill shall pass or not. Kansas demands its passage; Missouri and the adjoining States——

Mr. WEAVER. And Iowa.

Mr. SPRINGER. And Illinois.

Mr. HOLMAN. The adjacent States generally demand its passage, regarding the Indian Territory as standing in the way of their progress, and our people want the land, and I take it for granted that in some form or other, either in the form proposed by the gentleman from Georgia [Mr. BARNES], which is substantially the plan of the Secretary of the Interior, or in the present form, the bill now pending will become ultimately a law.

And yet, Mr. Chairman, the pending bill is one of the most peculiar measures that I ever knew to be pending in the House. It applies with certainty to a little over 3,600,000 acres of the public land, the Public Land Strip organizing a Territory over that limited quantity of land. You can not say with certainty that it goes an acre beyond that. The Government has for fifty years recognized the old international line on the Southwest, the one hundredth parallel as the western boundary of the Indian possessions; that is to say all the lands, other than Oklahoma, lands west of those owned in fee-simple by the five civilized tribes, stand substantially on the same footing as the small tract known as Oklahoma, which contains a little over 1,800,000 acres. That is to say they are lands on which the Government might settle friendly Indians, but not otherwise use; and to that extent at least the tribes, the five civilized tribes, have an interest in the lands beyond the mere matter of possession. The Government has recognized that for more than half a century. The civilized tribes claim, taking that view of the case, that they have an interest in the lands of the same character as the Creeks and Seminoles have to Oklahoma which they surrendered to the Government for the settlement of friendly Indians—that is, a right to have civilized friendly tribes settled upon them. Here the present right of the United States over the land to the western line ceases.

That is the condition of things, that is the character of the title that you must extinguish even as to the lands west of the Oklahoma tract, occupied by the Arapahoes and Cheyennes and other tribes under Executive orders. So the result is that beginning as we do now in this legislation, instead of negotiating first, we organize a Territory over a small district of land, a Territory with governor, judges, and the other necessary officers for Territorial organization, a small body of people, a people it is true who ought to have had some form of government long ago; but they must wait for this general plan. Nothing like it has occurred in our history before, and all this results from the fact that gentlemen are determined to force the measure in their own way instead of permitting the views and practical and honorable method of the Secretary of the Interior—the late Secretary I refer to—to be carried out, and that is to negotiate and extinguish the Indian title first and then organize the Territory. The gentleman from Illinois says that we can not negotiate unless we first pass the bill. I dissent from that and hope the gentleman will give the committee the reasons to substantiate that view of the case.

Mr. SPRINGER. I will answer the gentleman if he will permit me now.

Mr. HOLMAN. Very well.

Mr. SPRINGER. The council of the Cherokee Indians now is in control of the Cherokee Live Stock Association, so much so that that council, in the face of the proposition from a cattle company in Texas to pay $150,000 a year for the use of the lands, passed through the council the proposition with regard to the land which Chief Mayse vetoed, and the council tried to pass it over the veto.

Mr. HOLMAN. I understand what the gentleman refers to, but it is of the same character as the question which is raised, but not going quite to that extent, in reference to the railroad interests involved here. It is, at the best, mere speculation; but there are two features or two sides to that question. In regard to the railroad interest I do not pretend to assert that the railroads have an interest in the lands or will acquire any land on the acquisition of the Indian title by the Government; but the committee that the House appointed to inquire into Indian affairs cautiously suggested in their report to the House, in the Forty-eighth Congress, that instead of extinguishing the title of the Indians the land should be held in some form of trust, in order to avoid the possibility of either of the two railroad corporations running through the Territory obtaining any of the lands, for it would be a very mortifying result, in view of the past experience of this Government, if, after all the precautions taken, by a blunder any portion of the lands which ought to be dedicated as homes for the people should become the property of either of these railroad corporations upon the extinguishment

of the Indian title. I know that no gentleman desires to see that done.

Mr. SPRINGER. Let me ask the gentleman in this connection if the Forty-ninth Congress did not pass a bill forfeiting all the lands of the Atlantic and Pacific Railroad Company, and if the gentleman does not claim credit to Congress for passing that act?

Mr. HOLMAN. I claim a little credit, as well as my friend, for that legislation. But taking the Atlantic and Pacific, that road had been constructed to Vinita and as far west as the Arkansas River, to my personal knowledge, before the act was passed. I do not admit or believe that if the road had been completed clear through the Territory out of time it gave the corporation any right to the land. But that is still an open question.

It had, to my own knowledge, to the Arkansas River in September, 1885, and it is said reached near the west boundary of the Creek Nation and farther west at a comparatively early day after that, and long before we passed that bill declaring a forfeiture, but I do not know that; but I have inquired of some gentleman of the committee to what extent westward the Atlantic and Pacific Railroad had been constructed when that declaratory act of forfeiture was passed. I have tried to ascertain the fact, but I have not ascertained it yet. No one seems to know.

Mr. HEARD. I will state to my friend, the gentleman from Indiana, that to my own personal knowledge this road was being operated as far as Tulsa in 1883 or 1884.

Mr. WEAVER. But it never has got into Oklahoma.

Mr. HEARD. I suppose not.

Mr. HOLMAN. It has been stated that that road had been constructed through a considerable portion of the Oklahoma tract to a point on the northern fork of the Canadian River not far below Fort Reno, and Fort Reno is about 2 miles, perhaps more, west of the western boundary of what is known as Oklahoma. But on what authority and at what time it was so constructed I am not able to state.

Mr. SPRINGER. That is a mistake.

Mr. HOLMAN. I do not know it as a fact, but I know, as I have stated, that as early as September, 1885, it had reached the Arkansas River. The Atlantic and Pacific corporation ought not to have any of this land, and I hope no mistake will be made. To buy land for the benefit of that corporation would be a sad mistake, but more than that, it would be simply infamous.

Mr. PERKINS. Will the gentleman from Indiana permit me to make a suggestion? I know at the date of the passage of the act forfeiting the lands of the Atlantic and Pacific Railroad in the Forty-ninth Congress this road was not constructed west of the Arkansas River, west of the town of Tulsa.

The CHAIRMAN. The time of the gentleman has expired.

Mr. PAYSON. I ask unanimous consent that the gentleman may have permission to proceed.

Mr. SPRINGER. I ask unanimous consent that he may be permitted to speak twenty minutes, with a like privilege on the other side if it is desirable.

Mr. HOLMAN. The gentleman from Missouri [Mr. STONE] desires to be heard on this pending proposition.

Mr. SPRINGER. This is a request for an extension of the whole debate for twenty minutes on each side.

The CHAIRMAN. The gentleman from Illinois asks unanimous consent that the gentleman from Indiana be allowed to proceed twenty minutes, and that a like time be allowed to friends of the bill.

Mr. BARNES. That means forty minutes more on this section.

Mr. SPRINGER. That is all.

The CHAIRMAN. Is there objection? The Chair hears none.

Mr. HENDERSON, of Iowa. I would like to say to the gentleman from Indiana [Mr. HOLMAN] that if there is any possible job in this bill I wish he would show it.

Mr. HOLMAN. As to the effect of this measure I wish to say that the only thing to be regretted is the absence of positive information as to the facts. I think the opinion of the Attorney-General should have been taken as to the effect of the two acts, the act of July, 1866, making the grant to the Atlantic and Pacific Railroad, and the act of forfeiture. I should have been glad to have his opinion on the effect of these two measures before further legislation was had. I take it for granted that it will not be obtained; and I take it for granted that if we proceed with the consideration of this bill certainly every effort should be made to avoid a mistake. If the extinguishment of the Indian title will give any of this land to either of the railroad corporations it clearly ought not to be done. In 1886 I suggested a trust for these lands if we acquired them, rather than a purchase, to avoid the possibility of either of the two railroad corporations acquiring any interest in the lands.

I have said all I desired on the subject. I now come directly to the pending proposition: How far the Government of the United States can now depart from a policy substantially settled of holding lands for the purpose of securing homes for their people, and not only homes for their people but homes for their landless people? It is one of the most gratifying facts in our history that the highest order of statesmanship and the purest patriotism organized our land system. You have all, gentlemen, had occasion to exult in that part of our history.

I have read it with delight and astonishment. With apparently unbounded landed possessions, even when their western boundary was the Mississippi River, yet when that vast country known as the Louisiana purchase, which extended their western boundary to Oregon and the Pacific Ocean was added, it seemed a region so vast as to require centuries even to explore it. Yet our fathers husbanded the public land of that vast domain with the same fidelity and solicitude for the future that a small state would have done with only a limited territorial possession.

And it is an interesting fact to know that with all the countless schemes for grants of public lands that must have been pressed upon Congress at that early period, when emigration began to move westward after the Revolutionary war toward the rich lands northwest and southwest of the Ohio, with all the countless schemes of colonization, formed both at home and in other countries, with great landed estates, the policy of every civilized nation on the globe, there were never but two large bodies of land ever sold by the United States, pressed as they were for money to meet the debts of the Revolutionary war—one, 892,900 acres, known as the purchase of the Ohio Company—Marietta, Ohio, being a part of that purchase—sold for $642,856.66, and the other, 272,540 acres, to John Cleaves Symms, for $189,693.

Both these great sales together make only a little more than a million of acres, and this fact shows the extraordinary fidelity of the men who so long controlled the affairs of this Government through successive generations, and down to the present generation; how mindful they were of posterity and how anxious that the lands of this country should be held in small freehold estates by the American people. I say nothing of the last quarter of a century. It was then less clear than it is now that upon the multitude of these small freehold estates depends the permanency of our free institutions.

There is no hope now, as all considerate men see, of preserving republican institutions with our ever rapidly increasing population swelling the multitudes of our cities with startling rapidity, unless the great body of the people are invested with an actual interest in the soil of their country. It is on the conservative power of these freeholds that our free institutions must rest. Therefore any measure that seeks to enlarge the number of freeholds is a measure of public safety and worthy of the highest consideration of the American Congress. Those freeholds, even if they are but a half or a quarter section of land, are better than fortifications and armed bulwarks for the support of free institutions and free government [applause]; and any measure of policy that will tend to diminish the number of these freeholds by an unwise appropriation of the public land still under national control ought not to be approved by Congress, while any measure that tends to enlarge their number ought to commend itself to us as the representatives of the American people.

Now, what are the facts before us? My friend from Illinois [Mr. SPRINGER], who is generally so careful and accurate, misapprehends the spirit which actuated our fathers in relation to the public domain. They never sought to make the public lands a source of speculation or profit. Even when there was the greatest anxiety to pay the debt incurred in the Revolutionary war our fathers declined to sell the public lands in large bodies, and from the beginning the public lands were sold at a nominal price. When the pre-emption law of 1841 passed there seemed to be still some necessity for drawing some revenues from the public lands, but it was legislation in the proper direction, tending toward the ultimate result of securing the land to actual bona fide settlers. It was a measure that gave the actual settler priority over all others.

Mr. SPRINGER. Can the gentleman tell me what were the receipts from the sales of public lands last year?

Mr. HOLMAN. The receipts last year were larger than ever before.

Mr. SPRINGER. Eleven millions of dollars?

Mr. HOLMAN. Between eleven and twelve millions, according to my recollection; larger than ever before. But let me mention another fact to my friend to show the importance of this measure and securing this land to our landless people, and to show how little land we have left that is fit for agricultural purposes, in spite of the impression to the contrary. It has been found necessary this session to suspend your land laws, except the homestead law, in respect to public lands in the five public-land States of the South.

All men who would speculate in public lands now see the advantage of entering them for speculation, because the day comes rapidly upon us when no public land adapted to cultivation without irrigation will be found within the United States. The commission appointed some years ago to inquire into the condition of the public domain, with Major Powell at its head, undoubtedly underestimated the amount of arable land remaining when they put it at 25,000,000 acres. That was clearly a mistake, but not a mistake of the commission, for the statistics were not compiled by them, but at the present time it is reasonably certain that all the public lands adapted to agriculture, lands where the individual citizen with his wife and children around

him, without the aid of artificial irrigation, can build up a happy and prosperous home, does not exceed 75,000,000 acres.

Mr. HENDERSON, of Iowa. Does that include Indian reservations?

Mr. HOLMAN. It includes Indian and military reservations. Of the Indian reservations, the eastern portion of the Indian Territory and about two-thirds of the great Sioux reservation are the only two large bodies of Indian lands remaining that are arable. Of the lands of the Navajoes and of the Apaches large bodies are worthless for any other purpose than those to which Indians can apply them and for pasturage, not being adapted for agriculture as a general rule in any possible way. They are lands, except here and there a valley, not adapted to agriculture under any possible conditions.

Mr. SPRINGER. For the sake of accuracy the gentleman will allow me to state that the amount received as proceeds of the sales of the public lands for the year 1887 was $12,289,000.

Mr. HOLMAN. Mr. Chairman, the rapid exhaustion of the public domain, indicated by actual sales under existing laws, points out the importance of making no mistake as to how the twenty odd million acres now under consideration shall be disposed of. Let me state more carefully the facts in regard to the cost in money of the public domain and receipts from the sale of public lands. The following table presents the cost of all cessions and purchases made east of the Mississippi, and of all purchases made west of the Mississippi. Happily, except as the result of the Revolutionary war, we have acquired no land by conquest.

Cost of and receipts from the public domain to June 30, 1883.

COST OF THE PUBLIC DOMAIN.

Purchases and cessions	$88,157,389.98
For Indian annuities and titles, etc	208,776,031.24
For surveying and disposition	55,047,739.10
Total cost up to June 30, 1883	351,981,160.32

RECEIPTS FROM THE PUBLIC DOMAIN.

Total receipts up to June 30, 1883	233,576,861.04

So that from the origin of the public domain to June 30, 1883, the cash expenditures by the United States on account of the public domain was $351,981,160.32, while the receipts from land sold was $233,576,861.04, a difference of $118,404,299.28. The cost of the public domain as above stated includes $6,200,000 paid to the State of Georgia for her cession and Yazoo scrip claim, 1802.

Mr. STONE, of Missouri. Eighty-eight million dollars without that?

Mr. HOLMAN. No, sir; $88,157,389.98 including that. The foregoing statement establishes the fact that while in the earlier years of our history Congress was often greatly pressed for means to meet the debt contracted during the Revolutionary war and the war of 1812, yet the public lands were never disposed of exclusively for the purpose of raising money. And yet it must be admitted the revenue derived from the public lands was never lost sight of, and Congress habitually took into account their cash value.

Mr. SYMES. Is that the gross amount?

Mr. HOLMAN. That is the gross amount, and that includes the 2, 3, and 5 per cent. fund paid to the different States under the several acts of Congress. So that, as indicating the policy of the United States through all these years, covering now a little more than a century (because our land system may be regarded as having commenced in the year 1785), our public lands, instead of being held and sold as a source of speculation and profit to the Government, have been held in the main with an eye single to securing homes for the people. That magnificent display of prosperity which gladdens the eye of every American citizen as he travels through the great States of his country and gladdens the heart of every lover of freedom and of the human race, this widespread scene of happy and prosperous freeholds, the glory of the grandest period of human progress, has been the result of that wise policy of our fathers which made the creation of prosperous homes the chief object of Government and to that end hoarded and reserved the public land. Homes on the public domain were deemed of more value than revenues of Government received from their sale.

Mr. SPRINGER. The gentleman's figures come down to 1883. During the five years since that time the receipts from public lands have averaged nearly $10,000,000 a year.

Mr. PAYSON. Let me supplement the statement of my colleague [Mr. SPRINGER] with the remark that the expenses for extinguishment of the Indian occupancy titles during the years he has indicated have averaged nearly $6,000,000 a year; so that in this matter "one hand washes the other."

Mr. HOLMAN. Yet that is true, and you must add to the account the $11,000,000 to be paid to the Blackfeet and other Indians of Montana north of the Missouri for 17,000,000 acres acquired from them during the present session, and yet you wisely applied the homestead principle to that land. I had the honor myself to suggest the homestead provision in the form as it appears in that law. This principle I admit was not applied in the act proposing to take the lands of the Sioux Indians. In that case 50 cents an acre, I admit, was required of the settler in installments. There have been one or two other instances of the same kind, where the amount of land involved has been small. But in the case I have just mentioned, it applied to a region of country of special value. Gentlemen may not be aware of the fact that the 11,000,000 acres which you proposed to purchase from the Sioux, extending over the Black Hill region to the Missouri River, is a better body of land than the average of the Indian Territory; for while the eastern portion of the Indian Territory embraces very fertile land, equal to the average of Eastern Kansas, the western portion is not specially valuable for agriculture, though admirably adapted to pasturage. Besides this, the interests of railroads largely affected the action of Congress in regard to the Sioux reservation.

Mr. SPRINGER. Were not the settlers required to pay for those lands?

Mr. HOLMAN. I have stated that in that case 50 cents an acre was required to be paid; but as to the other seventeen millions which I have just mentioned not a cent was required from the settler. There the homestead principle was strictly applied.

Mr. Chairman, I am in favor of the proposition of the gentleman from Illinois [Mr. PAYSON] as now modified. It is not simply a homestead provision, but it has a merit beyond that. It is a measure to actually secure homes to your landless people as against all others, actually increasing the number of homes in the country to the extent that this land can provide them. You have been appropriating, or proposing to appropriate, millions of dollars for the defense of your borders, and, whether expressed or not, for your internal safety, by the erection of fortifications and the enlarging of your Navy; yet every American citizen of intelligence knows that the addition of a single homestead where the citizen raises up a family of children in virtuous industry will be a better safeguard to the nation than vast expenditures for military preparations.

Mr. SPRINGER. I concede that. Now, I desire to ask the gentleman whether the bill reported from the Committee on Public Lands and passed by Congress at this session, to amend the land laws so as better to secure lands to actual settlers, contained any such provision as this amendment, that a person who held or owned any land theretofore could not enter upon the public domain.

Mr. HOLMAN. I am glad my friend has asked that question. I will state to him our history on that subject. The pre-emption law enacted in 1841 contained a provision that no person should be entitled to the benefit of that law who was the owner of some limited quantity of land (I can not state the amount), or who should have sold land in the same Territory for the purpose of acquiring land under the pre-emption law, or who shall have sold lands in some Territory to acquire land under the pre-emption law. That was the provision of the pre-emption law of 1841. The homestead law was defective in two things. It was, I may say, defective in three respects. It was defective, *first*, on account of the commutation clause, which enabled the speculator to acquire title at an early period by paying $1.25 per acre for the land. It was defective in the second place because it was not more considerate of the importance of reserving the public lands for the actual settlers by repealing all other laws for entering public land adapted to agriculture. The great defect was that it did not repeal all other laws for the disposing of the agricultural public lands. If those grave errors had not occurred in that important law the laboring men of this generation and of generations to come would have had a highway of escape, an outlet from the curse and oppression of monopoly, an outlet and highway of hope for millions of our people. I say it would have been the good fortune of our people if those three provisions had been incorporated into that homestead law of May 20, 1862.

Now, if that can be accomplished in regard to this bill I wish to see it done, but I am not willing in view of the past history of our country to withdraw any portion of our public lands from the actual settlers. I am not willing to throw open any portion of our public lands to speculation.

Mr. SPRINGER. Let me ask the gentleman from Indiana a question.

Mr. HOLMAN. Certainly.

Mr. SPRINGER. Does his bill contain these provisions?

Mr. HOLMAN. It contains for the first time substantially these limitations. It does not go to the full extent named in the pending proposition. It provides that no person shall be entitled to the benefit of the homestead law who is the owner of a quarter-section of land.

Mr. SPRINGER. I am in favor of that.

Mr. HOLMAN. And absolutely restricts the entry of public land adapted to agriculture to actual bona fide settlers, that good faith being guarantied by an actual residence on the land and cultivation of it for five years. I have always insisted that the public lands shall be withheld from speculation and reserved for actual settlement.

Mr. SPRINGER. Yet the gentleman carried that defect in the homestead law in the very bill he introduced at this Congress. Why did it not occur to him then as it occurs to him now?

Mr. HOLMAN. It did occur to me, and so far as that is concerned I went as far as I could, and for the first time those provisions are now in a homestead bill, the bill now awaiting the action of the Senate.

Mr. SPRINGER. I wish to call the gentleman's attention to the

fact that there are many persons who have small holdings which are mortgaged who wish to sell out and go out to Oklahoma and make actual settlement upon these lands if they are permitted to do so. Under this amendment they will be prevented from doing so.

Mr. PETERS. If a man only owns a lot in a cemetery he will be barred from the privileges by this act.

Mr. SPRINGER. Yes, if he only owns a lot in a cemetery.

Mr. HOLMAN. Let me ask the gentleman a question. Does he intend by this bill to allow men all over the country to leave their farms and go down to Oklahoma and enter these lands to the exclusion of the landless and homeless people?

Mr. SPRINGER. Under this measure a settler going upon these lands must go there and live upon the land and cultivate it for three years. It contains the same provision of the homestead law which has been so much commended by the gentleman from Indiana. The settler is compelled to remain in occupancy of the soil for three years.

Mr. HOLMAN. My friend has no objection to men of landed estates going there and getting these lands into their possession?

Mr. SPRINGER. If the gentleman will suggest any amendment which will keep Jay Gould or which will prevent any other millionaire going out and settling on 160 acres of this land I undertake to say it will be accepted and adopted as a portion of the bill. Whoever occupies any of these lands for actual settlement will have to cultivate the soil for three years.

Mr. HOLMAN. As I have already said, I am in favor of retaining all the lands belonging to the public domain for the exclusive use of actual settlers for homes, under the safe and wholesome provisions of the homestead law; but I am against disposing of them for purposes of speculation. This bill is not a homestead bill; it does not contain the safeguards of the homestead law as amended by the House; it will not secure these lands to our landless people. This Indian Territory, situated in the midst of populous States, ought not to be given up to speculation. The western half of it can with justice to the Indians and with their consent be opened up to white settlement. But gentlemen ought not to overlook the importance of the lands we are to acquire; the western half of the Indian Territory and the Public Land Strip will form a State about as large as the State of Ohio. If you dedicate that land to the single purpose of securing homes for your landless people, it will be settled by landless men from all sections of the Union, who with scanty means will hurry forward with their wives and children to secure that priceless blessing, an independent home. If you open it up under the provisions of this bill at $1.25 an acre and a nominal residence of three years, it will be taken up at once by the enterprising population of the States around it, and the actual number of your independent freeholds will not be increased. Instead of landless citizens, men of landed estates and homes will at once enter these lands for speculation. To them the $1.25 is a nominal price; it is in fact a nominal price for lands which, while of little value to the Indian, are worth from $5 to $50 an acre to the men whose labor will transform them into prosperous homes.

In the name of labor I demand that this last great body of arable land you will control shall be secured to your landless and laboring people, every quarter section adding to the number of your independent homes.

I am not willing that the interests of railroads for the rapid development of the wealth of this region of country, or the interests of prosperous towns and cities on its borders, or of organized bodies of capitalists shall be considered in disposing of this 24,000,000 acres of land. I entreat you, gentlemen, to devote this public possession, when it shall be rightfully under your control, to the sacred object of securing homes to your laboring people, the landless and homeless.

I am in favor of opening up the western part of the Indian Territory to white settlement in a manner just to the Indians. I think I had the honor to first suggest it to the House, as chairman of a committee appointed by the Speaker on the 4th of March, 1885, of which Mr. CANNON, Mr. PEEL, Mr. HATCH, and Mr. RYAN were members, to inquire into Indian affairs. In the report made to the House by that committee the following views are expressed:

The civilized nations—Cherokees, Chickasaws, Choctaws, Creeks, and Seminoles—and all of the other more advanced tribes are in the eastern part of the Territory. Here the principal progress in agriculture, as well as in general advancement, has been made, while an extended portion of the west is occupied by the Cheyennes, Arapahoes, Wichitas, Kiowas, and Comanches, with a united population of 7,746, who have made comparatively little progress, with very unimportant improvements and none of a permanent character.

It is very manifest that if it is the policy of Congress to exclude the further settlement of tribes in the Territory, the interests of the Indians, as well as the Government, require an important change in the condition of this great Territory at an early day.

While it is true that extensive regions of this Territory are leased by the tribes for pasturage, including all of the Cherokee Outlet west of the Arkansas River, and is for the present a source of revenue to the tribes, yet the recent experience in the Cheyenne and Arapaho reservation, and the irritation manifest in several tribes whose lands are overrun by vast herds of cattle, passing without authority from one reservation to another, taking off with them the small herds of cattle owned by Indians, indicate the peril to which these leases expose the peace of the country. Besides, in most instances these leases tend to diminish the opportunities, as well as the motives, of the tribes for engaging in agricultural employments, and will, in the opinion of the committee, greatly interfere with any efforts which shall be made to encourage the tribes in agricultural pursuits.

The lease of the Cherokee Outlet is, perhaps, the only exception, and that outlet is remote from the lands actually occupied by the Cherokees; but the great herds of cattle on this outlet may seriously affect the tribes living south of it.

This method of rendering these vast pasture fields productive, while not tending to the civilization of the Indians, threatens constantly the peace of the country, and ought not to become a permanent policy if the substantial progress of these tribes in industrial employments is mainly to be considered, and such surely is the duty of the Government.

It would seem that these considerations induced the legislature of the Creek Nation during the past summer to decline leasing their unoccupied lands, while the Sac and Fox Indians, under chiefs of great sagacity, have entered into a lease of a portion of their lands on the condition that a permanent fence should be constructed which would protect the rest of their lands from herds of cattle wandering from the lands leased by a neighboring tribe.

In the heart of this Territory is situated the tract of land containing 1,887,800.47 acres, known as "Oklahoma," being a part of the land purchased by the Government at 15 and 30 cents an acre by treaties made in 1866 with the Creeks and Seminoles, a tract of land comparing well in fertility and streams of water with the southern portion of the State of Kansas. This Oklahoma tract is surrounded on every side by lands which the Government by treaties or agreements have ceded to Indian tribes. It is manifest that the Government can not, consistently with its agreement with the Creeks, permit this tract of land to be occupied except by Indians; and it will be seen by reference to the testimony (which appears in the appendix) taken by the committee at Muscogee, in the Creek territory, that a council held by delegates from all the civilized tribes consider this question of Oklahoma as one common to all of them. It is certain, in the opinion of the committee, that the tribes will not consent to the occupation of Oklahoma by white settlers. They seem to rely with confidence on the good faith of the Government.

While the settlement of the comparatively small tract of land known as Oklahoma seems wholly impracticable, in view of the obligations resting on the United States in their engagements with the Creeks and Seminoles, there is reason to believe that the Government without serious difficulty can, with the consent of the tribes interested, secure such a concentration of the western tribes in Oklahoma and further east as will open up for general settlement of white people a large portion of the western part of the Territory.

It would undoubtedly be a great benefit to the tribes before named who occupy the western portion of the Territory to remove farther east, and of very great benefit to the Government, not only in opening up for general settlement an extensive region of country, but by greatly diminishing the expense of providing for the good order and progress of the Indians, and extinguishing the motive for the unlawful invasion of this Territory by organized bodies of white men.

The present order of things is necessarily expensive in many respects—the transportation of supplies into regions remote from the railways, the support of a large body of men at different agencies. There are three military posts in this remote region occupied by a small number of people.

The opinion was generally expressed by those well acquainted with the Indians and the general situation that the concentration of all of these tribes in the eastwardly portion of the Territory was entirely practicable, and that it would be greatly beneficial. The opening up to settlement of this western portion of the Territory would, of course, involve the Cherokee Outlet, 57 miles wide, stretching along the southern boundary of Kansas. This strip of land is held by the Cherokees on the same condition on which the United States hold Oklahoma (except in the matter of compensation)—that the United States might settle friendly Indians upon it.

It can hardly be doubted that the intelligent Cherokees will see the general benefit to themselves and their kindred of the concentration of the Indians of the Territory in a region ample for their progress, growth, and development, removing the constantly growing irritation which the presence of a large body of unoccupied land tends to create in our landless people, and at the same time securing to them the reasonable value of the land surrendered.

The committee do not say that views favorable to the policy of surrendering to white settlement any part of the Indian Territory were expressed by the chiefs at that conference, but, on the contrary, it was manifest that the leading men of the five nations are earnest in adhering to the present engagements of the Government as the only safe policy for their tribes, and are fearful of the result of any modification or change. But still it is believed that, with the good faith of the Government assured, these tribes will readily see the benefits which would result to them from their greater concentration in the eastern section of the Territory. It is proper to remark that the leading men of this Territory seem to be exceedingly well informed as to the treaties, agreements, laws, and patents under which the lands of the Territory are held by the tribes.

The American people are not only bound to maintain untarnished their faith and honor in dealing with these remnants of the once powerful tribes which in former ages ruled this vast country, and have gone down in a brave but hopeless struggle with our advancing civilization, but can afford to act with justice, magnanimity, and forbearance towards them. No clamor of greedy avarice should tempt the American people to deal unjustly with these people, now completely at their mercy, in this final adjustment of their Territorial possessions and their relations to Government.

But in relation to the Indian question in general it can now be clearly seen that the period for this final adjustment of their landed possessions and the extent to which their support shall be a charge upon the national Treasury or upon their own resources has been reached. Every reservation is surrounded with an aggressive and growing white population. No further removals can take place except by the consolidation of the tribes. No lands except the waste and barren lands south and east of the pastoral Navajoes can be added to their possession. The wild herds and flocks that so long furnished the race clothing and food are gone, and they must at least in some degree accept the methods and conditions of the civilzation hitherto so fatal to the race, or disappear. The philanthropy of our people will in the early future be put to a severe test in deciding whether they shall on just conditions be permitted to work out their own advancement in civilization and government and survive as a part of the nation, or disappear as a people under the benevolent but utopian theories that the force of education and law will elevate them at once to the plane of the white race.

In view of the facts above presented, the committee are of the opinion that the final location of the tribes and the landed estates which shall be held by them with a view to their permanent settlement and improvement should be determined at an early period, and that in consideration of the magnitude of the subject, both as to Indian tribes and to the Government, and the solicitude that must be felt by the whole people that this adjustment should be made on principles of justice and a high regard for national honor the committee recommend the creation of a commission of six eminent citizens, three detailed from the Army and three appointed by the President from civil life by and with the advice and consent of the Senate, who shall perform the duties and exercise the powers touching the subject mentioned in this report, specified in the draught of a bill which is herewith respectfully submitted to the House.

The members of the committee are unanimous in the opinion, after a careful consideration of the subject, that the lands, as well in the Indian Territory as in the various reservations, which shall be ultimately found not required for the

Indians or the Indian tribes, and which, with their consent, ought to be disposed of for their benefit, should not be purchased by the Government, but should be held and disposed of by the United States, in trust for the tribe interested, to actual settlers only, on an extended period of time. Such a system avoids complications, is perfectly just to the tribes, and at the same time promotes the interest of the settlers, and, it is deemed proper to add, will enable the Government to dispose of these surplus lands gradually, and through a prolonged series of years—a policy believed to be of the highest importance to the people of the United States.

It will be seen that the real difference between the committee of the House which made that report and the Committee on Territories which urges the passage of the pending bill is as to the method by which the western part of the Indian Territory should be secured and opened up to white settlement.

I again express the belief that if the policy recommended by the committee appointed on the 4th of March, 1885, had been adopted and the bill it reported had been passed the Territory of Oklahoma could now be organized, not a part of it, but the whole proposed territory, without embarrassment, while justice would have been done to the Indian tribes. The pending bill proposes to throw open the great body of land proposed to be organized into the Territory of Oklahoma, while the bill of that committee would have ultimately secured them to actual and bona fide settlers without the possibility of either of the great railroad corporations which traverse the Indian Territory securing one acre of the land covered by the questionable grants they obtained from Congress.

The Silver Question.

SPEECH

OF

HON. RICHARD P. BLAND,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, August 29, 1888,

On the silver bill.

Mr. BLAND said:

Mr. SPEAKER: I propose to submit a few remarks upon this subject and to show the record of the Democratic and Republican parties in regard to the question of silver money. The following resolution was adopted by the Republican convention at Chicago last June:

The Republican party is in favor of the use of both gold and silver as money and condemns the policy of the Democratic administration in its efforts to demonetize silver.

The Republican party is to be congratulated upon its change of front upon this question.

This was the first time this party ever mentioned the subject of silver coinage in its platform since the Republican party demonetized silver in 1873. The Democratic party, however, in its platform at Cincinnati in 1880 and at Chicago in 1884, declared in favor of a currency consisting of gold and silver and paper convertible in coin. This platform of 1884 was also readopted at St. Louis in June last.

To show the duplicity of the Republican party in denouncing the present Administration for recommending the suspension of the coinage of silver I shall give a brief history of the attitude of the two parties upon that subject.

The coinage of silver was authorized by the act of February 28, 1878. In December following Secretary Sherman objected to the law, and recommended a further limitation of the coinage in the following language found in his annual report to Congress of that year:

The Secretary therefore earnestly invokes the attention of Congress to this subject, with a view that either during the present or the next session the amount of silver dollars to be issued be limited, or their ratio to gold for coining purposes be changed.

In his annual report for 1879 Secretary Sherman repeats his recommendation for suspension of silver coinage in the following language:

In the last annual report the Secretary stated:

"It would seem to be the best policy for the present to limit the aggregate issue of our silver dollars, based on the ratio of 16 to 1, to such sums as can clearly be maintained at par with gold, until the price of silver in the market shall assume a definite ratio to gold, when that ratio should be adopted and our coins made to conform to it; and the Secretary respectfully recommends that he be authorized to discontinue the coinage of the silver dollar when the amount outstanding shall exceed $50,000,000."

He again respectfully calls the attention of Congress to the importance of further limiting the coinage of the silver dollar. The market value of the bullion in this coin has been during the past year from 10 to 16 per cent. less than the market value of the bullion in the gold dollar. The total amount of silver dollars coined to November 1, 1879, under the act of February 28, 1878, was $45,206,200, of which $13,002,842 was in circulation, and the remainder, $32,203,358, in the Treasury at that time. No effort has been spared to put this coin in circulation. Owing to its limited coinage it has been kept at par; but its free coinage would soon reduce its current value to its bullion value, and thus establish a single silver standard. The inevitable result would be to exclude gold coin from circulation.

It is impossible to ascertain what amount of silver coin, based upon the ratio of 16 of silver to 1 of gold, can be maintained at par with gold, but it is manifest that this can only be done by the Government holding in its vaults the great body of the silver coin. It would seem that nothing would be gained by an unlimited coinage unless it is desirable to measure all values by the silver standard. The Secretary can not too strongly urge the importance of adjusting the coinage ratio of the two metals by treaties with commercial nations, and, until this can be done, of limiting the coinage of the silver dollar to such a sum as in the opinion of Congress would enable the Department to readily maintain the standard dollars of gold and silver at par with each other.

Again, in his annual report in 1880 he insists on suspension, as follows:

STANDARD SILVER DOLLAR.

In compliance with the provisions of the act of February 28, 1878, during the last fiscal year 24,262,571.38 standard ounces of silver bullion, costing $24,972,161.81 (an average of $2,081,013.48 per month), were purchased, of which 24,005,566.41 ounces were coined into 27,933,750 standard silver dollars. The total coinage of standard silver dollars since the passage of the act, up to November 1, 1880, has been $72,847,750, at which date $47,084,450 were in the Treasury. Of the latter amount $19,780,241 were represented by outstanding silver certificates, the amount in actual circulation at that date being $25,763,291.

Since the passage of that act the Department has issued numerous circulars and notices to the public in which it has offered every inducement which it could under the law to facilitate the general distribution and circulation of these coins. It has required United States disbursing officers to pay them out in payment for salaries and for other current obligations, and it has offered to place the silver in the hands of the people throughout the United States without expense for transportation, when sent by express, and at an expense for registration fee only, when sent by registered mail.

Notwithstanding these efforts it is found to be difficult to maintain in circulation more than 35 per cent. of the amount coined. While at special seasons of the year, and for special purposes, this coin is in demand, mainly in the South, it returns again to the Treasury, and its reissue involves an expense for transportation at an average rate of one-third of 1 per cent. each time. Unlike gold coin or United States notes, it does not, to the same extent, form a part of the permanent circulation, everywhere acceptable, and, when flowing into the Treasury, easily paid out with little or no cost of transportation.

Again in same report he says:

It may be better for Congress at the present time to confine its action to the suspension of the coinage of the silver dollar, and to await negotiations with foreign powers for the adoption of an international ratio; but, compelled by official duty to report upon this subject, the Secretary feels bound to express his conviction that it is for the interest of the United States now, as the chief producer of silver, to recognize the great change that has occurred in the relative market value of silver and gold in the chief marts of the world, to adopt a ratio for coinage based upon market value, and to conform all existing coinage to that ratio, while maintaining the gold eagle of our coinage at its present weight and fineness.

In 1881, in his annual report to Congress, Secretary Folger also recommended a suspension of silver coinage, and claims that it was not good faith for the Government to pay its bonded debt in anything but gold, as following extracts from his annual report in December, 1881, show:

PAYMENT OF UNITED STATES BONDS IN GOLD.

The gold dollar at the standard weight of 25.8 grains is by law the unit of value, while the standard silver dollar by this standard is now worth about 88 cents.

Although the act of July 14, 1870, provides for the issue of United States bonds, "redeemable in coin of the present standard value," whereby were included both gold and silver coin of that value, yet as by the act of February 12, 1873, the further coinage of silver dollars was prohibited, and the Revised Statutes declared gold coin only to be legal tender for sums exceeding $5, equity, if not strict construction of law, requires that the holders of such bonds should receive payment thereof in gold or its equivalent.

By act of February 28, 1878, silver dollars of the standard weight and fineness were again made a legal tender at the nominal value for all debts and dues, public and private, except where otherwise expressly stipulated in the contract.

Between the adoption of the Revised Statutes, June 22, 1874, and 1878, silver coin was not a tender in payment of United States bonds, and it might fairly be regarded, especially by foreign holders who had acquired bonds during this interval, as a breach of faith if bond creditors were compelled to receive a payment in a coin worth in the markets of the world but 88 per cent. of our own standard of value.

This Government is abundantly able to discharge all its obligations at home and abroad in money which is everywhere accepted as a true standard of value.

In the same report he recommends suspension or a limitation of coinage, as follows:

It may be assumed that a people as enterprising and progressive as that of the United States, holding a leading position among nations, will not consent to the total abandonment of the use of gold as one of the metals to be employed as money, and we can not consent to be placed in the very awkward position of paying for all that we buy abroad upon a gold standard and selling all that we have to sell on a silver standard.

It is therefore recommended that the provision for the coinage of a fixed amount each month be repealed, and the Secretary be authorized to coin only so much as will be necessary to supply the demand.

Again, in his annual report in 1883, Secretary Folger calls for a halt in the use of silver, as follows:

SILVER CERTIFICATES.

The amount of silver certificates outstanding November 1, 1883, was	$99,579,141
The amount outstanding at the same date in 1882 was	73,607,710
There was held by the Treasury on the 1st of November, 1882	7,987,260
And on the same date in 1883	14,244,760

These figures show an increase of the silver certificates in the hands of the people of $19,713,931. Figures given above show a like increase of silver dollars of $4,136,321.

Yet it is apparent that any demand that is likely to arise for silver dollars, or for the silver certificates based upon them, may be readily met without further immediate coinage of the dollars or preparation of the certificates for issue. It

is also apparent that to keep up an aimless purchase of silver bullion, at the rate of over twety-four millions of dollars each year, is a needless use of public money and of the taxing power to supply them, incurring a needless loss of the interest on the sum thus expended, and the expense of the manipulation. Apart from any consideration of the policy underlying the coinage at all, of the standard silver dollar, as now authorized, it would seem that an operation of the Treasury and its mints, for which there is no immediate call, might be at least temporarily suspended.

The Department makes no further comment upon these facts, but refers to its last two annual reports for its views upon the continued coinage of silver dollars and the issue of silver certificates, and for its recommendations thereupon.

Secretary McCulloch, the last Secretary under President Arthur, recommended the suspension of silver coinage and the retirement of the greenback in his annual report of 1884 in the following language:

The coinage of silver dollars under the act of February 28, 1878, has now reached the very large amount of $184,730,829, being an increase of $28,009,880 for the year ending November 1, 1884. The amount of these dollars in actual circulation is $41,326,736. The increase in the circulation for the year has only been $1,260,346, against an increase of $4,136,321 for the previous year. These figures of themselves are an insuperable argument against the continued coinage of silver dollars.

The Treasury would be relieved, in a measure, from the burden of the silver now held in the Treasury by a withdrawal from circulation of the one and two dollar notes. This would not be a gain to the Treasury, but it would be a gain to the country by increasing the amount of silver in circulation.

The amount of one-dollar notes in circulation is $26,763,097.80; the amount of two-dollar notes in circulation is $25,778,738.20. Congress would, I think, act wisely in putting an end to their circulation. Nor do I hesitate to express the opinion that the country would be benefited if all five-dollar notes should be gradually retired and the coinage of half and quarter eagles should be increased. If this should be done, the circulating medium of the United States below $10 would be silver and gold, and we should be following the example of France, in which there is an immense circulation of silver coin, which in all domestic transactions maintains a parity with gold.

The substitution of gold and silver for small notes would be productive of some inconvenience, but this would be temporary only. If the five-dollar notes should be withdrawn, the Treasury would be relieved from the burden of silver in its vaults, and it would not be long before the coinage of silver might be resumed.

In the Report of the Secretary of the Treasury for the year 1887 (pages 74 and 75) will be found the following tables, showing the coinage of silver since the enactment of the law of February 28, 1878:

Statement showing the amount of standard silver dollars coined, in the Treasury and in circulation, and of silver certificates outstanding, at the end of each month from March, 1878, to October, 1887.

Date.	Standard silver dollars coined.	Standard silver dollars in the Treasury.	Silver certificates in the Treasury cash.	Silver certificates in circulation.	Net standard silver dollars in Treasury after deducting silver certificates in circulation.	Standard silver dollars in circulation.

Subsidiary silver coin on hand, $25,854,807.81.

These tables show that the present Administration has coined more silver in same length of time than any previous administration. It further shows that there is now in circulation $207,405,324 of certificates and 55,174,971 standard silver dollars—a total of $262,580,295. Besides this there is of certificates in the Treasury, cash $8,075,041, leaving but 21,597,454 silver dollars in the Treasury not represented by certificates.

Now, with this showing, as compared to Secretary Sherman, who claimed that he could get only $13,002,842 in circulation, and that he had remaining in the Treasury $32,203,358 that he could not get out, as I have shown from his report in 1879, it seems to me the present Secretary of the Treasury stands in a far better light as the friend of the circulation of silver than did Secretary Sherman. Secretary Sherman also in 1880, as I have quoted, complained that he could get only $19,780,241 in certificates in circulation and $25,763,291 in coin of the whole $72,847,750 coined up to that date.

It will be observed that there was a constant complaint that silver would not circulate and it was hoarded, etc., yet we have to-day in circulation of silver certificates and silver dollars, as I have shown, $262,580,295 out of a total coinage of $302,254,790. All would go out but for the fact that the way is blocked by a grand total of surplus revenues of gold, greenbacks, and bank notes of one hundred and twenty-five millions, not counting the one hundred millions of gold reserve nor the one hundred millions more of lawful money held for the redemption of greenbacks. This vast hoard piled up in the Treasury by excessive taxation.

To show more conclusively that the Democrats are the best friends of silver coinage, I will give a history of the two parties on that subject. The Democratic party never demonetized silver as long as it had power in this Government, but maintained its free and unlimited coinage from 1792 till 1873. In 1873 the Republicans, being in a large majority in both Houses of Congress, and having the Executive, prohibited by the law of February, 1873, the further coinage of the standard silver dollar. Now, in December, 1876, the House passed a bill giving free coinage to silver. The House was Democratic. The Republican Senate never acted on the bill. Again, in November, 1877, I moved to suspend the rules and pass a free-coinage bill.

Here is the vote:

VOTE IN THE HOUSE OF REPRESENTATIVES NOVEMBER 5, 1877, ON MOTION OF MR. BLAND TO SUSPEND THE RULES AND PASS SILVER BILL (H. R. 1093).

[In the affirmative—164.]

DEMOCRATS—97.

This bill went to the Republican Senate, where the free-coinage feature of the bill was stricken out and a limited coinage provided for, as the following proceedings will show:

IN THE SENATE OF THE UNITED STATES, *February* 15, 1878.

The Senate having under consideration the bill of the House (H. R. 1093) to authorize the free coinage of the standard silver dollar, and to restore its legal-tender character, the following amendment was agreed to:

"And the Secretary of the Treasury is authorized and directed, out of any money in the Treasury not otherwise appropriated, to purchase, from time to time, silver bullion, at the market price thereof, not less than $2,000,000 worth per month, nor more than $4,000,000 worth per month, and cause the same to be coined monthly as far as so purchased into such dollars. And any gain or seigniorage arising from this coinage shall be accounted for and paid into the Treasury, as provided under existing laws relative to the subsidiary coinage: *Provid d* that the amount of money at any one time invested in such silver bullion, exclusive of such resulting coin, shall not exceed $5,000,000."

It was determined in the affirmative—yeas 49, nays 22. (See Senate Journal, second session Forty-fifth Congress, page 202.)

The vote in detail is as follows:

[In the affirmative—49.]

DEMOCRATS—16.

Barnum,	Eaton,	McDonald,	Ransom,

[In the negative—21.]

DEMOCRATS—7.

Barnum,	Kernan,	McPherson,	Whyte.
Bayard,	Lamar,	Randolph,	

REPUBLICANS—14.

Anthony,	Conkling,	Hoar,	Sargent,
Blaine,	Dawes,	Mitchell,	Wadleigh.
Burnside,	Edmunds,	Morrill,	
Christiancy,	Hamlin,	Rollins,	

It will be noted that on the Allison amendment, which was an amendment striking free coinage out of the House bill and substituting a limited coinage, there were 33 Republicans voting for the amendment and 16 Democrats.

Against this amendment and in favor of the free-coinage bill were, Democrats 18 and only 4 Republicans. Among the 18 Democrats voting to retain free coinage in the bill is found the name of the Old Roman, now Democratic nominee for Vice-President, Allan G. Thurman.

The next vote of importance on this question was in the House of Representatives in the Forty-ninth Congress, when the following proceedings were had:

IN THE HOUSE OF REPRESENTATIVES, *April* 8, 1886.

[See House Journal, first session Forty-ninth Congress, pages 1192 to 1195, inclusive.]

The House then proceeded, under the special order of the 16th ultimo, as modified on yesterday, to the further consideration of the bill of the House (H. R. 5690) for the free coinage of silver, and for other purposes.

After further debate thereon,

Mr. BLAND, by unanimous consent, withdrew the motion submitted by him on yesterday to recommit the said bill to the Committee on Coinage, Weights, and Measures.

Mr. DIBBLE submitted the following amendment in the nature of a substitute, namely:

Strike out all after the enacting clause and insert in lieu thereof the following, namely:

"That unless meantime, through concurrent action of the nations of Europe with the United States, silver be remonetized prior to July 1, 1889, that then and thereafter so much of the act of February 28, 1878, entitled 'An act to authorize the coinage of the standard silver dollar and to restore its legal-tender character,' as authorizes and directs the Secretary of the Treasury to purchase silver bullion and cause the same to be coined, shall be suspended until further action by Congress."

And then, the hour of 5 o'clock and 30 minutes p. m. having arrived, the Speaker, under the previous order of the House, declared the previous question to be in operation.

The question being first upon the said amendment submitted by Mr. DIBBLE, and being put, namely, Will the House agree thereto? it was decided in the negative, yeas 84, nays 201, not voting 38.

The yeas and nays being desired by one-fifth of the members present, those who voted in the affirmative are—

Adams, George E.	Bingham,	Cole,	Ely,
Allen, Charles H.	Bliss,	Collins,	Ermentrout,
Arnot,	Bound,	Davenport,	Evans,
Atkinson,	Boutelle,	Davis,	Everhart,

Campbell, James E.	Hammond,	Morrison,	Tillman,
Candler,	Hanback,	Morrow,	Trigg,
Cannon,	Harris,	Murphy,	Tucker,
Carleton,	Hatch,	Neal,	Turner,
Catchings,	Heard,	Neece,	Van Eaton,
Clardy,	Henderson, D. B.	Oates,	Wade,
Clements,	Henderson, John S.	O'Donnell,	Wakefield,
Cobb,	Henderson, Thos. J.	O'Ferrall,	Ward, James H.
Comstock,	Henley,	O'Hara,	Warner, A. J.
Conger,	Hepburn,	O'Neill, John J.	Warner, William
Cooper,	Herbert,	Osborne,	Weaver, Archib'd J.
Cowles,	Herman,	Outhwaite,	Weaver, James B.
Cox,	Hill,	Owen,	Wellborn,
Crain,	Hitt,	Payson,	Wheeler,
Crisp,	Holman,	Peel,	White, Alexander C.
Croxton,	Holmes,	Perkins,	White, Milo
Culberson,	Hopkins,	Perry,	Wilkins,
Curtin,	Houk,	Peters,	Willis,
Cutcheon,	Howard,	Plumb,	Wilson,
Daniel,	Irion,	Price,	Wise,
Davidson, Alex. C.	Johnston, James T.	Reagan,	Wolford,
Davidson, R. H. M.	Johnston, Thos. D.	Reid, James W.	Woodburn,
Dawson,	Jones, James H.	Richardson,	Worthington.
Dockery,	King,	Robertson,	
Dorsey,	Kleiner,	Thomas, Ormsby B.	
Dougherty,	Morgan,	Thompson,	

Democrats 130, Republicans 71.

Those not voting are—

Adams, John J.	Gibson, Eustace,	Negley,	Sadler,
Aiken,	Hayden,	Nelson,	Stone, Wm. J. of Ky.
Allen, John M.	Hiscock,	Norwood,	Swinburne,
Bragg,	Hudd,	Pettibone,	Taylor, Ike H.
Brown, Charles E.	Hutton,	Pidcock,	Thomas, John R.
Buck,	Jackson,	Pirce,	Townshend,
Campbell, Jacob M.	Jones, James T.	Reese,	Van Schaick,
Caswell,	Kelley,	Rice,	Ward, Thomas B.
Compton,	Libbey,	Riggs,	Winans.
Dargan,	Mills,		

So the amendment was rejected.

Mr. REAGAN moved to reconsider the vote last taken, and also moved that the motion to reconsider be laid on the table; which latter motion was agreed to.

The question then recurring upon the engrossment and third reading of the bill, and being put, viz: Will the House agree thereto? It was decided in the negative—yeas 126, nays 163, not voting 34.

The yeas and nays being desired by one-fifth of the members present, those who voted in the affirmative are—

Anderson, John A.	Dockery,	Johnston, Thos. D.	Perkins,
Ballentine,	Dunn,	Jones, James H.	Perry,
Barksdale	Eldredge,	King,	Peters,
Barnes,	Ellsberry,	Kleiner,	Plumb,

Democrats 70, Republicans 93.
Those not voting are—

Adams, John J.	Dargan,	Libbe	Stone of Ky.
Aiken,	Gibson, Eustace	Mills,	Taylor, Ike H.
Allen, John M.	Hayden,	Negley,	Thomas, John R.
Bragg,	Hiscock,	Nelson,	Townshend,
Brown, Charles E.	Hudd,	Pettibone,	Van Schaick,
Buck,	Hutton,	Pidcock,	Ward, Thomas B.
Campbell, Jacob M.	Jackson,	Pirce,	Winans.
Caswell,	Jones, James T.	Rice,	
Compton,	Kelley,	Sadler,	

So the House refused to order the said bill to be engrossed and read the third time.

Mr. JAMES moved to reconsider the vote last taken, and also moved that the motion to reconsider be laid on the table; which latter motion was agreed to.

It will be observed that in the vote to suspend coinage above given there were in favor of the substitute suspending coinage—Republicans 51, Democrats 33. On the original bill providing for the free coinage there were—Democrats 96, Republicans only 30. This latter vote was at that time a fair test of the sentiment and standing in the House and in the country on the subject of free coinage, that is, at least three to one in favor of the Democrats, or three Democrats to one Republican in favor of the free coinage of silver.

Mr. Speaker, in view of the record thus made by the two parties it sounds a little strange, this resolution in the Republican platform denouncing the present Administration for its attitude upon the silver question. I can only express the hope that this resolution was offered in good faith and that there will be no backsliding on this question, as there has been by our Republican friends on the tariff question.

Territory of Oklahoma.

REMARKS

OF

HON. T. R. STOCKDALE,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

July 26, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 10614) to organize the Territory of Oklahoma, and for other purposes—

Mr. STOCKDALE said:

Mr. CHAIRMAN: I have given the subject of this bill some attention, and have endeavored to arrive at correct conclusions regarding its merits.

The legal features of the proposed legislation have been so elaborately discussed by gentlemen who rank among the able lawyers of the House and the country, I feel that a further discussion in that line would be repetition, and not interesting to the House.

I have been intensely interested in the discussion, for I have had well-defined—to my own mind—opinions on the Indian policy of this Government for many years. My opinions were formed from a general view of the subject, as exhibited by the history of the two races since they came in contact, and the peculiar developments of the present civilization by the Anglo-Saxon race on this continent.

The legal questions arising out of the connection of the Indian treaties, the laws of the land, and the actions of Government officers and Departments with that policy have been brought into view in as strong a light as exhaustive research, profound learning, and great legal talent could throw upon them. And I embrace with great pleasure this opportunity of testing the correctness of my conclusions; for the law must be upheld, the good faith of the Government maintained, and justice observed at all times. Opinions that do not square with this rule must yield, actions that propose to violate them must be withheld, and any legislation obnoxious to and coming in contact with these principles should recoil and fail.

Whether the pending measure is subversive of these principles is the problem now seeking solution, and the mind, particularly the mind of lawyers, is not advanced in that direction by bold assertion on the one hand, nor by vigorous denunciation on the other. The mind must rest on something substantial before it will be at ease. It is important to know and understand just what action it is proposed for the Government to take by the pending bill.

Gentlemen who oppose the bill have frequently employed in the discussion the phraseology "taking these lands from the Indians." Some gentlemen have gone as far as to denounce the measure as a robbery and theft upon these Indian tribes.

Hearing such strong language from able and patriotic gentlemen, and not wishing to range myself with the advocates of a measure that could be so classified, I again examined the bill, line by line, in the light of the history of former legislation by the Government regarding its relations with Indian tribes and of the decisions of the courts and of former and existing treaties, and if there is a syllable in the bill that can be fairly construed to mean anything deserving of these epithets or deserving of denunciation at all, I have failed to discover it.

By express provision of the bill no lands or territory to which any Indian tribe has any right by any treaty or patent or executive order is included in this Territory unless such tribe consent. Not an acre of land is to be disturbed without their consent. Not a tribe, not one Indian can be disturbed in a rightful possession or occupancy of an acre of land in the proposed Territory except by his consent.

The only effect the bill can have and the only thing it proposes to do without the consent of the Indians first voluntarily given by them, is to establish a government on it and extend the laws and Constitution of the United States over it with United States courts and machinery of the Government to enforce the laws.

I will ask to have the first three sections of the bill read to see if I am correct in these statements.

They were read, and are as follows:

A bill to organize the Territory of Oklahoma, and for other purposes.

Be it enacted, etc., That all that part of the United States included within the following limits, except such portions thereof as are hereinafter expressly exempted from the operations of this act, to wit: Bounded on the west by the State of Texas and the Territory of New Mexico; on the north by the State of Colorado and the State of Kansas; on the east by the reservation occupied by the Cherokee tribe of Indians east of the ninety-sixth meridian of west longitude, and by the Creek, Seminole, and Chickasaw reservations; and on the south by the Creek, Seminole, and Chickasaw reservations and by the State of Texas, comprising what is known as the Public Land Strip, and all that part of the Indian Territory not actually occupied by the five civilized tribes, is created into a temporary government by the name of the Territory of Oklahoma: *Provided*, That nothing in this act shall be construed to impair the rights of person or property, or to impair any patent to or right of occupancy of lands now pertaining to the Indians in said Territory under the laws and treaties of the United States, Executive order, or otherwise, or to include any territory occupied by any Indian tribe for which title has been conveyed by patent or otherwise from the United States, or to which such tribe may be entitled by law, Executive order, right of occupancy, or treaty, without the consent of said tribe, or any territory which by treaty or agreement with any Indian tribe is not, without the consent of said tribe, to be included within the territorial limits or jurisdiction of any State or Territory; but all such territory shall be excepted out of the boundaries and constitute no part of the Territory of Oklahoma until said tribe shall signify its assent to the President of the United States to be included in the said Territory of Oklahoma, except for judicial purposes as provided herein, or to affect the authority of the Government of the United States to make any regulation or enact any law respecting such Indians, their lands, property, or other rights, which it would have been competent to make or enact if this act had never passed.

SEC. 2. That there shall be a governor, secretary, Legislative Assembly, supreme court, attorney, and marshal for said Territory, who shall be appointed and selected under the provisions of Title XXIII, chapter 1, of the Revised Statutes of the United States relating to the government of all the Territories. The provisions of said title shall have the same force and effect in the Territory of Oklahoma as in other Territories of the United States: *Provided*, That the Legislative Assembly and Delegate to the House of Representatives shall not be elected until the President shall order: *Provided further*, That no person shall be entitled to vote at the first election, or to be elected to any office, who has not been a bona fide resident of said Territory for sixty days previous to said election: *And provided further*, That the council in said Territory shall consist of thirteen members, and the house of representatives shall consist of twenty-six members, which may be increased to thirty-nine.

SEC. 3. That the Constitution and all the laws of the United States which are not locally inapplicable shall have the same force and effect in said Territory of

Oklahoma as elsewhere in the United States: *Provided*, That nothing in this act shall be construed to interfere with the local governments of any of the Indian tribes which may now be provided for by the laws and treaties of the United States, or which may exist in conformity thereto: *And provided further*, That the supreme court of the Territory shall have jurisdiction and shall embrace all causes of action, crimes, and offenses arising within the limits of the Territory organized by this act; and all laws heretofore passed granting jurisdiction to United States courts within the limits of said Territory are hereby repealed: but cases now pending shall be prosecuted to their final disposition therein the same as if this act had not been passed.

Mr. STOCKDALE. Now, I ask, what becomes of these elegant platitudes in regard to "robbery" and "bad faith" on the part of the Government of the United States toward the Indians? Where is the foundation for truth in them? Is this question to be argued in the House of Representatives of the United States upon denunciation and not upon logic, or upon law, or upon history? Invective is a sort of scalping-knife, which may be used in skillful hands with effect upon uninformed and unreflecting people, but grave questions of national policy it would seem ought to be entitled to a calm consideration in the light of history, of the law, written and unwritten, and of judicial decisions. Gentlemen of profound learning, great legal attainments, and high moral standing have framed and reported into this House the bill to establish the Territory of Oklahoma. We must attribute to them an honest and intelligent purpose.

Three gentlemen of equal ability and learning and character of the same committee have felt it their duty to support a different view, and have brought into this House for our consideration an adverse report, and are entitled to have accorded to them the same honest and intelligent purpose. The majority of the committee in an elaborate report urge upon the House to pass into a law House bill 10614, establishing a Territorial government over the Public Land Strip and so much of the Indian Territory as is not actually occupied by the five civilized tribes.

The gentlemen of the minority admit that such a government would be beneficial if it could be rightfully established, but deny the power of the United States to create and maintain such a government without first obtaining the consent of the Indian tribes that occupy the lands over which the Territorial government will extend. The only and sole question, therefore, is, has the United States Government now the right to establish a Territorial government as proposed? If the Government has the right, it is admitted on all hands that it should be done. If it has not the right, then it will be admitted that the Territorial government ought not to be established. I hope the question is capable of solution on information and argument.

The majority urge the pressing needs of a stable and civilized government over that territory and the precedents of the Government of the United States in similar cases.

The minority insist that, whatever reasons may exist showing the needs of such a government, the United States can not perform that act without violating its obligations to the Indians, and therefore it is not to be thought of, unless their consent be first obtained. All sides admit the needs of a government, but dispute on the point whether consent of the Indians is a condition-precedent. It is boldly asserted by the opp nents of the bill, first, that the Indian tribes have and hold an absolute "title in fee" to the lands in question, and can alienate them at will and without any condition as to how they shall sell; second, that by treaty stipulations the United States Government has put it wholly out of its power to ever have or exercise any control over the lands in question, and then proclaim that whoever do not concede these proclamations to be true, valid, and binding are thieves and robbers. To sustain this bold position the gentlemen who oppose this measure rely on patents issued to the Indian tribes in pursuance of treaties previously made, stipulating that they should have the Indian Territory, and various important privileges to be connected with it, in consideration that they release all claim they may have to lands on the east side of the Mississippi River.

The opponents of the bill have selected the case of the Cherokee Nation as the strongest, and exhibit the patent of the Government granting a part of said lands to that nation. This patent, of date December 31, 1838, refers to the treaties with the Cherokees and closes with the following condition expressed in the face of the patent:

And subject also to the condition provided by the act of Congress of the 28th of May, 1830, referred to in the above recited third article, and which condition is that the lands hereby granted shall revert to the United States if the said Cherokee Nation becomes extinct or abandons the same.

It is maintained that this patent is a grant in fee simple, giving the Indians full power to sell, and without condition on how they shall sell; and that they have as good a title as any other man who holds an acre of land granted from the public domain, whatever may be the color of his skin.

Will the gentlemen as lawyers assert before this House that if any man who holds a patent from the Government shall abandon his land it will revert to the United States? It would not revert anywhere, but the title would remain in him and his heirs until divested by legal means or by his own conveyance. He may abandon it for forty years and then come back and occupy it in defiance of the Government, or he may convey it to any one, although he be thousands of miles away at the time. Will it be contended that the Cherokees can sell these lands, so as to defeat these conditions and prevent them from reverting in case the tribe becomes extinct, with this patent on record staring the purchaser in the face?

I contend, and it ought not to be denied, that a sale of these lands by the tribe would be an abandonment, no matter if deeds of conveyance have been made and recorded, for, as has been said in this debate, the treaty-making power can not alienate lands and divest the Government of the title. That can only be done by the law-making power. And the law-making power in the very act that authorized the issuance of the patents put a condition upon them that prohibited the sale of the fee. And our courts never have decided that the Indian tribes can convey a fee-simple title to lands as against the United States. On the contrary, have decided the reverse.

How can gentlemen assert that there is no Indian patent and white man's patent, when the very patent exhibited to us refutes the declaration? No white man's patent contains those conditions.

Why, if the doctrine contended for by the opponents of this bill were true, and these Indian tribes have the absolute fee-simple title to these lands and can sell without condition, and the United States Government has no right to enter the borders of that Territory, these tribes being as they are, so far as their persons are concerned, free and independent nations, capable of levying war and concluding peace. They can sell their lands to Englishmen or Frenchmen, or to England or France for that matter if there is "no condition as to how they shall sell," as declared by my colleague, and that Territory could be made a dependency of England or France.

It is vigorously asserted in this discussion that the Government of the United States has no right to enter this Territory. That no American citizen has the right to enter there except by consent of the Indians, and the fact that the Army is employed to keep our citizens out of it is cited as conclusive that the State Department so construes the relations of this Government to the Indian Territory.

Now, let us keep this fact in mind for a moment, and suppose one of the many tribes now there undertakes to purchase from each of the other tribes until the one tribe shall own the whole Territory; then that tribe undertakes to sell to England or France—they can sell and give a good title "coupled with no condition as to how they shall sell," say these gentleman—at what point and by what right will the United States Government interfere?

When English citizens settle upon it and form their own government and enact laws inimical to the laws of the United States, if any interference is proposed by this Government, they will cite these patents and these treaties and the acts of the Administration and the debates in the American parliament and the vote on this bill, if it is voted down, to prove that the Government of the United States had no shadow of title or domain over these lands, but the Indians had the absolute fee and the absolute and exclusive control of this Territory, and have conveyed all their rights, title, and privileges to us. What a fine opportunity this is for the Mormon community to buy out those Indians.

These gentlemen will scoff at this picture, as they ought; but it is the legitimate result of their argument, and to scoff at the picture, the inevitable production of their logic, is to scoff at their own position, as they ought also to do.

These gentlemen will answer, "The United States Government will not permit that state of affairs," to which I assent, unless the doctrine on which gentlemen base their opposition to this bill prevails. If it does prevail, then I ask them upon their honor and legal reputation to point out the authority upon which the Government can interpose without infringing on the refined system of ethics they would substitute for the sturdy realities of human government. They can not say that the Constitution and laws of the United States will furnish authority, for they announce in this debate that neither one has any existence or vitality in the Indian Territory, and denounce with vehemence, as trespassers and robbers, those who believe that the Government has not lost all right of domain over these lands, and want by this bill to provide a government and a court to give body and expression to the Constitution and laws in that locality.

The friends of this measure believe that the Constitution and the laws and the right of eminent domain have not been obliterated from any foot of land that the Government ever owned, nor ever will be until it is ceded by regular legislation and treaty to some foreign power. And it is conceded that the United States had a complete title to these lands and control over them, and this contest is only whether the Government, by conveyance and treaty, has obliterated every vestige of such right. The opponents of this bill claim that it has, and place it on two grounds, treaties and the patents. The patents of the United States to these Indian tribes conveying these lands are exhibited in triumph as conclusive against the whole bill. Why, Mr. Chairman, the same thing can be shown to exist as to all the other Territories—not issued to tribes, but to individuals—yet no one contends that such patents give the control of the granted lands to those citizents to the exclusion of the right of the United States to establish a government there.

For the same reason the Union Pacific and Northern Pacific Railroad Companies might claim that they had the exclusive control of their immense grants in localities where no local government had been established before the grant. The citizens of States with patents and a long line of conveyances and a century of possession, and State sov-

ereignty to back it, does not wipe out the right of the United States Government to establish courts, and administer the law, and to go upon every man's premises, and even into his house to execute its process.

Even the State government itself is subordinate to the United States Government, and its officers must submit to the process of its courts, and can not prevent the establishment of United States courts within their borders. And yet we are asked to believe—yea, commanded on pain of being stigmatized as evil-doers—to accept the doctrine that this Government has so legislated and acted that it has placed this Indian Territory and the Indian tribes on a far higher basis than that of a sovereign State; that by its own acts it has so bartered with this piece of territory to which it once had an unquestioned title, and over which it had the right of supreme control, that the United States Government may be spurned from its borders, and even to attempt to assert its presence by the establishment of a court is a criminal trespass deserving of the severest condemnation; that the right of governing and the right of eminent domain has been wiped out forever, and all this by "solemn patent," as gentlemen please to call it. How solemn is a patent? It is not the "Sanjak sherif," but simply evidence of title, depending for its meaning wholly on the law authorizing its issuance. It may be correct or it may not. The courts are full of cases to set them aside as null and void. They are daily being canceled by the Department. There is hardly anything less solemn. I see nothing solemn about this patent except the announcement that the President abolished and bartered away the sovereignty of the United States over a part of its territory by signing a patent; and that loses its solemnity when you come to think of it.

This patent conveys not more, but less than an ordinary patent; it has conditions upon it. The Government does not yield the eminent domain by issuing patents to lands—nor the right to govern; on the contrary, the acceptance of a patent and occupancy of land within its domain is itself consent by the purchaser that he is subject to the Government, its Constitution, and its laws, and that argument is worse than untenable. As to the other ground, that the treaties, in pursuance of which these patents were issued, give them the scope of a title in fee, it is answered by the fact that the treaty-making power of this Government has no power to convey lands, not being the Government, but a part of it. Only the law-making power can divest the Government of title.

A patent issued by the President without a law authorizing it, as has frequently been done under misapprehension, is without force. A patent issued by the President and approved by the Senate would be equally so. It must be done by authority of enactment of both Houses, signed by the President, reported back, and enrolled. It was not even necessary for the patents to issue at all in this case. The so-called treaties were really not treaties, but simply agreements accepting a change of lands authorized by act of Congress of May 28, 1830 (United States Statutes, 4, page 412), and which the patent refers to and recites and, which the President was authorized to make; and if these supposed treaties undertook to confer more on the Indians or take more from the Government than the law authorized they were void to that extent, no matter what phraseology they used.

The statute authorizes the President to exchange with the Indians lands on the west of the Mississippi for their lands east of the Mississippi.

Section 3 of that law, out of which the so called treaties and the patents grew, is as follows:

And be it further enacted, That in the making of any exchange or exchanges it shall and may be lawful for the President solemnly to assure the tribe or nation with which the exchange is made that the United States will forever secure and guaranty to them, and their heirs and successors, the country so exchanged with them; and if they prefer it, that the United States will cause a patent or grant to be made and executed to them for the same: *Provided, always*, That such lands shall revert to the United States Government if the Indians become extinct or abandon the same.

The patent was only to issue if the Indians preferred it. It was no part of the title. Whatever title they had was as good without the patent as with it, and many corporations and individuals refuse to take out patents when they have grants of lands. This statute further provides—

That it shall and may be lawful for the President to have the same superintendence and care over any tribe or nation in the country to which they may remove, as contemplated by this act, that he is now authorized to have over them at their present place of residence.

It will be seen that the whole scope of this statute was simply to authorize the President to remove these Indians, with their consent, and place them on the public lands on the west side in precisely the same attitude and condition towards the United States Government that they occupied on the east side of the Mississippi, and neither treaty nor patent could do more. This formal part of the grant must follow the law, and did follow it, and expressed on its face the proviso contained in the law limiting the grant to the right of occupancy without the power to sell the fee. The gentleman from Georgia [Mr. BARNES] claims that the Cherokee Nation has the strongest case against the bill, and they present the Cherokee patent which contains the proviso prohibiting a sale of the fee, and refer to the treaty with that nation.

It would seem useless to argue further that the only effect this law had and the only thing that was intended was simply to change the location of the various Indian tribes without changing in any way or degree their status or relations to the Government of the United States.

This being admitted, it will throw some light on this question to know what was that status. My friend, Judge ROGERS, the gentleman from Arkansas, suggests that the case of Johnston *vs.* McIntosh, 8 Wheaton, 542, determines fully the status of the Indian nations in America in their relations to the United States Government and their capacity to sell and convey lands, or rather want of that capacity to convey the fee.

Chief-Justice Marshall delivered the opinion of the court and states the case thus (page 569):

The plaintiffs in this cause claim the land in their declaration mentioned, under two grants, purporting to be made, the first in 1773, and the last in 1775, by the chiefs of certain Indian tribes, constituting the Illinois and the Piankeshaw nations; and the question is, whether this title can be recognized in the courts of the United States.

The facts as stated—

Say the court further—

in the case agreed show the authority of the chiefs who executed this conveyance so far as it could be given by their own people; and likewise show that the particular tribes for whom these chiefs acted were in rightful possession of the lands they sold. The inquiry, therefore, is in a great measure confined to the power of Indians to give, and of private individuals to receive, a title which can be sustained in the courts of this country.

The conclusion reached on that question by the court, after elaborate argument on both sides and an extended opinion, is announced by the Chief-Justice, Marshall, as follows:

That law which regulates and ought to regulate the relations between the conqueror and conquered was incapable to a people under such circumstances. The resort to some new and different rule, better adapted to the actual state of things, was unavoidable. Every rule which can be suggested will be found to be attended with great difficulty. However extravagant the pretension of converting the discovery of an inhabited country into conquest may appear if the principle has been asserted in the first instance and afterwards sustained; if a country has been acquired and held under it; if the property of the great mass of the community originates in it, it becomes the law of the land, it can not be questioned. So, too, with respect to the concomitant principle that the Indian inhabitants are to be considered merely as occupants to be protected, indeed, while in peace, in possession of their lands, but to be deemed incapable of transferring the absolute title to others.

The opinion concludes:

After bestowing on this subject a degree of attention which was more required by the magnitude of the interest in litigation and the able and elaborate arguments of the bar than by its intrinsic difficulty, the court is decidedly of the opinion that the plaintiffs do not exhibit a title which can be sustained in the courts of the United States; and that there is no error in the judgment which was rendered against them in the district court of Illinois. Judgment affirmed with costs.

The court in a lengthy and learned and exhaustive opinion, in which other cases and the history of the country from the earliest times are reviewed, and in concluding upon that feature of the case, remark:

The titles held under the Indians were sanctioned by length of possession; but there is no case, so far as we are informed, of a judicial decision in their favor.

And if Chief-Justice Marshall did not know of any such decision, it is pretty safe to say none existed.

So that, as against the Government of the United States, the Indians can have no title that the Government can not abrogate at any time, and gentlemen are mistaken in the law.

The court, in that same decision (page 586), use the following language:

The United States, then, have unequivocally acceded to that great and broad rule by which its civilized inhabitants now hold this country. They maintain, as all others have maintained, that discovery gave an exclusive right to extinguish the Indian title of occupancy, either by purchase or by conquest; and gave also a right to such a degree of sovereignty as the circumstances of the people would allow them to exercise.

The power now possessed by the Government of the United States to grant lands resided, while we were colonies, in the crown or its grantees. The validity of the titles given by either has never been questioned in our courts. It has been exercised uniformly over territory in possession of the Indians. The existence of this power must negative the existence of any right which may conflict with and control it.

The court proceed:

An absolute title to lands can not exist at the same time in different persons or in different governments, and absolute must be an exclusive title, or at least a title which excludes all others not compatible with it. All our institutions recognize the absolute title of the Crown, subject only to the Indian's right of occupancy, and recognize the absolute title of the Crown to extinguish that right. This is incompatible with an absolute and complete title in the Indians.

This has been the condition of the public lands in this country ever since the establishment of the Government, and of the English Government before that. The title of the Indians has been uniformly and without exception held by our courts and the State Department.

The Supreme Court and the honorable gentlemen differ as to the law. If the law were otherwise and the doctrine of the opponents of this bill is correct, the United States never got a title to the lands on the west side of the Mississippi River, for France had no better title to that country than the United States has to the Indian Territory. She was simply a robber and we the receiver of stolen goods, which does not confer title.

On this point the Supreme Court say, after reciting the dispute between France and England concerning their American possessions, as follows:

These conflicting claims produced a long and bloody war, which was terminated by conquest of the whole country east of the Mississippi.

In the treaty of 1763 France ceded and guarantied to Great Britain all Nova Scotia, or Acadia, and Canada, with their dependencies, and it was agreed that the boundaries between the territories of the two nations in America should be irrevocably fixed by a line drawn from the source of the Mississippi through the middle of that river and the lakes to the sea. This treaty expressly cedes, and has always been understood to cede, the whole country on the English side of the dividing line between the two nations, although a great and valuable part of it was occupied by Indians. Great Britain, on her part, ceded all her pretension to the country west of the Mississippi River.

By the twentieth article of the same treaty Spain ceded Florida to Great Britain. Great part of this territory was also in possession of the Indians. About the same time France by recent treaty ceded Louisiana to Spain. Afterward Spain retroceded it to France. At the time, both of its cession and retrocession, it was occupied chiefly by Indians.

Thus all the nations of Europe who have acquired territory on this continent have asserted in themselves, and have recognized in others, the exclusive right of the discoverer to appropriate the lands occupied by the Indians.

The court then, after citing these historical facts, say:

Have the American States rejected or adopted this principle?

Then the court answer the question in this language:

It has never been doubted that either the United States or the several States had a clear title to all the lands within the boundary lines described in the treaty that closed the Revolutionary war subject only to the Indian right of occupancy, and that the exclusive power to extinguish that right was vested in that government which might constitutionally exercise it.

Had Chief-Justice Marshall lived until now he would have learned for the first time that is now doubted, and the measure that advocates it denounced on the floor of Congress as legalized robbery.

The Supreme Court in the same case refers to the history of Virginia in relation to possessions now known as the State of Kentucky in this language:

In pursuance of the same idea Virginia proceeded at the same session (1779) to open her land office for the sale of that country which now constitutes Kentucky—a country every acre of which was then claimed and possessed by Indians, who maintained their title with as much persevering courage as was ever manifested by any people.

It was after summing up all these historical facts and many more, as well as from decisions of the courts, that the Supreme Court announced the comprehensive paragraph that I have quoted:

The United States then have unequivocally acceded to that great and broad rule by which its civilized inhabitants now hold this country. They hold and assert in themselves the title by which it was acquired.

* * * * * * *

This is inconsistent with an absolute and complete title in the Indians.

I have shown that the statute of May 28, 1830, simply authorizes a change of place without changing the status of these tribes, and that all former treaties changing location was nothing more, the treaty-making power having to confer title. The treaties recognize that fact. They all commence that "the United States agree to possess the Indians" of certain lands—not to convey. That this was a new doctrine and a departure from the rules that public sentiment of the civilized nations of the world had adopted as to conquered countries and was peculiar to this country is admitted, but it was a necessity growing out of the peculiar circumstances attending the settlement of this country, which had not existed before, so far as history declares. And I prefer to quote the language of our Supreme Court—far more expressive than I can formulate, and has the force of authority. The court on this subject say:

The title by conquest is acquired and maintained by force. The conqueror prescribes its limits. Humanity, however, acting on public opinion, has established as a general rule that the conquered shall not be wantonly oppressed, and that their condition shall remain as eligible as is compatible with the objects of the conquest. Most usually they are incorporated with the victorious nation and become citizens of the government with which they are connected, and they make one people.

* * * * * * *

When the conquest is complete and the conquered inhabitants can be blended with the conquerors or safely governed as a distinct people public opinion, which not even the conqueror can disregard, imposes these restraints upon him, and he can not neglect them without injury to his fame and hazard to his honor.

But—

Say the court—

the tribes of Indians inhabiting this country were fierce savages, whose occupation was war, and whose subsistence was drawn chiefly from the forest. To leave them in possession of their country was to leave the country a wilderness; to govern them as a distinct people was impossible, because they were as brave and high-spirited as they were fierce, and ever ready to repel by arms any attempt on their independence. What were the inevitable consequences of this state of things? The Europeans were under the necessity either of abandoning the country and relinquishing their pompous claims to it or of enforcing those claims by the sword, and by the adoption of principles adapted to the condition of a people with whom it was impossible to mix, and who could not be governed as a distinct society, or of remaining in their neighborhood and exposing themselves and their families to perpetual hazard of being massacred.

Here is an epitome of the historical facts attending the peculiar conditions attending the proximity of these inimical races collected and interpreted by the highest tribunal in the land, with perhaps the most profound jurist this country has ever produced as its mouth-piece, and propounds to itself the inquiry, What were the inevitable consequences of this state of things?

Had the gentlemen who oppose this bill been there they would have had no difficulty in determining. The answer would have been prompt and loud and clear, "Go back to Europe, you robbers and thieves, and let these people alone. They have an indisputable title to these lands, and the command is, 'Thou shalt not steal.'"

The Supreme Court goes on to say, however:

The law which regulates and ought to regulate in general the relations between the conqueror and conquered was incapable of application to a people under such circumstances. The resort to some new and different rule better adapted to the actual state of things was unavoidable.

Why unavoidable, let us ask of the Supreme Court? They could have returned to Europe when they failed to make peace with the Indians, who were making war of extermination upon the Massachusetts Bay people and the Virginia and Carolina settlements.

The white race had no pretense of title except what the demands of civilization warranted, while the Indians held by undisputed occupation that had come down out of the ages from an antiquity which the light of the present age has failed to discover. The voice that is claimed to be of superior humanity goes out from these Halls, back along the brilliant pathway of our history for two centuries, with the inquiry, "Why not get the consent of Indians, you robbers, before you presume to take lands from these people to which they have an undoubted title? You can not establish your government first and get consent afterwards. That is robbery." The Supreme Court of the United States, through its illustrious mouth-piece, Chief-Justice Marshall, gives as the reason that consent was not obtained (8 Wheaton, page 588):

But the tribes of Indians inhabiting this country were fierce savages, whose occupation was war and whose subsistence was drawn chiefly from the forest. To leave them in possession of their country was to leave the country a wilderness. To govern them as a distinct people was impossible. They were therefore, under the necessity, of either abandoning the country or enforcing their claims with the sword.

Then and there was the momentous crisis of the present civilization. Which should they do? Retire from off these shores before these fierce and bloody natives of the soil, or advance over them?

We were not there, and they had to decide for themselves. The Plymouth Fathers, with the Bible in one hand and musket in the other, then and there made proclamation: "On this rock we build this civilization, and the gates of hell, nor the British, nor the savages shall not prevail against it." The echo came back to them in the deep tones of the Huguenot and the daring voice of Cavalier, and "forward" went along the line from Maine to Georgia.

This giant race, this superb governmental structure where Liberty dwells, the stupendous achievements of this civilization, are the result.

I know that all along this march there were multitudes of men with good intentions, who stood on the hilltops and high on the mountains proclaiming that conquest was wrong. I leave history to answer whether God's blessing or His curse has followed them, showing to the world whether their actions were righteous or criminal.

Mr. COBB. Does the gentleman mean to say that the true intent and meaning of this bill is to take these lands, treaty or no treaty, and that this is right?

Mr. STOCKDALE. I have been very unfortunate in my utterances if the gentleman has not understood the position I have taken on that point. The phrase "Take these lands" is not applicable to the provisions of this bill. If I understand its scope and effect, it proposes simply to establish a government over the Territory of Oklahoma, a government that will disturb nobody, but compel every one to obey the Constitution and laws of the United States. In plain terms, it provides that the Indians shall not be disturbed in the ownership or possession of their lands without their consent.

They and their descendants can occupy these lands forever if they desire. All that they are asked to do is simply to allow civilization and law to come among them, and that a civilized form of government, accompanied by courts to determine the rights of citizens, be established in that Territory.

It is begging the question to talk about taking the lands and establishing a Territory.

Mr. COBB. I understand the gentleman from Mississippi to say that on account of the superiority of the white man the Indian must not stand in his way.

Mr. STOCKDALE. I do not put it that broad; but would you require me, before I shall consent to what I believe to be proper legislation, that I shall reverse the history for centuries of the relations between the white race and the Indian tribes occupying this country? What I do say is that civilization is right and has a right to be here; it has a right to cover the territory of the United States; the Indians have not the right to prohibit it; and that has been the battle between the white and red races for three hundred years, and as long as the white race carries the banner of civilization and Christianity and the red man undertakes to prohibit that progress he should not stand in the way, but should join in with civilization and advance with it and let heathenism disappear from this land. I do not want the Indian to disappear, and hence I favor this bill. I want the savage to disappear by being transformed into a civilized man; if that can be accomplished by any means, it certainly can not be accomplished by the present policy of the Government, for after the honest, earnest, and persistent efforts of men devoted to the service of God, and the expenditure of millions of money and many lives of good men, a century of failure stares us in the face. This talk about the cultivation and intelli-

gence of those Indians is born of zeal and not from history, and in direct controversy with members of this House who live where they observe them and speak from knowledge. Their reports accord with the history of the races down to this hour—they are savage, fierce, and cruel, and most of them degraded.

I doubt not that my colleague [Mr. HOOKER] met an educated, eloquent man in the person of the half-breed Cherokee, William P. Adair. I, too, have some experience of that sort.

I saw one of those great Indian chiefs, such as my colleague has described, Mr. William Tanner, a Chippewa chief. I saw him in Cincinnati and heard him make a prayer that brought tears to the eyes of almost every one in the large congregation as he prayed for the preservation of the Red man. His superb stature, his deep and thrilling earnestness, and the indescribable tones of his deep, uncultured, musical voice, and the tears flowing down his bronzed cheeks, made him an impressive figure. His language was not smooth, but he seemed to grasp and wield the strong expressions of the English tongue as a warrior does his weapons. He was grandly eloquent. He was but half Indian blood. His father was a Kentuckian, which accounted for his eloquence. That same man told me that such a thing as a full-blooded civilized Indian he had never seen.

Mr. WEAVER. And that is the truth.

Mr. STOCKDALE. I believe it is. I am satisfied that were it otherwise civilization would not be so obnoxious to them. All civilized races mingle together without trouble. Their conceptions of equity and justice and fair dealing and the great principles of humanity are substantially the same hence; their laws and customs are similar and they are agreeable companions. Even when they engage in war these great recognized principles are not forgotten, but obeyed; and while in the midst of arms laws are silent, humanity, which is next to divinity, asserts itself as the supreme law of the hour.

When in the fortunes of war one power becomes the province of the other, they in time become peaceful citizens and coalesce with the conquering people and form one community. The Floridas and the French citizens of Louisiana resented their transfer to America. We never consulted California whether she would be American or not, and yet we have no more loyal and valuable communities of citizens. Even Alaskans invite rather than repel communication.

But nothing is so repulsive to Indians as civilization.

The Americans claim to be the highest type of civilized people. They are admired and sought after. The nations of the Old and the New Worlds make pilgrimages here to see by what marvelous genius this renowned people command the very elements to obey them. The heirs apparent to the grandest thrones of Europe come here to learn wisdom. The daughters of American citizens are sought in marriage by the proud nobility of Europe. And while plunging forward with an ambition that despises obstacles, with the most delicately constructed, most complicated and most glorious governmental structure of this or any other age, in the absolute management of these surging masses of people who brook no restraint, and yet with a public sentiment so exalted and gentle that Christianity holds sway in all its borders, and woman moves securely, with every American a knight ready to serve her. Our missionaries carry the gospel to the ends of the earth with success. The subjects of defective governments the world over journey hither to the Mecca of the human race, and none return except they are driven away, and yet this phenomenal Indian race have whetted against all these influences for a century and produced nothing but friction.

The effulgence of this civilization, softened and warmed by the milder rays of Christianity that attracts all nations unto it and vitalizes the coldest humanity, falls on that race like the sun's rays on solid ice, which never warms but melts away. This civilization has advanced for one hundred years, with men of God in the vanguard with the Bible in hand, urging Christianity and civilization upon them. They have traveled over this country from West to East and North to South, or their chiefs and headmen have, and witnessed the great achievements of the white race and their habits and customs. They have been furnished the utmost facility for observation.

They have seen our farms, our villages, and great cities, and turned away from it all wearily and gone back with glad hearts as they approached their wigwams far in the wilderness. They never built a house or a permanent abode. They have ridden on our railroads and rivers, and observed our navies and steamers, and visited our institutions of arts and sciences and literature, but have never made a railroad, and their achievements in navigation consist in rowing a canoe, and their advancement in science up to this year (1888) consists in shooting at the eclipse of the moon to "drive the evil thing away," and rejoicing at their success.

They have had more and better opportunities than any other race—an hundredfold better. Our system of government has been explained to them, they have observed the security, contentment, and happiness of our people under its influence and protection, civilization in all its phases has pressed upon them for one hundred years and has now surrounded them and is pouring in upon them a flood of light from all sides. Christianity has been carried among them by heroic and devoted men, and yet now, almost at the dawn of the twentieth century that is coming full of glory to all the civilized races—we find this phenominal race without history, and but crude and imperfect traditions, without intelligent government, without a system of laws, without religion, without architecture, without science or arts, made no discoveries or inventions, reduced from millions to a few thousands, still receding, flashing the scalping-knife in the face of civilization, and turning their backs upon Christianity, contemplating extinction with complacency.

It is said in this debate that the Cherokees are the best fortified in their title and the most civilized. The very patents exhibited here as the basis of the Cherokee title stipulate, in view of the extinction of the race, as well as the subsequent treaties, the lands shall revert to the Government when the most enlightened of all the Indian tribes shall become extinct. No more conclusive evidence of heathenism is needed than that the Cherokees accepted that bargain, trading in contemplation of the extinction of their race from the face of the earth. Love of posterity is one of the glories of civilization, and I might ask, could a more cold-hearted proposition have been made?

A Christian government having pursued one unbroken line of policy for more than a hundred years, with that policy sure to result in extermination, as the end comes in sight cooly bargains with these tribes on the basis of their extinction. And when humane and patriotic men, shocked at the contemplation, undertake to change the policy, denunciations loud and fierce are rained upon them. Will these gentlemen pause for a moment and contemplate the inevitable consequences of their policy? For three hundred years under your policy, stubbornly, and as surely as the Great Father of Waters flows towards the Gulf, these people have marched towards oblivion. Good and patriotic men believe that they will become civilized; but, as I have said, the idea is born of zeal and not of history, for the history of ten generations proves it false.

The Modoc race completed the stipulation and went to extinction under this effete Indian policy that must not be changed. That race went out and completed their history with an act that shocked civilization; a crime damnable enough to soil the walls of perdition. The scarred warrior, the daring, chivalrous Canby, full of the generous impulses of a high civilization, risked his life for peace—peace for women and children—and fell a victim to the present Indian policy. There ended the Modoc civilization. They regarded the act as patriotic.

The United States Government has erected a monument to tell to future generations where the magnificent Custer and his dauntless band dashed to their death in defense of the women and children of the brave frontiersmen. Shall history hold them up to the world as criminals, or write them down as the grand and chivalrous spirits that they were, who died in the defense of innocence and for the advancement of civilization. That monument was erected by the Government to express its approval of their gallant deeds and its appreciation of great soldiers; and there in silence and loneliness it stands a sentinel to their glory, awaiting the advance of civilization; and to make it tell the truth there should be chiseled in its eastward face, "Not robbers," but "Here the gallant three hundred perished in defense of innocence and humanity," "and victims of a policy musty with an hundred years of failure and ghastly with the blood of thousands," and which the United States Government lacks the courage or the will to remedy.

Geronimo and his companion chiefs were hunted down and caught with their hands still wet with the blood of innocence, and as they could not be tried by the courts, and being too fiendish to live in the vicinity of civilization, were caged in the far-off Florida prisons to remain for life. When I read over these recent specimens of the present Indian policy and think of the line of bleaching bones of white victims of savage barbarity, extending from Alaska to the Rio Grande, and wonder how many more mothers are doomed to die by savage hands, and with the last vision of their glazing eyes behold the golden curls scalped from the head of her blue-eyed baby girl and borne away a bloody trophy of Indian warfare, I feel as though William Tanner told the truth.

And, Mr. Chairman, while I do not want to deprive these people of their rights, I do want to protect the white race as well as the Indians. [Applause.] I do want to protect the women and children upon the frontier against Indian atrocities.

I shudder when I think of the responsibility resting upon this Government in reference to its Indian policy, and that I must bear even so small a part as one out of three hundred and twenty-five of one-half of the legislative branch. And I am not relieved when I reflect that my constituency will hold me to account for the expression I will give to their voice on this grave matter, and how posterity will view our actions.

I believe these bloody Indian wars can be anticipated and averted and the slaughter of my race prevented, and the further killing of Indians by our Army or by their own tribes avoided. I also entertain a reasonable hope that the Indian race may be rescued from extinction.

I have no guide but my convictions after years of study of this subject. I believe this bill a step in the right direction. It is designed to extend the beneficence of the law, instead of the Army, to these Indian tribes. We let them inhabit their land, and they did just what

my colleague [Mr. HOOKER] said they did. When some man happened to trespass with a plow a little over the line what did they do? Seek redress as civilized people seek it? No, they commenced to kill; they engaged in "terrible war," as it was well characterized, and all their wars are terrible. Any war is terrible, whatever the scale upon which it is carried on, when women, children, and non-combatants fall alike victims to the scalping knife and tomahawk. This bill is intended to sustain and advance civilization, and at the same time restrain the savage nature of these people by the firm and strong but kind and humane hand of the law, and is in the spirit of the highest patriotism, philanthropy, and justice.

As I have said, if we had had such legislation as this Springer bill twenty years ago we would have been saved many bloody wars and the loss of much valuable life and property. Then these Indians would have had their lands distributed to them in severalty. They would have been established in communities subject to the law and where the marshal could reach them. My colleague has said what is true, that civilization has driven the Indians from the East to the West, and they find now advancing civilization confronts them moving from the West to the East. I ask, is civilization right or wrong? If it is right, why should we stop its advance? [Applause.]

Let these people submit to the laws. Is civilization so obnoxious to them they can not afford to embrace it or to tolerate it in their Territory? Has the United States Government put itself in the attitude that it must employ its army to beat back the civilization of the fathers and of this age, that it may not disturb the royal ease and luxury of the chiefs and head men and agents, many of them half-breeds, who spend the millions furnished for the tribes which the common Indians never see, but are simply vassals to the chiefs, while their women are as mere beasts of burden? Is it wonderful that their chiefs resist the approach of civilization, for if the Indians should become civilized and the masses become free and own lands in severalty, and live under the United States Government, their chiefs could no longer lord it over them and could no longer embezzle their funds. Give us the heathen for our inheritance, they say by their action.

Gentlemen say that the Poles were permitted to die with arms in their hands, and in the next sentence say these Indians are the wards of the nation. Therefore the logic of the two sentences is that we must take care of these tribes and feed them and clothe them as we do, and take the money out of the pockets of our own people to do it. We allow our agents to sell them arms and then we must not extend the laws and government of the United States over them, but let them fight us when they please, and after they kill a good many of our citizens and women and children send our Army to kill a number of them, and then make a treaty of peace and go on feeding them again. We tried the gentlemen's Polish doctrine with the Modocs. The idea strikes me with horror. If they are wards, treat them kindly, but control them, and with law and not the bayonet.

Gentlemen say the Government traded to these wards lands on the west side of the Mississippi for lands on the east side worth far more. Who made the trade, let me ask, by which the Government swindled its own wards? Not those States that surround the Indian Territory, for they were not in existence when the treaty was made. I will tell you who did it—the States east of the Mississippi River. They forced it on the Government and drove the Indians out, if any driving was done.

The English of it all is, Mr. Chairman, when you come to review the whole scope of the argument of the opponents of this bill, that the States of this Union in the East and South, by their representatives in the Congress, being in full control of the Federal Government, used it as a means of removing these Indians—driving them, say these gentlemen—out of the States, far away from the benign influences of our civilization. It was these States, I say; for the very treaty that stipulates about their going recites in the preamble as a reason for going that the Indians wanted to get away from the difficulties with the State governments. What next did we do—these Eastern and Southern States, comprising nearly the whole Government then? Why, we made proclamation to the world of our vast, fertile, unoccupied domain, and invited the oppressed of all lands to our shores. Finally we offered a farm of 160 acres to every man who would go West.

When these settlements approached the masses of heathenism that we had dumped down in the wilderness out of reach of our holy nostrils, with savage yell they sallied out upon civilization. And when the people of our own blood, tired of seeing their women and children massacred and their property spirited away, and not desiring the extermination of the race, ask for the restraining influences of our most beneficent Government to be extended for the protection of both races and to prevent further bloodshed, we wave our sanctified fists in the face of our Western kinsmen and with solemn voice proclaim, "Keep your unhallowed government off those lands that we traded to the Indians and got twice their value; we swindled them as much as good conscience will allow, you robbers." If this whole argument is to be sustained by the decalogue the eighth speech should be amended so as to read: "Thou shalt not steal; but if peradventure ye do, or in exchanging with the heathen round about you you get from them two talents and give unto them one, see thou to it that that one be not touched by the uncircumcised."

I do not believe at this late hour, Mr. Chairman, when the people of the East and the people of the South, have gotten rid of these Indians, we ought to say, in a sort of death-bed repentance on our part, after we have pushed them on you of the West, we will make you take care of them in the best way you can. We got rid of them in whatever way we pleased and now we propose to say to the people of the West, you shall endure them as best you may. [Laughter and applause.]

Mr. COBB. I wish to call the gentleman's attention to this point——

Mr. STOCKDALE. I have only ten minutes left, and I have yielded five to the gentleman already; I hope, therefore, he will excuse me.

Mr. Chairman, I accept the golden rule as the arbiter of this issue as heartily as it has been proffered by the other side. I would put myself in the Indians' place, and then embrace it with alacrity. I would speak then to my people as in the presence of the Great Spirit, "Let us come off the war-path, let our camp-fires die out, and all the nations of red men meet the Great Father and say to him, 'We are not cowards, we are brave, we have fought your race for more than a thousand moons while all other nations have flocked to it. You ride upon the sea, you sweep through the mountains in palaces, you talk with the lightning, your people pray and the clouds shower down plenty upon the land, and peace comes to your people and they give the right hand in friendship without fear. Your civilization is high like the heavens. Your religion must be the breath of the Great Spirit. Treat us as you would have us treat you were we enlightened and you in darkness. We see all other nations inhale strength from your civilization. Even the lowly African, who but yesterday was freed from a bondage of two centuries, vitalized by it lives among the white race under the same laws, and rising in the scale of humanity and increasing in numbers, while we, brave and ambitious, surrounded and ingulfed by this great civilization, are about to go down in darkness and oblivion from amidst this halo of a grander life. We have learned the art of war from civilization; now let us learn peace and prosperity and save our race from extinction. You have fed and clothed us and brought us schools. Let your Government extend over our land; let us participate in it and feel its presence. Let us have Sunday and hear the great bells ring, and when the Great Spirit sends blessings on the pale-faced race they will descend on the red men, too.'"

And, Mr. Chairman, when they rise to the appreciation of the new life they will have the right to chide us for not sooner rescuing them from darkness, if indeed they are the nation's wards. I do not believe the Indians will be contaminated or injured by the presence of government and the reign of law.

Civilization is buoyant and strong, but not harsh. The Western people are sturdy and daring, and are marching westward with dauntless will, but they are humane and generous. Twenty thousand of them in this territory now.

Why can we not trust these brave and magnanimous Western people, moved by their own generous impulses, to deal fairly by the Indians, better than we, who drove them from us?

This Government has a surveillance over them now far less humane than a government. The tribes, many of them, can not leave their reservations without leave from the Indian agent. If they do, mischief s suspected and troops drive them back. I say let the law go there and protect those who are peaceable, and when these bands of marauders go out and kill in cold blood, let them be tried and condemned like white people, and this bill provides that remedy.

There is a volume of history, Mr. Chairman, within reach of our eyes as we approach and enter this Capitol building, which is said to challenge the world in grandeur of structure and imposing beauty. The marble group of statuary in the east gable of the portico of the Senate extension, said to have cost $50,000, shows in one view a great volume of history new to the world and not yet finished. We may be writing now on its last chapter if this bill be defeated. It represents the advance of American civilization and the decadence of the Indian races. It represents it as that mighty cavalcade has always advanced—the Pioneer first, Americanism follows, next War, and following him the Arts and Sciences. The stalwart Indian sorrowfully recedes as he sees the wilderness, the temple of his fathers, melt away before civilized life that he can not understand nor resist.

The marble groups at the main entrance represent, the one, Columbus as the discoverer of America; the other, on the opposite buttress, its history avers, was intended to represent a death-struggle between the white and red races for possession of this country in the early settlement of it; but the attitude of the figures, the unruffled face of the almost giant pioneer who holds the writhing Indian in his powerful grasp without seeming desire to kill, indicates to me that deep in the artist's mind was the conception of the higher sentiment of a later era, indicating that this wild race should be grasped and held in the powerful and firm grasp of the law, which should never be relaxed; at least it is not a strained interpretation. The Springer bill is an embodiment of that sentiment.

The same story is eloquently told by the marvelous genius of art,

in paintings and frescoes within the building. These were erected by the American Congresses as objective lessons for the people, illustrating the history of Americanism. Streams of visitors from all parts of the country and of the world daily examine and admire them. Is it all an eloquent lie, or if truthful is it a magnificent portrayal of a century of crime against the Indians, against God's creatures, written on the frontlet of American civilization and thus shamelessly paraded before the world and interpreted robbery and larceny by our own consent? Is the glory of our ancestry a sham after all? Shall our own hands blacken their fame?

These groups and paintings suggest to the mind of the student of history to look for another character in connection with the settlement of America.

His gaze goes westward over the heads of the scholars and orators and statesmen that have made Kentucky famous in her accomplished civilization. His gaze is over the heads of the Breckinridges, the Crittendens, the Guthries, and McCrearys, even past the towering form of Great Harry of the West, and descries standing out against the sky, grandly and alone, in the horizon of civilization, the supurb figure of Daniel Boone, the greatest of all pioneers, and the bravest of all Americans. He, too, is represented as in terrible life-and-death struggle with Indians. The mind asks itself, why did this marvelous man go beyond the mountains? By what right did he trample the soil and utter the English tongue in the forests of the dark and bloody ground? The answer must be that he had no right, no shadow of right, except the divine right to blaze the way for civilization and Christianity into the domains of darkness and heathenism. And according to this latter-day gospel he, too, must be classed with the robbers, for if to advance civilization and extend the benign influences of the American system of government over territory where Indians inhabit is robbery, then Daniel Boone was the boldest robber known to history. And the gentlemen whose duty it is made to show visitors through the Capitol should be instructed to point out the staute of Daniel Boone as the great American Indian-land robber.

The missionaries who followed him to attempt the conversion of the Indians were subjects of criticism because they did not instead point the finger of warning at his massive brow and say: "Daniel Boone, thou shalt not steal; and get thee hence from these lands." It should be written in black lines across the brow of Columbus, for he, for the same reason, was the champion robber of the world. He came across the wide waters and in the name of his king took possession of a continent inhabited by people whose title seemed to come from an antiquity as old as time. The Pilgrim fathers should have an appendix to their history, that the youth of the land shall no longer be deceived, but know they were not Christians and patriots, but freebooters and robbers.

With the same finger they might point to the historical statue of William Penn. Ah, you say, he purchased the land from the Indians. So he did, according to the Anglo-Saxon way of acquiring territory; he takes it. William Penn first took the territory which became Pennsylvania, and then bought parts of it—bought it for prices that made the negotiations a travesty on the name of purchase and sale.

I know history gives Penn great credit for purchasing that territory. It was a purchase in name after he was in full possession under a charter from the English Crown. It was a negotiation by Penn prompted by those noble traits of humanity for which he was so celebrated, to avert an Indian war, but does any man out of the lunatic asylum think Penn intended or contemplated for a moment to give up Pennsylvania if the Indians should refuse to sell. He could have quieted his conscience by giving up the land; he did not think of it; that was not in the programme. He was a great and grand man. He is a glorious character in history, to which generations yet to be born will look back with admiration and utter praises; but he was a true Englishman. They always get possession first and then negotiate.

The student of history looks with amazement over the great drama of human life, back as far as the light of revealed history shows the way to where the dynasty of the Pharaohs exposed to view the declining glory of what must have been a great race with a high civilization which dwelt around the Pyramids, and from then until now civilization has moved westward, alternately falling into the shadows and rising in dazzling glory. Every time it rose it created for itself a new race and a new language. First the Egyptian, then Hebrew, Greek, Roman, and now the Anglo-Saxon race and the English tongue, and still "westward the course of empire takes its way."

When it appeared on the Atlantic shores of this continent it soon transpired that the new race was repellent to the native fierce and savage tribes, and the seeming hopeless conflict commenced. No human courage could have faced the prospect. It was the vanguard of the column that started at the pyramids, beyond the horizon of history, westward on the march of destiny. Civilization was born not to die. Like the eternal motion of the ocean, it can not be at rest. It must advance or recede. It is in obedience to no command, but moves by its own innate power. The nameless force by which the present civilization moves was put in motion when the breath of life was breathed into the Anglo-Saxon race. It grew strong amid impending terrors and extended far along the Atlantic coast. As the succeeding generations were born and grew to manhood on the soil and in the atmosphere of the New World a distinct Americanism pervaded the communities. Their self-reliance and bold thinking resulted in the ambition to own and possess this great continent in their own right, and to govern it. The more exalted attributes of humanity, as well as the consummate wisdom of that achievement, are apparent in the imposing grandeur of our system of government that we almost reverence.

English armies, savage tribes, and bloody Hessians conspired to block the way, and to human vision at one time seemed about to succeed. But the hope of a sublime destiny inspired their courage. Christianity, as the breath of God, imparted to the movement the vitalism of immortality, and in royal disdain alike of hardships, of suffering, and of death, with eagle eye upon the goal, marched over it all. Their faces westward and still in motion, these unexampled people changed the ensign of war to the banners of peace and Christianity.

They walked over the mountains, and the great valley of the world laughed back into the face of civilization as it swept onward to the monarch mountain range of the West, bearing the ensigns of Jehovah—for civilization is of God. It bent its ear southward and heard the voice of a high-spirited people struggling to sever their connection with a sluggish and defective government; took to its embrace the brave young republic and placed the Lone Star in the galaxy that its own genius and inspired courage had made to glow in the front of the sky. With whetted sword and strong hand it pushed the boundary line of the American Republic to the Rio Grande and raised the American flag at the Golden Gate.

Then, as now, criticism fierce and scathing was made upon the movement by good and patriotic and true men; denunciations, too, by some as a robbery and disgraceful to American civilization. But while the anathemas were still in the air, by the magic force of this bounding race, a mighty people, ablaze with the spirit of this wondrous age, rose up between the mountains and the sea, and with the dauntless energy of the race forced a passage through the bowels of the rocky ranges and made an iron way, short and quick, back to this Capitol, and here they are—Texas, California, and Oregon—here to stay, their proud insignia are emblazoned over our heads. Gentlemen on the other side say the admission of Texas and Kansas was violation of the Indian treaties. But we can not afford to relegate Texas back to Mexico because she blocks the Cherokee Outlet. We can not destroy Kansas because her presence may annoy some Indian tribes. It is not necessary now to argue whether the march of the white races over this continent is robbery; it is the march of civilization, it is the march of the inevitable. The command "Go ye into all the world and preach" was given to civilization and not to heathenism.

Gentlemen say Jackson told these people they could have this land as long as grass should grow and water run. Why did not he tell them they could keep their lands in Tennessee that long? No; he "advised" them to go—people generally took the advice of Old Hickory. He advised the removal of the deposits. He was a great general, a great President, and a great man; but civilization is greater than Jackson, greater than Congress, greater than the Administration, greater than the Government itself. It made the Government and can unmake it; and the idea that a few battalions can beat it back is futile. No power this side of the throne of God can stop it. What then becomes our duty as Representatives of this great Government in this enlightened age, with the facts of history before us? Shall we see these people go surely to extinction, and content our consciences with a sentiment, however beautiful; or shall we act with the vigor of the age, in obedience with the highest and holiest dictates of humanity, and let this great civilization take them up in its arms and rescue them from extermination?

If the latter, the Springer bill is a step in that direction and ought to be passed at once, and the name of WILLIAM M. SPRINGER go into history as a philanthropist. I support it because I believe in my conscience that it is in the interests of the Indian races, in the interests of a common humanity, and will subserve the purest philanthropy and the highest patriotism.

Gentlemen say they would not care to belong to such a civilization. I know it is not perfect—nothing is that is developed through human agency—but I would belong to it because it is the best, the highest, and the grandest civilization of the world. Its movements are sometimes harsh, it is true, and it has its victims. I am not arguing now whether the American civilization is all right or all robbery. I am talking history. Its advance over the Indians may be harsh. It swept over the Constitution and crashed through the institution of slavery. It reached out and acquired Utah and then created laws and established courts to punish the people for domestic habits which they had when they were brought under our Government against their will, and established a government over them that they did not want, and has the same right to make a government over the Indian tribes and correct their worse than Mormon habits, their habits of slaughter.

I will adhere to a civilization that produced Washington and Jefferson, Adams and Webster, that gave to the world Fulton, Morse, Edison, and Whitney, of which was born Lee and Grant, Hancock and Jackson, rather than that of Geronimo and Captain Jack. I will go with a civilization that fosters art and science and learning, that made the American system of government possible, that cherishes liberty

and upholds Christianity, and bears upon its bosom an exalted and glorious womanhood; in short, that produces and sustains Americanism, notwithstanding terrible hardships may attend its course.

My colleague says eloquently—as he says everything eloquently—"that the Indians have retreated before the tide of civilization from the Eastern coast, and now they are met by the tide of civilization coming from the Pacific coast." He might have added that civilization is closing in upon them from the South and from the North, and it is against civilization that the Indians complain, and against which these gentlemen defend them. Is civilization such a thing that it can not be trusted? Must we have a line of soldiers to keep it out from among the heathen? and it always carries the Bible open in hand. I tell you this civilization will not be arrested; the tide from the East and the tide from the West are at the flood, and will float together as the approaching clouds if let alone, but will flow together like the waters of the parted sea if resisted.

You say this is wrong; my only answer for the present purpose is, it is inevitable:

> God made for Himself this giant race, which alone
> Rises high as by inspiration;
> This civilization flashes back to the throne
> The wisdom of that creation.

Shall we encourage the Indians in the futile hope that they can withstand it when our better intelligence teaches us that it means extinction to the Indians. I say to encourage that hope with three hundred years of disaster to them from the same cause staring us in the face, is a higher crime than robbery. It is to stultify the civilization that is the crowning glory of the world. It is to contribute to the blotting out of the Indian race, when we should rescue them, as we can, by wise legislation. It is far wiser and nobler and more in accord with humanity when the dikes break to take the helpless from the low lands by force if need be than to try to stay the flood.

I have heard the cry of robber all along the line in this debate. I will point out the robbers and the victims. I, being a new member, have been rather a silent one, but held no restraint on my observation. I have tried to vote intelligently. I hold in my hand the Indian appropriation bill. I remember the discussion upon it. I read the reports of one hundred and forty-two agents, I think there are, and then I was told that the Indians were a suffering, needy people; they were savages, but were improving; that they needed flour and meat and knick-knacks, farming implements, clothing, school-teachers, and agents. I was asked to vote for a bill appropriating over $7,000,000 of the people's money for expenses of the Indians. I am furnished reports of Indian agents giving glowing accounts of the great progress of civilization among the Indians. All right. Then here comes the Springer bill to give them a government—white men and red men together. That bill is denounced as a scheme to rob the Indian.

I find that some of the tribes have lands to the extent of 5,000 acres to each head of a family; that the Cherokees rent their outside lands for which they have no other use for $100,000 a year for grazing purposes; that they have an income besides of $100,000. When the Army bill came up to be voted on, I took occasion to ascertain that the bulk of the expenses of the Army in the field is to support the troops, who watch the Indians to keep them from killing our frontier settlers and from killing each other. We voted a million of dollars this session to reimburse Texas for her expenses in fighting the Indians who were making incursions upon that State. Now, then, I say that if these Indians have progressed as the Indian agents say they have—they have good lands, and plenty of them—let us give them a government, white and Indian together, and let the law govern them, and let them support themselves, and we can gradually get rid of the one hundred and seventy-five employés in the Interior Department who attend to Indian business only at salaries of $900 to $2,500 annually. Let us gradually get rid of the three hundred agents and attachés of the Indian Bureau. We can withdraw the Army gradually as civilization prevails.

These Indians are all healthy, stalwart people; why can not they support themselves? It is simply that civilization has driven out the game and they are too infernal lazy to work. But I must stand up here and vote money out of the Treasury to feed them and clothe them in lounging laziness. Where do I get the money? I must get it from the farmers and husbandmen, who do not work eight hours, but from the dawn till twilight. There is where the robbery comes in. I am going to vote for every bill that looks to the correction of that state of affairs. If, on the other hand, these agents have misrepresented the facts in order to hold their places, and the Indians are savages still, then I say let government be started among them so that white people can live among them and administer the laws for them.

In nearly all the Southern States there are Indians living that way, and are peaceable. And in that way we will get rid of this enormous expense, over $19,000 a day. The Indian chiefs and their agents and the cattle barons and their minions get this money, I am told by respectable men. I am willing to vote money to support the poor, but to vote money out of the pockets of the people to support great stalwart Indians in idleness, that can rally out and kill our people, and vote money to keep an army there to herd them like wild beasts, when they are more able to work and support themselves than my constituents are, I rob my own people. If I must be a robber I will not rob my own folks, and that, too, when I have been trusted by them and commissioned to represent them. These Western men are not savages, but Anglo-Saxons. They will not treat the Indian half so badly as we treat them with the present policy. Let him have government and have peace, and learn industry from the white race among them.

Now, Mr. Chairman, I say that that government is what the Indians want, is what they need, is what will save them. The mighty civilization of this age, which I say is right, whose actions and movements I indorse, must be extended over all the people of this country. I am proud of the civilization of the age. I am proud of the civilization of America and prouder still of the great progress of the Anglo-Saxon race. And, now, while this sentiment may be beautiful and may be as roseate as the romantic dreams of a brown-eyed maiden, this Indian policy—but it is effeminate and beneath the sturdy progress of the age. [Applause.] It never wielded the sword in the line that advanced the progress and civilization of this country. Justice is sturdy, manhood is sturdy, civilization is truth, and if these people have the hand of civilization extended to them they would gladly accept it and live, perpetuate their race, but for the despotic rule of the chiefs and their minions, who revel in wealth and rule with iron hand while their degraded subjects starve. These brown chiefs and their salaried agents should yield and with their race prepare for a higher and nobler life; because I tell you that this great Anglo-Saxon race is going forward, going like the flood-tide, and you had as well undertake to resist the waves of the ocean as its onward progress. [Applause.] They must come in with the tide. The white man is as good as the Indian [laughter and applause] and will obey the laws and accept civilization. The Indian must do the same or lag and be left and finally go out in oblivion.

But, forsooth, the Indian chiefs do not like our laws or our civilization. They cannot sally forth at the head of their tribes and kill women and children and demand a bonus from the Government to quit if they accept civilization. But I say now, we might just as well make up our minds to believe and know that the decree has gone forth. It was signed when the Pilgrim Fathers upon Plymouth Rock on bended knees devoted this new world to civilization, to liberty, and to God. [Applause.] It was emphasized when the bugle blast of the cavaliers announced the presence of that dauntless race on these shores. It was promulgated when the brave and bold Anglo-Saxon swung his gun upon his shoulder, turned his face towards the setting sun, commanded the wilderness to give the way, and with prophetic vision beheld the scene portrayed by the magnificent fresco on the wall of this extension of the Capitol, and meets the eye as we descend the western grand stairway from the upper story to the floor upon which we stand.

There is represented, as with sentient pencil the lofty awe-inspiring Rocky Mountain range. An emigrant cavalcade has pushed its tedious, dangerous way up the last rugged ascent on the eastern side and camped in a mountain gorge near the summit. The emigrants have climbed high up on the base of a high peak, and holding their wives and daughters in place look with beaming triumph in their faces down over the great western slope to the Golden Gate, and out upon "the other ocean." The women have expressions of devotion on their faces. At last God had brought them through the wide and solemn wilderness and over the deserts to victory. Civilization and Christianity have triumphed.

The impregnable rocky barrier to the march of progress yielded to the all-conquering Anglo-Saxon; and that the picture might make complete expression of Americanism a daring youth in wild exuberance climbed to the summit of the loftiest peak and upon the topmost stone of the rocky cliff that none but the eagle's foot had pressed planted the American flag, and erect on that towering, dazzling height waved his hat in wildest exultation as the Stars and Stripes floated out upon the breeze above the clouds and the exultant voice of civilization rang out on the startled air. That is a faithful and grand portrayal of Americanism. And this is the race and this the civilization that a few feeble battalions are to arrest in its triumphal march to a sublime destiny, to slap it in the face and beat back its conquering phalanxes that this patch of heathenism be not desecrated by its presence. This area, in the center of this great country, must be held free from the Constitution and laws of that Government held to be the grandest production of the human brain, fenced by a cordon of soldiery, and devoted to the propagation of savages.

The years that are to come must behold the spectacle of American soldiery in solid phalanx around this territory sacred to heathenism, floating the American flag, with bayonets fixed against the American civilization. The chief of the armies will find that he breasts a resistless force. This civilization moves with a swelling self-prompted motion, as the ocean's swelling tide, and its proud waves are coming in with illumined crests and will cover the whole land. It is the march of the inevitable, and moralize as we will, we must face the fact that it is not a theory but a condition that confronts us, and the theory must give way. [Applause.]

The Tariff in its Relation to the Workingman.

REMARKS

OF

HON. JEHU BAKER,

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 4, 1888.

Mr. BAKER, of Illinois, said:

Mr. SPEAKER: Our country is now passing through a political contest of the highest importance; a contest which profoundly concerns the welfare of our whole people.

Our immense farming population is deeply interested in the issue, for it is invited to concur in a policy which would, as its first effect, destroy the employment of a vast amount of our home labor, by substituting for it the employment of like labor in foreign countries; and which would, as its inevitable second effect, greatly weaken the power of our home markets to purchase and consume the products of the farm, thus entailing a certain injury upon our farmers by seriously impairing the purchasing ability of their home markets, in the uncertain and visionary pursuit of a paying increase of their foreign markets.

Our great business population is equally interested in the issue, for it is invited to concur in a policy which would shock the very foundation on which our business rests, by suddenly disturbing values, by crippling or breaking down home industries, and by diminishing the sum total of the employment and productive force of our country, in the way of transferring a large part of that employment and productive force to foreign countries.

Our great capital interest is in like manner concerned in the issue, for it is invited to concur in a policy which would, to a large extent, destroy the use and profit of American capital by increasing the use and profit of foreign capital.

Our great labor interest is equally and deeply concerned in the issue, for it is invited to concur in a policy which would lower the condition of American labor without elevating the condition of foreign labor, thus aiding to fix the working masses of mankind in the shackles of the same low status of industrial service.

Although I have mentioned classes of our people, according to the general nature of their employment or life, yet all these classes are but parts of one organic whole in our great and complicated American society. Like the organs of a living body, all are in the most intimate sympathy with each other. When one part suffers all suffer. When one part is really and justly prosperous, all are in good condition. The laborer, the farmer, the business man, the capitalist, are so connected together that the real good of one is the real good of the rest; the harm of one the harm of the rest; and all are confronted to-day by a menace which should arouse their united recoil as against a common danger—the menace of substituting a great part of our American labor and farming and business and capital by the labor and farming and business and capital of foreign countries.

But what I have said is only introductory to the views of another—on the matter of the American principle of protection in its relation to our home labor.

It is well that in the halls of our legislation more and more attention is coming to be paid to those who are the immediate, unofficial representatives of the aspirations of great masses of our people. I draw attention to the following letter of Mr. Charles B. Litchman, late General Secretary of the Knights of Labor, in which he briefly discusses the pending issue from the standpoint of an extensive practical study of the interests of the workingman, and in which he very naturally and very reasonably reaches the conclusion that the Republican-American policy is greatly preferable to the Democratic-English policy, as regards the interests of our laboring people; and he might equally have added, as regards the interests of all our people, for, as I have pointed out, all these interests are sympathetic, and all prosper or suffer together. But let us hear Mr. Litchman:

PHILADELPHIA, PA., *August* 27, 1888.

DEAR SIR: My connection with the labor movement for the last fourteen years has made it necessary for me to be a close student of the causes of labor depression, and of the needs of those who toil.

While as a body a labor organization may refrain from active participation in politics, so much of what organized labor demands must be obtained through legislation that the individual member of the labor organization must act politically as in his judgment will best aid the aims and objects expressed in the principles of the organization he represents, and whose success he desires.

In the gigantic political struggle now begun side issues count as nothing to aid or hinder the principal combatants in the political arena. However sincere may be the advocates of the measures to secure which these separate political organizations are formed, and whatever strength in votes may be shown at the polls, the fact remains that the candidate of either the Republican or of the Democratic party will be the next President of the United States.

Therefore to him who has the good of his country and the welfare of her people at heart the necessity exists to choose to which of these two old party organizations shall be given his aid, either directly or indirectly, by voice or vote.

While it may be that neither party offers all that labor organizations desire I believe that the Republican party, in adopting and advocating the American system of encouragement and protection to the labor and wages of our own land, is nearer the declarations and desires of organized labor than its free-trade opponent, the Democratic party.

The conflict [is] between the American system, as represented by the Republican party, which would foster and encourage the labor of our own people and retain for them the market and wages of our own country, and the British system, as represented by the Democratic party, which would break down the barriers of protection and throw open our home market to the productions of foreign factories and foreign labor, thus making idle our own toilers and reducing to a lower level the standard of American wages.

When the Knights of Labor and kindred organizations shall have obtained in foreign lands the same commanding position and influence enjoyed in the United States, the inequality in wages will disappear, not by leveling our wages down, but by leveling their wages up. It is far better to level up than to level down, as the larger the income the larger the power to consume.

Until this equalization can be accomplished, and until the wages of labor abroad shall equal those at home, there must be a proper restriction of immigration, so that our land may not be the dumping-ground of the pauper and degraded labor of the balance of the world. This restriction, supplemented by a continuation of thorough, systematic organization of the labor already here, in conjunction with the American idea of protection to American labor, can not fail to secure for our people the best results of their toil, and by our example lift the labor of the whole world to a higher and better plane of existence.

Whichever party wins, something must be done to regulate more strictly this importation of foreign labor under contract and the immigration of paupers and dependents. If nothing should be done, then Democratic success would mean not only free trade in goods made by pauper labor, but the importation of both the labor and the goods. While under free trade goods may be cheaper to the consumer in certain lines, the labor made idle in these lines must turn to other means of employment, and thus by competition compel a lower rate of wages to those already employed therein.

The power of a workingman to consume depends upon what he receives for his labor. Unemployed, his power to consume, except on charity or theft, ceases. I prefer that America should be a land of workers rather than a land of thieves and paupers.

What is true of the individual is equally true of the nation. The primary elements of national wealth and national prosperity are production, distribution, and consumption. Whatever affects the power of labor to consume affects the entire interests of the nation. Whatever lowers the wages of labor affects its power to consume. An "average reduction" of 7 per cent. on the cost of goods imported will not compensate American labor for the loss of 100 per cent. in wages in the lines affected and of from 10 to 50 per cent. in wages in the line of employment by the substitution of the free-trade for the protective system. I hold it to be far wiser statesmanship to build up and retain our home market by a system that protects American labor than to command a market in foreign lands secured by the wholesale degradation and pauperization of our own people.

Every dollar's worth of labor value imported is by so much a reduction of home laborers' wages. This axiom is not offset by the declaration that there are more goods in the imported dollar's worth. The position of the protectionist is rather strengthened by such a specious presentation of the matter, because the question is then instantly forced upon every intelligent man: How can American labor earn dollars if the industry in which he is experienced is transferred to foreign lands?

The theory of protection advocated by the Republican party is the same as the underlying principle upon which all labor organizations are founded. A friend to organized labor that believes in organization as a means to enhance and maintain wages can not consistently oppose a party that applies to all labor the same principle of protection from unfair competition that the individual trade organization gives to the single trade. Trade organizations do aid in advancing wages in their respective trades, and the protective system demanded by the Republican party will secure for all the toilers in the land a similar fostering care.

That this is clearly understood by most of the thinking leaders of organized labor is proved by the declaration recently made in favor of the American system and a home market by the presiding officers of the organizations representing the iron and the glass industries of the United States. There is no better organization of any one trade than the Amalgamated Association of Iron and Steel Workers. There is no trade more thoroughly organized or better disciplined than that of the Window Glass Workers, nor one in which higher wages are paid. The warning of the officers representing those trades against free trade is very significant, and should be heeded.

A careful consideration of all these facts convinces me that the present is a grave crisis in the political affairs of our country, and that I have no right to remain silent. My position as General Secretary of the Knights of Labor has given me an intimate knowledge of the various phases of the labor question, and from the knowledge thus gained I do not hesitate to say that the triumph of the Democratic party, dominated by intolerance in the South and British free-trade sentiment in the North, would be the most serious blow to organized labor it could possibly receive. I can not remain inactive in such a conflict.

Therefore, to you and your associates on the national Republican committee, as the representatives of the Republican party, I offer my services in any position or capacity where they may be useful to aid in securing the success of Harrison and Morton, the representatives in this campaign of the American idea of protection to American labor.

I have the honor to remain yours to command,

CHAS. B. LITCHMAN.

Hon. MATTHEW S. QUAY,
Chairman of the National Republican Committee,
Everett House, New York City, N.Y.

In the main and in the substance these words are well and wisely put, as regards the question of aid, encouragement or protection of American labor; and in one place they rise to the highest level of political and social thought—in presenting the conception that the stand made by the industrial system of the United States has a tendency to ultimately elevate the industrial systems of other countries, and that the surrender of our American system, and the adoption of the system of England instead, would lower the status of labor in America without elevating it elsewhere—which would be the barrenest surrender that was ever made. Will the laboring men of America voluntarily surrender in such a case? Will they voluntarily put aside, by their own votes, that shield of protection which guards them from the debasing competition of the underpaid labor of foreign countries? Will they voluntarily consent to be led blindfolded into the camp of their own subjection, impoverishment, and degradation? I will confidently rely upon the workingmen of the United States to answer these questions in a manner which will at once respect their own just interests, and respect the interests of humanity in general.

I conclude these remarks by adding two tables, the one showing the average weekly wages in England and Wales, and in Chicago and New York, for thirty-six trades, and the other showing the same in London and Chicago for forty-two trades, both of which tables I have compiled

from the United States Consular Reports, published by our Government in 1885, and which therefore carry with them official authority. These are only two of the numerous tables and statements which I have collected and compiled from the most reliable sources and from an extended correspondence, tending altogether, and with overwhelming weight, to the one solid conclusion, that our present tariff system should be maintained and perfected instead of being overthrown. In consulting these tables, which show how much greater wages are in the United States than in England, it should be borne in mind that wages in England are considerably higher than they are on the continent of Europe, thus showing the very great advantage of American wages over all.

TABLE I.—*Average weekly wages in England and Wales, and in Chicago and New York, for thirty-six trades.*

[Compiled from the United States Consular Reports published in 1885.]

Occupations.	England and Wales.	Chicago.	New York.
Bricklayers	$7.56	$24.00	$20.00
Hod-carriers	4.94	10 50	11.00
Masons	7.68	24.00	18.00
Tenders	5.07	10.50	10.00
Plasterers	7.80	27.00	18.00
Tenders	5.27	15.00	10.00
Slaters	7.10	21.00	14.00
Roofers	7.35	16.50	12.00
Tenders	7.24	10.50	9.00
Plumbers	7.90	22.50	16.00
Assistants	4.69	5.70	10.00
Carpenters	7.66	16.50	14.00
Gas-fitters	7.66	18.00	12.00
Bakers	6.77	12.00	7.00
Blacksmiths	7.37	15.00	13.00
Strikers	5.30	10.50	9.00
Book-binders	6.77	16.50	14.00
Brick-makers (about)	7.00	17.40	10.00
Butchers	5.50	16.50	8.00
Brass-founders	7.47	15.00	10.00
Cabinet-makers	7.68	15.00	12.00
Cigar-makers	6.07	18.00	11.15
Coopers	7.50	12.00	12.00
Draymen and teamsters	5.37	12.00	10.00
Street railways	6.09	13.50	11.00
Dyers	$6.18	$16.50	$13.00
Engravers	8.34	24.00	16.00
Gardeners	5.80	12. 0	9.00
Horseshoers	6.32	18.00	13.00
Jewelers	8.76	13.50	11.00
Laborers, porters, etc	4.70	10.50	9.00
Printers	7.17	18.00	13.00
Saddle and harness makers	6.63	12.00	11.00
Sailmakers	7.02	15.00	12.00
Stevedores	8.44	18.00	12.00
Tinsmiths	6.56	12.72	11.00

TABLE II.—*Weekly wages in London and Chicago for forty-two trades.*

[Compiled from the United States Consular Reports published in 1885.]

Occupations.	London.	Chicago.
Bricklayers	$8.40	$24.00
Hod-carriers	4.60	10.50
Masons	8.40	24.00
Tenders	4.60	10.50
Plasterers	7.50	27.00
Tenders	4.60	15.00
Slaters	7.50	21.00
Roofers	7.50	16.50
Tenders	4.60	10.50
Plumbers	8.10	22.50
Assistants	4.87	5.70
Carpenters	8.00	16.50
Gas-fitters	8.00	18.00
Bakers	6.50	12.00
Blacksmiths	7.80	15.00
Strikers	6.00	10.50
Book-binders	7.00	16.50
Brick-makers	6.00	17.40
Brewers	7.00	15.00
Brass-founders	8.10	15.00
Cabinet-makers	8.80	15.00
Confectioners	6.00	12.00
Cigar-makers	6.80	18.00
Coopers	8.00	12.00
Draymen and teamsters	6.50	12.00
Street railways	7.50	13.50
Dyers	7.50	16.50
Engravers	8.50	24.00
Furriers	8.50	15.00
Gardeners	5.20	12.50
Horseshoers	7.10	18.00
Jewelers	8.00	13.50
Laborers, porters, etc	4.87	10.50
Lithographers	8.50	24.00
Printers	7.30	18.00
Saddle and harness makers	7.80	12.00
Sail-makers	7.30	15.00
Stevedores	8.00	18.00
Tanners	7.00	16.00
Tailors	7.50	15.00
Telegraph operators	8.00	20.00
Tinsmiths	7.00	12.72

A glance at the foregoing tables shows at once the great superiority of American wages, and the Secretary of State, in summing up the result, says:

From the foregoing statement it appears that bricklayers and masons in Chicago are paid very nearly three times the wages; plasterers, nearly four times; slaters, three times; plumbers, nearly three times; carpenters, twice; blacksmiths, twice; book-binders, more than twice; brick-makers, nearly three times; brass-founders and cabinet-makers, nearly twice; confectioners, twice; cigar-makers, nearly three times; coopers, once and a half as much; draymen, teamsters, and street-railway drivers, nearly twice; dyers, more than twice; engravers, nearly three times; furriers, twice; horse-shoers, three and one-half times; jewelers, more than one and one-half times; laborers, porters, etc., more than twice; lithographers, three times; telegraph operators, twice and one-half; sail-makers, more than twice; printers, twice and one-half times; saddlers and harness-makers, more than one and one-half times; stevedores, more than twice and one-fourth times; tailors, twice; and tinsmiths, once and three-fourths the wages paid to similar trades and callings in London.

And, in reference to the comparative purchasing power of wages here and in Europe, the Secretary adds the following highly important statement:

In the volume on labor in Europe, published by this Department in 1878, it was shown that the prices of food in the United States were actually lower than in Europe, and that the working classes in the United States could purchase more and better aliment, dollar for dollar, than the working classes of any country in Europe.

It is demonstrably true that the wages of labor in the United States are very much greater than the wages of labor in Europe; and it is as demonstrably true that the wages of labor here go much further than they do there in purchasing the necessaries, the commodities, and the comforts of life. The practical question of the hour for the American workingman is: Will he voluntarily surrender these great advantages? Will he voluntarily agree to level down? Will he voluntarily agree to exchange our American system for the English system? a surrender, a leveling down, and an exchange of systems which would lower his own wages without raising the wages of his fellow workmen in other countries. The very statement of these questions carries with it a necessary and firm negative answer to the whole of them; and I can not doubt that this will be the answer of a great majority of the workingmen of the United States on the 6th day of November next.

Mr. Payson's Proposed Amendment to the Oklahoma Bill.

SPEECH

OF

HON. WILLIAM M. SPRINGER,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, August 28, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 10614) to organize the Territory of Oklahoma, and for other purposes—

The CHAIRMAN. The Clerk will report the pending amendment.

The Clerk read as follows:

It is proposed, in section 5, to strike out the words "at a price of $1.25 per acre," in lines 12 and 13, and insert "under the homestead laws, only excepting that section 2301 of the Revised Statutes do not apply."

The CHAIRMAN. The question is on the amendment proposed by the gentleman from Illinois.

* * * * * * *

Mr. SPRINGER. I will occupy a portion of the time allowed to the friends of the bill this afternoon, if the gentleman from Mississippi [Mr. HOOKER] does not desire to proceed now.

Mr. HOOKER. No, I do not. The gentleman can go on and reply to his colleague from Illinois. I shall be glad to hear his argument.

Mr. SPRINGER. I desire to call the attention of the committee briefly to the fact, and hope the committee will give me its attention, that during the long years in the history of this Government, when we have been purchasing lands from other governments and acquiring the right of occupancy from the Indians by the extinguishment of their titles, the policy of the Government in the disposition of its public lands, although a homestead law was in force in recent years, yet for that whole time has also embraced within it general features and provisions which produced for the Treasury by the sale of these lands large sums of money. While the amount of money received up to this time is not equal to the amounts paid for the lands by the Government, yet, considering the value of the land yet undisposed of and the millions of acres given to States and corporations, the value received is vastly in excess of the cost of the land. The provision in the land laws which allowed the commutation of homestead entries and the pre-emption of lands, and also the taking of railroad lands at double price, and many other provisions which permitted the offering of public lands in certain circumstances at $1.25 per acre to all persons who might take them at the land offices of the United States, under which provisions nearly all of the lands in the great State of Illinois were taken——

Mr. WEAVER. And Iowa.

Mr. SPRINGER. Yes, and Iowa; which provisions have brought into the Treasury of the United States from 1785 to June 30, 1883, the enormous sum of $233,576,861.04. Since 1883 up to June 30, 1888, the receipts from the sales of public lands, including Indian lands, have been over $53,000,000, making a grand aggregate of cash receipts of $286,576,861. The estimated value of the public domain June 30, 1883, was, less the amount required to survey it and quiet Indian titles, and excluding Alaska, $1,089,500,000. If we deduct from this the value of the lands disposed of since that time we will still have on hand lands worth at least $1,000,000,000. The lands granted to railroads up to November 1, 1880, had realized the railroad companies $68,905,479, and the lands which they received from the Government then unsold were valued at $322,899,130. The railroads will realize at least $100,000,000 from the sales of lands which the Government has given them.

June 30, 1883, the United States owned a total of 928,426,577 acres of unsurveyed land (including Alaska) and 271,382,299 acres of surveyed and unsold lands, a grand total of 1,199,808,876 acres yet to be disposed of, an area equal to 7,498,805 homesteads of 160 acres each. This estimate is within 10 per cent. of the actual amount, official, legal, and other reasons preventing a closer estimate. (See Public Domain, 1883, page 527.)

The total cost of the public domain to June 30, 1883, was as follows:

Purchases and cessions	$88,157,389.98
Surveys and disposition thereof	55,047,739.10
Indian lands, annuities, etc	208,776,031.24
Total	351,981,160.32

The following donations of public lands have been made by Congress up to June 30, 1886:

	Acres.
Swamp lands patented up to June 30, 1885	56,692,500
Common schools, sixteenth and thirty-second sections	67,893,919
Agricultural colleges	9,600,000
Seminaries	1,165,520
Military and naval land warrants	61,028,430
Military reservations	2,920,580
State selections for internal improvements	7,806,554
Scrip	2,893,034
Town sites	18,916
Land bounties for cultivation of timber	9,346,660
To railroads (up to November 1, 1882)	178,952,688
Total	400,446,821

If valued at $1.25 per acre these lands were worth over $500,000,000. If we add to this amount the sums already received (up to June 30, 1888) for sales of public lands and the value of the public domain unsold, the grand aggregate would be as follows:

Value of donations of public lands	$500,000,000
Cash received from sales thereof	286,576,861
Value of unsold lands, not including Alaska	1,000,000,000
Value of Alaska (the price paid)	7,200,000
	1,793,776,861
Deduct total amount paid	351,981,160
Net profit on land purchases	1,441,795,701

My colleague from Illinois has said that the Government has paid to the Indians some $208,000,000 to acquire titles to their lands, and had opened these lands to settlement under the laws to which I have referred. He said under the homestead laws that the Government has given the lands to the people without requiring payment therefor. But I want the gentleman to bear in mind the fact, and I ask the attention of the committee to it also, that the homestead laws were coupled with the other provisions to which I have referred; and those provisions, running parallel with the homestead laws, have caused an immense sum of money to be paid into the Treasury of the United States, namely, as I have already stated, $286,000,000, while we have given the railroads $400,000,000 worth and have still on hand lands worth a billion dollars, to say nothing of the vast amount of lands we have given for schools, colleges, internal improvements, and other purposes.

Mr. PAYSON. What does the gentleman mean by saying that the homestead laws were coupled with provisions which paid vast sums of money into the Treasury? What condition was imposed by any provision of the homestead laws that demanded payment for the lands or required anything else than the occupancy of the lands for a definite period?

Mr. SPRINGER. I mean, as I have just stated, that coupled with the provisions of the homestead law were the other provisions, the commutation feature, for instance, pre-emptions and other features of the land laws which are a part of the general land system of the United States, and which were in force at the same time with the homestead law, and under which provisions the settlers availed themselves of the right to speedily perfect their title by the payment of a definite sum instead of living upon the lands for the number of years required. I grant you, and I have just stated it to be a fact, that the Government under certain conditions offered these lands to persons who settled upon them for a number of years——

Mr. PAYSON. As a donation.

Mr. SPRINGER. Certainly, without cost to them. But the policy of the land laws has coupled with the homestead feature other provisions which were in force at the same time, and which authorized the purchase of the lands; and these two provisions, the commutation-feature principle and the pre-emption right, and other provisions of the laws were in force and operating, and by their operation they brought into the Treasury of the United States the immense sums of money to which I have referred. In fact, as suggested by the gentleman from Arkansas [Mr. ROGERS] who sits near me, while the homestead laws were in force, and persons could occupy the lands and get them for nothing by living five years on them, yet it appears from a reference to the records of the Land Office that in many instances, perhaps in the majority of them, they preferred to commute the homestead and pay $1.25 an acre, so as to get the title immediately, or to pre-empt lands, or purchase offered lands.

Mr. RYAN. And that applies to the great body of them.

Mr. SPRINGER. The great body were commuted, purchased, or pre-empted, showing it to be a fact that the people would prefer to pay the $1.25 an acre rather than take homesteads upon them for nothing. Hence when you provide, as in this bill, but one way to acquire the title, that is, a continuous personal occupancy for three years, and the payment of the sum which the Government must pay in order to indemnify the Government for the purchase of the Indian titles, we place the lands simply upon an equality with all of the other public lands of the country, namely, apply such provisions as in their practical working in the land system generally has brought or will bring into the Treasury of the United States enough money to indemnify the Government.

Now, if the gentleman would suggest and if it were proposed to amend the law to apply all the homestead provisions of the lands laws now in force to Oklahoma, so that the settler could commute in six months under the law by paying $1.25 an acre. I would guaranty that there would not be a single homestead perfected.

Mr. PAYSON. Yes; and the gentleman can go on and state why.

Mr. SPRINGER. Yes; the gentleman knows why very well.

Mr. PAYSON. There need not be any hesitancy in saying it. The reason is that in less than three months' time from now all of these lands would be in the hands of speculators, every acre of them; and that is a sufficient answer why the "gentleman from Illinois," referring to myself, is opposed to such a proposition.

Mr. SPRINGER. But I think the gentleman ought to be willing to allow a settler to pay $1.25 an acre, rather than open up the lands under the homestead laws as they stand and thus allow them to go into the hands of the speculators.

Mr. PAYSON. I hope the gentleman does not mean to say that is what I propose.

Mr. SPRINGER. I do not intend to put the gentleman in a wrong position.

Mr. PAYSON. Because if my amendment is adopted it makes that impossible, and prevents the speculator from getting an acre of the lands.

Mr. SPRINGER. I do not say that that is the object of the gentleman's amendment, but that will be its effect if he should apply all of the homestead laws to Oklahoma.

Mr. PAYSON. No; it is simply to prevent that.

Mr. SPRINGER. I have only said that the gentleman's argument was to the effect that the policy of the Government was to allow its lands to be taken under the homestead laws without payment, and his argument implies also that this was the law he was applying to this territory. But by his amendment under the provisions of the bill he will apply a different principle to Oklahoma than to any other portion of the public lands of the United States.

He is requiring it to be taken solely under the homestead law without commutation, thus prohibiting any taking of land except by actual settlers, and he does not provide any means by which the Government can get any indemnification whatever. So that the policy which the gentleman cites as the precedent for one hundred years of our constitutional history, the policy of allowing the people to take the public lands under the homestead law, does not apply in this case. If you applied or offered to apply the same land laws to Oklahoma that have been in existence ever since the homestead act was passed, then more money would come into the Treasury under those laws than will come in under the provisions of this bill. Therefore, we are taking a departure here; we are turning over a new leaf. We can not afford to enter upon these fertile lands of Oklahoma with the provisions of the homestead law, with commutation and pre-emption, in existence. We can not afford to open up these rich fields and allow them to fall into the hands of speculators as so many millions of acres of the public domain have fallen. We must hold them solely and sacredly for the benefit of actual settlers.

Mr. HOOKER. Do I understand the gentleman to take the position that if the homestead law applied to the lands embraced in Oklahoma, more money would be paid into the Treasury for those lands than if they were sold at $1.25 per acre?

Mr. SPRINGER. I said that if the homestead law as it now exists was applied to those lands, then the Government would get more money for them than it will under the provisions of this bill.

Mr. HOLMAN. But the commutation clause is expressly stricken out.

Mr. SPRINGER. I know; but the idea that I want to impress upon the committee, if I can succeed in doing so, is this: My colleague [Mr. PAYSON] has spoken of the precedent of opening up the public lands under the homestead law and holding them for actual settlers, and has alleged that this bill is a departure from that precedent because it requires the settler to pay for his land the amount required to

get the Indian title. Now, I say to my colleague that the land laws of the United States, including the homestead law, as they have existed for years, are not the laws which he proposes by his amendment. The gentleman is not proposing the land laws of the United States as they now exist.

Mr. PAYSON. Except one section.

Mr. SPRINGER. Yes, except one section; but that makes the whole difference.

Mr. PAYSON. And that section, as it stands in the existing law, is claimed to have rendered possible the frauds upon the public land system with which everybody here is so thoroughly familiar.

Mr. PETERS. The gentleman from Illinois [Mr. PAYSON] is entirely mistaken on that point.

Mr. PAYSON. Well, we need not get into that argument now. I do not now assert that as a fact. I simply say it is so claimed.

Mr. SPRINGER. I have already given the figures from the records of the Government showing how many millions of dollars have gone into the Treasury as the proceeds of the sales of public lands, and when those sums are taken into consideration, together with the $400,000,000 worth of lands given to railroads and the countless millions given for common schools, colleges, internal improvements, and the billion dollars' worth of lands unsold, the $200,000,000 which the gentleman from Illinois [Mr. PAYSON] has paraded before the committee as having been paid for Indian lands "pale their uneffectual fire" and sink into comparative insignificance.

Now, the gentleman [Mr. PAYSON] proposes a new departure himself. He proposes that, as to these Indian lands, that we shall pay the Indians the price that we agree upon, and then shall give the lands away to actual settlers under the homestead law, without commutation.

What will that policy cost the Government? If the gentleman will look at the reports of the Indian Bureau, he will find that there are now held within the Indian reservations of the United States 224,000 square miles of land, or an area in acres of one hundred and forty-three millions. This area, which is now held for the exclusive occupancy of the Indians in this country, who number, according to the last census, 246,000 only, this area now reserved for the occupancy of these Indians is equal to the combined area of the following States of this Union: Maine, New Hampshire, Massachusetts, Vermont, Connecticut, Rhode Island, New York, New Jersey, Delaware, Pennsylvania, Maryland, and Ohio—a territory beginning at New Brunswick and sweeping south to Mason and Dixon's line, and westward to the eastern border of Indiana. The area of the States I have named amounts to 143,000,000 acres, almost precisely the area that is now held in the exclusive occupancy of 246,000 Indians! If you gave each one of those Indians, man, woman, and child, his portion of this land it would amount to 583 acres to each individual; or over 3,000 acres to each family of five persons.

If those lands, under the policy adopted by the Government, shall be disposed of under the allotment law and every head of a family given 160 acres, or, if you please, 180 acres, it will still leave 100,000,000 acres of Indian lands for the future settlement of white men.

One hundred million acres of land. Now, if the policy of the Government is adopted of allotting the Indian lands so that the remainder can be opened to white settlement, under the agreement with the Indians, it will leave 100,000,000 acres of land for future settlement by white people. The gentleman from Illinois proposes to pay $1.25 per acre for that land.

Mr. PARKER. Will the gentleman permit a question?

Mr. SPRINGER. Certainly.

Mr. PARKER. What does the gentleman mean by white people?

Mr. SPRINGER. I mean white and colored and everybody but Indians. I mean white men in contradistinction to red men.

Mr. BUCHANAN. Will the gentleman permit another question?

Mr. SPRINGER. Certainly.

Mr. BUCHANAN. I understood him to refer to all Indian lands.

Mr. SPRINGER. I did.

Mr. BUCHANAN. Will the gentleman tell us if he knows the exact amount that is covered by this bill to which the amendment of the gentleman from Illinois attaches?

Mr. SPRINGER. I will.

Mr. BUCHANAN. In other words, will he bring himself down to the actual details before us?

Mr. SPRINGER. I am coming right down to that. As I understand, if the bill is passed with this amendment, and we secure all the lands of the Indians in what is known as Oklahoma proper and the Cherokee Outlet, there will be 8,000,000 acres to be given away to actual settlers, for which the Government must pay about $10,000,000.

Mr. PARKER. Will the gentleman permit another question?

Mr. SPRINGER. Not until I have answered the gentleman from New Jersey. Under the provisions of this bill what is known as the Cherokee Outlet, containing 6,000,000 acres, and Oklahoma proper containing nearly 2,000,000 acres, or in all nearly 8,000,000 acres of Indian lands, will be opened to settlement, and at $1.25 an acre it would amount to nearly $10,000,000. So that if this provision prevails the next session of Congress will be required to appropriate $10,000,000 in payment for Oklahoma proper and the Cherokee Outlet. Hereafter, if we are to acquire other lands from the Indians outside of the five civilized tribes under the provisions of the allotment law, under which each Indian family shall have 160 acres, there would be an additional 11,000,000 acres to be acquired from the Indians, for which we would have to pay a sum of money amounting to thirteen or fourteen million dollars. I have estimated the land which in the near future will be opened to settlement will amount to nearly 20,000,000 acres, and the cost to the Government will be about $25,000,000, if the amendment of the gentleman from Illinois [Mr. PAYSON] be adopted.

Mr. PAYSON. That would be the maximum amount.

Mr. SPRINGER. Yes, that would be the maximum amount.

Mr. BUCHANAN. Will the gentleman permit another question?

Mr. SPRINGER. Certainly.

Mr. BUCHANAN. I want to ask how much land given away under the homestead laws in your own State the Government paid for in hard cash?

Mr. SPRINGER. The Government paid nothing in hard cash for lands in Illinois. The State of Illinois was part of the Northwestern Territory——

Mr. BUCHANAN. Does the gentleman see any reason why the settler of to-day should be treated with less favor than the settler of 1861?

Mr. SPRINGER. No, I do not; and that is just what I desire to speak about. The gentleman from Illinois and my friend from New Jersey have assumed that there is a different rule as to settlement on the public lands provided by this bill from that which prevailed heretofore under the homestead laws, which permit the settler to commute after six months and pay $1.25 for the land.

Mr. PAYSON. Will the gentleman permit me? Under the law as it stands now the homesteader is allowed to commute, and this bill compels him to commute and pay, and there is a great distinction between allowing a citizen to do something and compelling him.

Mr. SPRINGER. That is the general law, and under the law as it now stands the homestead law permits the settler to commute and pay, and he generally commutes and pays, and this would bring a large revenue into our Treasury. The homestead law permits the settler to buy at $1.25 an acre, and he finds it more convenient or profitable to pay $1.25 than to occupy it for five years and get it for nothing. We are now, under existing law, permitting persons to acquire titles without the three years of occupancy and settlement which the pending bill requires. Now, Mr. Chairman, one word further. These lands are differently situated from the lands which were offered for $1.25 under the homestead laws many years ago in the far Western regions.

The lands embraced under the provisions of the pending bill are surrounded on all sides by the highest forms of civilization. Within 60 miles of the Cherokee Outlet there is a city of forty or fifty thousand inhabitants. There are many cities along the border of the Cherokee Outlet of two, three, four, and five thousand inhabitants, from the cupolas of whose spires you can see 50 miles into the Indian Territory. A railroad runs two trains of passenger coaches from Kansas City to Galveston through the Oklahoma territory. These lands are now in the very center of civilization, and they are more valuable than were ever offered heretofore by the Government to actual settlers. I want to say to the gentleman from Illinois [Mr. PAYSON] that of the 600,000 people of the United States who have petitioned Congress for the passage of this bill in not one single instance was it asked that the lands should be thrown open to settlement free of cost. The people who desire to settle in Oklahoma only ask the privilege of going there and paying for the lands the same that the Government must pay in order to acquire the Indians' title. They have only asked that. They ask the privilege of going there and paying $1.25 an acre for the land, and the gentleman's efforts to secure it to them for nothing will not be appreciated by the people who desire to go to Oklahoma and settle.

Mr. PAYSON. Does my colleague think that the signers of this petition have noticed the difference between the homestead principle and the compulsory process of requiring $1.25 an acre?

Mr. SPRINGER. I presume they have.

Mr. PAYSON. Let me say to the gentleman that one of the highest representatives of the Knights of Labor that has been about this Capitol has had a conference with me within twenty-four hours, and his idea is that this bill makes provision for homestead settlement alone. I happen to know also that the Knights of Labor in my own county (and numerous petitions have come here signed by all of that organization in my town) understand the homestead feature of this bill to be the homestead principle pure and simple.

Mr. WEAVER. Does the gentleman from Illinois [Mr. PAYSON] think that the people who desire to settle in Oklahoma can reasonably ask the people of the United States—men, women, and children—to tax themselves 50 cents each in order to give those settlers free homes?

Mr. PAYSON. I do. I am in favor of that proposition; and I hope the House will be unanimous in support of it.

Mr. PETERS. That policy, besides the tax upon the people generally, as indicated by the gentleman from Iowa [Mr. WEAVER] would give those settlers in Oklahoma, without compensation, the benefit of the labor of all the settlers upon lands in the surrounding country.

Mr. SPRINGER. The gentleman from Illinois [Mr. PAYSON], I

have no doubt, has offered this amendment in good faith; but I want to assure him that I would regard its adoption as fatal to the passage of this bill. The Congress of the United States is not now ready, as the gentleman well understands, to depart from the policy which has heretofore prevailed in the passage of similar bills when we have acquired Indian lands—the policy of requiring the settlers to return to the Government the amount paid by the Government to the Indians.

Mr. WEAVER. Does anybody believe Congress will vote $30,000,000 in order that the lands thus purchased may be made a free gift to those who shall settle upon them?

Mr. PAYSON. My colleague [Mr. SPRINGER] must remember that more acres have been opened by Congress to settlement without expense to the settler than have been opened subject to charge. The great Blackfoot reservation of over 17,000,000 acres was opened without charge to the settler by the action of the present Congress. The only instances I now remember of the contrary policy were the Sioux reservation, where a charge of 50 cents an acre was imposed, and a little tract in Minnesota, the acreage of which I do not now recollect.

Mr. SPRINGER. I will appeal to Representatives on this floor who are most familiar with the circumstances to state whether, in acquiring the Indian reservations in Kansas, Iowa, Minnesota, and Nebraska, the Government has not required the settler to reimburse it for the amount paid to the Indians.

Mr. PERKINS. In the county in which I reside, which was formerly a part of the Osage diminished reservation, the settlers were compelled to pay for every acre which they acquired; and the money went into the Treasury to constitute a trust fund for the benefit of the Indians, who are to-day one of the wealthiest of the Indian tribes.

Mr. WEAVER. I live on what is called the new purchase from the Sacs and Foxes; and I know the settlers there had to pay $1.25 an acre.

Mr. PERKINS. Not a foot of land in my county was subject to homestead entry.

Mr. PAYSON. The great Pottawatomie reservation in Iowa, embracing over 5,000,000 acres in one body, was opened up without expense to the settler.

Mr. WEAVER. But settlers upon the new purchase of which I have just spoken were all required to pay $1.25 an acre.

Mr. PAYSON. There have been exceptional cases, like the Osage diminished reserve, mentioned by the gentleman from Kansas [Mr. PERKINS], and the "new purchase" from the Sacs and Fox Indians in Iowa. In cases where the land has been limited in area, and has been made especially valuable by reason of the proximity of settlement, the exceptionel policy of requiring reimbursement from the settler may have been adopted. But that has not been the general policy of the Government.

Mr. SPRINGER. Mr. Chairman, I will say to my colleague [Mr. PAYSON] that this amendment is not asked by the friends of this bill, and will not be voted for by them. Those who desire to defeat the bill, those who have not wished to give it even consideration in this House, will vote for that proposition in order to weaken the bill and render its passage impossible. That at least will be the motive of many gentlemen in supporting the amendment. This proposition is a "Trojan horse," which, if introduced into this bill, will have the effect of destroying it. Whatever may be his intention, my colleague [Mr. PAYSON], in urging this proposition, is dealing this bill a fatal blow.

Mr. PAYSON. Why does the gentleman say that?

Mr. SPRINGER. I say it because the people of the United States are not going to depart from the principle heretofore established requiring the settlers to reimburse the Government the cost of the purchase of Indian lands. That policy has prevailed all through our history. The extinguishment of the Indian title to the public lands and their disposal to the people who desired to settle upon them has been one of the most profitable enterprises in which our Government has engaged, as I have already shown.

Mr. HOOKER. Will the gentleman yield to me?

Mr. SPRINGER. Certainly.

Mr. HOOKER. The question I wish to ask is this: Do I understand you to say and admit that to introduce the homestead law into this bill would be fatal to the purpose of the bill? Do you say that?

Mr. SPRINGER. I say that if you introduce the present homestead law, which allows commutation and purchase at a dollar and a quarter per acre, it would be fatal to the purpose of the bill.

Mr. HOOKER. If the gentleman says that the homestead law being introduced into this bill it would be fatal to it, I would like to know from him and have him state to the House why and how it would be fatal. How can it be fatal by allowing commutation under the homestead law by payment of a dollar and a quarter per acre?

Mr. SPRINGER. It would be fatal from the fact that the homestead law allows commutation after six months and the payment of a dollar and twenty-five cents an acre. Under such a provision speculators would get the greater part of the lands.

Mr. HOOKER. Would we object to doing——

Mr. SPRINGER. Would the gentleman vote for the bill if we adopt the amendment of the gentleman from Illinois [Mr. PAYSON]?

Mr. HOOKER. I am not going to vote for your bill and you know it. I do not think your bill ought to pass. I ask you to say whether or not you will apply the ordinary homestead law, which applies to all lands in the United States, to the lands which are embraced by this bill.

Mr. SPRINGER. To put in this bill the homestead law as it exists to-day would, in my judgment, be fatal to the immediate purpose of the bill.

Mr. HOOKER. If this bill can not stand the homestead law then it ought to die.

Mr. SPRINGER. The homestead law, as it exists to-day, allows millions of acres of the public lands to go into the hands of speculators. If you put the homestead law in this bill so as to apply to the public lands of Oklahoma it would not be six months after we had acquired these lands by the extinguishment of the Indian title before they would be in the hands of speculators and cattle syndicates. My colleague from Illinois knows that, and the gentleman from Mississippi ought to know it also.

Mr. HOOKER. How many railroads are there which would have possession of them? The gentleman says you have two railroads there already. They get double the amount they do in the States.

Mr. SPRINGER. They will get nothing under this bill.

Mr. HOOKER. If you carry out your obligations they will get what the law allows them.

Mr. SPRINGER. Under this bill every grant to railroads, except the right of way, is extinguished, and the fear which the gentleman states so far as railroads are concerned is groundless. The statement of the gentleman from Mississippi convinces me he has not read the bill at all.

Mr. HOOKER. On the contrary, I have read every line of it, and will tell the gentleman that the courts would soon see whether you have the power to interfere with vested rights.

Mr. SPRINGER. There are no vested rights to be interfered with.

Mr. HOOKER. When you attempt to disturb vested rights the courts will interpose to prevent you. They will teach you that there are such vested rights, and they are to be respected.

Mr. SPRINGER. I repeat it, there are no vested rights on the part of any railroad in any grant of lands in the Oklahoma Territory, except as to the right of way. Whatever rights other than this have been granted can be forfeited. The grant of the Atlantic and Pacific Railroad Company was forfeited during the last Congress. Out of abundant caution the bill contains a provision forfeiting all such grants.

Now, the objection I have to the proposition of my colleague from Illinois is that it provides that the amounts to be paid for the lands shall be paid by the Government and no portion is to be refunded. His amendment in connection with the other provisions of the bill would not open the lands to settlement under the homestead laws as they exist to-day, but under those provisions of the homestead laws which permit the taking up of the land by actual settlers after an occupancy of five years, but without the right to commute.

Mr. WASHINGTON. Let me ask the gentleman a question right there. You say that if you adopt the amendment of the gentleman from Illinois it will open up these lands to speculators?

Mr. SPRINGER. Oh, no; I did not say that.

Mr. WASHINGTON. Then how will the present bill, with its $1.25 per acre provision, prevent the lands from getting into the hands of the speculators?

Mr. SPRINGER. I will tell my friend. The provisions of this bill, if it becomes a law, will permit settlements to be made and the settler to take his 160 acres of land only. It provides that there must be a personal residence and occupancy and cultivation of the lands for three years, and the payment in four annual installments at the rate of $1.25 an acre for them. The provisions of the bill will effectually prevent the lands from getting into the hands of speculators.

Mr. WASHINGTON. And they will not be on the lands very long before they will be turned over to a syndicate.

Mr. SPRINGER. The settler can not turn his claim over to speculators. He gets no title to the land until he has resided on it three years and cultivated it, and paid in cash $1.25 per acre for it. Until these condititions have been complied with he has nothing that he can sell or even encumber.

The money derived by the Government from the sale of the lands will go to the Indians, to pay for the interest in the lands which they now have.

Mr. HENDERSON, of Iowa. Does the amount necessary to purchase this Indian title, in the opinion of the gentleman from Illinois, constitute an element that will endanger the bill?

Mr. SPRINGER. I do most certainly. I know and understand this: that if you start out on the principle of this amendment of my colleague [Mr. PAYSON] that it will involve an expenditure of $25,000,000 to acquire the Indian titles in the whole Territory and an immediate expenditure of $10,000,000 to cover the Cherokee Outlet and the Oklahoma lands proper. I do not believe the gentleman from Illinois will seriously advocate a policy which is to cost the Government $125,000,000 for Indian lands in the future, and which requires an immediate payment of $10,000,000, and ultimately of $25,000,000 in Oklahoma to acquire the

Indian lands, and then give them away to settlers. I do not believe that he is in favor of inaugurating that policy; and I know very well that the friends of this bill, and those persons who are anxious to go there and acquire the lands, are not asking that that provision be adopted, because they are willing to pay the $1.25 an acre to acquire homes there.

Mr. BUCHANAN. I would like to ask the gentleman from Illinois a question.

Mr. SPRINGER. I yield to the gentleman for that purpose.

Mr. BUCHANAN. The gentleman says that to bring the homestead laws into this bill would utterly destroy it. Does he not understand that the amendment of the gentleman from Illinois expressly excepts the commutation provision?

Mr. SPRINGER. I have already stated that proposition so often that it is hardly necessary now to repeat it. But I will say to the gentleman——

Mr. BUCHANAN. Did not your bill contain the commutation clause as originally reported?

Mr. SPRINGER. No, sir.

Mr. BUCHANAN. I understood that it did.

Mr. PAYSON. It permitted it.

Mr. SPRINGER. No, sir.

Mr. PAYSON. Oh, yes.

Mr. SPRINGER. I beg pardon; this bill points out one way and only one way in which the Indian lands can be acquired, which is to pay $1.25 in cash, to cultivate the lands, and reside upon them for three years.

Mr. PAYSON. It may not be profitable to discuss that question now; but will not the gentleman concede that as this bill was reported it adopted the homestead laws, which contain the commutation feature, which feature would have remained in the bill and could have been exercised but for the amendment offered by myself and the gentleman from Indiana [Mr. HOLMAN]?

Mr. SPRINGER. I concede nothing of the kind. The gentleman's proposition was entirely surplusage, and the provision by which the land can be acquired was pointed out so clearly that no man could doubt what it was. It was so plain that any man could see it; actual occupancy for three years, cultivation of the soil for three years, and the payment for the land in money in four installments at the rate of $1.25 an acre, and this money to be placed in the Treasury for the benefit of the Indians. It appears that the gentleman has not even read the bill.

Mr. WEAVER. Permit me to say further to the gentleman from Illinois [Mr. PAYSON] that the original bill introduced by myself expressly provided that they should not have the right to commute.

Mr. SPRINGER. I move that the committee now rise.

The CHAIRMAN. The gentleman from Illinois has occupied thirty-four minutes of his time.

The Retaliation Message.

SPEECH

OF

HON. PETER P. MAHONEY,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 7, 1888,

On the bill (H. R. 11309) to authorize the President of the United States to protect and defend the rights of American fishing vessels, American fishermen, American trading and other vessels in certain cases, and for other purposes.

Mr. MAHONEY said:

Mr. SPEAKER: To a certain extent I feel that I would be lacking in my duty to my constituents did I not avail myself of this opportunity to go on the record with an expression of opinion on the bill brought in by the Foreign Affairs Committee regarding our commercial relations with Canada. In my judgment—and it is the only objection which occurs to me—the bill does not go far enough. It provides in substance that if Canada persists in the narrow policy of discrimination against American interests which has thus far characterized her course, her fishing vessels shall be refused the privileges to which they have been accustomed, and that she shall no longer be permitted to send goods across our territory without payment of duty, Canadian boats to be subjected to the same treatment in American canals as are American boats in the canals of Canada.

This may be called "retaliation" or anything else, but it is not of the vigorous character which would seem to be provoked no less by the churlish attitude of the Canadian Government than by due respect for the dignity and patriotism of our own people.

For my part, in view of all the circumstances, I deem it proper to exclude all Canadian railroads from the transit made across our northern borders, and it is, moreover, my belief that if this decisive policy had been pursued long ago, Canada and the world at large would have been imbued with a much more wholesome respect for the manner in which our national interests can be vindicated. The appeal in this instance is not to party. When we are told on presumably reliable authority that the English stockholders of our Grand Trunk Railway openly boast of their intention and ability to "buy" this Congress; when we see a disposition on the part of a foreign power to transfer our commerce and deny even simple courtesy, and when, further and beyond all this, our conditions are such as to render further delay alike inexcusable and costly, it is our duty, I say, not only to strike back, but to strike hard.

Frankly I avow that I am getting weary of these attempted "friendly negotiations" with Canada, on the principle that it is not wise to make terms with the nation or the individual in whose faith we have no confidence and for whose honesty no respect. Let the British understand once and for all that we know our own business, that we are not slow to resent as an affront any reflection on the character of this representative body, and that our foreign policy, as far as they at least are concerned, can, if necessary, be characterized by as much vigor to-day as it was one hundred years ago. I think it will be agreed the President has shown that he is not willing to surrender American rights or be at all submissive to Great Britain. In this position he should be sustained; and while for my own part I do not think the measure reported by the committee is sufficiently radical, I am content to vote for it in compliance with the ideas and wishes of others. The facts in this controversy are well understood by the people, and there has been much discussion here. What is now needed is not talk, but action to some purpose.

The Fisheries.

SPEECH

OF

HON. HENRY CABOT LODGE,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 5, 1888,

On the bill (H. R. 11309) empowering the President to carry out the purposes of an act entitled "An act to authorize the President of the United States to protect and defend the rights of American fishing vessels, American fishermen, American trading and other vessel in certain cases, and for other purposes," approved March 3, 1887.

Mr. LODGE said:

Mr. SPEAKER: I do not rise, sir, with any intention of opposing this bill. On the contrary, I propose to vote for it, for the idea which it embodies has long had my earnest support. But a measure of such importance, which may have the gravest results, and which will certainly, if carried into effect, disturb the commerce of a continent, seems to me to demand the most careful consideration. All that I have to say, and it is very little, is simply in a friendly spirit of inquiry. I desire only to call attention to certain points which seem to deserve special attention. The constituency which I represent includes some of the fishermen whose injuries are put forward as one of the reasons for this bill, and I think I should be unfaithful to them did I not express my views on this most momentous subject.

The country, I think, sir, is to be congratulated that the President has abandoned the policy embodied in the late treaty project of Mr. Joseph Chamberlain, and has adopted in its stead that which has been vainly urged for three years past by the Republican party. The country, I say, is to be congratulated on this change, assuming, of course, that it is made in good faith, with a single eye to the honor and dignity of the United States. On the morning of Tuesday, August 21, the Chamberlain treaty had the cordial support of the Administration, and the country had been assured that there were no grievances which it did not cover.

The Democratic party in this House in a recent debate gave their allegiance to the same policy. It was, I am bound to admit, somewhat perfunctory, but the allegiance was there in sufficient force to meet the requirements of post-offices and public buildings. In the Senate the support was hearty and outspoken; one very eminent gentleman finding, it is said, fifty-two hours too short to express his admiration of this diplomatic triumph. On Tuesday, August 21, it came to a decision, and the treaty was sustained by a solid Democratic vote and rejected by an equally solid Republican vote. Forty-eight hours later the President sent a message to Congress which, in every line but one, repudiated and condemned that treaty. But yesterday, in the opinion of the Administration, it might have stood against the world; now, none so poor to do it reverence. So violent a change in so short a time may seem strange to persons conversant only with the methods

of statesmen of training and experience. It is really a trifle to a heaven-born genius in a tight place.

It is not my purpose, however, to pry into motives even were this the time and place to do so. It is always difficult to determine the motives by which men are actuated. The secrets of the human heart are accurately known only to Omniscience and to the editors of a few Mugwump newspapers.

All that we are concerned with here is the bill before the House, which I do not need to discuss in detail. Whatever we may think of this specific measure the question is no longer a party question, for the Administration professes to have come over to the Republican position, and we should all be united in support of a policy of vigor and dignity now promised in place of one of timid and feeble subservience. When Canadian cruisers seized our fishing vessels, when the ordinary rights of humanity were denied to our fishermen, when they were harassed, insulted, abused, and driven forth on the ocean short of men, provisions, and water, the Administration thought the slow processes of a tame negotiation were sufficient redress. Within little more than a week even the Administration thought that these outrages were atoned for by a treaty which did not contain one line of apology or one dollar of compensation.

These outrages are two years old, yet the flood of Democratic eloquence has but just ceased to flow in behalf of a treaty that gave us the bare rights of humanity and conceded everything else, including thousands of square miles of fishing water, to England. This slothful negotiation and this impotent treaty have been all that our fishermen have been able to obtain. I may add that it is all they have at this moment. Despite the great retaliatory message the fishermen are no better off and their wrongs are still unredressed. The worst of their wrongs it now appears is the refusal to allow us to send fish home in bond. The treaty admitted the distinction between fish and other products and proposed to buy this right by altering our tariff and admitting fish free. This seemed a pitiful surrender, but until the 21st of August it was deemed all-sufficient.

This, however, is not all. We are now told that there are other grievances of even greater importance. We hear that the Canadian canals discriminate against us in violation of our treaty rights. If we are left to the acts of the Administration for information we are forced to conclude that these discriminations began on Tuesday, August 21, or only reached the ears of the President at that time. Other sources of information, however, are fortunately not so limited. We know as a matter of public notoriety that these discriminations are no new thing. They are as old as the fishery outrages and the refusal of transit to fish in bond. They are all wrongs to the people of this country. Why was the treaty, which covered every grievance, silent in regard to the canals? There is not a word or a line in that treaty to redress these discriminations.

In my opinion they are serious grievances and need redress. Why, then, did the Secretary of the Treasury, in June, 1887, confer large bonding privileges on the Canadian Pacific Railroad through the Pacific Coast Steam-ship Company? The act of 1866, which gave him the authority, is purely permissive. If these discriminations deserve redress to-day, as I fully believe they do, why did they not deserve it in June, 1887? Why did they not deserve it when the Chamberlain treaty was signed? In June, 1887, far from deserving retaliation, they merited, in the opinion of the Administration, additional privileges. In February, 1888, the canal tolls were not of sufficient importance to be worthy of notice in a treaty which covered all grievances. To-day they merit swift retaliation in the new light of truth just seen by this Administration.

But, sir, into the question of canals I do not propose to enter. I wish only to speak of the fisheries. The fishermen of New England, when they were insulted, abused, and harassed, asked for retaliation and redress, and they were refused by the Administration. Congress, acting without distinction of party, gave them the retaliation act of 1887, which was ample and strong, but the Administration refused to use it. It was capable of being a non-intercourse act and struck direct at Canada, but it was passed in vain. At this very moment, while clamoring for more power, the President still refuses, despite his new-found affection for the fishermen, to redress their wrongs by the power he has held idly in his hands for eighteen months. The outrages for the time have practically ceased, but those that were perpetrated are still unredressed. The ordinary rights to touch and trade are still withheld, except when a license is purchased. There has been no take of mackerel on that coast this summer, as Mr. Phelan, the consul-general has pointed out in a recent interview, and so there have been practically no fish to ship in bond, but the privilege of doing so is still denied.

For all this injustice we have asked retaliatory measures. For eighteen months we have asked the enforcement of the act of 1887. We have asked for retaliation in kind and nothing more. The fishermen of New England have never asked that the traffic of the Northwest should be partly paralyzed, as this bill proposes, in order to redress their wrongs. They wished the Canadians to suffer what they themselves suffered, but they have not sought to make their own fellow-citizens suffer for them. They have never desired that the Canadians should be punished by retaliation at the expense of the farmers of the Northwest and of the merchants and traders of Chicago and Detroit, of New York and Boston. They were denied certain rights and they asked that these rights should be denied by us to Canada. This is all they have asked, and they have asked in vain. They ask now at this moment the use of the powers of the act of 1887, and this is still refused. If the President, however, believes that he can only redress their wrongs by stopping trade along the whole Northern frontier, it is not for them to object. It is not for them to criticise a message which, while it asks for narrower powers than those already conferred upon the Executive, nevertheless promises them a tardy redress.

I have in the past criticised the President for making our foreign policy a party question. I am as always firmly of opinion that this should never be done. A vigorous, dignified American policy toward foreign nations will always command my hearty support no matter what its source. A feeble, undignified foreign policy, debased either by timidity or bluster for party purposes, deserves, and will receive, when it is detected, the utter condemnation of the American people.

The President professing himself dissatisfied with the act of 1887 now comes to Congress and asks for certain additional powers. In his hands the Constitution has placed the great duty of initiating and guiding all our relations with other nations. It seems to me the duty of Congress without regard to party to grant his request. It is true that he already has similar powers of a larger scope and greater fitness which he declines to exercise. It is true that he is accused of political motives which ought never to actuate the Chief Magistrate when as the representative of the whole country he deals with foreign nations.

It is true that all the acts both of the President and his party have been favorable to Canada, from the bonding privileges granted to Canadian railroads to the $1,800,000 of duties on Canadian products remitted by the Mills bill. It is true that all we have on the other side are the words of this recent message. All these things are true, but they do not affect the duty of a Representative in this House as I understand it. The President says that he intends to adopt a vigorous policy toward Canada, and asks for a bill granting certain powers. They should be readily given to him as the representative of the nation by the representatives of the people, with no thought of party anywhere. The responsibility for the use of the powers conferred rests with the President. It is a grave responsibility, and he will be held to a strict account. His action as suggested in his message will seriously cripple the trade of the West and North, because, for reasons best known to himself, he declines to retaliate in kind for the fishery grievances, and decides to spread his retaliation over the whole country. All this is for him to decide. We are bound to assume that this message has been written in good faith. A feeble foreign policy is bad, but it is not necessarily disgraceful. To use the honor and dignity of the country at stake in our foreign relations for political ends or to bluster to foreign nations for political effect would be disgraceful in the President of the United States. We can not suppose here that such things as these are possible. Our duty is plain, as I see it. It is to give the President the power he asks, and I shall therefore vote for the bill.

Glass—Tariff.

REMARKS

OF

HON. OSCAR L. JACKSON,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 3, 1888.

The House having under consideration bill H. R. 9051, and the glass schedule having been read—

Mr. JACKSON said:

Mr. SPEAKER: The passage of this bill as reported by the Committee on Ways and Means will do great harm to the glass industry of the United States. Gentlemen familiar with the business, and who have no motive for exaggeration, say that it will practically destroy it. I am fully satisfied that with such a law on the statute-book for any considerable time the business can not be carried on unless the glass-workers of this country can in some way be induced to work at much lower wages than they are now receiving. Fully believing this, I express the hope that the glass schedule may be very considerably changed before the bill is put upon its passage. I will cheerfully support any amendment that will have a tendency to protect this industry. I assure you that I am gratified to hear the report that the majority who have this bill in charge are disposed to support what I consider valua-

ble amendments to it. I only regret that they are not willing to do more. I will not stop to inquire what are the motives that have prompted the authors of the bill to amend it in this respect.

If I thought there was any probability of this bill becoming a law I would cheerfully aid in amending it so as to protect the glass industry, even if I was certain that such amendments were offered by the majority for the purpose of obtaining votes for their party in doubtful districts. I do not think it probable that this bill will finally become a law, but I know that it is possible that it may; knowing this, I consider it to be my duty to do all I can to secure amendments to it that will help to protect any industry that seems to be threatened by it. I have occasionally heard it suggested that it was not best for Republicans to aid the majority in amending and improving this bill; that the Democrats, having a majority in this House, are responsible for the bill, and the worse the bill they offer to the country the more surely will their party be defeated at the next election.

I trust I am actuated by higher motives of duty than that. I will do all in my power to amend every section of the bill that I consider wrong. I shall continue to support all proper amendments, so far as I have the opportunity. In this connection I may, however, be permitted to say that I do not see much prospect of the adoption of amendments offered by our side of the House. It is our duty to try to amend the objectionable features of every bill under consideration. If we then fail, the responsibility of bad legislation will rest on the majority, who will very soon be called on to answer before the country for their conduct.

The glass industry has much to commend it to the favorable consideration of all members of this House. We have in this country all the materials—sand, lime, coal, lumber, clay, and soda—necessary to make glass of the finest quality. This material in a raw state is useless, and a large part of it if not used for glass will not be used at all; but little of this material is capable of being used for other purposes or of being sent to foreign markets. From this it is apparent that the principal part of the cost of making glass goes to labor. Taking into account the wages of those who prepare the sand, lime, coal, soda, etc., 80 per cent. of the cost goes for labor; but take the factory after the materials are prepared ready for use, and in the manufacture of glass 60 per cent. goes for labor and only 40 per cent. for salt cake, lime, soda, sand, charcoal, arsenic, boxing, pots, rings, clay work, insurance, taxes, discounts, freight, fuel, incidentals, and all other expenses.

There are now in the United States factories with sufficient capacity by running ten months in the year to make all the window-glass used in the United States. They consist of one hundred and forty plants in fifteen different States and Territories, giving employment directly to over eight thousand men besides the men engaged in preparing material. Notwithstanding these facts we are now importing one-fourth of all the window-glass we use.

Glass-workers in Europe work for very low wages, and a small reduction in tariff will largely increase our importations. A reduction in the duty of one-eighth of a cent per pound by the act of 1883 increased the amount of importations in the next four years about one-third. This in turn compelled a considerable reduction in the wages of workers to compete with the foreign glass so brought in. Instead of lowering the duty it ought to be restored to what it was before the passage of the act of 1883.

Lower duty means increased importation and still lower wages. But it is alleged by some that too high wages are paid to glass men. This is not correct. As a class, glass workers have heretofore made good wages in this country, but not higher than they fairly deserved.

The work of the glass-blower is of the hardest kind. He is exposed to excessive heat, and endures the severest labor for long turns. His labor is of a kind that requires the very highest skill and long training. The art of glass making is very old, but no machinery for blowing has ever been found practicable or useful. No one who knows the character of the skill and labor required to make glass thinks the wages paid the workmen too high. They are deserving of all they get. Their labor is so severe that they can not work all the year round. They require a period for rest. The profit on capital invested in this business is not unreasonably large.

Prior to 1883 the business paid fairly well in advantageous locations. Since then it has required good management and great energy to keep the factories in operation without loss, and the owners are everywhere content with very small profits.

I repeat what I have said at other times in this discussion, that protection is not for the purpose of permanently making the price of glass high, but it is for the purpose of preserving our own home markets for our own factories and enabling the men to receive good wages. Free trade would, no doubt, for a year or two, give us cheap glass, but it would close all the factories in the United States, and as soon as foreign makers got control of our markets the price would go up. In plate glass the establishment of one or two factories in the United States reduced the price of foreign glass one-half in a very short time. Competition among our own people will make glass as cheap as it ought to be.

Protection to the window-glass industry, whilst it has given our own markets to a large extent to our own people, has actually cheapened the price to the consumer, as the following table will show:

American glass.

SINGLE THICK.

Sizes.	Price, 1860.	Price, 1888.
8 by 10 third	$1.95	$1.78
8 by 10 fourth	1.80	1.66
10 by 14 second	2.40	1.90
10 by 14 third	2.10	1.78
12 by 18 first	3.00	2.38
12 by 18 third	2.40	2.08
18 by 24 second	3.60	2.73
22 by 28 second	3.60	2.73
	20.85	17.04

Fifteen per cent. less price in 1888=$3.81.

DOUBLE THICK.

Sizes.	Price, 1860.	Price, 1888.
8 by 10 first	$4.50	$2.93
16 by 20 second	6.00	3.15
18 by 30 first	9.00	4.38
18 by 22 second	7.20	4.00
20 by 30 second	7.20	4.00
30 by 40 second	10.20	4.78
32 by 44 second	12.00	5.18
	56.10	28.42

Fifty per cent. less price in 1888=$27.68.

Imported glass has also been reduced in cost by American competition.

The foreign (invoice) cost, per statement of Bureau of Statistics, averaged for year to July, 1877, 4.10 cents per pound, averaged for year to July, 1887, 2.27 cents per pound.

The duty being specific, this large reduction in foreign cost (45 per cent. in ten years), increases the equivalent ad valorem rate, but is no real advance, and foreign manufacturers have practically paid all the duty.

I again call attention to the numerous petitions of glass-workers that I have presented to Congress protesting against the passage of this bill. I also offer as a part of my remarks the following letter which I have received from a gentleman engaged in the manufacture of glass in the town where I reside. He is an intelligent and well-informed gentleman who has had large experience in the business, and I commend what he says to your careful consideration. This is but one of many letters of the same character I have received, and I present it that Congress may have the benefit of the information, opinion, and judgment of practical, reliable men.

The letter is as follows:

NEW CASTLE, PA., *March* 7, 1888.

DEAR SIR: The proposed reduction of duty on unpolished cylinder window-glass, as contemplated by the Mills tariff bill, will close every window-glass factory in this town. I desire to call your attention to the fact that we pay out for labor 60 per cent. of the cost of production, 40 per cent. only going into ash, salt-cake, lime, sand, charcoal, arsenic, boxing, pots, rings, and all clay work necessary for our works, insurance, taxes, discounts, freight, fuel, and losses incident to a large business. The four window-glass factories here pay out in cash $240,000 annually in weekly payments to labor, and any reduction in tariff on glass will let in upon us foreign glass produced by labor 50 to 60 per cent. cheaper, and in some instances 70 per cent. below what we pay in this country to our workmen for doing the same work. We hope you will spare no effort to defeat the proposed Mills bill, and, if possible have the duty on window-glass restored to what it was in January, 1883.

Yours, truly,

FORBES HOLTON, *Treasurer.*

Hon. O. L. JACKSON,
Washington, D. C.

The Tariff.

REMARKS

OF

HON. W. D. OWEN,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 12, 1888,

On the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue.

Mr. OWEN said:

Mr. CHAIRMAN: Never in the history of our Government have the people been so aroused on the tariff and all cognate questions. The recent elections in Oregon, Vermont, and Maine indicate the aroused sentiment and increasing intelligence on this subject. The wages and the industries, the happiness and the prosperity of our people are now in the balance awaiting the final decision which shall sustain our protective system and continue our Government in its upward and un-

folding greatness, or check its development and turn its prosperity into decline and disaster. I append the letter of acceptance of the Presidential nomination by General Harrison, which is one of the most valuable contributions on this subject ever given to the country:

INDIANAPOLIS, IND., *September* 11, 1888.

Hon. M. M. ESTEE and others, *Committee:*

GENTLEMEN: When your committee visited me July 4 last and presented the official announcement of my nomination for the Presidency of the United States by the Republican convention, I promised, as soon as practicable, to communicate to you a more formal acceptance of the nomination. Since that time the work of receiving and addressing almost daily large delegations of my fellow-citizens has not only occupied all of my time, but has in some measure rendered it unnecessary for me to use this letter as a medium of communicating to the public my views upon the questions involved in the campaign. I appreciate very highly the confidence and respect manifested by the convention, and accept the nomination with a feeling of gratitude and a full sense of the responsibilities which accompany it.

DISCUSSION OF THE TARIFF.

It is a matter of congratulation that the declarations of the Chicago convention upon the questions that now attract the interest of our people are so clear and emphatic. There is further cause for congratulation in the fact that the convention's utterances of the Democratic party, if in any degree uncertain or contradictory, can now be judged and interpreted by Executive acts and messages and by definite propositions in Congress. This is especially true of what is popularly known as the tariff question. The issue cannot now be obscure. It is not a contest between schedules, but between wide-apart principles. The foreign competitors of our market have, with quick instinct, seen how our issue of this contest may bring them advantage, and our own people are not so dull as to miss or neglect the grave interests that are involved for them. The assault upon our protective system is open and defiant. Protection is assailed as unconstitutional in law or as vicious in principle, and those who hold such views sincerely can not stop short of an absolute elimination from our tariff laws of the principle of protection.

STEP TOWARD FREE TRADE.

The Mills bill is only a step, but it is toward an object that the leaders of Democratic thought and legislation have clearly in mind. The important question is not so much the length of the step as the direction of it, judged by the Executive message of December last, by the Mills bill, by the debates in Congress, and by the St. Louis platform. The Democratic party will, if supported by the country, place the tariff laws upon a purely revenue basis. This is practical free trade, free trade in the English sense. The legend upon the banner may not be "free trade;" it may be the more obscure motto, "tariff reform," but neither the banner nor the inscription is conclusive, or, indeed, very important. The assault itself is the important fact.

Those who teach that the import duty upon foreign goods sold in our market is paid by the consumer, and that the price of the domestic competing article is enhanced to the amount of the duty on the imported article—that every million of dollars collected for customs duties represents many millions more which do not reach the Treasury, but are paid by our citizens as the increased cost of domestic productions resulting from the tariff laws—may not intend to discredit in the minds of others our system of levying duties on competing foreign products, but it is clearly already discredited in their own. We can not doubt, without impugning their integrity, that, if free to act upon their convictions, they would so revise our laws as to lay the burden of the customs revenue upon articles that are not produced in this country, and to place upon the free-list all competing foreign products.

I do not stop to refute this theory as to the effect of our tariff duties. Those who advance it are students of maxim, and not of the markets. They may be selfishly allowed to call their project "tariff reform" if the people understand that in the end the argument compels free trade in all competing products. This end may not be reached abruptly, and its approach may be accompanied with some expressions of sympathy for our protected industries and our working people, but it will certainly come if these early steps do not arouse the people to effective resistance.

The Republican party holds that a protective tariff is constitutional, wholesome, and necessary. We do not offer a fixed schedule, but a principle. We will revise the schedule, modify rates, but always with an intelligent provision as to the effect upon domestic production and the wages of our working people. We believe it to be one of the worthy objects of tariff legislation to preserve the American market for American producers and to maintain the American scale of wages by adequate discriminating duties upon foreign competing products. The effect of lower rates and larger importations upon the public revenue is contingent and doubtful, but not so the effect upon American production and Americam wages.

Less work and lower wages must be accepted as the inevitable result of the increased offering of foreign goods in our market. By way of recompense for this reduction in his wages and the loss of the American market, it is suggested that the diminished wages of the workingman will have an undiminished purchasing power, and that he will be able to make up for the loss of the home market by an enlarged foreign market. Our workingmen have the settlement of the question in their own hands. They now obtain higher wages and live more comfortably than those of any other country. They will make choice between the substantial advantages they have in hand and the deceptive promises and forecasts of those theorizing reformers. They will decide for themselves and for the country whether the protective system shall be continued or destroyed.

WHAT TO DO WITH THE SURPLUS.

The fact of a Treasury surplus, the amount of which is variously stated, has directed public attention to the consideration of the methods by which the national income may best be reduced to the level of a wise and necessary expenditure. This condition has been seized upon by those who are hostile to protective custom duties as an advantageous base of attack upon our tariff laws. They have magnified and nursed the surplus, which they affect to deprecate, seemingly for the purpose of exaggerating the evil, in order to reconcile the people to the extreme remedy they propose. A proper reduction of the revenue does not necessitate and should not suggest the abandonment or impairment of the protective system. The methods suggested by our convention will not need to be exhausted in order to effect the necessary reduction. We are not likely to be called upon, I think, to make a present choice between the surrender of our protective system and the entire repeal of the internal taxes. Such a contingency, in view of the present relation of expenditures to revenues, is remote.

The inspection and regulation of the manufacture and sale of oleomargarine is important, and the revenue derived from it is not so great that the repeal of the law need enter into any plan of revenue reduction. The surplus now in the Treasury should be used in the purchase of bonds. The law authorizes this use of it, and if it is not needed for current or deficiency appropriations, the people, and not the banks in which it has been deposited, should have the advantage of its use by stopping interest upon the public debt. At least those who needlessly hoard it should not be allowed to use the fear of a monetary stringency thus produced to coerce public sentiment upon other questions.

IMPORTATION OF LABOR.

Closely connected with the subject of the tariff is that of the importation of foreign laborers under contract of service to be performed here. The law now in force prohibiting such contracts received my cordial support in the Senate, and such amendments as may be found necessary effectively to deliver our working men and women from this most inequitable form of competition will have my sincere advocacy. Legislation prohibiting the importation of laborers under contracts to serve here will, however, afford very inadequate relief to our working people if the system of protective duties is broken down. If the products of American shops must compete in the American market, without favoring duties, with the products of cheap foreign labor, the effect will be different, if at all, only in degree, whether the cheap laborer is across the street or over the sea. Such competition will soon reduce wages here to the level of those abroad, and when that condition is reached we will not need any laws forbidding the importation of laborers under contract. They will have no inducement to come and the employer no inducement to send for them.

In the earlier years of our history public agencies to promote immigration were common. The pioneer wanted a neighbor with more friendly instincts than the Indian. Labor was scarce and fully employed. But the day of the immigration bureau has gone by. While our doors will be open to proper immigration, we do not need to issue special invitations to the inhabitants of other countries to come to our shores or to share our citizenship. Indeed, the necessity of some inspection and limitation is obvious. We should resolutely refuse to permit foreign governments to send their paupers and criminals to our ports. We are also clearly under a duty to defend our civilization by excluding alien races whose ultimate assimilation with our people is neither possible nor desirable. The family has been the nucleus of our best immigration and the home the most potent assimilating force in our civilization.

CHINESE IMMIGRATION.

The objections to Chinese immigration are distinctive and conclusive, and are now so generally accepted as such that the question has passed entirely beyond the stage of argument. The laws relating to this subject would, if I should be charged with their enforcement, be faithfully executed. Such amendments or further legislation as may be necessary and proper to prevent evasions of the laws and to stop further Chinese immigration would also meet my approval. The expression of the convention upon this subject is in entire harmony with my views.

A FREE BALLOT AND FAIR COUNT.

Our civil compact is a government by majorities; and the law loses its sanction and the magistrates our respect when this compact is broken. The evil results of election frauds do not expend themselves upon the voters who are robbed of their rightful influence in public affairs. The individual or community, or party that practices or connives at election frauds, has suffered irreparable injury and will sooner or later realize that to exchange the American system of majority rule for minority control, is not only unlawful and unpatriotic, but very unsafe for those who promote it. The disfranchisement of a single legal elector by fraud or intimidation is a crime too grave to be regarded lightly. The right of every qualified voter to cast one free ballot and to have it honestly counted must not be questioned. Every constitutional power should be used to make this right secure and punish frauds upon the ballot.

THE COLORED VOTER.

Our colored people do not ask special legislation in their interest, but only to be made secure in the common rights of American citizenship. They will, however, naturally mistrust the sincerity of those party leaders who appeal to their race for support only in those localities where the suffrage is free and election results doubtful, and compass their disfranchisement where their votes would be controlling and their choice can not be coerced.

The nation, not less than the States, is dependent for prosperity and security upon the intelligence and morality of the people. This common interest very early suggested national aid in the establishment and endowment of schools and colleges in the new States. There is, I believe, a present exigency that calls for still more liberal and direct appropriations in aid of common-school education in the States.

TERRITORIAL ADMISSION.

The Territorial form of government is a temporary expedient, not a permanent civil condition. It is adapted to the exigency that suggested it, but becomes inadequate and even oppressive when applied to fixed and populous communities. Several Territories are well able to bear the burdens and discharge the duties of free Commonwealths in the American Union. To exclude them is to deny the just rights of their people, and may well excite their indignant protest. No question of the political preference of the people of a Territory should close against them the hospitable door which has opened to two-thirds of the existing States. But admission should be resolutely refused to any Territory a majority of whose people cherish institutions that are repugnant to our civilization or inconsistent with a republican form of government.

COMBINATIONS AND TRUSTS.

The declaration of the convention against "all combinations or capital organized in trusts or otherwise, to control arbitrarily the condition of trade among our citizens," is in harmony with the views entertained and publicly expressed by me long before the assembling of the convention. Ordinarily, capital shares the loss of idleness with labor, but under the operation of the trust, in some of its forms, the wage-worker alone suffers loss, while idle capital receives its dividends from a trust fund. Producers who refuse to join the combination are destroyed, and the competition as an element of prices is eliminated. It can not be doubted that the legislative authority should and will find a method of dealing fairly and effectively with these and other abuses connected with this subject.

SOLDIERS' AND SAILORS' PENSIONS.

It can hardly be necessary for me to say that I am heartily in sympathy with the declaration of the convention upon the subject of pensions to our soldiers and sailors. What they gave and what they suffered I had some opportunity to observe, and in a small measure to experience. They gave ungrudgingly; it was not a trade, but an offering. The measure was heaped up; running over. What they achieved only a distant generation can adequately tell. Without attempting to discuss particular propositions, I may add that measures in behalf of the surviving veterans of the war and of the families of their dead comrades should be conceived and executed in a spirit of justice and of the most grateful liberality, and that, in the competition for civil appointment, honorable military service should have appropriate recognition.

THE CIVIL SERVICE.

The law regulating classified civil service received my support in the Senate, in the belief that it opened the way to a much-needed reform. I still think so, and therefore cordially approve the clear and forcible expression of the convention upon this subject. The law should have the aid of a friendly interpretation and be faithfully and rigorously enforced. All appointments under it should be absolutely free from partisan considerations and influence. Some extensions of the classified list are practicable and desirable, and further legislation extending the reform to other branches of the service, to which it is applicable, would receive my approval. In appointments to every grade and department, fitness, and not party service, should be the essential and discriminating test, and fidelity

and efficiency the only sure tenure of office. Only the interest of the public service should suggest removals from office. I know the practical difficulties attending the attempt to apply the spirit of the civil service rules to all appointments and removals. It will, however, be my sincere purpose, if elected, to advance the reform.

VIRTUE AND TEMPERANCE.

I notice with pleasure that the convention did not omit to express its solicitude for the promotion of virtue and temperance among our people. The Republican party has always been friendly to everything that tended to make the home life of our people free, pure, and prosperous, and will in the future be true to its history in this respect.

FOREIGN RELATIONS AND FISHERIES.

Our relations with foreign powers should be characterized by friendliness and respect. The right of our people and of our ships to hospitable treatment should be insisted upon with dignity and firmness. Our nation is too great, both in material strength and in moral power, to indulge in bluster or to be suspected of timorousness. Vacillation and inconsistency are as incompatible with successful diplomacy as they are with the national dignity.

We should especially cultivate and extend our diplomatic and commercial relations with the Central and South American States. Our fisheries should be fostered and protected. The hardships and risks that are the necessary incidents of the business should not be increased by an inhospitable exclusion from the near-lying ports. The resources of a firm, dignified, and consistent diplomacy are undoubtedly equal to the prompt and peaceful solution of the difficulties that now exist. Our neighbors will surely not expect in our ports a commercial hospitality they deny to us in theirs.

I can not extend this letter by a special reference to other subjects upon which the convention gave an expression.

In respect to them as well as those I have noticed, I am in entire agreement with the declarations of the convention. The resolutions relating to the coinage, to the rebuilding of the Navy, to coast defenses, and to public lands, express conclusions to all of which I gave my support in the Senate.

Inviting a calm and thoughtful consideration of these public questions, we submit them to the people. Their intelligent patriotism and the good Providence that made and has kept us a nation, will lead them to wise and safe conclusion.

Very respectfully, your obedient servant,

BENJAMIN HARRISON.

The Tariff.

REMARKS

OF

HON. JOHN J. O'NEILL,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, September 10, 1888,

On the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue.

Mr. O'NEILL, of Missouri, said:

Mr. CHAIRMAN: In a government by the people the tribute they pay in direct and indirect taxation for the protection of the law and the just and economical administration of public affairs more deeply concerns them than any other question.

This is to-day the paramount political issue before the American people, and it is important that they should be well informed upon every phase of the question. In to-day's press appears the letter of acceptance by Grover Cleveland of his renomination to the Presidency. Believing that the wise and patriotic views therein expressed will be of great benefit to the people and should therefore be given the widest publicity, I append his letter to my remarks and ask that the same be printed in the Congressional Record.

WASHINGTON, *September* 8, 1888.

GENTLEMEN: In addressing to you my formal acceptance of the nomination to the Presidency of the United States, my thoughts persistently dwell upon the impressive relation of such action to the American people, whose confidence is thus invited, and to the political party to which I belong, just entering upon a contest for continued supremacy.

The world does not afford a spectacle more sublime than is furnished when millions of free and intelligent American citizens select their Chief Magistrate and bid one of their number to find the highest earthly honor and the full measure of public duty in ready submission to their will.

It follows that a candidate for this high office can never forget that when the turmoil and the strife which attend the selection of its incumbent shall be heard no more, there must be in the quiet calm which follows a complete and solemn self-consecration by the people's chosen President of every faculty and endeavor to the service of a confiding and generous nation of freemen. These thoughts are intensified by the light of my experience in the Presidential office, which has soberly impressed me with the severe responsibilities which it imposes, while it has quickened my love for American institutions and taught me the priceless value of the trust of my countrymen.

PROTECTION FOR AMERICAN CITIZENS.

It is of the highest importance that those who administer our Government should jealously protect and maintain the rights of American citizens at home and abroad, and should strive to achieve for our country her proper place among the nations of the earth; but there is no people whose home interests are so great and whose numerous objects of domestic concern deserve so much watchfulness and care.

Among these are the regulation of a sound financial system suited to our needs, thus securing an efficient agency of national wealth and general prosperity; the construction and equipment of means of defense, to insure our national safety and maintain the honor beneath which such national safety reposes; the protection of our national domain, still stretching beyond the needs of a century's expansion, and its preservation for the settler and the pioneer of our marvelous growth; a sensible and sincere recognition of the value of American labor, leading to the scrupulous care and just appreciation of the interests of our workingmen; the limitation and checking of such monopolistic tendencies and schemes as interfere with the advantages and benefits which the people may rightly claim; a generous regard and care for our surviving soldiers and sailors and for the widows and orphans of such as have died, to the end that while the appreciation of their services and sacrifices is quickened, the application of their pension fund to improper cases may be prevented; protection against a servile immigration which injuriously competes with our laboring men in the field of toil and adds to our population an element ignorant of our institutions and laws, impossible of assimilation with our people, and dangerous to our peace and welfare; a strict and steadfast adherence to the principles of civil-service reform and a thorough execution of the laws passed for their enforcement, thus permitting to our people the advantages of business methods in the operation of their Government; the guaranty to our colored citizens of all their rights of citizenship and their just recognition and encouragement in all things pertaining to that relation; a firm, patient, and humane Indian policy, so that in peaceful relations with the Government the civilization of the Indian may be promoted, with resulting quiet and safety to the settlers on our frontiers; and the curtailment of public expense by the introduction of economical methods in every departmen tof the Government.

FULLY INDORSING THE PLATFORM.

The pledges contained in the platform adopted by the late convention of the national Democracy lead to the advancement of these objects and insure good government—the aspiration of every true American citizen and the motive for every patriotic action and effort. In the consciousness that much has been done in the direction of good government by the present Administration, and submitting its record to the fair inspection of my countrymen, I indorse the platform thus presented, with the determination that if I am again called to the Chief Magistracy there shall be a continuance of devoted endeavor to advance the interests of the entire country.

EXPENSES LIMITED TO THE PUBLIC NEED.

Our scale of Federal taxation and its consequences largely engross at this time the attention of our citizens, and the people are soberly considering the necessity of measures of relief. Our Government is the creation of the people, established to carry out their designs and accomplish their good. It was founded on justice and was made for a free, intelligent, and virtuous people. It is only useful when within their control, and only serves them well when regulated and guided by their constant touch. It is a free government because it guaranties to every American citizen the unrestricted personal use and enjoyment of all the reward of his toil and of all his income, except what may be his fair contribution to necessary public expense. Therefore it is not only the right but the duty of a free people, in the enforcement of this guaranty, to insist that such expense should be strictly limited to the actual public needs.

It seems perfectly clear that when the Government, created and maintained by the people to do their bidding, turns upon them and, through an utter perversion of its powers, extorts from their labor and capital tribute largely in excess of public necessities, the creature has rebelled against the creator and the masters are robbed by their servants.

The cost of the Government must continue to be met by tariff duties collected at our custom-houses upon imported goods and by internal-revenue taxes assessed upon spirituous and malt liquors, tobacco, and oleomargarine.

TARIFF TAXATION AND ITS EFFECT.

I suppose it is needless to explain that all these duties and assessments are added to the price of the articles upon which they are levied, and thus become a tax upon all those who buy these articles for use and consumption. I suppose, too, it is well understood that the effect of this tariff taxation is not limited to the consumers of imported articles, but that the duties imposed upon such articles permit a corresponding increase in prices to be laid upon domestic productions of the same kind, which increase, paid by all our people and consumers of home productions, and entering every American home, constitutes a form of taxation as certain and inevitable as though the amount was annually paid into the hand of the tax-gatherer.

These results are inseparable from the plan we have adopted for the collection of our revenues by tariff duties. They are not mentioned to discredit the system, but by way of preface to the statement that every million of dollars collected at our custom-houses for duties upon imported articles, and paid into the public Treasury, represent many millions more, which, though never reaching the national Treasury, are paid by our citizens as the increased cost of domestic productions resulting from our tariff laws. In these circumstances, and in view of this necessary effect of the operation of our plan for raising revenue, the absolute duty of limiting the rate of tariff charges to the necessities of a frugal and economical administration of the Government seems to be perfectly plain.

The continuance, upon a pretext of meeting public expenditures of such a scale of tariff taxation as draws from the substance of the people a sum largely in excess of public needs, is surely something which, under a Government based upon justice, and which finds its strength and usefulnsss in the faith and trust of the people, ought not to be tolerated. While the heaviest burdens incident to the necessities of the Government are uncomplainingly borne, light burdens become grievous and intolerable when not justified by such necessities.

UNNECESSARY TAXES ARE UNJUST.

Unnecessary taxation is unjust taxation, and yet this is our condition. We are annually collecting at our custom-houses, and by means of our internal-revenue taxation, many millions in excess of all legitimate public needs. As a consequence there now remains in the national Treasury a surplus of more than $130,000,000.

No better evidence could be furnished that the people are exorbitantly taxed. The extent of the superfluous burden indicated by this surplus will be better appreciated when it is suggested that such surplus alone represents taxation aggregating more than $108,000 in a county containing 50,000 inhabitants.

Taxation has always been the feature of organized government, the hardest to reconcile with the people's idea of freedom and happiness. When presented in a direct form nothing will arouse popular discontent more quickly and profoundly than unjust and unnecessary taxation. Our farmers, mechanics, laborers, and all our citizens closely scan the slightest increase in the taxes assessed upon their lands and other property, and demand good reasons for such increase. And yet they seem to be expected, in some quarters, to regard the unnecessary volume of insidious and indirect taxation visited upon them by our present rate of tariff duties with indifference, if not with favor. The surplus revenue now remaining in the Treasury not only furnishes conclusive proof of unjust taxation: its existence constitutes a separate and independent menace to the prosperity of the people.

WHAT A VAST SURPLUS MEANS.

This vast accumulation of idle funds represents that much money drawn from the circulating medium of the country, which is needed in the channels of trade and business.

It is a great mistake to suppose that the consequences which follow the continued withdrawal and hoarding by the Government of the currency of the people are not of immediate importance to the mass of our citizens, and only concerns those engaged in large financial transactions.

In the restless enterprise and activity which free and ready money among the people produces is found that opportunity for labor and employment and that impetus to business and production which bring in their train prosperity to our citizens in every station and vocation. New ventures, new investments

in business and manufacture, the construction of new and important works and the enlargement of enterprises already established, depend largely upon obtaining money upon easy terms with fair security; and all these things are stimulated by an abundant volume of circulating medium. Even the harvested grain of the farmer remains without a market unless money is forthcoming for its movement and transportation to the seaboard.

THE EFFECT OF A SURPLUS ON LABOR.

The first results of a scarcity of money among the people is the exaction of severe terms for its use. Increasing distrust and timidity is followed by a refusal to loan or advance on any terms. Investors refuse all risks and decline all securities, and in a general fright the money still in the hands of the people is persistently hoarded. It is quite apparent that when this perfectly natural, if not inevitable, stage is reached, depression in all business and enterprise will, as a necessary consequence, lessen the opportunity for work and employment, and reduce alaries and the wages of labor.

Instead, then, of being exempt from the influence and effect of an immense surplus lying idle in the national Treasury, our wage-earners and others who rely upon their labor for support are most of all directly concerned in the situation. Others seeing the approach of danger may provide against it, but it will find those depending upon their daily toil for bread unprepared, helpless, and defenseless. Such a state of affairs does not present a case of idleness resulting from disputes between the laboring man and his employer, but it produces an absolute and enforced stoppage of employment and wages.

In reviewing the bad effects of this accumulated surplus and the scale of tariff rates by which it is produced, we must not overlook the tendency toward gross and scandalous public extravagances which a congested Treasury induces, nor the fact that we are maintaining, without excuse, in a time of profound peace, substantially the rate of tariff duties imposed in time of war, when the necessities of the Government justified the imposition of the weightiest burdens upon the people.

CRITICISM OF THE PLANS TO REDUCE THE TREASURY'S ACCUMULATION.

Divers plans have been suggested for the return of this accumulated surplus to the people and the channels of trade. Some of these devices are at variance with all rules of good finance; some are delusive, some are absurd, and some betray by their reckless extravagance the demoralizing influence of a great surplus of public money upon the judgments of individuals. While such efforts should be made as are consistent with public duty and sanctioned by sound judgment to avoid danger by the useful disposition of the surplus now remaining in the Treasury, it is evident that if its distribution were accomplished another accumulation would soon take its place if the constant flow of redundant income was not checked at its source by a reform in our present tariff laws.

We do not propose to deal with these conditions by merely attempting to satisfy the people of the truth of abstract theories, nor by alone urging their assent to political doctrines. We present to them the proposition that they are unjustly treated in the extent of present Federal taxation; that, as a result, a condition of extreme danger exists, and that it is for them to demand a remedy and that defense and safety promised in the guaranties of their free Government.

We believe that the same means which are adopted to relieve the Treasury of its present surplus and prevent its recurrence should cheapen to our people the cost of supplying their daily wants. Both of these objects we seek in part to gain by reducing the present tariff rates upon the necessaries of life.

We fully appreciate the importance to the country of our domestic industrial enterprises. In the rectification of existing wrongs their maintenance and prosperity should be carefully and in a friendly spirit considered. Even such reliance upon present revenue arrangements as have been invited or encouraged should be fairly and justly regarded. Abrupt and radical changes which might endanger such enterprises and injuriously affect the interests of labor dependent upon their success and continuance are not contemplated or intended.

STIMULATE PRODUCTION BY FREE RAW MATERIALS.

But we know the cost of our domestic manufactured products is increased and their price to the consumer enhanced by the duty imposed upon the raw material used in their manufacture. We know that this increased cost prevents the sale of our productions at foreign markets in competition with those countries which have the advantage of free raw material. We know that confined to a home market our manufacturing operations are curtailed, their demand for labor irregular, and the rate of wages paid uncertain. We propose, therefore, to stimulate our domestic industrial enterprises by freeing from duty the imported raw materials which, by the employment of labor, are used in our home manufactures, thus extending the markets for their sale and permitting an increased and steady production, with the allowance of abundant profits.

True to the undeviating course of the Democratic party, we will not neglect the interests of labor and our workingmen. In all efforts to remedy existing evils we will furnish no excuse for the loss of employment or the reduction of the wages of honest toil. On the contrary, we propose in any adjustment of our revenue laws to concede such encouragement and advantage to the employers of domestic labor as will easily compensate for any difference that may exist between the standard of wages which should be paid to our laboring men and the rate allowed in other countries. We propose, too, by extending the markets for our manufactures to promote the steady employment of labor, while by cheapening the cost of the necessaries of life we increase the purchasing power of the workingman's wages and add to the comforts of his home.

And before passing from this phase of the question I am constrained to express the opinion that while the interests of labor should be always sedulously regarded in any modification of our tariff laws, an additional and more direct and efficient protection to these interests would be afforded by the restriction and prohibition of the immigration or importation of laborers from other countries who swarm upon our shores, having no purpose or intent of becoming our fellow-citizens or acquiring any permanent interest in our country, but who crowd every field of employment with unintelligent labor at wages which ought not to satisfy those who make claim to American citizenship.

A STRONG CONDEMNATION OF THE TRUSTS.

The platform adopted by the late national convention of our party contains the following declaration:

"Judged by Democratic principles, the interests of the people are betrayed when by unnecessary taxation trusts and combinations are permitted and fostered, which, while unduly enriching the few that combine, rob the body of our citizens by depriving them, as purchasers, of the benefits of natural competition."

Such combinations have always been condemned by the Democratic party. The declaration of its national convention is sincerely made, and no member of our party will be found excusing the existence or belittling the pernicious results of these devices to wrong the people. Under various names they have been punished by the common law for hundreds of years; and they have lost none of their hateful features because they have assumed the name of trusts instead of conspiracies.

We believe that these trusts are the natural offspring of a market artificially restricted; that an inordinately high tariff, besides furnishing the temptation for their existence, enlarges the limit within which they may operate against the people, and thus increase the extent of their power for wrong doing. With an unalterable hatred of all such schemes, we count the checking of their baleful operations, among the good results promised by revenue reform.

While we can not avoid partisan misrepresentation, our position upon the question of revenue reform should be so plainly stated as to admit of no misunderstanding.

NO FREE TRADE.

We have entered upon no crusade of free trade. The reform we seek to inaugurate is predicated upon the utmost care for established industries and enterprises, a jealous regard for the interests of American labor, and a sincere desire to relieve the country from the injustice and danger of a condition which threatens evil to all the people of the land.

We are dealing with no imaginary danger. Its existence has been repeatedly confessed by all political parties, and pledges of a remedy have been made on all sides. Yet when in the legislative body, where under the Constitution all remedial measures applicable to this subject must originate, the Democratic majority were attempting with extreme moderation to redeem the pledge common to both parties, they were met by determined opposition and obstruction, and the minority, refusing to co-operate in the House of Representatives or propose another remedy, have remitted the redemption of their party pledge to the doubtful power of the Senate.

The people will hardly be deceived by their abandonment of the field of legislative action to meet in political convention and flippantly declare in their party platform that our conservative and careful effort to relieve the situation is destructive to the American system of protection. Nor will the people be misled by the appeal to prejudice contained in the absurd allegation that we serve the interests of Europe, while they will support the interests of America.

They propose in their platform to thus support the interests of our country by removing the internal-revenue tax from tobacco and from spirits used in the arts and for mechanical purposes. They declare, also, that there should be such a revision of our tariff laws as shall tend to check the importation of such articles as are produced here. Thus, in proposing to increase the duties upon such articles to nearly or quite a prohibitory point, they confess themselves willing to travel backward in the road of civilization and to deprive our people of the markets for their goods, which can only be gained and kept by the semblance, at least, of an interchange of business, while they abandon our consumers to the unrestrained oppression of the domestic trusts and combinations which are in the same platform perfunctorily condemned.

CHEAP NECESSITIES FOR THE PEOPLE.

They propose further to release entirely from import duties all articles of foreign production except luxuries the like of which can not be produced in this country. The plain people of the land and the poor who scarcely use articles of any description produced exclusively abroad and not already free, will find it difficult to discover where their interests are regarded in this proposition. They need in their homes cheaper domestic necessaries; and this seems to be entirely unprovided for in this proposed scheme to serve the country.

Small compensation for this neglected need is found in the further purpose here announced and covered by the declaration that if after the changes already mentioned there still remains a larger revenue than is requisite for the wants of the Government, the entire internal taxation should be repealed "rather than surrender any part of our protective system."

FREE WHISKY AND TOBACCO IS NO RELIEF.

Our people ask relief from the undue and unnecessary burden of tariff taxation now resting upon them. They are offered free tobacco and free whisky. They ask for bread and they are given a stone.

The implication contained in this party declaration, that desperate measures are justified or necessary to save from destruction or surrender what is termed our protective system, should confuse no one. The existence of such a system is entirely consistent with the regulation of the extent to which it should be applied and the correction of its abuses.

Of course in a country as great as ours, with such a wonderful variety of interests, often leading in entirely different directions, it is difficult, if not impossible, to settle upon a perfect tariff plan. But in accomplishing the reform we have entered upon, the necessity of which is so obvious, I believe we should not be content with a reduction of revenue involving the prohibition of importations and the removal of the internal tax upon whisky. It can be better and more safely done within the lines of granting actual relief to the people of their means of living, and at the same time giving an impetus to our domestic enterprises and furthering our national welfare.

If misrepresentations of our purposes and motives are to gain credence and defeat our present effort in this direction there seems to be no reason why every endeavor in the future to accomplish revenue reform should not be likewise attacked, and with like result. And yet no thoughtful man can fail to see in the continuance of the present burdens of the people and the abstraction by the Government of the currency of the country inevitable distress and disaster. All danger will be averted by timely action. The difficulty of applying the remedy will never be less, and the blame should not be laid at the door of the Democratic party if it is applied too late.

With firm faith in the intelligence and patriotism of our countrymen, and relying upon the conviction that misrepresentation will not influence them, prejudice will not cloud their understanding, and that menace will not intimidate them, let us urge the people's interest and public duty for the vindication of our attempt to inaugurate a righteous and beneficent reform.

GROVER CLEVELAND.

Hon. PATRICK A. COLLINS AND OTHERS,
Committee, etc.

Chinese Immigration.

SPEECH

OF

HON. WILLIAM D. OWEN,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 18, 1888.

The House having under consideration the bill (S. 3304) to prohibit the coming of Chinese laborers into the United States—

Mr. OWEN said:

Mr. SPEAKER: I did not know until a few minutes before my colleague [Mr. BYNUM] took the floor to deliver his address that we were to have a speech this afternoon for the special benefit of the voters of Indiana, and an attack upon General Harrison, the Republican candidate for the Presidency. In view of the circumstances under which this matter is presented, I am able to say only a few words in reply to the gentleman at this time. He makes some four distinct charges in his speech. One of them is, if I understood the gentleman correctly

(if I did not, I will thank him to correct me), that a partner of General Harrison in the campaign of 1886 caused to be naturalized seven or some other number of Chinamen, and voted them for the Republican ticket.

Mr. BYNUM. I did not make such a charge. I charged that in 1880 a number of Chinamen—as I recollect now the number was five—were not naturalized, but took out their first papers; that the oath was administered to them by a special friend of General Harrison; that they were voted at the election of 1880, and voted the Republican ticket; and that General Harrison must have known of it from the fact that it was done by his partner, and the oath was administered by his most intimate friend—a loyal supporter of him for the Senate. The gentleman, I presume has read Senator VEST'S speech. I do not understand the facts as Senator VEST states them.

Mr. OWEN. Ah! then the brethren do not agree in their statements.

Mr. BYNUM. I state to the gentleman that I am prepared to prove all I have said if any one controverts it.

Mr. OWEN. I controvert it.

Mr. BYNUM. You controvert it? I state, then, that Daniel Ransdell, clerk of Marion County, administered the oath to three Chinamen, who declared their intention to become citizens; they went to the polls to vote, when one of them was challenged by Austin H. Brown, now an officer in the Treasury Department, upon the ground that he was not naturalized. Mr. Brown examined his papers, and they were signed by Mr. Ransdell as clerk. Mr. Joseph Nichols, now a clerk in the Post-Office Department, challenged another.

Mr. OWEN. Mr. Speaker, my colleague [Mr. CHEADLE] telegraphed to the partners of General Harrison this morning. I sent a telegram myself a few moments ago, not knowing that my colleague had telegraphed, asking about this matter of Chinamen having been naturalized or having voted in the city of Indianapolis. I read the reply received by my colleague:

INDIANAPOLIS, IND., *August* 18, 1888.

Did no such thing; never heard of a Chinaman being naturalized.

W. H. MILLER.
JOHN B. ELAM.

J. D. CHEADLE, *House of Representatives.*

These gentlemen are the two law partners of General Harrison. [Applause on the Republican side.]

Mr. BYNUM. If the gentleman will allow me——

Mr. OWEN. Will you give me more time?

Mr. BYNUM. Certainly; we will give you all the time you want.

Mr. OWEN. Will the Chair agree to that?

The SPEAKER *pro tempore*. The gentleman from Indiana [Mr. OWEN] is speaking in the time of the gentleman from Illinois [Mr. HITT].

Mr. OWEN. I did not interrupt the gentleman during his speech, although there were fair opportunities to do so.

Mr. BYNUM. But my colleague has appealed to me; he has asked me to correct him. I want to say I did not make the charge that Mr. Miller or Mr. Elam knew anything about the matter. [Cries of "Regular order!"]

Mr. OWEN. Mr. Speaker, this does not come out of my time?

Mr. BYNUM. The gentleman does not deny that those Chinamen were naturalized and voted the Republican ticket. That is a fact.

Mr. MILLIKEN. I call for the regular order. The gentleman would not allow himself to be interrupted, and he "bulldozes" others.

Mr. BYNUM. I want to force the truth down your throats.

The SPEAKER *pro tempore*. The gentleman from Indiana [Mr. OWEN] is entitled to the floor and will proceed.

Mr. OWEN. I presume, of course, the Chair will not take this out of my time.

The SPEAKER *pro tempore*. The Chair has not done so.

Mr. BYNUM. The gentleman has dodged the issue I made.

Mr. OWEN. Mr. Speaker, the gentleman should not introduce the phrases of Indianapolis politicians into the debates of this House. There is no effort to avoid the issue. The fact is I am anxious to get at it. The whole effort of the gentleman's speech is to present General Harrison as favoring the importation and citizenizing of Chinamen, and to connect him personally with the alleged naturalization of Chinamen at Indianapolis. This is so positively true that I assert that if another than General Harrison had been nominated for President my colleague's speech would not have been delivered. Speaking of these Chinamen voting he says: "That General Harrison was cognizant of the intentions of his party to vote these persons there can be no doubt." General Harrison says he never heard of the naturalization or voting of Chinamen at Indianapolis until he read it in a newspaper!

You are pushed to desperate straits when so much labor is performed to get General Harrison "cognizant of intentions." Your solemn asservations that Daniel Ransdell, as county clerk, signed these declarations to become citizens is startlingly convincing evidence. This explanatory amendment to your written speech is valuable, for it is the only direct testimony of General Harrison's complicity in this matter that has not been distinctly overthrown. The case then stands as follows: General Harrison lives in Marion County. One Daniel Ransdell, in his capacity as clerk of the county, administers lawful oath to Chinamen who declare their intentions to become citizens. Daniel Ransdell is a Republican, therefore there can be no doubt but General Harrison was "cognizant of their intentions." Mr. Speaker, this shows the condition of brain fever a man gets himself into by "following Mr. MILLS and doing whatever he commands."

This studied effort to connect General Harrison with the Chinese brings to memory that other effort made by your party in 1880. I here reproduce the famous Morey letter:

[Personal and confidential.]

HOUSE OF REPRESENTATIVES, *Washington, D. C., January* 23, 1880.

DEAR SIR: Yours in relation to the Chinese problem came duly to hand.

I take it that the question of employés is only a question of private and corporate economy, and individuals and companies have the right to buy labor where they can get it cheapest.

We have a treaty with the Chinese Government which should be religiously kept until its provisions are abrogated by the action of the General Government, and I am not prepared to say that it should be abrogated until our great manufacturing and corporate interests are conserved in the matter of labor.

Very truly, yours,

J. A. GARFIELD.

H. L. MOREY,
Employers' Union, Lynn, Mass.

This letter was published on the eve of the election, almost too late to be contradicted. General Garfield repudiated it, but members of the Democratic national committee affirmed that he wrote it and that it spoke his sentiments. It cost Garfield hundreds of votes. The Democrat who forged that letter has not yet served out his sentence in the penitentiary.

My colleague asserts that the Republican party seeks to bring in pauper and contract labor in harmony with its policy of serfdom to mine and corporation controllers. If I should characterize this statement as it deserves my language would not be parliamentary. But perhaps it will be sufficient characterization to reveal a part of the hollowness and insincerity of his party's labor professions. Why, Mr. Speaker, at this hour Italian imported contract laborers are digging the gas trenches in his own city of Indianapolis. The men who have the contract from the gas trust for digging these trenches, or men connected with them, have already had their contract paupers take out their first papers of citizenship, and will in November be voted by their Democratic bosses for Cleveland and his party.

Who are the great mine and corporation controllers? The greatest mine-owner in America is WILLIAM L. SCOTT, the President's representative on this floor. The greatest corporations are the Pennsylvania coal combination, of which Mr. SCOTT is the central figure; the Standard Oil monopoly, and its Mr. PAYNE is a Democratic Senator and its Mr. Whitney is a Cabinet officer. The third great combine is the sugar trust, whose head, Mr. Havemeyer is an enthusiastic Cleveland advocate. The most infamous and notorious trusts and combines are under the control of men most prominent in your party ranks.

My colleague habitually berates the railroads as cormorants, eating up the farmer and poor man, and yet the national Democratic campaign committee is the most remarkable conclave of railroad cormorants that ever organized to run a poor man's party. William H. Barnum, standing at the head, is president and director of six railroad lines, Arthur Sewall of seven, Calvin Brice of nine, John S. Barbour of one, ARTHUR P. GORMAN of two, WILLIAM L. SCOTT of thirteen, and Herman Oelrichs is not a railroad magnate, but is part owner of the Trans-Atlantic Steam-ship Company. These seven worthies rule land and sea. These seven wise men in a combine with the whisky pool, which is solidly Democratic, and the coal combination and the oil monopoly and the sugar trust as the controlling influence in a great party, present an amazing spectacle for a poor man to contemplate.

Another statement was made in the gentleman's speech, that Senator Harrison read in some literary society a paper in which he advocated the free and unrestricted immigration of the Chinamen to this country. Senator Harrison, over his own signature, says he never did any such thing. [Applause on the Republican side.]

Mr. BYNUM rose. [Cries of "Sit down!" on the Republican side.]

Mr. OWEN. Mr. Speaker, the gentleman, in closing his speech, with a flourish of tongue and wave of hand peculiar to a Hoosier orator [laughter], said that every member of the Democratic party could cast his vote for the bill now before this House without swallowing any of his words or taking back any part of his record in the past.

If that be true, I again call up the statement of the gentleman from Maine, Governor DINGLEY, when the Democracy had control of the Senate, from 1879 to 1881, by a majority of 9, and during those two years had control of this House. Why did they not at that time take action on this matter? The Democracy at that time could have forced action on the Chinese question if they had so desired. That they did not do so, but let it slumber until the eve of a Presidential election in 1888, shows your lack of sincerity then and that your "condition" is badly disturbed now. [Laughter and applause.]

Again, the gentleman's speech seeks to impress on the public mind that the Republican party is in favor of the importation of Chinese labor because it is cheap. It is not necessary I should enter into any detailed denial of that statement. The party that was born out of certain great moral necessities of the country, that in its history has blasted a rebellion and saved the greatest nation of the world, that

gave freedom to 4,000,000 of slaves, the grandest elevation of labor ever given by any party; the party that passed the homestead act, that gave to the poor men of this country a home in the West which had been refused to them by the Democratic party; a party, sir, that has built up the protective system until the wage-workers of this land are to-day the best paid, the best fed, the best housed, and the most intelligent and most prosperous of any wage-workers in all the world, is not a party that favors the importation of Chinamen or Italians, or any other sort of pauper labor. [Applause on the Republican side.]

The gentleman from New Jersey [Mr. BUCHANAN], when we were on the discussion of the tariff bill, offered an amendment to that bill that in no case should goods be imported into this country which were manufactured in whole or in part by convict labor in foreign countries. On the vote on that amendment every Democrat in the House voted against it. Every Republican voted for it.

Mr. O'NEILL, of Missouri. The gentleman is mistaken. I voted with the gentleman from New Jersey [Mr. BUCHANAN] in favor of it. [Laughter and applause.]

Mr. OWEN. Mr. Speaker, allow me to digress for a moment and step over the bloody chasm and offer my hand in fellowship to my distinguished friend from Missouri. [Laughter and applause.]

The gentleman from California, General VANDEVER, also offered an amendment prohibiting the importation of any merchandise made in whole or in part by Chinese. Every Democrat voted against that amendment. Every Republican voted for it.

Mr. Speaker, it is idle for the gentleman from Indiana [Mr. BYNUM] to seek to create the impression that the Republican party is in favor of Chinese immigration; that it is in favor of pauper labor. He will not be able to create such impression upon the public mind.

Now, a word with reference to General Harrison's action. He charges that General Harrison voted against every bill to restrict and control Chinese immigration. I deny that charge. General Harrison opposed the Chinese bill which was then under consideration, and the basis of his opposition to that bill, and explicitly so stated, was that its passage was in violation of treaty obligation. When General Harrison took that position and stood on it manfully he did not, in taking such a position or by any word he uttered in the Senate, indicate he was in favor of Chinese immigration. The bill was passed over General Harrison's opposition and the then President of the United States, General Arthur, vetoed it. I will read an extract from that veto message:

I regard this provision (twenty years' exclusion) as a breach of our national faith; and being unable to bring myself in harmony with the act of Congress on this vital point, the honor of the country constrains me to return the act with this objection to its passage.

President Arthur stood, therefore, with General Harrison to preserve the honor of his country, which forbade him to violate a solemn treaty. Now, sir, Secretary Bayard, who at that time was a member of the Senate of the United States, declared in that discussion that the Burlingame treaty was a humbug, and attempted by act of Congress, without notification to the other contracting nation, a willful abrogation of our treaty, which would have been a violation of the solemn pledge of our Government. This Government, sir, can not afford to abrogate her treaty stipulations without due process, no matter whether the treaty is with the greatest or weakest of nations. Senator Harrison stood there and said: I stand first for the honor of my country, and this treaty shall be enforced in its letter and in its spirit until by proper action it shall be abrogated. [Applause.]

[Here the hammer fell].

Mr. HITT. I yield the gentleman three minutes further.

Mr. OWEN. Now, Mr. Speaker, I maintain that General Harrison in that position showed himself broad in his statesmanship. He showed himself true to American interests. His course upon this subject has been so thoroughly consistent that when at the Chicago convention the people of the Pacific coast could not get their first choice, James G. Blaine, they turned and gave their votes solidly to Benjamin Harrison and said that his record was consistent with the interests and honor of America upon the Chinese question; and it is a sufficient answer that he was true to the interests of the Pacific Slope that he should receive the nomination out of the hands of the Republican convention, the representatives from the Pacific Slope showing their indorsement by voting for him.

Now, Mr. Speaker, in 1886, General Harrison was still a member of the United States Senate and a member of the Committee on Foreign Affairs. That committee brought in a Chinese bill. They brought it in with a unanimous report. It is the best Chinese immigration bill that has ever been offered to the Congress of the United States. In the Senate General Harrison worked for the passage of that bill.

Mr. BAYNE. It was a Republican measure.

Mr. OWEN. Entirely so. It passed the Senate without division, came over to a Democratic House, and slumbered the sleep of death in this House. [Applause on the Republican side.] General Harrison's record is not in favor of Chinese immigration, but against it. The best restriction measure ever offered to Congress was draughted by him and passed a Republican Senate, and was smothered by you Democrats in this House. He is against the violation of the Government's solemn treaties and in favor of maintaining the Government's best interests, whether it be on the Chinese question or whether it be a question affecting those who labor on American soil. He is against the Mongolian in America, and if elected President will enforce the law against the importation of contract labor, which Mr. Cleveland has failed to do. The life, the utterances, the votes, the whole character of Benjamin Harrison are in favor of that which we call distinctively the American idea. [Applause on the Republican side.]

General Deficiency Bill.

SPEECH

OF

HON. GEORGE E. ADAMS,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, August 22, 1888,

On the bill (H. R. 10896) making appropriations to supply deficiencies in the appropriations for the fiscal year ending June 30, 1888, and for prior years, and for other purposes.

Mr. ADAMS said:

Mr. CHAIRMAN: I avail myself of the leave of the House to call attention to certain changes in the alien contract-labor law, made by the pending bill. They will be found on pages 3 and 4. It is there provided that the act referred to shall be so amended—

As to authorize the Secretary of the Treasury, in case he shall be satisfied that an immigrant has been allowed to land, contrary to the prohibition of that law, to cause such immigrant, at any time within one year after his landing, as aforesaid, to be taken into custody and returned to the country from whence he came, at the expense of the owner of the importing vessel; or if he entered from an adjoining country, at the expense of the person previously contracting for his services.

This provision is taken almost literally from a letter dated July 16, 1888, addressed to the Speaker of the House by the Secretary of the Treasury, and referred to the Committee on Appropriations. In this letter the Secretary of the Treasury expresses the opinion that the administration of the law has been impeded, first, by the failure of Congress to make an appropriation to pay the expense of carrying the law into effect, and, secondly, by reason of the limited powers conferred by the act itself on the Secretary of the Treasury.

As the law stands—

Says the Secretary—

his jurisdiction in the premises apparently terminates when the landing of the immigrant has been consummated. From information derived from reliable sources, there is reason to believe that it will not infrequently happen that the evidence going to show that the immigrant has come here under a contract to perform labor is inaccessible till it is too late to be of any avail.

When it is considered that many of these immigrant ships entering at the port of New York bring from a thousand to fifteen hundred passengers at a trip, and sometimes enter at the rate of four or five a day, and the question of their right to land must necessarily be determined, in the first instance, in a very brief period of time, the possibility of evading the most rigid examination that can be instituted under such circumstances is not remote. But the subsequent conduct of the immigrant and his employer may furnish strong proof of the contract previous to immigration.

In view of these difficulties the Secretary recommends, first, that $50,000 be appropriated to defray the expense of executing the alien contract-labor law during the next fiscal year; secondly, that the law be so amended as to authorize the Secretary of the Treasury, "in case he shall be satisfied that an immigrant has been allowed to land contrary to the prohibition of that law, to cause such immigrant, within a reasonable time, say one year, to be taken into custody and returned to the country from whence he came;" thirdly, that the Secretary be authorized to pay to an informer a share of the penalties recovered for a violation of the law. These three recommendations of the Secretary of the Treasury have been embodied in the pending deficiency appropriation bill. My object in calling attention to these provisions of the bill is to say, in the first place, that while I believe there is much force in the reasoning of the Secretary of the Treasury, I do not believe it is necessary or expedient to give to him and his subordinates the power to take into custody an immigrant who has been allowed to remain a year in this country and send him back to the country from whence he came merely because the Secretary is satisfied that before coming here he entered into a contract to perform labor in the United States.

When an immigrant comes to this country in violation of the law he should not be permitted to land. If he succeeds in landing, the Secretary should have the right to take him into custody within a reasonable time and cause his return to the country from whence he came. So far I agree with the Secretary. But what is a reasonable time? How long after his landing ought the immigrant to be subject to this power of arrest? I believe that one year is an unreasonable time. To permit the arrest of an immigrant so long after his landing, because the Secretary is satisfied that prior to his coming he had made a contract, against the public policy of the United States, as declared by the alien contract alien labor law, would, in many cases, be oppressive upon in-

nocent and worthy immigrants, and would not, in my judgment, tend to a uniform and effective execution of the law.

So far as the law imposes penalties upon the employer who induces the immigrant to come, or upon the steam-ship company which brings him, the penalties should be exacted whenever the violation of the law is discovered, even if it is more than a year after it takes place. But so far as the immigrant himself is concerned, if the law requiring his return to his own country can not be exercised within a month, or, at the very furthest, three months after his landing in this country, it had better, on the whole, not be executed at all.

That the Secretary of the Treasury, having the power to prevent an immigrant from landing because he is satisfied that his landing would be illegal, should also have the power to compel him to re-embark when the illegality of the landing is discovered after it has taken place, is a reasonable proposition. It is reasonable, not merely because it is to secure the effective execution of the law, but it is demanded also by a regard for the security and convenience of the immigrant himself. Suppose, for example, the Secretary by his subordinate says to some passenger on an incoming steamer, "You shall not land, because you, being an alien, or foreigner, have, prior to your coming to this country, entered into a contract to perform labor in the United States." Suppose the answer is, "I am not a foreigner, or alien, at all. I am a citizen of the United States. Let me land and send to my home, and I will prove it." What is to be done? Shall he be allowed to land merely because he claims to be a citizen? Shall he be forbidden to land merely because his statement is disbelieved? Suppose he admits that he is a foreigner, but denies that he has prior to embarkation contracted to perform labor in the United States. Suppose he claims that he is a skilled workman, and that he has contracted to perform labor in the United States in or upon some new industry not at present established in the United States, or that the contract which he has entered into was made with a member of his family, or a relative, or a personal friend, with a view to assist him to immigrate to the United States for the purpose of settlement here. If in any one of these cases the answer is true, the law does not apply to him, how shall it be determined whether the answer is true or not? It may be impossible to decide till after he has landed. Yet if he is allowed to land the power of the Government over him, so far as it is conferred by the existing law, as construed by the Secretary, ceases instantly. He can not be compelled to depart even if it instantly appears that his assertion is false.

If to avoid this inconvenience he is kept on shipboard and compelled to depart in the same vessel in which he came, it may sometimes happen that a great wrong has been done to an innocent and worthy man. It is clear, however, that the power to compel an immigrant to depart because before coming here he has entered into a contract against the policy of the United States ought, in justice to the immigrant himself, to be exercised as soon as possible after the landing has occurred. The Government is bound in fairness to exercise a high degree of diligence in ascertaining whether the law has been violated or not. It is not fair to the immigrant to allow him to remain in the country for a year and to take root, as it were, and then compel his departure, not because of any fault he has committed in this country, but because before coming here he has made a contract against the policy of the United States. In that period of one year he may have formed ties which it would be hard to break. He may have acquired property; he may have married.

We should remember, in the first place, that in order to bring him within the reach of the law it need not appear that he has violated the law willfully. He may have made a contract in ignorance of the law or through a misunderstanding of its applications.

In the second place, we should remember that the act of entering into a contract abroad to perform labor in the United States is not of itself, on the part of the immigrant, an immoral act. It does not imply any degree of moral turpitude. It does not necessarily prove that the immigrant, who has entered into such a contract, is an undesirable immigrant. He may be honest, sober, industrious, frugal, and intelligent. The contract he has entered into may be in itself a fair contract, beneficial rather than injurious, not merely to the parties to it, but to the country. We forbid his landing under such a contract, not because the contract is in itself wrong, but because such contracts are in many cases the instruments of evil to the laboring people of the United States, and we can see no way of preventing the evil except by forbidding such contracts altogether, and forbidding the landing of immigrants who come here in pursuance of them.

Suppose an industrious, sober, intelligent, skilled workman proposes of his own accord and without the assistance of anybody to immigrate from some European country to the United States in order to better his condition, and to make a home for himself and his children. He is a desirable immigrant, in the best sense of the word, whether he brings money with him or lands without a dollar in his pocket. He is a desirable immigrant, even from the point of view of the alien contract labor law.

But now suppose that after he has made all his preparations to come to this country, he happens to meet the agent of an American factory, who discovers the high value of his labor and offers to pay him $4 a day from the time he lands in New York. If he accepts the offer his character instantly changes, from the point of view of the alien contract labor law. He has ceased to be a desirable immigrant. He has become undesirable simply because his desirability as a skilled workman has been discovered and appreciated by an American employer. Yet it is clear that such a man has inflicted no injury upon American labor by the mere making of a contract to work at high wages in the United States. If he had come to this country without any definite prospect of employment, and, upon landing had gone upon the labor market looking for a job, his competition with American workmen likewise looking for a job, would be far more injurious to them than if he had stepped at once into a place already secured for him at high wages, a place suited to his particular kind of skill, which perhaps no one in the United States is so well prepared to fill. Yet just such a man might under the provisions of the alien contract labor law be forbidden to land in the United States, and compelled to return to the country from whence he came.

What I insist on is that as the making of a contract abroad to perform labor in the United States, however injurious the general practice of making such contract may be to the American people, and particularly to the American workingman, does not imply any degree of conscious wrong-doing on the part of the immigrant who enters into it, the law ought not to be executed against him by compelling him to depart after he has been permitted to reside here for a year. Within the year he may have repudiated the contract under which he came. The law allows him to do so. He may have begun to work as a free American workman for an American rate of wages. He may have married and bought a home. To give the Secretary of the Treasury the power to arrest such a man without trial and send him out of the country, not because of any fault he has committed here, but merely because the Secretary is satisfied that before coming to this country he entered into a contract, not immoral in itself, but only contrary to the public policy of the United States—a contract, too, which he may have repudiated the day he landed here—would be so harsh a measure that it would defeat its object and render the law odious. It would, moreover, tend to make it harder to secure evidence by which to convict those whom, far more than the immigrant himself, we ought to regard as the real offenders against the law.

The illustration I have given shows that the alien contract-labor law does not uniformly and exactly reach the evil it was intended to reach. The evil is forced or stimulated immigration, by which the supply of labor is rapidly increased in excess of the demand for labor at American rates of wages, to the injury of American workingmen and workingwomen. The framers of the law undoubtedly supposed, and had a good reason to suppose, that the main cause of this difficulty—stimulated immigration—was to be found in the desire of American employers to employ labor in the United States at European rates of wages. For this purpose gangs of foreign workmen were imported under contract. Many of them spoke a language unfamiliar to the native or foreign-born citizen of the United States. They lived in colonies by themselves, either in the great cities or in the mining districts of the country. They were out of the reach of American influences which would tend to raise their standard of living and their rate of wages. The effect of their competition upon the industrial life of this country was to crowd the labor market, reduce the wages of American workingmen and workingwomen, and thus, indirectly, to lower their standard of living.

That this was an evil and a danger, was recognized not only by the workingmen of this country, but by all others who are concerned for the moral, social, and industrial development of the American people.

The theory of the alien contract-labor law was this: The free and unassisted immigrant comes to this country to make a home here and to become a part of the American people. He soon learns to adopt the American way of living and to charge an American wage for his work. If he produces American goods for other workmen to consume he also consumes American goods which other workmen produce. He is producer and consumer at the same time. The effect of his competition on the wages of other American workmen is comparatively slight. But if his coming to this country has been artificially encouraged in the way I have indicated; if he is imported by a coal company, for example, merely to serve as a cheap industrial machine, and is sedulously kept apart from influences which would tend to raise his standard of living, and consequently his desire to demand American wages for his work, he is no more a consumer, in the American sense of the term, than any other labor-saving machine. He remains a foreign element in the industrial population of the United States, and the effect of his competition on the wages of American workingmen in general is far more severe.

It now appears from the investigations of the Congressional committee in session in New York, that there are many cases of artificially stimulated immigration, which the law does not reach at all. Immigration, for example, that is induced by the false representations of the agents of steam-ship companies, whose only interest lies in the commissions they make on the tickets they sell, is just as injurious to the laboring men of this country as if it were due to the greed of American employers. Yet artificially stimulated immigration of this sort does not come within the reach of the alien contract labor law at all. It is difficult to see

how a law can be framed which will meet all such cases. The best we can do now is to await the report of the Congressional committee now investigating the subject in the city of New York.

It is worth nothing, that while the Secretary of the Treasury complains that he can not effectively execute the alien contract labor law, because by the terms of that law his power to compel the return of an illegal immigrant ceases the moment the illegal immigrant has set his foot on shore, he fails to notice that he is in precisely the same predicament under the act of 1882, forbidding the landing of idiots, lunatics, convicts, and persons unable to support themselves without becoming a charge upon the public. The section of the alien contract labor law giving the Secretary power to compel the return of illegal immigrants to the country from whence they came is copied almost literally from the act of 1882. If the power of the Secretary ceases with the landing of the immigrant in the one case, it ceases also in the other. If it is difficult to determine on shipboard whether a certain passenger is prohibited from landing by the one statute, it is also difficult to determine whether he is prohibited by the other. The power of the Secretary ought to be enlarged under both statutes, not merely to secure the more effective execution of the spirit of the laws, but also for the security and comfort of the immigrants themselves. They ought in both cases to be allowed to land if it is necessary in order to determine whether they come within the prohibition of the law or not.

I have already shown why I think the period of one year after the landing of the immigrant is unreasonably long for the Secretary of the Treasury to exercise the power of arresting and sending him out of the country for a violation of the alien contract law. The reasons given do not apply to the statute of 1882. That statute forbids the landing of convicts, idiots, lunatics, or persons unable to support themselves without becoming a charge upon the public. These classes of immigrants should not only not be permitted to land, but when they have landed, before their character is discovered, they should be taken in custody whenever and wherever they may be found and sent back to the country which is properly chargeable with their support. Any administration is grossly derelict in its duty which does not make strong and persistent reclamation against any foreign power which unloads upon us the expense of supporting its idiots, lunatics, paupers, or convicts, or suffers it to be done by any municipality subject to its jurisdiction.

There is another class of foreigners whom in the interest of all the good people of the United States, whether native or foreign born, we ought to prevent from coming here so far as we can, and send out of the country when their real character becomes apparent only after they have landed. The professional revolutionist who comes here to advocate a reform of society by means of dynamite is the most undesirable of all immigrants. Any man who, in this free country, advocates or encourages the illegal use of force as a means of reforming the social, political, or industrial institutions of this country, is a public nuisance and a public burden, whether he be native or foreign born, naturalized or unnaturalized. If he is a citizen of the United States, we can not get rid of him by sending him to some other country any more than we can get rid of our own convicts, idiots, or lunatics in the same way. But if he is a citizen of another country and comes here to make a living by teaching his doctrine of confusion, there is no reason in the world why we should knowingly permit him to land. Nor is there any reason in the world why we should suffer him to remain here, if, after landing in this country, he makes his character and purpose known.

We can tolerate in this country the largest liberty of speech. We can and should allow peaceable agitators in favor of the most radical changes in our fundamental laws. But when a man abandons the legitimate weapons of reform, which are to be found in free discussion and an appeal to the ballot, and encourages murder as a means of effecting a change in the laws, we have the same right and the same duty to send him out of the country that we have to sent out an idiot, a lunatic, or a convict; and the sooner we exercise the right the better. We have the same right to send out of the country a citizen of some other country, whose presence here is deemed to be injurious to us, that we have to prevent him from landing here. Over three hundred persons, it is said, were forbidden to land in this country during the last year We have the same right to send home a citizen of another country for the sake of our own welfare that we have to send him home under our extradition laws at the request of his own government. This power of extradition we have exercised almost from the foundation of the Republic. If, under our extradition laws, we send abroad a man who has been a law-abiding man ever since he came to this country merely because he is alleged to have committed a crime in his own country before he came here, why should we not send him home to his own country when we discover that by reason of mental, physical, or moral defects his presence here is a burden and a menace to ourselves?

Another thing. The power to send a man out of the country, as well as the power to prevent a man from landing in this country, is a large power, and the exercise of it should be carefully regulated by law. If it is exercised under the immediate supervision of the President, there will be no danger of abuse. But when it is exercised by a subordinate official of the Treasury Department, it seems to me that the person to be affected by it, whether he has been in this country a year, a week, or a day, or has not yet even landed from an immigrant vessel, should have some simple and inexpensive way open to him by which he can prove that his case does not come within the provisions of the law. When we arrest a man for the purpose of sending him abroad under our extradition laws, we first take him before a Federal judge in order to show that there is reasonable cause for his arrest. It is a humane proceeding, intended for the security of the person under arrest. It seems to me that the same consideration ought to be shown to every immigrant on an incoming steamer who is charged with having come here in violation of the law.

Mr. Chairman, when the committee of this House, now in session in New York, shall have completed its labors, I trust it will enable us to do something more than merely secure a more efficient administration of the existing law. I trust we shall see our way clear to make some change in the scope of the law itself. Our object should be not to restrict the free and voluntary immigration of law-abiding and industrious men and women from Europe, however poor they may be when they land here. What we want to do is, to check the artificial or stimulated immigration, whether brought here under contract or by the false representations of ticket agents, or by any other cause, which has filled the city of New York and some of the mining districts of the country with crowds of laboring men, ill-paid or unemployed.

Secondly, we ought to enlarge the powers of the Secretary of the Treasury, not merely under the alien contract labor law, but also under the act of 1882 relating to idiots, lunatics, convicts, and persons unable to support themselves without becoming a charge upon the public, in order that the Secretary may decide the question of the legality or illegality of the coming of any particular person, after, as well as before, he has landed from the vessel.

Thirdly, I hope the committee will suggest some simple way in which, in case of a dispute as to the facts or the law, the question whether the immigration of a particular person is legal or illegal can, without expense to him, be submitted to the nearest Federal judge or to some other proper tribunal. And the same provision should be made for the case of every person who, after landing here, is taken in custody for the purpose of sending him back to his own country.

Fourthly, the Government should strongly and persistently remonstrate with every foreign government which permits its municipalities to send idiots, lunatics, or other dependent persons to this country to avoid the expense of maintaining them. Our consuls abroad should be required to investigate and report such cases, and ample appropriations should be made for this and all other purposes connected with the execution of the two statutes to which I have referred. I do not know that any appropriation has ever been made to carry into effect the alien contract labor law, except an appropriation contained in the amendatory act of February 23, 1887, for the then remaining four months of the fiscal year 1887. Probably no appropriation would have been made for the fiscal year 1889 had it not occurred to the Secretary of the Treasury to write his letter to the Speaker, dated July 16, 1888, after the committee of investigation, now in session in New York, had been appointed.

Mr. Chairman, I trust that the important question of the prevention of artificial or stimulated immigration will not be obscured by attempting, as some have proposed, to change our naturalization laws. The existing laws on this subject should be more carefully executed. No judge ought to admit a man to become a citizen of the United States until he has at least endeavored to ascertain, as the law requires him to do, whether the applicant during the five years of his residence in this country has—

Behaved as a man of good moral character, attached to the principles of the Constitution of the United States, and well disposed to the good order and happiness of the same.

The purpose and meaning of the existing law should be more effectively carried out; that is all. To require a longer residence than five years before a foreigner can be admitted to the full rights of citizenship seems to me unnecessary and illogical. Our naturalization laws were enacted more than eighty years ago. At that time very few of our immigrants came, or could be expected to come, from a country where the people had any voice in the administration of the public affairs. It was then deemed necessary that a man coming here to make his home should reside here for five years before becoming a citizen of the United States, in order that he might in that interval become accustomed to the government of the people by the people.

Since that time what a change has taken place. The cause of popuular government has made giant strides. Revolution after revolution has swept over Europe. To-day an immigrant coming to the United States from Great Britain, France, Germany, Holland, Denmark, Sweden, or Norway, comes from a country where, even under the monarchial form of government, the people have a large share in molding and guiding public policy. The immigrant who comes from any one of these countries has learned long before his arrival here not only to discuss public questions, but to understand his own responsibility as a citizen. If the immigrant of eighty years ago, when popular government was almost unknown outside of the United States, was believed to be capable of becoming in five years a good citizen of this Republic, it is hard to see

why the European immigrant of to-day requires a longer period of probation.

One thing more. This great problem, how to exclude all forms of unnatural or unwholesome immigration without interfering with the wholesome, natural, and free immigration, which has done so much for this country during the last fifty years, ought not to be obscured or prejudiced by any feeling between the native and the foreign born American. Any one who tries to excite race prejudice in the native against the foreign-born American is just as unpatriotic as the man who excites the same race prejudice in the foreign-born against the native. The great problem which we have before us is as important to the American citizen who was naturalized yesterday as it is to the man whose ancestors came over in the Mayflower. Both are interested for themselves and for their children to the same extent and in precisely the same way. Both are interested in seeing to it that the immigrants who come to us hereafter shall come from the industrious, law-abiding, intelligent element of the population of Europe, whom the governments of Europe are as unwilling to part with as we are glad to receive them, rather than from the idiots, the lunatics, and the criminals, whom the municipalities and charitable societies of the Old World are glad to send here, not for our good, but for their own. Immigration from Europe to the United States should be for the benefit of the United States, and not for the benefit of Europe.

In this sense of the phrase, we are all interested, native and foreign born alike, in preserving America for Americans.

The Arid Regions of the Territories and the Mississippi River.

SPEECH

OF

HON. WM. C. P. BRECKINRIDGE,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, September 1, 1888.

The House having under consideration the sundry civil appropriation bill—

Mr. BRECKINRIDGE, of Kentucky, said:

Mr. SPEAKER: I think this is in many respects the most important item in the present bill. I presume that two of the most difficult problems with which we have to deal in America are two connected with this enterprise—the proper treatment of the Mississippi River and the irrigation of the arid lands in the Territories. And curiously enough, these two problems are probably solvable by the means pointed out in this amendment of the Senate to which I have offered this additional amendment.

I take it for granted that if any human being could stand upon the banks of the Mississippi to-day and furnish a solution of the problem of the Mississippi River he would be one of the greatest benefactors America ever had. The millions of dollars which we have poured into that stream, and which year by year we pour into it—apparently only to be washed off in the next flood—indicate the value of the solution of the problem which that river presents to science. On the other hand, if the arid regions of the Territories can be made tillable, if a fair proportion of the 1,200,000 square miles which practically are incapable of tillage can be made arable, we add an immense empire to the agricultural resources of America.

It seems to be possible, Mr. Speaker—I will not say more than that—it seems to be possible that the solution of both these questions is in the scientific survey of the waters of the Rocky Mountains and the utilization of those waters after that survey to the irrigation of those arid regions, by which these waters, which defy as yet our efforts to control them in the Mississippi, may be diverted from ruin to fruitfulness by means of canals in irrigating the arid regions of the Territories.

It seems to be a simple proposition. The only element in it which prompts us to take it up reluctantly is the possible amount of money necessary to carry it out successfully. How much money will be required is a question incapable of answer until the experiment is more fully made by an accurate survey of that country. For myself, Mr. Speaker, I desired only to call the attention of the House to this matter. I desired only that the House might seriously take it up. Wishing to be perfectly candid, I say that this appropriation is solely for information, and may not be all that will hereafter be required. How much more may hereafter be necessary I do not know. This much is for the purpose of beginning the surveys which the House has heretofore ordered. I hold in my hand the joint resolution passed by Congress and approved March 20, 1888, ordering this survey to be made. Congress has already deliberately determined that it shall be done. The present proposition simply furnishes the necessary means for carrying out the order of Congress. The joint resolution to which I refer is the following:

Joint resolution directing the Secretary of the Interior by means of the Director of the Geological Survey to investigate the practicability of constructing reservoirs for the storage of water in the arid region of the United States, and to report to Congress.

Whereas a large portion of the unoccupied public lands of the United States is located within what is known as the arid region and now utilized only for grazing purposes, but much of which, by means of irrigation, may be rendered as fertile and productive as any land in the world, capable of supporting a large population, thereby adding to the national wealth and prosperity;

Whereas all the water flowing during the summer months in many of the streams of the Rocky Mountains, upon which chiefly the husbandman of the plains and the mountain valleys chiefly depends for moisture for his crops, has been appropriated and is used for the irrigation of lands contiguous thereto, whereby a comparatively small area has been reclaimed; and

Whereas there are many natural depressions near the sources and along the courses of these streams which may be converted into reservoirs for the storage of the surplus water which during the winter and spring seasons flows through the streams, from which reservoirs the water there stored can be drawn and conducted through properly constructed canals at the proper season, thus bringing large areas of land into cultivation, and making desirable much of the public land for which there is now no demand: Therefore,

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior, by means of the Director of the Geological Survey, be, and he is hereby, directed to make an examination of that portion of the arid regions of the United States where agriculture is carried on by means of irrigation, as to the natural advantages for the storage of water for irrigating purposes, with the practicability of constructing reservoirs, together with the capacity of the streams and the cost of construction and capacity of reservoirs, and such other facts as bear on the question of storage of water for irrigating purposes; and that he be further directed to report to Congress as soon as practicable the result of such investigation.

Approved March 20, 1888.

It would be mere child's play for Congress to pass this resolution without going one step further and furnishing the means for the purpose of carrying it into effect.

Mr. Speaker, this work will be done some day. It is as absolutely certain that those 1,200,000 square miles will, by the enterprise of the American people, be turned into fruitful farms, as that we legislate to-day. The simple question may be whether the vast advantages of this work shall accrue to private speculation, or whether by the common money of the country we shall add that empire to the common heritage of our children.

It may be a conquest by the American people with an expenditure that, scattered over years, can be but very small, of an empire which, when conquered, will be worth many, many fold the amount of money that will be expended upon it. It may, therefore, be hereafter a question not as to whether it shall be done, but whether we shall do it for homesteads, for those who come to seek homes with us, and for our children, and for those who are crowding our cities, now already in many instances too much crowded, or whether it shall be done by means of some private enterprise by which those who go into it will gain the vast pecuniary benefit which will be derived from its successful prosecution. For, Mr. Speaker, it is no new problem. Egypt has preserved the fertility of her delta for five thousand years by means of this same plan of irrigation. It is an old problem which simply requires scientific survey and research to determine how best it may be carried into execution.

On the other hand, if it is done, it may be that the people who live on the Mississippi River have as great an intrest in it in the reclamation of their own lands from overflow as those who will hereafter live in the vast arid regions, for in the reclamation of these immense deserts we will be able to provide for multitudes of people.

I do not care, sir, to trespass further upon the time of the House, but yield twenty minutes to the gentleman from New York [Mr. COX], reserving the remainder of my time.

Mr. SYMES. It was understood that I was to speak next on this question, and that the gentleman from New York was to follow with the time yielded to him by the gentleman from Kentucky.

Mr. MORGAN. Will the gentleman from Kentucky permit me before he takes his seat to ask him a question?

Mr. BRECKINRIDGE, of Kentucky. Certainly.

Mr. MORGAN. Has the gentleman given any thought to that portion of this suggestion by which you can with any degree of certainty determine the protection that will be afforded to the Mississippi River from overflow by this plan?

Mr. BRECKINRIDGE, of Kentucky. I know but little of it. In fact, I know only what has been stated in the papers and in the testimony which has from time to time been obtained upon this subject.

It has long been believed by certain scientists who have investigated the Northwest configuration of our country that one of the causes of the floods in the Mississippi is the water that comes down the Missouri River, and that the peculiar effect of these freshets in their destructive work on the banks of the Mississippi is caused by the sediment brought down the Missouri. One of the results of taking the water from the streams that issue from the Rocky Mountains and diverting them by first leading them in reservoirs and then distributing them through canals for irrigation purposes will be to take away from the Missouri and Mississippi Rivers so much of the water as is thus diverted.

Mr. MORGAN. What is to become of the immense body of water that falls in the water-shed east of the Rocky Mountains?

Mr. BRECKINRIDGE, of Kentucky. Of course no provision can be made to meet all of the primary causes which operate to increase the flow of the Missouri River.

Mr. HERBERT. Does the gentleman from Kentucky not know that there is a larger volume of water comes down from the Ohio River than the Missouri, and enters the Mississippi proper?

Mr. WEAVER. Oh, that is a mistake.

Mr. BRECKINRIDGE, of Kentucky. All the waters that do not go into the Missouri can not, of course, be diverted from it.

As to the remark of my friend from Alabama, there are two answers. In the first place, that the statement he makes is, in my judgment, incorrect.

Mr. HERBERT. Well, I had the testimony of Major Powell himself, in whose brain this scheme originated.

Mr. WISE. It is certainly a mistake, whoever made it.

Mr. BRECKINRIDGE, of Kentucky. In the first place, I repeat, it is not correct that the waters of the Ohio are equal to the Missouri in volume during the floods in that river.

Mr. HERBERT. He said the volume of water is much greater.

Mr. BRECKINRIDGE, of Kentucky. I will not dispute the gentleman's statement that Mr. Powell said so, because I do not know. Major Powell has done a great deal of writing and talking during his lifetime, much of which I have not heard or read; but if he said that, and I use the expression with the greatest deference, I am satisfied he has made a mistake. It is not possible. No one who is acquainted with the configuration of the American continent would assert that the waters of the Ohio are equal to the waters of the Missouri.

In the second place, if it be true, then there is much more reason to do something with the superabundant waters of the Missouri, in order that they will not be added to the great flow of water entering the Mississippi by way of the Ohio, and thereby both being combined destroy the Mississippi delta.

Mr. WEAVER. That is exactly it.

Mr. HERBERT. If the gentleman will allow me a moment, I find on page 117 of the Senate testimony this question was asked of Major Powell by Mr. HALE:

Does the Ohio River furnish a larger body of water than the Missouri?
Mr. POWELL. Yes, sir; the Ohio furnishes the largest body of water.

Mr. DORSEY. That must have been for the entire year.

Mr. WEAVER. That is unquestionably a mistake.

Mr. BRECKINRIDGE, of Kentucky. I would not put my name against Major Powell in denial of his assertion; but I think it must be an error. If not, then, as I said before, it is the greater reason for doing something to prevent the influx of two such enormous volumes of water into the Mississippi.

Mr. HERBERT. It is not a mistake; for the rainfall in the eastern part of our country is far greater than the rainfall above or towards the West. There is a far larger watershed connected with the Ohio, and a larger volume of water comes down that stream than the Missouri.

Mr. BRECKINRIDGE, of Kentucky. I desire to put in the RECORD a paragraph from the letter of Major Powell of date March 13, 1888, to the Secretary of the Interior, and contained in Executive Document No. 134:

The development of irrigation along the base of the Rocky Mountains is of double importance because of its influence on the agriculture of the Lower Mississippi. To store up the water of the Missouri and its main affluents for the purpose of irrigation is to diminish the volume of that flood of the Lower Mississippi which is most destructive by reason of its occurring in the heart of the farming season. Moreover, the great difficulty of the problem of the Lower Mississippi arises from the fact that the river normally makes a deposit there, thus clogging its course and giving to its channel an unstable position.

The principal source of the sediment is the Missouri River, and it is carried forward chiefly during flood. With abolition of great Missouri floods the sedimentary load of the Lower Mississippi would be diminished, and the scouring power of the less-loaded floods from the Ohio and the Upper Mississippi would establish for the Lower Mississippi a lower grade and a deeper channel. For every acre reclaimed to agriculture in Montana another acre will be reclaimed in Louisiana; and, in general, all lands redeemed by irrigation on the great plains will be equaled by the lands redeemed from floods in the great valley of the Lower Mississippi.

We have expended, we are expending, millions on the Mississippi River, with what success I do not now discuss. All I meant to submit to the House was that the amendment under consideration had a wider interest than its relation to the arid regions of the Territories, as important as that is, so that it might be understood that we were considering a subject of national importance, and that the inquiry ordered by Congress in the resolution of last March was one which ought to be prosecuted and for which the sum named in the appropriation was not unreasonably large.

Mr. BRECKINRIDGE, of Kentucky. If the gentleman from Colorado will allow me, I would like to yield five minutes to the gentleman from Mississippi [Mr. MORGAN] before he proceeds.

Mr. SYMES. Certainly.

* * * * * * *

Mr. BRECKINRIDGE, of Kentucky. I yielded the time to the gentleman from Mississippi [Mr. MORGAN] understanding that he was in favor of the amendment. The gentleman and I entirely agree that we want information, and the object of the amendment is to get it, but the mode which he desires to adopt to get information is to do nothing, while the mode provided for is to pay competent persons to go and obtain it. The whole object of this appropriation is to provide for investigating the extent of the arid region of the United States to be redeemed by irrigation.

The House on the 12th of March last ordered that this should be done, but it did not furnish the money. This provides the money for the purpose of obtaining that information. I have no doubt that my friend from Mississippi [Mr. MORGAN] and the chairman of the Committee on Public Lands [Mr. HOLMAN] have made inquiry to find out how much of these lands there are, but it is impossible to obtain the information in that way.

Gentlemen can not get it by sitting here in Congress with a thousand other things to do, and looking for it in places where it is not to be found. What we want done, the object of this appropriation, is to obtain for the benefit of Congress, the very information which the gentleman from Mississippi [Mr. MORGAN] says he wants to have before he acts. I think we ought to have it before we consider any system of irrigation or commit the Government to any action. We ought not even to go into that question until we have the information, and the mode of getting it is to employ persons to go there and make a survey. There is no other practicable mode.

I know, Mr. Speaker, how easy it is to arouse a prejudice by saying that some corporation may be interested in a measure of this kind. But lands can not be stolen permanently. They are there. Make them arable, and secure the water for the owners of the soil, and whoever may have the title at first, they will be owned ultimately by those who till them. The husbandman will buy them. If they be fertile, human sweat will unite with the agencies of nature and cause them to produce abundantly. No man can prevent this. Those lands are worthless as they are, but they can be made fruitful.

I now yield to the gentleman from Colorado [Mr. SYMES]. I desire to reserve my time, of which I have promised to yield twenty minutes to the gentleman from New York [Mr. COX].

Chinese Immigration.

SPEECH

OF

HON. BINGER HERMANN,

OF OREGON.

IN THE HOUSE OF REPRESENTATIVES,

Monday, August 20, 1888,

On the bill (S. 3304) to prohibit the coming of Chinese laborers into the United States.

Mr. HERMANN said:

Mr. SPEAKER: For the first time in the history of our Government it is proposed to enact a law for the enforcement of the provisions of a treaty not yet consummated by ratification. This unusual departure from all precedents only the more emphasizes the profound public interest in the pending legislation. It illustrates the solicitude of the nation lest any interval of time shall exist after ratification without appropriate legislation in the premises.

So rapidly has the evil of Chinese immigration increased, and so thoroughly has the country become educated to its baneful influence among our people in a social, industrial, moral, and economic view, that now the most radical measures are proposed as a remedy, which, if even suggested thirty years ago, would have been indignantly frowned down by both parties in Congress.

In no section of the nation has this subject been so long or so practically studied as on the Pacific coast. In the one State of California there are more Chinese residents than there are American voters. There is now hardly an industrial pursuit in which they are not engaged. They are found in the factories, the shops, the mills, the canneries, the mines, and as farmers, teamsters, packers, merchants, cooks, and laundrymen. As an imitative race they soon learn the rudiments of the commoner pursuits. As railroad builders they have almost entirely displaced the white laborer on the Pacific. The secret of their employment is not that they possess or acquire any superior skill, or that they are more industrious or perform more labor than the white laborer, for in nearly every respect they are in all these far inferior; but their success in monopolizing the labor field is in their proportionately cheaper labor. Their labor is in the market as a competitor with white labor. So long as this cheaper article is available its utilization by one enterprise compels a rival business to engage the same labor.

As a matter of self-preservation competitors in a business in which this element is found adapted are compelled to seek it. No upbraiding can check it. Eventually the leading trades of the country would have to adjust their affairs on the basis of this cheapest of labor. The supply comes from a most prolific nation, a people numbering 400,000,000. The lowest level in the conflict has not yet been reached, unless it shall be arrested by a vigorous hand. There is no longer any apologist for this element in our midst. Time and experience have developed a sufficient result. There is but one reading. They remove from the community in which they toil the earnings of their labor and

leave but little behind. They contribute nothing to the support of our schools, our churches, or our libraries. While demanding the protection of the municipal law it is only in rare instances they answer to assessments for purposes of revenue to maintain the law; nor do they even form a part of our militia that in time of war they may extend reciprocal aid to the State. As social beings, and as an exception to all other races seeking our shores, they are absolutely alien and exclusive.

Without the domestic influences of home, wife, and children they are also without appreciation for the many virtues which spring from the domestic relations, and which bind so indissolubly the citizen to the State. With them the Asiatic never changes. They do not and can not assimilate with us. There is nothing in common. They have neither our dress, our language, our music, our literature, our religions, our amusements, our arts, our sciences, our business methods, our pride and hope of country, nor our interest in the stability and perpetuity of our institutions and laws. They are parasites on the body politic. The employment furnished sixty thousand Chinese would if given to a like number of white men provide support for three hundred thousand people in families and bless the State with all the advantages which follow an industrious and social community.

In the arena of labor the conflict between the American and the Chinaman resolves itself into one of physical endurance. A Chinese laborer can subsist on 10 cents a day. Their messes are in associations; one cook, one load of fuel, one light, one fire, one set of board tables and benches will answer for fifty. In the matter of rent and house room their economy is equally noticeable. One small room is divided and subdivided into "bunks" from floor to ceiling, each bunk usually containing two sleepers, one small room often being used in this way for thirty occupants. There is no furniture. For food rice and tea will constitute the sole supply for weeks at a time. Their clothing for the entire year will not exceed an average for each person of $5. It is entirely of Chinese fabric and make. Where under such circumstances is there the remotest hope for the survival of American labor against such rigid economy and degradation?

So long as this cheap labor is in our market there will be a temptation to bid for it. Its immediate acceptance by one association, or manufactory, or enterprise disturbs the existing adjustment of business, and the tendency is at once to a leveling of wages on the basis of the new element. However reluctant the competitors in business may be to conform to the new order yet the sharp rivalry for trade and often of existence compels an acquiescence. It is idle to taunt the people of the Pacific States by asking, "Why do you employ Chinese?" Labor, like the product of labor, when in the market will always find those who will prefer to buy the cheaper to that which is the more costly. This is a law as unvariable as that of supply and demand.

So long as self-interest is a controlling motive in individual man, so long it will be a vain hope to expect a realization of that disinterested patriotism of which the inquirer asks. This brings us face to face with the very alternative presented first to the Pacific coast people, and next to the whole people of the nation. After numerous trials under various laws, and with vain results as the end of all, it has become to be almost a unanimous and final conclusion that the only practicable, sure, and satisfactory remedy is in the absolute exclusion of these people from the United States.

ABSOLUTE EXCLUSION IS THE ONLY REMEDY.

The people of our country will be found to be consistent not only in excluding this degraded labor, but in the exclusion also of the products of degraded labor. To exclude the Chinese and at the same time admit their cheap labor productions in competition with American labor in American markets is the creation of a distinction without a difference. In plain language, it is an absurdity.

Keeping in view the labor interests of America alone it were far better the Chinese remained than that our ports should be opened to the free importation of the labor products of China. Cheap as they can manufacture and labor here, cheaper still can they toil in their own land. The result must be that China would become the workshop and the United States the market. We have educated these people to become competitors. The dire effects of such a disaster to the American wage-earner can not be foretold. Happily we have in the patriotism and intelligence of our people a constant assurance against the adoption of so ruinous a policy.

Sir, while in earnest sympathy with the objects of the pending legislation, I must in justice to my own convictions, as well as in deference to the great interests of those most concerned, be permitted to express a profound apprehension as to whether the treaty or the proposed law will accomplish the remedy so vitally necessary and so universally demanded. From recent experience on our Pacific coast our faith in effective legislation upon this subject is much impaired. Laws deemed apparently faultless have proven but legislative make-shifts. Between the interpretation of courts, the crafty evasion of the Mongolian himself, and the ready aid of well-paid allies on the border line and at American ports the law has become more honored in the breach than in the observance. For these reasons we now look less to the manner in which a law is to be enforced than how it may be evaded.

Heretofore Chinese have found an entrance into our nation chiefly through the port of San Francisco, and the bill before us is eulogized almost exclusively because of its safeguards against immigration to the United States through its leading ports. This far it may prove highly efficient. But to my mind it falls far short of answering the purposes designed in other respects. There are other avenues into the United States than through its ports or on its coasts. We are reminded that to the north of us we have for thousands of miles the border line of British Columbia and Canada. On the south of us we are confronted by the Mexican line. Across these imaginary lines dwell two distinct foreign nationalities, and each without restriction to Chinese immigration and admission.

Wherein, let me ask, does the present measure afford any reasonable guaranty in restriction of immigration through these wide, easy, unguarded, and well-concealed approaches? We have no treaty obligations with these countries to aid us in our restriction. From Hong-Kong, a British port in Asia, to Victoria, Vancouver, and other British ports in North America, or to Mexico or South or Central America the Chinese can come. With every precaution under existing laws and in the face of every effort we have failed so far to arrest the incursions already effected over the border lines of the neighboring territory. Well-known routes are established by trails and by water ways along which they come. When once here they mingle and merge with and become an unrecognizable portion of the "former residents."

Who is to distinguish them? How shall they be distinguished? They are all alike. If perchance one shall occasionally be detected he at once becomes the so-called "student," "merchant," "teacher," and "traveler," and claims exemption under the treaty. When not molested he is the "laborer." Who is to perform the ungracious task of apprehending these contraband Chinamen? Who is to travel through the mines, among the factories, in the orchards, the vineyards, the harvest fields, the laundries, the kitchens, the mills, and along the railways to trace out and arrest the forbidden arrivals across the border? Who is to provide the funds? When adjudged to be unlawfully here, who supplies the means to remove him to China? No appropriation is even anticipated in the proposed law. How shall restriction restrict without these essential aids?

In proof of the modes of ingress to which reference is made, I shall submit the following official communication from the United States consul at Victoria, British Columbia, addressed to the State Department of this Government in regard to the increased immigration of Chinese through British Columbia into the United States:

DEAR SIR: Referring to my dispatch 308, of date December 24, 1887, concerning Chinese and opium, the situation with regard to the arrival of Chinese in this province is so greatly changed since the writing of that dispatch, notably so within the last six weeks, that I have thought proper to report briefly upon the subject. Two thousand eight hundred and fifty-four Chinese have arrived at Vancouver on the steam-ships that are running from the Orient in connection with the Canadian Pacific Railway, as follows: Per steam-ship Abyssinia, May 10, 1888, 471 Chinese; per steam-ship Zambesi, June 6, 776 Chinese; per steam-ship Batavia, June 10, 674 Chinese; per steam-ship Port Adelaide, June 30, 613 Chinese; per steam-ship Parthia, July 8, 960 Chinese. Total, 2,584 Chinese. Their objective point is mainly San Francisco, and they for the most part are provided with return certificates of the customs authorities of the United States, many of which prove fraudulent. The crossing from and near this point is also renewed with vigor. A small sloop was reported to-day at the consulate as having left last evening with seventeen Chinese aboard bound for the opposite shore.

I am, sir, your obedient servant,

ROBERT J. STEVENS, *Consul.*

Hon. GEORGE L. RIVES,
Assistant Secretary of State, Washington, D. C.

I make no comment as to what I conceive to be the defects of the treaty, as well as the law in other particulars, especially as to transit facilities, with the slender check provided in the visé of our consuls.

A fair sample of the public disapproval of these provisions of the treaty is found in the concluding portion of an editorial in a leading San Francisco journal, which I quote:

The fisheries treaty, which has already been cut to pieces in the Senate, was wise diplomacy in comparison with the Chinese treaty. The latter is, in fact, the most outrageous sell-out of the present Administration. It may be regarded as a treaty to facilitate Chinese immigration. Under it this country will be flooded with Chinese. Every cooly now ashore can be duplicated as often as he departs, while new hordes can be introduced by the transit privilege. Improvised traders, students, teachers, and travelers can be brought on the scene when everything else fails. There will be no check on the latter but the visé of our consuls, and what sort of a check that will be everybody knows. If this treaty had been considered in open Senate, like the fisheries treaty, it would have been defeated.

Without the amendments insisted upon by the Senate the treaty would have been utterly indefensible. It is by this amendment made more acceptable in preventing the return of those absent from this country who claim to be prior residents, excepting certain classes; and further, as to the cancellation of all certificates outstanding.

NOT A PARTISAN QUESTION.

But, Mr. Speaker, it is to be profoundly regretted, as is apparent in these debates, that partisan politics should be invoked in grave deliberation of a subject which so vitally concerns the bread-winners of America. It is a matter which rises above and beyond party policies. All parties agree upon some heroic remedy whereby to protect the United States from these Mongolian inroads.

There is but one platform upon this policy, and all stand pledged to its faithful observance. The time has come for unity and for concert of action. The necessity of the hour demands it, and no party dare

ignore it. We can not afford to invite dissension among us, for this produces delay, and delay only aggravates the evil.

My good friend from Indiana [Mr. BYNUM], usually so fair, so candid, and so accurate, in this instance, however, departs from his usual course to arouse a partisan strife by impeaching the present good faith and motives as well as the past record of the Republican party in its treatment of this Chinese subject. In his speech he says:

The Democratic party and its representatives were not so tender of the feelings of the Chinese Government that they were willing to longer endure this abomination.

Further on he says that the Republican party—

Was in favor of conferring greater rights and privileges upon the Chinese.

By this assertion he unconsciously not only discloses the rancor of the partisan, but a lack of candor as well as a reckless disregard of history. Only the blinding excitement of the campaign and the approaching wreck of the party in power, now so inevitable to him, could possibly tempt him to deviate from his lofty and conscientious regard of established fact. Would it not have been more consistent with the record and consistent with candor and a just presentation of the subject to have conceded that at one time all parties were unconscious as to the evils in store for this nation should reciprocity of travel with China be encouraged? Would it not have been fair as well as accurate to have stated that all parties at one time were eager for an international and free intercourse between the two nations?

THE ACTION OF THE DEMOCRATIC PARTY.

While boasting that the Democratic party were not so tender of the feelings of the Chinese Government had he forgotten that on the Pacific coast that same party were the very first to encourage this same Chinese immigration?

In the California Legislature of 1853 the following resolution was introduced in the Democratic State senate:

Whereas California is nearer to the Empire of China than any other State of the Union, and many thousands of Chinese are now residing in California and intermingling with our people in all their employments; and

Whereas a valuable and increasing commerce already exists between California and China, which may hereafter bring great accessions to the wealth of the whole American Union through the ports of California and open the way to a free intercourse with the secluded nations of Asia: Therefore,

Resolved, That in our opinion the public interest would be promoted by the appointment of a citizen of California to the office of "commissioner to China."

Resolved, That the president of the senate be instructed to forward a copy of the above preamble and resolution to the President of the United States.

It passed by the following vote: Ayes 16, nays 3. The whole vote cast was 26, of which 19 were Democrats and 7 were Whigs. It is understood that the present collector of the port of San Francisco was then a member of the State senate and voted aye, with others equally prominent at the present time in the Democratic party. A bill was introduced in that Legislature the year previous to tax Chinamen. This the Democratic majority refused to pass. Then a Whig member offered a bill known as the miners' tax, imposing a head tax on all aliens working mining claims, and there were then twenty-five thousand Chinese already in that State, but it was laid on the table promptly by the same Democratic majority. The record further discloses that in 1856, when there were thirty thousand Chinese in California, there was considerable discontent manifesting itself as to these large arrivals in the mining regions, and the Democratic Legislature of that year appointed a Democratic committee of investigation, and the Democratic report was as follows:

We say the tendency is not toward corruption. We think they have done us no harm.

THE ACTION OF THE REPUBLICAN PARTY.

When, in 1862, the Republicans for the first time succeeded to control in that State they appreciated the necessity for stringent legislation in order to shut off the immigration of Chinese, which was now becoming immense and fast spreading all over the State. The first Republican governor in his first annual message sounds the warning voice in these words:

Asia, with her immense population, is sending her people here, and I will be glad to co-operate with any movement having for its object the prohibition of Chinese immigration.

This was twenty-six years ago. How was it in the Congress of the United States? One of the first acts of the Republican party was the passage of the bill prohibiting the importation of coolies. It was approved by President Lincoln February 15, 1862. The subsequent legislation in Congress, becoming at each enactment more and more radical as treaties would permit, was the work of the Republican party, and has been commented upon at length by other gentlemen. I shall not repeat what they have so accurately asserted, but shall content myself, with the indulgence of the House, to submit some record of the Republican party in its national conventions and through Republican Presidents.

General Grant, in his message of December 7, 1874, said:

I call the attention of Congress to a generally conceded fact, that the greater proportion of Chinese do not come voluntarily. * * * If this evil practice can be legislated against it will be my pleasure as well as duty to enforce any regulations to secure so desirable an end.

The first declaration ever made by any national party as to Chinese immigration was that proclaimed in June, 1876, by the Republican party in its national platform of that year, as follows:

It is the immediate duty of Congress fully to investigate the effect of the immigration and importation of Mongolians on the moral and material interests of the country.

Why were the national Democratic conventions previous to this "so tender of the feelings of the Chinese Government" as that they had nothing to say until the Republican national convention first thundered forth its anathemas upon this curse to America's "moral and material interests?" Does this look as if it was the Republican party that was, as the gentleman from Indiana asserts, "in favor of conferring greater rights and privileges upon the Chinese?" Then, in the next Republican convention, in 1880, the conflict begun by it before was continued in the declarations of its national party platform demanding legislation restricting the immigration of Chinese.

General Garfield, the Republican nominee of this convention, reasserted the sentiments of the platform in his letter of acceptance, wherein he said:

The recent movements of the Chinese to our Pacific coast is too much like an importation to be welcomed without restriction; too much like an invasion to be looked upon without solicitude. We can not consent to allow any form of servile labor to be introduced among us under the guise of immigration. It will be the duty of Congress to mitigate the evils already felt and prevent their increase by such restrictions as without violence or injustice will place upon a sure foundation the peace of our communities and the freedom and dignity of labor.

Still later on, the Republican national platform of 1884 again and equally emphatic asserted the party doctrine on this question as follows:

The Republican party having its birth in a hatred of slave labor, and in a desire that all men may be free and equal, is unalterably opposed to placing our workingmen in competition with any form of servile labor, whether at home or abroad, * * * and we pledge ourselves to sustain the present law restricting Chinese immigration.

And now, in 1888, comes the latest Republican national convention and in its platform again voices the party sentiment, as follows:

We declare our hostility to the introduction into this country of foreign contract labor and of Chinese labor alien to our civilization and our Constitution, and we demand the rigid enforcement of the existing laws against it and favor such immediate legislation as will exclude such labor from our shores.

THE POSITION OF GENERAL HARRISON.

This declaration, it is fair to say, has the approval of all parties, and especially of the Republican nominee, General Harrison, who is in earnest sympathy with its object, and if elected will enforce all laws in harmony with it firmly and without fear or favor. To those illiberal and narrow-brained politicians who insist on representing this distinguished statesman as antagonistic to anti-Chinese legislation that party advantage may accrue to them, let us commend to them the recent declaration from General Harrison over his own hand in his published letter of February 29th last. In reference to Chinese immigration he says:

I think there has been a very general change of sentiment on that subject since. We do not need to ask anybody to come to this country now, as we formerly did, and I think we have a right to preserve our own institutions by exercising a fair election as to who shall come here. I do not like that class of immigration that comes in gangs; that can be driven into pens and on shipboard and hired, not by personal contract, but by bosses, and the Chinese immigration is very much of this sort.

Very truly yours,

BENJAMIN HARRISON.

REPUBLICAN LEGISLATIVE ACTION.

What the Republican party promises, that it performs. In no part of its illustrous record has this been more truly confirmed than in its conduct in Chinese legislation. Closely following its declaration in convention June 5, 1880, to "limit and restrict" Chinese immigration a joint resolution was passed by Congress authorizing a commission to treat with China that more effective legislation might be practicable. This met the cordial approval of President Hayes, who appointed James B. Angell, John F. Swift, and William H. Trescot, all Republicans, as the commissioners to negotiate for a modification of the Burlingame treaty, and on November 5, 1880, a new treaty was consummated, the portions of which of interest in this discussion being as follows:

ARTICLE I. Whenever in the opinion of the Government of the United States the coming of Chinese laborers to the United States, or their residence therein, affects or threatens to affect the interests of that country, or to endanger the good order of the said country, or of any locality within the territory thereof, the Government of China agrees that the Government of the United States may regulate, limit, or suspend such coming or residence, but may not absolutely prohibit it. The limitation or suspension shall be reasonable and shall apply only to Chinese who may go to the United States as laborers, other classes not being included in the limitations. Legislation taken in regard to Chinese laborers will be of such a character only as is necessary to enforce the regulation, limitation, or suspension of immigration, and immigrants shall not be subjected to personal maltreatment or abuse.

ART. II. Chinese subjects, whether proceeding to the United States as teachers, students, merchants, or from curiosity, together with their body and household servants, and Chinese laborers who are now in the United States, shall be allowed to go and come of their own free will and accord, and shall be accorded all the rights, privileges, and immunities and exemptions which are accorded to the citizens and subjects of the most favored nation.

This was the first treaty ever consummated having for its object the exclusion of the Chinese, and it had its origin with the Republican party and was negotiated under a Republican President. Its limitations and demands were fully up to the popular requirement of that time.

In the next term of Congress an act of exclusion was passed. The bill was introduced by General Miller, a Republican Senator from California, and reported favorably by a Republican committee of the Senate, and passed both Houses.

The preamble and first section of this bill as it was passed read as follows:

Whereas in the opinion of the Government of the United States the coming of Chinese laborers to this country endangers the good order of certain localities within the territory thereof: Therefore,

Be it enacted, etc., That from and after the expiration of ninety days next after the passage of this act, and until the expiration of twenty years next after the passage of this act, the coming of Chinese laborers to the United States be, and the same is hereby, suspended; and during such suspension it shall not be lawful for any Chinese laborer to come, or, having so come after the expiration of said ninety days, to remain within the United States.

Sections 16 and 17 were as follows:

SEC. 16. That hereafter no State court or court of the United States shall admit Chinese to citizenship; and all laws in conflict with this act are hereby repealed.

SEC. 17. That the words "Chinese laborers," wherever used in this act, shall be construed to mean both skilled and unskilled laborers and Chinese employed in mining.

Other provisions refer to the penalties for violations and for the registration of such Chinese as were entitled to enter or remain here by the act.

The treaty having guarantied that in the regulation as to immigration and residence "the limitation or suspension shall be reasonable," President Arthur deemed the twenty years' suspension as unreasonable in view of the treaty spirit, and therefore he said, "The honor of the country constrains me to return the act with this objection to its passage." The Republicans in the House at once prepared another bill, which obviated the objections by making the limitation ten years, and it was introduced by Mr. Page, a Republican from California, and reported by him favorably from the Republican committee. On April 17 he moved to suspend the rules and pass the bill, which was done. In the Senate it was amended, and afterward concurred in by the House and passed, and was approved by President Arthur. Of the Democrats it is only candor to say that they cordially united in this legislation as they usually do in the end in all Republican legislation, but in this instance they were earlier in moving their camp than is usual for them to do in occupying Republican grounds.

This was the first law in restriction of Chinese immigration. It was introduced by a Republican. It passed the House, which was Republican, and the Senate, which was a tie, and was approved and signed by a Republican President. Had the bill previously introduced in the Senate by General Miller, a Republican, and passed not only there but through the House and vetoed, contained a more "reasonable" limitation, so as to conform to the treaty, it too would have become a law and met executive approval; but Republicans largely, and many Democrats also, conceived it to be in conflict with the treaty, and are recorded against the first passage of the bill with the twenty years' limitation. General HOOKER, then and now a member of this body from Mississippi, and a distinguished Democrat, in his remarks in this debate as to the sentiment then entertained by himself and others on this treaty obligation, says:

I predicted in my place here that the then President of the United States, animated by a desire to maintain our treaty obligation, as he ought to have been, whether he was the President of one party or the President of another party, would insist upon preserving the treaty and would veto the bill of the gentleman from California even if it should pass. The gentleman declined to listen to my word of warning. He passed his bill through the House and through the Senate, and it went to the Executive Mansion, and it was vetoed by the President. In the same session of Congress the very amendment which I had proposed was adopted by the gentleman from California, and the bill so amended passed both Houses of Congress and became a law.

PRESENT LAW AND TREATY INEFFECTUAL.

This legislation suspended all immigration of Chinese laborers for ten years. Those who departed in the mean while with intention of returning were given certificates by the collector of customs at port of departure so as to identify them. This was soon found ineffective, as many who were here between the making of the treaty and the law claimed the right to come and go of their own "free will and accord," which right was allowed all those Chinese laborers in the country at the making of the treaty. On appeal to the courts this right was confirmed to them. It also opened a door to the perjurer, who was only too ready to swear himself within the pale of the treaty, and thus whole legions of these people flocked to the United States who were not entitled to come.

It became necessary again to strengthen and repair the law, and it was enacted in 1884 that the certificates should be the only evidence of a right to return to the United States. But again the courts held—this time the Supreme Court—that this law could not affect those resident here between the treaty and the law. Again were the lawmakers foiled. Once more a bill was introduced in Congress in June, 1886, as a further remedy. This provided that where any Chinese laborer had left the United States and remained absent for two years he should be deemed to have elected to remain absent. This bill passed a Republican Senate, but in the Democratic House no legislation was had, and thus this the Fiftieth Congress inherited the present task of perfecting the former defective legislation.

Had the Democratic House of the Forty-ninth Congress moved in harmony with the prompt and quite effective legislation of the Senate much would have been accomplished, and the Chinaman would not be kicked from one party to the other as a most serviceable political football for a Presidential campaign. It must be admitted that at last he serves some purpose. In the meanwhile a treaty during this session of Congress was most tardily negotiated. This was one advance more radical than any previous treaties or laws. It prohibited the immigration of Chinese laborers for twenty years, while others only limited it to ten years; but Chinese "teachers, students, merchants, or travelers" may still come without limitation as to time or numbers. A mere certificate from some government where they may reside as to their occupation and visaed by our official representative in that country is all the passport necessary to admit these people into and throughout the United States. This was all. It still allows extravagant rights even to a Chinese laborer. This is the right to travel over our country to and from other countries, and the right, if absent as a prior resident, to return if he has a wife, child, or parent, or property or debts in the United States—the property or debts to amount to $1,000 in value. It is these licenses which will continue to open the door to unlimited immigration and offer a premium to outrageous fraud and perjury.

It is confessedly true that still another treaty or a total abrogation of all treaty to be followed by legislation of absolute and unconditional exclusion will be necessary before the real object and desire of the American people can be accomplished. And even with this radical remedy it is a question with me if still it will not be required that a general deportation be had of all those now here, or if not this then that Mexico and the Canadian Dominion be invited to co-operate with the United States in stringent measures of exclusion in order that the border line north and south be made more secure against what will soon be broad avenues for wholesale transit into our country. If China will not consent to co-operate by treaty, then it will become necessary, as it is our right, to terminate so much of existing treaties as now interfere with legislation to this end. This right is inherent in every government, and the time will be soon, if not now at hand, when its prompt exercise should be invoked.

Our deliberations should be untrammeled by partisan considerations. The great object in view will not admit of party difference. It rises paramount to party and appeals to the patriotic regard of every citizen throughout our broad land. The results of this legislation concern the great future infinitely more than the present. The rapid and marvelous increase of American population admonishes us to look with suspicious care to the character of the foreign element hereafter seeking a place in the roll of citizenship. Already we number sixty millions of people, and the child is now born who is to behold this nation with a population of 150,000,000. How very essential, then, that we should prepare now for the future conditions with which another generation must contend.

We owe it to ourselves not less than to the unborn millions who will succeed us that our legislation shall all tend to guard well the approaches to our temple of liberty against the vandal tread of the commune and the commorant, the enemies to free government, and the purity of our social system.

The Tariff—Free Quinine.

REMARKS

OF

HON. WILLIAM M. SPRINGER,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 14, 1888,

On the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue.

Mr. SPRINGER said:

Mr. CHAIRMAN: I have received numerous letters requesting information on the condition of the quinine industry since that article was placed on the free-list. In order to answer such inquiries fully and satifactorily, I requested Mr. John W. Springer, who is well informed upon such matters, to thoroughly investigate the whole subject and prepare an article thereon for publication. He gave the matter a very careful consideration, as will be seen by reading his article, which I ask leave to print in the RECORD.

FREE QUININE.

Quinine is perhaps the most indispensable medicine in this country, and is universally used. Its price affects its consumption. If the price is high, the poor can not buy what they really need, their suffering will be unrelieved, and even death in many malarial districts may ensue. Much has recently been written upon this subject to prove that the taking off of the duty of 20 per cent. on imported quinine in 1879 has resulted in ruining this industry, in closing the factories, and in throwing many laborers out of employment, and that no benefit to the consumer of this article has resulted. The facts in the case are just the opposite from the statements sent broadcast over the country by the

Republican campaign committee at the instance of the quinine monopolists. In 1823 the price of quinine was $20 per ounce, in 1888 only 50 cents. What has brought about this great reduction in price to the consumer?

As is well know quinine is manufactured from cinchona bark, which, until 1870, was all obtained from the mountain forests of South America. England and Holland seeing the increasing demand for quinine, planted forests of the cinchona tree in India and Java, and since 1870 these three countries have supplied bark for the quinine markets of the world, of which London is the certer.

From the most reliable information obtainable, there are about sixteen quinine manufactories in the world, of which number six are in the United States. Two of these—Powers & Weightman, and Rosengarten & Sons—both being in Philadelphia, monopolized the market before 1879, and have kept it well in hand ever since, and failed only in one point, and that was in keeping up the price.

At the request of the writer, Mr. Switzler, Chief of the Bureau of Statistics, addressed a letter to each of the above firms, and also to half a dozen other firms, asking for information on this subject. Five have responded. Rosengarten's (1888) "Quinine Protection Tract" contains a table of prices which by computation shows that from 1823 to and including 1879, a period of fifty-seven years, the highest average price of quinine was $3.38 per ounce in the United States. It also reveals the fact that from 1879, when quinine was put on the free-list, to 1888, the highest average price has been $1.74, the lowest $1.20 per ounce, while the ruling price at present is only 50 cents per ounce. In addition to the "tract" just mentioned, one was received from Powers & Weightman, dated December 20, 1887; one from McKesson & Robbins, dated March 1, 1888; one from the Iron and Steel Association, and several others not necessary to mention.

How do these manufacturers and protectionists explain this great drop in the price of quinine? These "tracts" all agree on an answer and that is "the lowering of the prices of cinchona bark brought about by the large supplies from India and Java." These interested witnesses further agree that the taking off of the duty of 20 per cent. had nothing to do with lowering prices of quinine, and they argue that to so hold, would subject the "assertion to ridicule," is "simply an absurdity," and "would expose the ignorance or the malicious falsehood of the utterance."

If taking off the duty on quinine in 1879, and the consequent breaking of the "corner" had nothing to do with this fall in prices, why was the market not overstocked with bark between 1870 and 1880 when the source of supply was the same and when quinine went as high as $4.50 per ounce and averaged in price over $3 per ounce to and including 1879? If the duty had nothing to do with maintaining high prices by "cornering the market and preventing competition," why has the average price of quinine ever since 1879 been less than $1.50 per ounce, while the present price is only 50 cents? When I assert that the repeal of the duty on quinine in 1879 was directly the cause of breaking the "quinine trust" in the interest of the consumers of this country I state a fact that any man free from prejudice will readily admit.

When the McKenzie bill for free quinine was introduced in Congress in 1879 there was a great outcry against it from the protectionists and a vigorous protest "from the quinine manufacturers" (the same men who are still protesting), declaring that if the bill should pass they would have to quit business at once, that their employés would be turned out to starve, and that the price of quinine would rise instead of fall. They asserted that if the bill should pass it would have the effect to immediately close their factories, and that thereupon the foreigners would at once put up prices of quinine, and our consumers would then be at the mercy of the "pauper quinine" of Europe. It was the same old story which we hear so frequently to-day, even in the face of the facts. The chain of protection is no stronger than its weakest link, and the quinine link being broken, the whole system is liable to destruction.

Congressman BINGHAM said on the floor of the House, on June 30, 1879, "This bill to put quinine on the free-list ought not to pass"—would ruin an infant industry. Mr. KELLEY and Mr. BAYNE agreed with him; so did Mr. BURROWS, of Michigan. The Democratic members all supported the McKenzie bill, and it was passed by a vote of 125 to 33—not voting 128. Of those in favor of the bill 100 were Democrats, while every one of the 33 votes against were Republicans, save one Democrat, who was paired with a Republican, but voted "no" to make a quorum. It went to the Senate, and was vigorously opposed by Senator MORRILL, of Vermont, a Republican, who said:

They (the quinine manufacturers) import annually 5,000,000 pounds of bark, and have large quantities on hand, and will be deprived of any power of profitably using it, for they will be compelled to stop the manufacture of quinine. They will be closed at once, although the duty is but 20 per cent. on the article. My judgment is the repeal of the duty upon quinine will not result in giving the American consumer any lower-priced article for any length of time, and that in the end we shall have to pay even higher prices. * * * When you get up the cry of "mad dog" the dog is sure to die. I am very sure that the result desired will not follow, and that within two years from now, or one year from now, the price of quinine will be higher than it has been heretofore unless the demand shall subside.

Senator SHERMAN, of Ohio, also said in the debate:

It is represented to us that 25 per cent. is the lowest rate at which the manufacture can possibly be maintained.

Such was the opinion of the leading Republicans of both Houses at that time. Quinine was then $4 per ounce. Senator MORRILL predicted that it would immediately be higher. What can this distinguished Senator say to-day when the people get quinine at 50 cents per ounce? This is a fair sample of similar prophecies in the Fiftieth Congress against the passage of the Mills bill.

The quinine petitioners added their testimony to the prophecy of Senator MORRILL, as follows:

Will the consumer be benefited? We assert, most emphatically, he will not. Prices will fluctuate; average rates will be as high or higher than they have been during the existence of the protective tariff, but even should the wholesale price be as low as now at times, a consumer using it in small quantities will get no benefit from it. In whose interest, then, is the duty to be reduced?

They further ask in their petition:

Why should objection be made to a duty of 20 per cent.? Why should the chemical industry be singled out to be ruined?

Notwithstanding protests, remonstrances, and predictions the bill became a law, and quinine has fallen from $3.60 to 50 cents per ounce, the three factories of 1879 are still manufacturing quinine, together with three other new firms, one of which is the New York Quinine and Chemical Company. These firms employ as many hands, and more than they ever did, and pay undoubtedly as high wages as heretofore. Although Mr. Powers, sr., died not long since, six or seven times a millionaire, the business still goes on, but not at the old stand, as that burned down, and a larger and more costly establishment was immediately erected to meet the demands of the large increase in the chemical industry.

The Republican Tariff Commission in 1882 was appealed to by the quinine manufacturers, who "testified together" and "worked together" for protection for quinine, but the commission decided that there was no necessity for restoring the duty.

Mr. Alexander H. Jones, of the Manufacturing Chemists' Association of the United States, testified before the commission as follows:

We are as much entitled to a fair share of the accepted policy of the Government as are any other manufacturers.

And again:

We are no infant industry, but no matter how long it has existed, unless everything is equalized we want protection, but we do not want to be classed in the same schedule with bladders, peanuts, and corsets.

Mr. John D. Dix, representing the drug and chemical trade, testified:

The majority of work done in chemical factories is done by unskilled labor. I do not think there is one-third of five hundred men all told employed in manufacturing of quinine in this country, and not $150,000 invested in all the five factories in operation now (1882). I believe that there is no business in the world that could so well afford to have its profits cut down as this.

The evidence of the quinine manufacturers before the commission was to the effect that they were losing money, but upon a cross-examination it was finally conceded that they had managed to run their factories at a profit, but not a substantial profit. What a substantial profit is may be inferred when it is stated that since 1878 quinine has fallen in price from $4.50 to 50 cents an ounce.

In the great tariff debate of 1888 in Congress on the Mills bill Mr. ATKINSON, of Pennsylvania, a Republican, said:

The United States deserves no credit for the reduction in the price of this important drug, and anybody that claims that putting quinine on the free-list made the great reduction in price falls into a great error. The duty should never have been removed. It does the consumer no good. I submit, Mr. Chairman, that when a man is sick, good medicine, and not cheap medicine, is what he wants.

To this speech he attached the circular of Powers & Weightman as a part of his argument. Mr. Rosengarten was more radical in his answers to the commission, and insisted upon calling things by their right names.

Of course—

Said he—

a duty makes quinine higher, for if it don't, what do you have it for?

And further—

The great object is to get bark down and prices up.

In 1870 the quinine manufacturers came to Congress and got the duty of 20 per cent. on cinchona bark removed, the duty on quinine being 45 per cent., a prohibitory duty. With free bark the importations of this bark doubled, and has continued to increase, proving what free raw materials will do for any business. The duty on quinine was reduced in 1872 to 20 per cent., and quinine was put on the free-list July 1, 1879.

Since 1879, when the duty was taken off of quinine, the consumption has more than doubled in quantity, while the price is only one-seventh what it was in 1879. Then (for three years prior to 1879) the consumer paid an average of $3.90 per ounce, while for the last three years the average price has only been 65 cents per ounce. These figures clearly show that the saving to the consumers of quinine in this country since 1879 has been over $50,000,000. In the face of such facts how can any one insist that the consumer has not been benefited?

The Rosengartens, of Philadelphia, and Charles T. White & Co., both allege, in letters to the Bureau of Statistics—

That the amount of quinine manufactured in this country has been decreasing year by year as the quantity of the foreign article has increased.

As I stated before, quinine is made exclusively from cinchona bark, none of which is grown in this country. The bark being used only for

quinine and being imported, it will only be necessary to refer to the Treasury statistics on importations. From 1872 to 1879 the quinine manufacturers of this country imported 28,819,552 pounds of cinchona bark, or an average of 4,117,079 pounds per annum. From 1879 (when quinine was put on the free-list) to 1888 the manufacturers imported 40,678,375 pounds of cinchona bark, or an average of 4,519,819 pounds per annum, being an increase of 402,740 pounds of bark annually under free quinine over the period of protection.

The table furnished by Powers & Weightman to the Tariff Commission in 1882 (see page 2573 of volume 2) shows that for the three years preceding 1879 the quinine manufacturers imported 96,800 bales of cinchona bark, or an average of 32,266 bales per annum, while for the three years succeeding 1879 (under free quinine) they imported 110,900 bales of bark, or an average of 36,966 bales, which shows an average of 4,700 bales more per annum under free than under protected quinine.

In the letter of Rosengarten & Sons they say:

The importation of sulphate of quinine last year probably equaled the entire consumption of this country.

For the year ending June 30, 1888, the importation of quinine amounted to 1,628,414 ounces, valued at $651,535, or 40 cents per ounce. In 1880 there was imported one-fourth this number of ounces at twice the cost.

If it be true that foreign quinine supplied our entire home consumption, what then became of the large importation of cinchona bark made during that year? The consumption of quinine in 1882 was 1,600,000 ounces; it was more than double that amount in 1888.

In the circular of Powers & Weightman they say:

Not a single ounce of American sulphate of quinine was exported from 1874 to 1887.

If that was on account of free quinine, what prevented the exportation of quinine under a protective duty of 20 per cent.?

And again they say:

The American manufacturer of quinine once supplied the wants of this country in full, and while not in a position to export, they held the home market.

Of course they held the "home market;" but the poor of this country learned to their sorrow that they were compelled to pay an unjust proportion of their scanty earnings in order to enable these two quinine kings to hold the "home market."

Prior to 1862 the duty on quinine was only 15 per cent. Under the low duty a French firm moved their factory to New York, purchased property, and erected a plant to manufacture quinine. No sooner had they begun operations than these American quinine monopolists got together and decided it was absolutely necessary "to hold the home market" as against the "pauper French quinine." To do this the monopolists decided to cut the price of quinine 75 per cent., which was done, and this figure maintained until the "pauper French quinine manufacturer of New York" was bankrupt, and was driven back to France. When this was accomplished the monopolists held another meeting, at which it was unanimously decided that cheap quinine was not conducive to the public health, and further that "to hold the home market" it would be absolutely necessary to raise the price of quinine 100 per cent. This was done, and as a result the "home market" was held by them until 1879, when a Democratic Congress put quinine on the free-list.

I shall now consider the question asked by Powers & Weightman, Rosengarten & Sons, and Charles T. White & Co. in their petition to the Ways and Means Committee in 1879, namely:

Why should the chemical industry be singled out to be ruined?

It is not generally known, but it is a fact, that over two-thirds of all raw materials for manufacture into chemicals, together with the manufactured articles, are on the free-list. Still, the business has prospered. In 1860 there were in this country 173 chemical establishments, with a capital of $1,977,385. The number of hands was 1,059; wages paid, $372,127; value of product, $3,465,594; the average annual wages, $351.41; the average weekly wages, $6.76. In 1870 there were 292 establishments; capital, $12,750,800; employés, 4,729; wages paid, $2,141,238; product, $19,417,194; average yearly wages, $452.90; average weekly wages, $8.70. In 1880 there were 592 establishments; capital, $28,598,458; employés, 9,545; wages paid, $4,157,163; product, $38,173,658; average annual yearly wages, $400; average weekly wages, $7.71.

Besides building up an immense trade in this country, these establishments have increased their "exports" as follows: From 1850 to 1860 they exported drugs, etc., valued at $6,730,320; from 1860 to 1870 they exported drugs, etc., valued at $15,209,173; from 1870 to 1880 they exported drugs, etc., valued at $22,310,696; from 1880 to 1890, at present rate of increase, will amount to $40,000,000. These figures are taken from the census, and, after carefully reading them over, is there any man so blinded by the theory of protection as to assert in the face of the facts that Congress singled out the chemical industry to ruin it? And now as to the wages paid in this industry. We have seen that the average weekly wages in 1860 was $6.76; in 1870, $8.70, and in 1880, $7.71; while the average wages of woolen operatives in Philadelphia (all very highly protected) is only $5.71 per week.

And now, in conclusion, having demonstrated that the quinine factories existing in 1879 have not closed, but are still "doing business;" that the number of factories is at least six, as against three in 1879; that they employ as many hands, and doubtless more than they did in 1879; that they pay as good wages as they did in 1879; that they pay higher wages than the average paid in the protected industries; that they have manufactured an average of over 402,000 pounds of cinchona bark per annum more than they did before 1879; that the average price of quinine for three years prior to 1879 of $3 has been reduced to 65 cents for the three years ending with 1888; that the consumption has more than doubled, possibly trebled, since 1879; that the Republican tariff commission in 1882 after hearing the "special pleading" of the quinine monopolists, failed to give or suggest a re-establishment of the duty on quinine; that when the duty was removed the "corner" was immediately broken, and quinine placed within reach of the workingmen of this country; and that the McKenzie bill for free quinine, was a Democratic measure in the interest of the consumer, I respectfully submit that the placing of quinine on the free-list has resulted in great benefit to the people and no wrong or injury to any industry in the country.

Irrigation of the Arid Region of the United States.

SPEECH

OF

HON. GEORGE G. SYMES,

OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, September 1, 1888.

The House having under consideration the bill (H. R. 10540) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1889, and for other purposes—

Mr. SYMES said:

Mr. SPEAKER: The first point I would make is that it is of the most imperative necessity to pass this Senate amendment, with our amendment to it, at this time, for the reason that my distinguished friend from Indiana [Mr. HOLMAN] has failed to accomplish any legislation, and will fail at this session of Congress to grant any relief against the obtaining title by monopolies in the arid region of the natural sites for reservoirs, which will destroy the value of the balance of the lands hereafter to be settled by homesteaders. I will come to that, however, in the course of my remarks.

Mr. Speaker, we can not at this late period of the present session enter into the question of disposing of these lands made irrigable by providing for these sites for reservoirs, because the Public Lands Committee can not pass their bill. That bill might be amended, but it is in the Senate, and as we all know it is entombed for the first session of the Fiftieth Congress.

Mr. Speaker, this amendment to the sundry civil bill is not new legislation. It is only carrying out the provisions of the statute passed at this session. On the 20th of March last a joint resolution was passed which requires the Secretary of the Interior to investigate the practicability of constructing storage reservoirs for water in the arid region. The resolution is as follows:

[Public resolution—No. 6.]

Joint resolution directing the Secretary of the Interior, by means of the Director of the Geological Survey, to investigate the practicability of constructing reservoirs for the storage of water in the arid region of the United States, and to report to Congress.

Whereas a large portion of the unoccupied public lands of the United States is located within what is known as the arid region, and now utilized only for grazing purposes, but much of which, by means of irrigation, may be rendered as fertile and productive as any land in the world, capable of supporting a large population, thereby adding to the national wealth and prosperity;

Whereas all the water flowing during the summer months in many of the streams of the Rocky Mountains, upon which chiefly the husbandman of the plains and the mountain valleys chiefly depends for moisture for his crops, has been appropriated and is used for the irrigation of lands contiguous thereto, whereby a comparatively small area has been reclaimed; and

Whereas there are many natural depressions near the sources and along the courses of these streams which may be converted into reservoirs for the storage of the surplus water which during the winter and spring seasons flows through the streams, from which reservoirs the water there stored can be drawn and conducted through properly constructed canals, at the proper season, thus bringing large areas of land into cultivation, and making desirable much of the public land for which there is now demand: Therefore,

Be it resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior, by means of the Director of the Geological Survey, be, and he is hereby, directed to make an examination of that portion of the arid regions of the United States where agriculture is carried on by means of irrigation, as to the natural advantages for the storage of water for irrigating purposes, with the practicability of constructing reservoirs, together with the capacity of the streams and the cost of construction and capacity of reservoirs, and such other facts as bear on the question of storage of water for irrigating purposes; and that he be further directed to report to Congress as soon as practicable the result of such investigation.

Approved March 20, 1888.

To carry out the provisions of this statute the Senate on the 27th day

of March last passed a resolution directing the Secretary of the Interior to report what appropriation was necessary to carry into effect this joint resolution.

On the 11th day of March last the Secretary made a report to the Senate recommending the appropriation of $250,000 to carry into effect this statute.

The Secretary's report was accompanied by a report of the Director of the Geological Survey made by direction of the Secretary, and which contains an able presentation of the subject. It shows the practicability and utility of making this appropriation to carry into effect this statute.

But the joint resolution directing this investigation and for selecting these natural sites for storage reservoirs which calls for this appropriation was not passed without due consideration and examination.

On the 13th of February last the Senate by a resolution requested the Secretary of the Interior to inform the Senate if it was desirable to direct the Geological Survey to segregate land susceptible of irrigation and to select sites for reservoirs and rights of way for ditches and canals, and the land to be reserved from sale.

The Secretary in response to this resolution transmitted a report of the Director of the Geological Survey, to whom he referred the resolution for information. This report shows the necessity for proceeding without delay in this matter.

The Director says:

It is undoubtedly true that the greater the delay in the selection of areas for irrigation and of sites for irrigation headworks, the greater will be the knowledge which can be brought to bear in making wise selections; but it is also true that the greater the delay the more complex becomes the practical problem, by reason of the interference of vested rights. The difficulties arising from vested rights far outweigh, in my judgment, all considerations in favor of delay, and there is even ground for regret that such surveys and selections as are now proposed were not instituted at an earlier stage in the development of the arid region.

And so, Mr. Speaker, this measure has been under consideration and examination by the Senate and the Department of the Interior for the past six months.

Mr. Speaker, two committees of this House have also given the matter much consideration during this Congress, and arrived at the conclusion that this appropriation ought to be made.

Mr. Speaker, I introduced a bill near the beginning of this session and had it referred to the Committee on Agriculture, providing for the appropriation of $500,000 for the investigation and development of the water resources of the arid region and the utilization thereof for the purpose of irrigation.

It requires the money to be expended under the direction of the Geological Survey in making such topographic or hydrographic surveys as may be necessary to ascertain and locate sites for reservoirs for the storage of water for irrigating the public lands and in aid of agriculture. I was heard in support of this bill before the Committee on Agriculture. I addressed the committee at length in favor of the bill. I think I violate no secret of the committee when I state that it is favorable to the bill, and that a favorable report will be made on the bill if this appropriation is not made. This amendment accomplishes the same object.

The Committee on Agriculture after hearing arguments and investigating this subject are in favor of this appropriation. A bill was introduced by Mr. JOSEPH and referred to the Committee on Territories providing for hydrographic surveys in the Territories of New Mexico and Arizona for the purpose of ascertaining the practicability of storing water in reservoirs to aid in irrigating the public lands, providing that lands so made susceptible to irrigation shall be subject to homestead entry at the minimum price of $4 per acre. The bill also provides for sinking artesian wells in aid of agriculture.

The Committee on Territories fully considered this bill and reported it favorably to the House on the 1st of last March, recommending an appropriation of $100,000, $50,000 for Arizona and $50,000 for New Mexico.

The committee in its report shows the necessity for these appropriations:

The Committee on the Territories having under consideration bills H. R. 1980 and 6166, ask to report in lieu thereof the substitute contained in the report made herewith.

Your committee recommend the passage of said bill for the following reasons:

From the census of 1880 it appears that the Territory of Arizona embraces an area of 112,920 square miles, or 72,268,800 acres of land, of which vast area less than 2,000,000 are susceptible of cultivation for want of water, and even this small area is entirely dependent on irrigation, thus leaving utterly without water supply and without any means of irrigation the enormous body of over 70,000,000 acres of land, which, under the present land laws, must forever remain unfit for the habitation of man unless a supply of water can be obtained by artificial means.

The same conditions exist in the Territory of New Mexico, which embraces an area of 122,460 square miles, or 78,374,400 acres of land, of which, as appears by said census, only 5¼ per cent. is susceptible of cultivation, for the reasons already stated, leaving 94¾ per cent., or 74,063,808 acres, forever unfit for human habitation unless water can be obtained to irrigate the same.

The Territory of New Mexico was organized in 1850, and in thirty years thereafter it had a population of 119,565 souls, or less than one person to the square mile, and its population during the two decades preceding 1880 only increased 26,000, all of which increase occurred after 1870, and consisted largely of persons connected directly or indirectly with the construction, maintenance, and operation of railroads leading through said Territory to the Pacific Ocean. While population increased as above stated, and also by reason of large mining enterprises, yet, as shown by said census, there has been an actual decrease of the agricultural element—the number of farms in 1880 being actually less than in 1860. This can be accounted for only on the fact of scarcity of water for agricultural purposes.

The same conditions exist in Arizona, except that its population is about one person to 2 square miles of area. The waters of that Territory have been almost entirely appropriated to agricultural purposes, yet millions of acres of most fertile land is uninhabited because the poverty of the people will not permit experiments in water development, and does actually prevent any effort towards reclamation of these vast deserts.

The climate of this desert country is adapted to the growth of the vine, fig, olive, orange, lemon, and various other tropical and semi-tropical fruits, while the products of the temperate zone grow in richest profusion wherever a water supply can be obtained. The valleys of these Territories are extremely fertile, and under proper encouragement can be made productive beyond probably any other land on this continent.

With these facts before your committee, drawn from official sources and sustained by actual observation, the conclusion is reached that the public interests require the adoption of some wise measure that shall test the question of the practicability of making this vast area of waste and desert country productive.

By such means England has succeeded in making India the granary of the world, and the Ganges Canal, with its branches over 3,500 miles in length, has more than doubly paid the cost of its construction.

Artesian wells have proved a success on the desert of Sahara, as well as in France, Spain, Germany, England, and in many parts of the United States where proper inducement has been held out to capital.

The committee sees no reason to fear a failure in this instance, and, considering the magnitude of the benefits resulting from successful experiment in redeeming millions of acres of now worthless lands, and converting this vast area into fertile fields, tilled by an empire of intelligent, prosperous, and happy freemen, your committee recommends the passage of the substitute herein set out.

I can say as a member of the Committee on Territories that the committee thought the bill ought to pass.

The bill providing for the admission of Montana, Dakota, New Mexico, and Washington Territories into the Union grants to the proposed new State of New Mexico 250,000 acres of land to aid in the construction of reservoirs. The committee thought, after considering the question, that this land should be granted to this new State for this most important internal improvement.

So, Mr. Speaker, two leading committees of this House, after giving full consideration to this question, recommend appropriations of the same character made by this Senate amendment.

These are the only two committees of the House that have investigated this question.

I introduced a bill which grants 500,000 acres of land to the State of Colorado to aid in the construction of storage reservoirs. It was referred to the Committee on Public Lands, but that committee has been so preoccupied we have not yet secured a hearing on that bill.

Let me illustrate from that map one minute, that gentlemen may understand this subject.

Now, Mr. Speaker, this is the topographical map of the United States. The red line where I draw the pointer divides the arid region from the part where you raise crops without irrigation.

The blue, yellow, and other colors on the map represent the sections of country where the topographic and geological surveys have been made. This work has already been done, and this additional appropriation is to be used by making additional local surveys to select and locate sites for reservoirs, and thereby utilize the expensive work before performed. This topographic survey has been going on for ten years, at an expense of $200,000 per year in addition to the geological survey.

The topographic survey makes a description of the country. Is it hill or is it vale? Is it mountainous or is it cañon? Is it plains or is it timber land? Now, that general description has been made by the topographical surveys carried on over the different portions of the country. You have expended millions for it; you have it upon plats and maps in your Government office to-day. Engineers have the field-notes, as they call them. They could go back with these field-notes and they could utilize part of the millions of money that have been expended in this topographic survey by going with these notes upon the ground and locating these sites for reservoirs by the engineers running levels and drawing contour lines and locating these national sites for reservoirs and staking them off. They could make an estimate of the desert lands that can be made arable by the irrigation that will be made practicable by these reservoirs, and report and carry it on the Government maps as irrigable land. Major Powell says on the subject that these topographic surveys have been carried on with a view to irrigation, and that this is only an extension of it. And now are we to stop here and say we will not appropriate $250,000 for this most important purpose?

Mr. Speaker, the arid region comprises about four-tenths of the whole area of the United States outside of Alaska. Hence, within the arid region of the United States there are approximately 500,000,000 acres of land—a tract of country larger in area than the greatest empire in Europe. It is estimated that 10 per cent. or 50,000,000 acres of that arid land can be brought under cultivation by irrigation with a proper system of storage reservoirs.

Without irrigation this desert or arid land is not worth more than 10 to 50 cents an acre. When this land is reclaimed from arid to arable land it will become worth from $10 to $50 to $100 per acre. So

these 50,000,000 acres of the 500,000,000 acres of arid land by irrigation would be increased in value over $2,000,000,000, more than sufficient to pay off the national debt. Most of this land is public domain, and it can never be thickly, nor much of it sparsely, settled without irrigation.

But this gives a small idea of the permanent wealth and accruing benefits to be derived from this system of irrigation by storage reservoirs. It will provide homes in the future for many millions of people. It will create large, populous, and wealthy communities in that part of our country heretofore marked upon the maps as the Great American Desert. Nature has given that country every kind of material wealth in profusion, except agriculture, without irrigation or without water. The storage of water for irrigation is the one thing needed.

I have traveled over that country from the northern boundary of Montana to the southern boundary of New Mexico and Arizona, and from the one hundredth meridian of longitude to the Pacific coast range, and I have contemplated what an empire of population and wealth it would contain when the waters running to waste in those mountain torrents and rivers should be stored up and used by the hand of agriculture.

That part of our country has poured hundreds and hundreds of millions of gold and silver into the Treasury of this great nation. Her mineral wealth of all kinds is inexhaustible, but she needs the development of her agriculture to support her mining interests.

Mr. Speaker, this large part of our country has received and asks nothing for the improvement of rivers and harbors, nothing for light-houses, stations, or piers. She asks for none of the millions appropriated for big guns and forts to protect her cities or coasts. She asks nothing for geodetic or coast surveys. She only asks for a mere pittance compared with these great sums to survey and select and reserve from the grasp of monopoly these natural sites for storage-reservoirs for the future benefit of all the people.

Mr. Speaker, let me recall to the mind of the committee the enormous sums of money that have been expended in this country for internal improvements. Up to 1882 there had been spent for public buildings, $183,000,000—it is now nearly $200,000,000; for rivers and harbors, $105,000,000—it would now reach $140,000,000; for roads, turnpikes, and canals over $19,000,000; for light-houses, stations, piers, etc., $73,000,000; for mints and assay offices, $5,000,000, and for forts and arsenals, $86,000,000, etc. In this way the Government has appropriated and expended on internal improvements in this country over $400,000,000 of money.

Now, a large portion of this was expended, from time to time, up to fifteen years ago, before this country became so great and populous as it is now. I am not criticising these appropriations for internal improvements, but ask the attention of the committee to a comparison with many of these internal improvments with the future benefits and the continued and increasing wealth by accretion that will come to our Government and the people as the result of these reservoirs. How many people in the future will it support among the agricultural classes and the industries dependent upon them by irrigating and making arable land of 50,000,000 acres of desert land? I will not attempt to give the figures; it is something enormous.

Mr. Speaker, in addition to these hundreds of millions of dollars appropriated in aid of internal improvements almost hundreds of millions of acres of the public lands have been granted and donated in aid of intended improvements to States and corporations. Tracts of land, in the aggregate large enough to settle the people of an empire upon, have been granted and donated in this way. Sir, we are only asking for a few thousand dollars, not to be donated to any corporations, but for the purpose of reserving these sites for storage reservoirs for the surplus waters on the public domain for the use and benefit of the Government and the people for generations to come. It will increase the value of the public domain a thousand fold more than the amount to be appropriated. It will increase instead of diminish the Treasury. This amendment reserves the sites for reservoirs.

Mr. Speaker, I ask the House, in the name of future generations that have to settle this country when it shall have become crowded, that we now wrest from the grasp of private corporations these natural sites for reservoirs that are worth so many millions of money, and prevent any further vested rights from being acquired to them.

Mr. Speaker, conventions of the people have been held asking for this legislation. The people of this immense arid region ask that these sites for storage reservoirs be selected and reserved from sale. They ask that the homesteaders who have and who will hereafter make their homes in this arid region shall not be subject to the exactions and extortions of the corporations that will one way or another secure these natural sites for these reservoirs and canals if the Government does not, without delay, make the necessary surveys and reserve these reservior sites from sale.

Any gentlemen who wish this great arid region to be settled up and improved by the homesteaders and small farmers will vote for this appropriation to reserve these natural storage reservoir sites from the possession and control of monopolies. The chairman of the Public Lands Committee, who is devoting his energy and legislative experience towards preserving the public lands for actual settlers, and reserving them from speculators, will of course support this amendment—for it will avail little to reserve the arid land from the grasp of monopolies and speculators unless we also reserve the control of the water from the same hands.

To show how valuable some of these natural sites for reservoirs are and will become if individuals or corporations are allowed to obtain title to them from the United States I will give one illustration. The bed of a small extinct soda lake in Colorado, to which title has been obtained, is valued at over $25,000. A land and irrigating company has offered $25,000 for this lake bed, to be used as a storage reservoir, and the owners have refused the offer. It contains less than 200 acres of land. This shows how necessary and imperative it is to proceed without delay to select these natural sites for storage reservoirs and reserve them from public or private sale. Private enterprise will cause surveys to be made and some of the most valuable sites to be selected, and title obtained to them under the pre-emption laws if the Government does not proceed with this survey and reserve the land from sale.

The individual or corporation that owns the natural site for a large storage reservoir practically controls or has a monopoly of the land that can be irrigated from it. The land is of little value unless water can be obtained at reasonable rates to irrigate it. Water is an incident to the land in other parts of the country, but in the arid region the land is an incident to the water. Those who control the water in an irrigating country practically control the land that can be irrigated. The history of all irrigating countries shows this.

Mr. HERBERT. One question, if the gentleman pleases. If this amendment should pass and this scheme be put into operation, how would the Government, when it undertakes this work, get the bed of that lake? Would it be able to buy it for any less than is demanded from private individuals or a private company?

Mr. SYMES. I am very glad, sir, the gentleman from Alabama asked that question. It leads to, and will explain with a little more force, the next paragraph of what I was about to say. The Government can not obtain it. The Government is too late to obtain it. By the neglect of Congress and by the absence of practical legislation on this great subject of the public lands millions of money have been lost to the Government, and untold hundreds of millions have been lost to the benefit of future generations hereafter to settle that region.

I stand here this afternoon to protest against the continuance of that short-sighted policy. The very illustration of the portion of my argument I am now making is in that line; and I tell you, gentlemen, that private corporations are to-day sending engineers throughout that arid region, making private surveys, running contour lines, and making that character of topographical surveys, where the intelligent mountain engineer, from experience by his own eyes, can find a site for a reservoir by a preliminary survey. Levels are being run, lines traced, and the next thing we hear in the way of "land-grabbing" will be that A, B, C, D, and E will be located, will have acquired homestead or pre-emption rights within that part of the public domain, valuable as they are, for no other purpose than to turn a ditch into it in high water to fill a large reservoir or lake that will command the surrounding land for irrigation so far.

Mr. HERBERT. Will the gentleman allow me another question? I would not interrupt him, but the House desires to be informed.

Mr. SYMES. I will yield to the gentleman from Alabama.

Mr. HERBERT. Is it not true that all along the streams in Colorado and Nevada, and other arid regions, wherever there is land which may be irrigated in the manner suggested, settlers have already acquired rights in almost all cases where these natural basins exist, and now use them as farms? And would not the Government, if it undertakes this scheme, have to buy up at any sum that may be asked lands already in possession of settlers who have selected them with an eye to this very purpose?

Mr. SYMES. I thank the gentleman from Alabama again for his question. It is evident that his clear mind is running in such a direction that if he will listen to my answer he will comprehend the necessity for this appropriation.

I was about to say, Mr. Speaker, that along the smaller streams of Colorado, and some, I may say, of the largest, the current supply of water for irrigation purposes has been appropriated, and little lakes and little reservoirs created, and the climate has almost been changed in different valleys until we have now in the thickly settled portions of Colorado utilized all of the small streams during the growing season.

It has been urged against this appropriation that it commits the Government to the policy of carrying on a vast scheme of irrigation. This is not the fact. It does not commit the Government to the carrying on of any system of irrigation. It is not intended by this measure that the Government should take charge of the storage of water, the conveying of it through ditches or canals, or the distribution of it for irrigation. This amendment only goes to the selecting of sites for reservoirs on the public domain, and adding to the present classification of public lands those which are susceptible of irrigation, and the reservation from sale of all lands that are suitable and selected for reservoir or canal purposes. The reservoir land is reserved from sale from

the time this amendment passes, and also the land made susceptible of irrigation by such reservoirs.

This amendment does not commit the United States to conducting irrigation. This amendment has only one object in view at this time; others can be settled in the future. Those who oppose it will in the future be in the position of those who stand here to-day complaining because they say great grants have been made to railroads which they would not have made if they had been here. Mr. Speaker, if this amendment is not passed and these reservoir sites surveyed and selected and reserved these irrigable lands ought to be classified. The statute requires the public surveys to show what lands are agricultural, what lands are mineral, and, in some instances, what lands are desert or arid.

The topographical division of the Geological Survey is required to describe minutely the character of the country over which topographical surveys are extended. The geological branch of the Survey describes the character of the country examined and surveyed, with regard to its geological formation and mineral resources.

But these surveys, classifications, and descriptions of the public lands do not give any special information about what land can be irrigated—that is, what lands can be reclaimed from worthless desert and made valuable arable land.

The topographic survey and the topographic maps that are being made at an expense of $200,000 per year do not lay down or specify these natural sites for reservoirs in the arid region. Additional work is necessary for this purpose.

The Director says:

The topographic work of the Geological Survey in the arid regions has from the first been executed with a view to the problems of irrigation, and if such authority as is contemplated by the resolution shall be given to the Survey, the maps now completed and in preparation will serve as a basis for the special work required in respect to irrigation. It will be necessary in addition to make local surveys for the selection of sites for reservoirs, canals, etc., and of irrigation areas.

This amendment utilizes some of this work upon which $2,000,000 have already been expended.

When the topographic work has extended over a section of the arid region where there are natural sites for reservoirs, this work will be utilized and only some additional survey work will be necessary to locate the reservoir sites and classify the irrigable lands.

In a word, this amendment simply and only adds $250,000 to the (about) $500,000 that has been appropriated annually for many years for topographic and geologic surveys, and will practically utilize a portion of those large expenditures.

Mr. Speaker, I have advocated those appropriations. They are of great public benefit and importance. But, sir, the additional surveys and topographic work necessary to locate the sites for these storage reservoirs and reserve them from sale, and the classification of the irrigable lands, are of much more immediate and practical importance than the other surveys and work which have cost and will cost many millions.

It is known, sir, that this arid region is similar to the plains of Spain, the plains of Asia, and the great wheat-growing plains of Russia, and to some portions of Italy. It is known, sir, that it is similar in character to the great country of India where England has been spending hundreds of millions of dollars in the construction of canals to irrigate that country, so as to rival America in the London wheat market, which by reason of this irrigation she has succeeded in doing successfully in the last ten years.

I will now ask the Clerk to read an extract on this subject from a book written by the distinguished gentleman from New York [Mr. COX], after he had traveled in Spain, some years ago.

The Clerk read as follows:

I said much about this element of Spanish wealth, but did not give you the facts and foundation of the system. Having now seen under my own eyes the principal irrigation works of Spain I feel more competent to write about it. In Valencia, from the rivers Turia and Jucar, there are 56,810 acres under irrigation; in Murcia from the Segura, 25,915; at Orihuela from the Segura, 50,318; at Elche (place of plumy palms), 40,010; Alicante, 9,139; at Granada, from the Darro and Genil, 46,930 acres. These works, whose results at least I have witnessed, comprise nearly one-half of the irrigation area of Spain.

The total quantity of irrigated lands is 374,269 acres. The best works are those of Valencia, Murcia, and Granada. They are the oldest, being made by the Moors about the year 800. On the Spanish conquest and division of land, the rules of the Saracens about water were re-established. Some of these works are made of masonry, in which rain is collected, as at Alicante. The principal rivers of Spain, like the Tagus and Guadalquivir, run to the sea with but little utility as motive or creative power. But almost anything, and in any quantity, of vegetable beauty and utility can be raised in Spain with this water power. Peppers and peaches, apricots and apples, olives, and oranges, sugar and citron, cotton and corn, potatoes and pears; and never less than two crops a year, and sometimes four! Of course irrigation enhances the value of the land. In Castellon good irrigated ground is $700 per acre; dry ground only $50. In Murcia $3,000 per acre is given for the good ground there irrigated. In Valencia it averages from $1,000 to $2,000 per acre. Irrigation adds 1,200 per cent. to the valuation of the land.

Mr. SYMES. Great progress has been made in Colorado in irrigation. The laws, rules, and regulations in Colorado governing the appropriation and use of water for irrigation are among the best in any State or country. The constitution of Colorado wisely provides that all the waters of every natural stream in the State shall be the property of the public and is dedicated to the use of the people.

No private ownership can be acquired in the water. The right of appropriation only carries with it the right to convey the water through ditches or canals for beneficial use. The State can regulate the use and fix the price to be charged for conveying the water.

A foreign and alien corporation constructed a large irrigating canal from the cañon of the Platte River and appropriated the water to fill it. The company then demanded from $20 to $40 an acre royalty from all the owners of land that could be irrigated from this canal. This royalty means the privilege of buying water, the price per acre per annum for the water to be thereafter fixed by the company. This practically amounted to confiscation of the land adjoining the canal. The county commissioners undertook to regulate the price to be charged for the water under a State statute, and denied the right of the company to charge royalty.

The matter was carried into the courts. The courts decided that under the constitution the company could not acquire ownership in the water; that the Legislature could by law regulate the distribution of the water and the price to be paid for conducting it through ditches or canals; and that royalty for the privilege of buying the use of water could not be legally demanded. Thus the people of Colorado by the wisdom of their organic lawmakers were saved from the worst character of monopoly that would have cursed them in the future.

But, Mr. Speaker, the State has no power to protect her people from the monopolies that will arise when private enterprise and private corporations shall seek out and acquire title to the land covering these natural sites for these storage reservoirs on the public domain. The people ask that they be protected from this threatened evil.

In Colorado alone there are over 10,000,000 acres of public domain that can be reclaimed from desert and made valuable agricultural land by this system of reservoirs. Most of the current supply of water from the small streams and a large amount from the large streams have been utilized for irrigation; but the irrigating or growing season only lasts three to four months in the year, and all the water, both in the small and large streams, runs to waste for seven to eight months in the year. The floods of spring and early summer go to waste. This is the water that must be utilized by the reservoir system. The increase in the value of the public lands will be infinitely greater than the cost of locating these reservoirs.

Early in July, 1878, I rode over the trail passing the headwaters of the Rio Grande River. I looked at a bank of snow 50 feet high and turned around on my horse and commented on the fact that that melting snow was running into a little willow marsh 11,000 feet above the sea and forming absolutely the source of the Rio Grande River which separates Mexico from this country. I watched it, and my mind followed that historical river for the next hour in riding over the range on my broncho pony. At that time there were great floods below, and I thought of the millions of acres of land that would be utterly worthless for all coming time unless that water was stored up for the purpose of irrigation. In the San Luis valley alone, which adjoins this river, it is estimated that it will furnish arable land enough which it is practicable to irrigate to support more people than you find in any New England State. That is one illustration; that is only one river. We may go over the headwaters of the Arkansas River in the same way, for illustration, and scores of other rivers and mountain streams.

Mr. SAYERS. I desire to ask the gentleman a question for information. Speaking of the Rio Grande, does not that gentleman believe that the establishment of large reservoirs in that arid region, retaining the waters of the streams that flow into the Rio Grande, would deplete the main body of the river as it runs to the sea?

Mr. SYMES. These reservoirs that I am now speaking about and that this legislation applies to are designed to gather and store the water during the eight months of the year called the non-growing season, and where the current supply during the growing season has already been appropriated along the immediate banks and valleys of the streams.

Mr. SAYERS. But will it not deplete the flow of water down the river?

Mr. SYMES. It will deplete the flow of water, of course, during the proper season, during the high water when there is no use for it below. That is one of the objects of it.

Mr. BUTTERWORTH. Is it not the fact that the season of the year when this depletion would take place is the season when the people there pray that there may be a depletion, the season when they have a surplus of water?

Mr. SAYERS. Not at all on the Rio Grande.

Mr. BUTTERWORTH. It is so on the Mississippi.

Mr. SAYERS. The Rio Grande is very different from the Mississippi.

Mr. SYMES. It is not different in that the people below do not want the water for eight months of the year or during the non-growing season.

Mr. SAYERS. I will state that all along as you get toward the mouth of the Rio Grande these irrigation ditches are extended from the river. But if you establish your immense reservoirs upon those streams which go to fill up the river, then of course these irrigation ditches cease to be valuable.

Mr. SYMES. I beg the gentleman's pardon. He does not comprehend the object of these storage reservoirs in which water is to be stored during the non-growing season. The great object of these storage reservoirs is to gather the snow which I have described when it melts in the early spring, and the surplus water, and retain this supply until the growing season. This plan will never interfere with, but will only benefit, the people living along the bank of the stream below. It is not contemplated to turn the current supply of the stream into these reservoirs, for by the plan proposed you will have all the water you require for irrigation purposes during the growing season of three or four months without attempting to rob the river, so to speak, or any of the localities which have a right by prior appropriation to the current supply.

Mr. SAYERS. I will say to the gentleman that I concur most heartily in his amendment; I think it all right. The only question with me is whether it is the duty of the Government to enter upon a scheme which may involve the expenditure of millions and hundreds of millions of dollars.

Mr. SYMES. I do not think it is the duty of the Government to enter on any scheme which will require the expenditure of millions or hundreds of millions of dollars. Mr. Speaker, if I were called upon to-day to have this Government enter upon a system of irrigation proper—to build dams and reservoirs, ditches and canals, and undertake to distribute the water, as has been done by the Government of India, or Spain, or Italy, or Egypt, I should hesitate. I would not vote for such a proposition at this time. There is no necessity for such a measure in our case. I am only asking (and I trust I have been understood) that the Government protect its own property and preserve it for the use of its people in the future.

I intended to dwell upon the benefit of turning the headwaters of the Missouri River and its tributaries and the sediment therein during the early spring and summer when the freshets are on into these storage reservoirs. The especial benefit to the Lower Mississippi in preventing floods I think I could satisfy gentlemen of in a short time, in answer to the gentleman from Mississippi.

Mr. RICE. I would be glad to hear you do so.

Mr. SYMES. I feel confident I could do so, but I must yield the floor for the present, because my friend from New York [Mr. COX] has been promised a portion of the time.

The construction of these storage reservoirs will aid in relieving the people on the Lower Mississippi from the destructive floods that now devastate that region. The worst of these floods are caused by the melting of the snows in the mountains around the headwaters of the Missouri and its tributaries. Major Powell has shown this in his report. He says:

> The development of irrigation along the base of the Rocky Mountains is of double importance because of its influence on the agriculture of the Lower Mississippi. To store up the water of the Missouri and its main affluents for the purpose of irrigation is to diminish the volume of that flood of the Lower Mississippi which is most destructive by reason of its occurring in the heart of the farming season. Moreover, the great difficulty of the problem of the Lower Mississippi arises from the fact that the river normally makes a deposit here, thus clogging its course and giving to its channel an unstable position. The principal source of the sediment is the Missouri River, and it is carried forward chiefly during flood. With abolition of great Missouri floods the sedimentary load of the Lower Mississippi would be diminished, and the scouring power of the less-loaded floods from the Ohio and the Upper Mississippi would establish for the Lower Mississippi a lower grade and a deeper channel. For every acre reclaimed to agriculture in Montana another acre will be reclaimed in Louisiana; and, in general, all lands redeemed by irrigation on the Great Plains will be equaled by the lands redeemed from floods in the great valley of the Lower Mississippi.

The people living in the districts subject to the floods, and who are asking Congress for millions of appropriations to construct levees and dikes to protect their property, will be greatly benefited by this system of storage reservoirs.

Mr. Speaker, if gentlemen who object to this appropriation could travel through portions of my State they would object no longer. They would see large agricultural towns and communities where the farms are valued at from $25 to $50 per acre. This land a few years since was not worth 50 cents per acre. Irrigation alone has wrought this change. It was at one time supposed Colorado was only a mining country. Now she exports wheat, flour, potatoes, and other produce to Chicago and the East.

The changes brought about in the soil and climate by irrigation are truly wonderful. They can only be appreciated and are not generally understood except by those who have had experience. On one side of a country road you see 40 bushels of wheat to the acre standing, on the other side cactus, sage-brush, and alkali that mark the original desert. Irrigation is a great fertilizer. Crops can be continued for scores of years on irrigated land without manure. Where before the hot winds filled the air with alkali dust and scorched up everything, the air is moistened by absorption and refreshing dews spread over the vegetation.

More than one-half the agricultural regions of the world have to be aided by irrigation. England has expended tens of millions in constructing irrigating canals in India in aid of agriculture where irrigation has been carried on since the dawn of civilization. In the richest portions of Spain, Italy, Russia, and the Asiatic countries agriculture has to be carried on by irrigation.

The Investigation of Trusts.

SPEECH

OF

HON. ALBERT R. ANDERSON,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, August 8, 1888.

The House having under consideration the report of the Committee on Accounts concerning the expenses of the Committee on Manufactures in continuing the investigation of trusts—

Mr. ANDERSON, of Iowa, said:

Mr. SPEAKER: This question of trusts is a very interesting question, and to me especially, as it comes before the House this morning. I am pleased with the position taken by the gentleman from Arkansas [Mr. BRECKINRIDGE] and his views relative to trusts. I may also say the same with regard to the views of my friend from Illinois [Mr. CANNON] with regard to trusts, and the sum of these two views is the ground upon which this Congress should stand, and that is the ground of a sweeping condemnation of all trusts, whether they be found in the sugar interests at the South or in the lumber interests at the North.

The great difficulty in this compromise, as we may term it, with reference to the matters of the various interests from the various sections of the country, is found in the fact that what my friend from Illinois inveighs against in one section and calls a trust, my friend from Arkansas ignores and refers to another. The sum of these criticisms amounts to a confession of the dangerous character of all trusts and high war duties, and should be a sufficient warning to the farmers and others not specially interested in them. The truth is that American trade and commerce have, through the undue advantage of pools, trusts, combines, and corners, become demoralized and corrupted; and no gentleman is willing any longer to go into the open field, and under the law of competition and supply and demand, take an equal chance with others in like business, but by some combination or trust he must have an undue advantage over both his competitor and customers, by which he can drive the one out of business and compel the other to do business with him on such terms as he shall dictate.

I have heard many assertions and a great many denials with reference to the relation the tariff bears towards the trusts. I think a mistake is made on one hand when my friends on the Democratic side charge the tariff with being the father of trusts. And there is a mistake made on this side of the House when the denial is made that the trust is not related to the tariff. The principle involved in the application of the tariff to the commerce of the country, so far as it goes, is simply the same principle that is involved in every trust and in every combine in the country. The tariff is not the sole progenitor of these combinations and trusts, but in principle it is precisely the same to the extent and degree to which it goes; and the protective principle and trust are simply of common origin and are akin and stand on all fours, and are working for the accomplishment of a given purpose, and that purpose is to get rid of the cheapening effects of competition.

While I am for the protection of American industries, I must nevertheless concede that it is true that the principle of elimination of competition that is involved in the application of tariff laws is the same principle that is applied in the pool and in the trust, and a growing principle, and one that the American people must guard against, or the many will bear great burdens in the interest of the few. The great question, Mr. Speaker, in American politics and the foremost one in demand for prompt consideration is well-defined, vigorous control of the legislative beneficiaries that are thronging the halls of legislation from one end of the country to the other. Their procurers and their agents are in the halls of legislation seeking protection for this business enterprise and for that, and to be a bank or railway director or mill-owner, and interested and educated in those lines of industries, is fast coming to be understood in certain quarters as the conclusive proofs of soundness on the main question in American politics and of complete equipment for legislative duties as well as honors.

And the farmers of this country, constituting one-half its population and paying one-half of the whole tax charge of Government, and who at best, no matter what their views or shades of opinion on the question of the adjustment of the tariff, are only incidental beneficiaries, and that in an unknown and speculative quantity, are rapidly coming to understand that they are in unequal contest and that they are bearing an undue proportion of the governmental burden.

And while the farmers of the country are protectionists in the best sense of that much-abused term, the grinding exactions and extortions of the trust and the pool have brought boldly into relief some ugly facts that suggest to them that they are paying more than their relative proportion in maintaining the system as there is a distinct difference between direct and incidental benefits.

No farmer desires to pay more for his daily supplies to maintain his household than they are worth simply because they are good things

and he must have them, and he stands in precisely the same relation to the tariff.

He believes that a 47 per cent. tariff that was imposed as a war necessity and in consequence of an extraordinary temporary condition of things should be revised and reduced to harmonize with the existing conditions. Nor does he regard increase of the free-list or 5 per cent. reduction of a 47 per cent. tariff, as proposed in the Mills bill, any more of an assault on home industries, or any greater step in the direction of free trade than was the recommendation of the Republican tariff commission appointed by President Arthur in 1882 of a reduction of 20 per cent., or about four times as great a reduction as that which is now called an assault, and which contained a large free-list as all tariff laws ever have.

It would seem from the present outcry about the free-list that it was a new feature in tariff legislation, but it is nothing of the kind. The truth is that the Mills bill is nearer the Republican position on the tariff than the Chicago platform, as an effort now being made in another place to construct a measure on ground not covered by it, and that at the same time meets the demands of the Republican party, especially in the Northwest, is making more apparent every day.

So it seems, Mr. Speaker, that the self-styled friends of protection could increase the free-list and greatly reduce duties without being open to the criticism of being free-traders. It resolves itself to this, then, that it is simply a question of which party shall present the measure. Can the tax-payers afford to follow such quibbling for party purposes only, when they bear the great cost and burden of such needless delay in reducing taxation?

The gentleman from Ohio [Mr. McKINLEY] could say in 1882 that "the free-list might be enlarged without affecting injuriously a single American interest;" yet to put the strap-iron for the poor woman's wash-tub on the free-list at this time is regarded by the same gentleman as an assault on "American interests," and leads him to say that before he will accede to it he will, in the language of the Chicago platform, "favor the entire repeal of internal taxes," which means free tobacco, whisky, and oleomargarine.

Then a Republican protection administration and a commission appointed by it specially to investigate the matter could recommend a reduction of 20 per cent. (more than three times of the amount of the Mills bill) without exciting alarm, or even calling forth a suggestion that such a proposition was "an assault on American industries" or "a blow at American labor." And, Mr. Speaker, I call attention to the fact that an examination of the report of the Tariff Commission of 1882 and the modification of the law in 1883 will disclose as great inequalities in the percents on different articles and will show as many sectional features as the measure which is now denounced by the very authors of that report and change in the laws in 1883 as a "free-trade measure," "an assault on American industries," and "an effort to degrade American labor to the level of pauper labor in Europe." And that I am unquestionably right on these points can be proven by the very highest Republican authority, and for this purpose I desire to submit the testimony of President Arthur and his administration on tariff reduction.

In his last annual message Mr. Arthur declared in favor of—

> Such tariff reductions as may seem advisable when the result of recent revenue laws and commercial treaties shall have shown in what quarters those reductions may be most judiciously effected.

President Arthur had three Secretaries of the Treasury—Charles J. Folger, of New York, an Eastern State, and General Gresham and Hugh McCulloch, of Indiana, a Western State—and all three were able and trusted leaders of the Republican party, and all three were outspoken for tariff reform.

Secretary Folger, in his report for 1883, recommended—

> That the duties upon the articles used or consumed by those who are the least able to bear the burden of taxation should be reduced.

And Secretary McCulloch, in pointing out in his report the proper way in which to do this, said:

> 1. That the existing duties upon raw materials which are to be used in manufacture should be removed.
> 2. That the duties upon the articles used or consumed by those who are the least able to bear the burden of taxation should be reduced.

Mr. Arthur's administration was but executing Republican principles in compliance with the Republican platforms; and the Chicago Tribune, the leading Republican newspaper in the United States, when measured by its devotion to the masses as against special interests, puts the situation in a nutshell and voices the sentiments of its party in the West when it says:

> Thus the last Republican administration anticipated by four years the recommendation just made to Congress by Mr. Cleveland and laid down the precise doctrine which, coming from a Democratic President, is now expected to excite the abhorrence of Republicans.

In short, Mr. Speaker, you may run the whole round of the objectors, and you will find them the men who have within the past few years made solemn proof of indorsement of more radical tariff reform measures than those they are now objecting to. Wool-growing in the South is a large industry, and the finest timber forests in the world are in Tennessee, Georgia, and Arkansas, and other States, and yet the placing of wool and lumber on the free-list is the foundation for this charge of sectionalism.

Could I have my way about it I would put sugar and rice upon the free-list, yet the Mills bill found these articles in the existing law at a much higher duty than it leaves upon them and they are in the existing law at the instance of the very men who are now charging sectionalism on the Mills bill because they are not on the free-list. It seems to me that this charge coming from the source it does is very inconsistent and unfair, as they put these articles in the existing law with their present high rate of duty and will not in any law they frame dare to put either article on the free-list, as they should do, in order to be consistent and meet the demands of a large majority of the voters and tax-payers of the country.

Mr. Speaker, these considerations lead me logically to an important phase of these economic questions which I have heretofore discussed in this Chamber, in relation to the rapid and alarming growth of this demand for a retention of the high impost duties that the country would never have tolerated for a moment but for the imperative demands made by the late war for the preservation of the Union.

The growth of the protection idea, which, beginning under Henry Clay with the plea of "infancy" followed by "war necessity," has reached the climax under the leadership of the trust defenders with the declaration that the entire internal-revenue system, including the tax on whisky and oleomargarine, "must go." And this notwithstanding the declaration of Mr. Clay and his friends that when the period of infanthood should be passed that protection would no longer be needed, and notwithstanding the solemn pledges of those in whose interest they were imposed, as voiced by Senator MORRILL, of Vermont, that these taxes would be greatly reduced when the war necessity was passed.

I appeal to the honest and fair-minded friends of protection to ask them if there is not something in this history, taken as a whole, when calmly and dispassionately viewed, to excite suspicions that mill-owners are taking an undue advantage of the farm owners, and in the alluring name of protection to home industries imposing unnecessarily heavy burdens on the many in the interest of the few?

My predecessor on this floor made a speech in this House in favor of free lumber, an article, according to Mr. Blaine, a prime necessity of life, like bread, and yet such has been the rapid growth of this demand for more and more protection, that to-day were this same gentleman here on this floor, such a declaration by him in favor of taking the tariff off of lumber would cost him his standing with the party managers, as it would be in violation of the tariff plank of the Chicago platform, which distinctly declares as follows:

> We favor the entire repeal of internal taxes rather than the surrender of any part of our protective system at the joint behest of the whisky trust and the agents of foreign manufacturers.

The miserable appeal to passion and to prejudice formulated in the phrase "at the joint behest of the whisky trust and agents of foreign manufacturers" should deceive no one, and is only worthy of that class of men who, in political life, have reduced the matter of deception to an art whose leading characteristic is to make a diversion of the tax-payer and voter in one direction while his confederates rob him in another.

In view of this extraordinary declaration it is not strange that the Chicago Tribune and the St. Paul Pioneer Press, the two leading Republican papers of the Northwest, should denounce the Chicago declaration on the tariff as contrary to Republican principles and in violation of the entire past history of the position of the party on that question. The Pioneer Press, speaking for the Republican party in Minnesota and the Northwest, says that—

> Of the representatives of the Republican party at Washington not one in a hundred does not declare that the tariff plank adopted at Chicago, in a moment of excitement and without consultation with the delegates of all sections, is not good Republican doctrine. The Republican party, by all its traditions and declarations, by the expressions of its honored leaders, and by its acts when in power, is a party of tariff reform. It is not a party of free trade, nor is it a party of prohibitory tariffs. It has promised and it proposes to reduce the revenue derived from taxes on imports whenever the condition of the Treasury and the condition of native industries unite in declaring that this may be done with safety.

And, Mr. Speaker, the following article from the Chicago Tribune of June 26, written by its editor, an old-time Republican leader who was on the ground and knew the facts touching which he wrote down against the party of his choice, may, at least in part, account for the appearance of the new doctrine on the tariff question. Here is the article, which I commend to the careful consideration of my Republican brethren on this side the Chamber, and should it fail to impress them it may receive some consideration at the hands of the honest voter in the agricultural regions who has no interest in the matter of politics save to get at the very right of the business in hand.

> The Tribune ceased to feel confidence in Gresham's nomination as soon as it discovered the power of a few great or crooked corporations in the convention. From the moment that railroad attorneys and lobbyists from California, Nebraska, Iowa, Wisconsin, and New York took their places in the convention and made their first display of strength in electing Thurston, the Union Pacific lobbyist, to the temporary chairmanship, Gresham's chances became clouded.
>
> When availability was thrown overboard and the agents of Gouldism infused into the delegates the foolish notion that the ultra high-tariff plank would elect anybody, no matter how unpopular, and pointed to Oregon in support of the stupid assertion, the Tribune saw who was pulling the wires. Yet while the crooked railroad attorneys talked about the tariff plank electing any one, even a wooden Indian, their acts belied their words. Some days ago the Tribune

said that the real problem with the representatives of Gouldism in the convention was "how to defeat Gresham and yet secure a candidate who could be elected." So it proved. They sought to perform the work of their employer in accomplishing the political assassination of Gresham and yet wanted to secure themselves against the charge of betraying the Republican party to a crushing defeat.

Some of the most powerful forces in the convention might be enumerated thus:

First. Jay Gould and the Wabash wrecking crew, thirsting for revenge against Gresham for removing from control of the "system" Gould's right-hand man, formerly of Iowa, who was on the ground early and was deep in the secrets of every anti-Gresham caucus. Little seen by the public, no man exercised a more potent influence on the result than Gould's most efficient and capable lieutenant. Gouldism as arrayed against Gresham represented $200,000,000 of capital.

Second. The Central Pacific Stanford-Crocker-Huntington ring, with its able, plausible attorney, Creed Haymond, at the end of the California delegation. This firm has in its possession $150,000,000 of railroad plunder which a President of the Gresham stamp might compel it to disgorge. Naturally it fought hard to prevent the nomination of any such man.

Third. The Union Pacific Crédit Mobilier crowd, represented by Lawyer Thurston, who is shrewd, brainy, and nervy, and a packed delegation grossly misrepresenting the granger State of Nebraska. This ring has $150,000,000 worth of railroad Crédit Mobilier and other boodle to protect. It is deeply in debt to the Government, draws dividends on debts which it never intends to pay during the lifetime of any human being now in existence. It wants Mr. David Littler's free-and-easy eighty-year bill passed, which it knows Cleveland favors, and it feared that Gresham never would, as he is not that sort of man. Hence it fought him to the death, using the power of the granger State of Nebraska, nine-tenths of whose population indorse him, to defeat Gresham. It now laughs like Mephistopheles over the success of its schemes.

Fourth. Chauncey M. Depew, the railroad attorney and official head of the great Vanderbilt railroad syndicate, with its $300,000,000 of capital and its doctrine of "the public be d--d." With Depew as helpers were Tom Platt and Wood-Pulp Miller.

Fifth. The great Wisconsin railroads were represented by Senator JOHN C. SPOONER, the well-trained railroad attorney, who manipulated the Wisconsin delegation and put the votes where they would "do the most good." And the popular sentiment of the State for Gresham was ignored and disregarded with the utmost *sang froid*.

These were the leading representatives of corporate railroad monopoly, but with two or three exceptions there was hardly a delegation without a sprinkling of railroad attorneys and lobbyists. The land-grant rings were also represented. They argued that a President like Gresham would have discharged Lamar and retained Sparks, and thus cause them to lose millions of acres of public land which they had grabbed in violation of law. Like all the Gouldites who swarmed in from the East and West, they wanted no "d——d nasty particular honest" candidate, as they called Gresham—no man born in a log cabin and afflicted with homespun, granger notions about honesty and integrity. What great schemes of pelf and plunder might not such a man upset if intrusted with the mighty powers of the Presidency! The Wabash decision showed Gresham's spirit, and it was time an example was made of him for the effect it would have on other judges and public men.

Mr. Speaker, the proofs are overwhelming, and the apathy of the people at the known corruption of the times, and the refusal of party leaders to reduce taxation and check the extortions and robberies of the commercial monsters that are absorbing the wealth of the country, is absolutely amazing.

You ask me, Mr. Speaker, what all this has to do with trusts, and the pending question, and my answer is, everything. Less than twenty-five men, perhaps half that number, can to-day, through the commercial agencies representing the railroads, the telegraphs, the banks, and the manufactures, absolutely dominate the entire business interests of the country and levy upon it, in every department, just what tribute they see fit, and the usual rule is to "levy all" a given "industry will bear."

These great commercial establishments have found that they have a common commercial interest, and this has led very naturally to the development of the fact that they have a common legislative interest, and the result is a combination of instrumentalities in the hands of a few men that makes the strongest and most influential power, comparatively speaking, that the world has ever seen. It is idle to discuss the origin of the trust. It is born of greed and is the general agent and aider and abettor of all the great commercial establishments I have named. While it takes shelter in many instances under the protection of an unduly high tariff, it is a thing that could not well exist but for its alliance with the railroads and the favorite rates it receives as the price it pays for a division of the swag when the robbery is perfected.

In the specious and enchanting name of protection these great powers are plundering the people, and the trust is the handmaid and helper of them all. And, Mr. Speaker, the people need but look to note the fact that the most ultra defenders of railroad extortion and high-tariff duties are the defenders and apologists of the trust. The trust is the creature that goes out upon the road to destroy their rivals and rob their victims.

The undue power of these great commercial establishments must be bridled. The highwaymen who command the public highways of the country naturally head the procession. The highways are to the commerce of the country what alcohol is to the liquor traffic. Rates must be reduced and watered stock and bonds distilled. Tariff duties must be reduced. We must have protection but must draw the line at extortion. Corporate as well as governmental extortion and oppression must cease, and the more than one billion of money that is now taken wrongly from the tax-payers of the country by this dual system of burdens and taxes must be less with the people where it belongs. This vast sum reserved in the pockets of the people and free to flow in the channels of trade, aided, as it should be, by free coinage of silver, would tend to equalize the forces and give the country a prosperity that would apply to the people at large, as well as to the mill-owners and the trust and pool manipulators. Nothing has so grown in the last few years as the people's debts, and there should be an increase of money to relieve the stringency and enable them to pay out.

But the inverse of this order has prevailed, and money has so increased in value and the property with which the people have to meet the demands made on them has so depreciated in value that it would cause them to give up more of it to pay the national debt, now standing at about $1,000,000,000, than it would have taken of the same kind of property—beef, pork, corn, hogs, butter, cheese, and the like—than it would have taken to have paid the debt in 1865, when the amount was $2,700,000,000.

I believe in the adoption of such measures of investigation and such acts of legislation as will make trusts and all like institutions odious, and extirpate them, and therefore think the work of the committee should proceed. And in conclusion I beg leave to submit, as a part of my remarks, to be printed in the RECORD, the opinions of leading Republicans on the tariff, as they have been given to the country in speeches and in official reports and documents, and invite attention to these various opinions in connection with what I have said as to the rapid and extraordinary growth of the demand in this country for the retention of the high taxes that were imposed as temporary measures during the great war which threatened the life of the nation. There will be found in these opinions much wholesome food for profitable reflection.

APPENDIX.

REPUBLICAN OPINIONS ON THE TARIFF—WHAT PROMINENT PARTY MEN HAVE, DURING ITS HISTORY, HAD TO SAY IN FAVOR OF A LIBERAL SYSTEM OF CUSTOMS TAXATION.

[James G. Blaine on lumber—June 10, 1868.]

During the entire war, when we were seeking everything on earth, and in the skies, and in the waters under the earth, out of which taxation could be wrung, it never entered into the conception of Congress to tax breadstuffs—never. During the most pressing exigencies of the terrible contest in which we were engaged neither breadstuffs nor lumber ever became the subject of one penny of taxation. * * * Now, as to the article of lumber, I again remind the House that there has never been a tax upon this article. The gentleman from Ohio may talk on this question as he pleases; but I say that wherever the Western frontiersman undertakes to make for himself a home, to till the soil, to carry on the business of life, he needs lumber for his cabin, he needs lumber for his fence, he needs lumber for his wagon or cart, he needs lumber for his plow, he needs lumber for almost every purpose in his daily life.

[William D. Kelley, of Pennsylvania, on free wool—July 28, 1866.]

Let the raw material come in. Let us make blankets that will drive out English blankets. Let us make our own "English frieze" and "Peterboro' frosted beaver." Let us be able to rival England and France and other representative nations in making these cloths.

[Senator Ingalls, February 15, 1878.]

We can not disguise the truth that we are on the verge of an impending revolution; the old issues are dead! The people are arraying themselves upon one side or the other of a portentous contest. On one side is capital, formidably entrenched in privilege, arrogant from continued triumph, conservative, tenacious to old theories, demanding new concessions, enriched by domestic levy and foreign commerce, and struggling to adjust all values to its own standard. On the other is labor, asking for employment, striving to develop domestic industries, battling with the forces of nature, and subduing the wilderness; labor starving and sullen in cities, resolutely determined to overthrow a system under which the rich are growing richer and the poor are growing poorer; a system which gives to a Vanderbilt the possession of wealth beyond the dreams of avarice and condemns the poor to a poverty which has no refuge from starvation but the prison or the grave.

[Hugh McCulloch, Secretary of the Treasury. Recommendations in report, 1884.]

First. That the existing duties upon raw materials which are to be used in manufacture should be removed. This can be done in the interest of our foreign trade.

Second. That the duties upon the articles used or consumed by those who are the least able to bear the burden of taxation should be reduced. This also can be effected without prejudice to our export trade.

[President Grant, annual message, December, 1874.]

Those articles which enter into our manufacture and are not produced at home, it seems to me, should be entered free. Those articles of manufacture which we produce a constituent part of, but do not produce the whole, that part which we do not produce should be entered free also. I will instance fine woolens, dyes, etc. These articles must be imported to form a part of the manufacture of the higher grades of woolen goods. Chemicals used as dyes, compounded as medicines, and used in various ways in manufactures, come under this class. The introduction, free of duty, of such wools as we do not produce would stimulate the manufacture of goods requiring the use of those we do produce, and therefore would be a benefit to home production. There are many articles entering into "home manufactures" which we do not produce ourselves, the tariff upon which increases the cost of producing the manufactured article. All the corrections in this regard are in the direction of bringing labor and capital in harmony with each other, and of supplying one of the elements of prosperity so much needed.

[Mr. Kelley on tax reduction, April 22, 1872.]

If we adjourn on the 29th of May we shall have repealed no tax or duty, and the people will ask us in every paper and at every corner why we have continued the system of taxation, so largely in excess of the demands of the Government and the reduction of the public debt, at the rate of $50,000,000 per annum outside of what is already provided by law. On neither side of the House can justification be found, nor do I believe apologies which will prove entirely satisfactory to the tax-payers, who are loaded at every point and whose profits are absorbed in the excessive Treasury of the Government.

[William McKinley, of Ohio, 1882.]

The free-list might be enlarged without affecting injuriously a single American interest.

[Senator Warner Miller, of New York, 1882.]

The sooner we have that (tariff) revision the better it will be for all industries.

[Senator Hawley, of Connecticut, 1882.]

I will vote in any direction to bring about a resolute attempt to give us a revision of the tariff. I say that as representing a protectionist constituency.

[Mr. Kasson, of Iowa, 1882.]

Some excessive duties remain on the statute-book; some dutiable articles should be on the free-list, and some of the provisions of the tariff have become obsolete.

[Senator Sherman, of Ohio, 1882.]

We agree that the tariff should be revised and the taxes reduced. * * * Under existing law we are collecting from the people of the United States as national taxes the sum of fifty to one hundred millions of dollars more than is requisite to meet all the proper current expenditures of the Government and all our obligations to the public creditors.

[Eugene Hale, of Maine, in the House, 1871.]

The duty upon salt is now 18 cents per 100 pounds in bulk and 24 cents in sacks. The best Turk's Island salt can be purchased at the place where it is produced for from 9 to 10 cents per bushel. Any gentleman here can compute for himself the percentage of duty resting upon this article. I believe there is no one question about which the reflection of millions of people day by day is so decided as it is in declaring that there should be no tax upon this article of salt. I have been asked to amend the bill introduced by me so as to cut down the duty 50 per cent. I do not consent to that. I believe this article should go upon the free-list; that the monopoly which has obtained heretofore for the Onondaga Salt Works—as great and complete as any monopoly ever granted by the Tudors in England's most despotic times—ought to cease.

[President Grant, annual message, December, 1875.]

Many duties now collected and which give but an insignificant return for the cost of collection might be remitted, and to the direct advantage of consumers at home. I would mention those articles which enter into manufactures of all sorts. All duty paid upon such articles goes directly to the cost of the article when manufactured here, and must be paid for by the consumers. These duties not only come from the consumers at home, but act as a protection to foreign manufacturers of the same completed articles in our own and distant markets.

[President Arthur, annual message, 1882.]

A total abolition of excise taxes would almost inevitably prove a serious, if not an insurmountable obstacle to a thorough revision of the tariff and to any considerable reduction in import duties. The present tariff system is in many respects unjust. It makes unequal distributions, both of its burdens and its benefits. * * * I recommend an enlargement of the free-list so as to include within it the numerous articles which yield inconsiderable revenue, a simplification of the complex and inconsistent schedule of duties upon certain manufactures, particularly those of cotton, iron, and steel, and a substantial reduction of the duties upon those articles, and upon sugar, molasses, silk, wool, and woolen goods.

[Senator Sherman, of Ohio, 1867.]

In considering so complicated a subject as a tariff, nothing can be more deceptive than the application of such general phrases as a "protective tariff," "a revenue tariff," "a free-trade tariff." Every law imposing a duty on imported goods is necessarily a restraint on trade. It imposes a burden upon the purchase and sale of imported goods and tends to prevent every importation. The expression, "a free-trade tariff," involves an absurdity. If you converse with intelligent men engaged in the business of manufacturing they will tell you that they are willing to compete with England, France, Germany, and all the countries of Europe, at the old rates of duty. If you reduce their products to a specie basis, and put them on the same footing they were on before the war, the present rates of duty would be too high. It would not be necessary for scarce any branch of industry to be protected to the extent of your present tariff law. They do not ask protection against the pauper labor of Europe, but they ask protection against the creation of your own laws.

[Benjamin Harrison, November 28, 1882.]

The creation of the Tariff Commission was a confession that the tariff needs revision. If the report comes in it should be promptly acted upon. My opinion is that no time should be lost after Congress assembles in bringing forward these measures, and that no time should be lost during the holidays by adjournment.

[James G. Blaine, Secretary of State, 1881.]

The wages of spinners and weavers in Lancashire and in Massachusetts, according to the foregoing statements, were as follows, per week:

Spinners: English, $7.20 to $8.40 (master spinners running as high as $12); American, $7.07 to $10.30.

Weavers: English, $3.84 to $8.64, subject, at the date on which these rates were given, to a reduction of 10 per cent.; American, $4.82 to $8.73.

The average wages of employés in the Massachusetts mills is as follows, according to the official returns: Men, $8.30; women, $5.62; male children, $3.11; female children, $3.08. According to Consul Shaw's report, the average wages of the men employed in the Lancashire mills on the 1st of January, 1880, was about $8 per week, subject to a reduction of 10 per cent.; women, from $3.40 to $4.30, subject to a reduction of 10 per cent.

The hours of labor in the Lancashire mills are fifty-six, in the Massachusetts mills sixty per week. The hours of labor in the mills in the other New England States, where the wages are generally less than in Massachusetts, are usually sixty-six to sixty-nine per week.

Undoubtedly the inequalities in the wages of English and American operatives are more than equalized by the greater efficiency of the latter and their longer hours of labor. If this should prove to be a fact in practice, as it seems to be proven from official statistics, it would be a very important element in the establishment of our ability to compete with England for our share of the cotton-goods trade of the world.

From these returns it is seen that every American spindle consumes 66 pounds of raw cotton, while each British spindle consumes only 32 pounds, or less than one-half the American consumption per spindle.

It thus appears that each American operative works up as much raw material as two British operatives, turns out nearly $1.50 worth of manufactures to the British operative's $1 worth, and even in piece goods, where the superior quality and weight of the American goods are so marked, the American operative turned out 2.75 yards to 2.50 yards by the British operative.

[Senator Morrill, of Vermont, 1870.]

It is a mistake of the friends of a sound tariff to insist upon the extreme rates imposed during the war, if less will raise the necessary revenue.

[Senator Sherman, March 15, 1872.]

I have listened with patience, day by day, to the statements of gentlemen who are interested in our domestic productions. I am a firm believer in the general idea of protecting their industries, but I assure them, as I assure their Representatives here, that if the present high rates of duty, unexampled in our country, and higher by nearly 50 per cent. than they were in 1861, are maintained on metallic and textile fabrics after we have repealed the very internal taxes which gave rise to them, and after we have substantially given them their raw materials free of duties, we shall have a feeling of dissatisfaction among other interests in the country that will overthrow the whole system and do greater harm than can possibly be done by a moderate reduction of the present rates of duty.

[National Republican platform, 1868.]

It is due to the labor of the nation that taxation should be equalized and reduced as rapidly as the national faith will permit.

[National Republican platform, 1884.]

The Republican party pledges itself to correct the inequalities of the tariff and to reduce the surplus.

[Senator Allison, of Iowa, March 24, 1870.]

The tariff of 1846, although confessedly and professedly a tariff for revenue, was, so far as regards all the great interests of the country, as perfect a tariff as any that we have ever had.

But I may be asked how this reduction shall be made. I think it should be made upon all leading articles, or nearly all, and for that purpose, when I can get an opportunity in the House, if no gentleman does before me, I shall move that the pending bill be recommitted to the Committee on Ways and Means, with instructions to report a reduction upon existing rates of duty equivalent to 20 per cent. upon the existing rates, or one-fifth reduction. Even this will not be a full equivalent for the removal of all the internal taxes upon manufactures.

[Justice Miller, of the United States Supreme Court, in Loan Association vs. Topeka. 20 Wallace.]

To lay with one hand the power of the Government on the property of the citizen, and with the other to bestow it upon favored individuals to aid private enterprises and build up private fortunes, is none the less a robbery because it is done under the forms of law and is called taxation. This is not legislation. It is a decree under legislative forms. Nor is it taxation. A "tax," says Webster's Dictionary, "is a rate or sum of money assessed on the person or property of a citizen by Government for the use of the nation or State." Taxes are burdens or charges imposed by the Legislature upon persons or property to raise money for public purposes.

We have established, we think, beyond cavil that there can be no lawful tax which is not laid for a public purpose.

If it be said that a benefit results to the local public of a town by establishing manufactures, the same may be said of any other business or pursuit which employs capital or labor. The merchant, the mechanic, the inn-keeper, the banker, the builder, the steam-boat owner, are equally promoters of the public good and equally deserving the aid of the citizens by forced contributions. No line can be drawn in favor of the manufacturer which would not open the coffers of the public Treasury to the importunities of two-thirds of the business men of the city or town.

[Charles J. Folger, Secretary of the Treasury, annual report, 1882.]

All agree that a revision of the tariff is necessary. The action of Congress in creating a commission for that purpose renders discussion on that point unnecessary. * * * The Secretary earnestly recommends a careful revision of the tariff, with a view to substantial reductions.

[Senator Allison, of Iowa, March 24, 1870.]

The agricultural interest, it will be seen, is much the largest interest in its aggregate products as well as in the number of persons employed. I believe no one will claim that this large interest is directly protected. It is true that under customs laws there is a small duty upon wheat, barley, oats, and other agricultural products, but it does not afford any protection to the great wheat and grain producing regions of the country. The gentleman from Ohio [Mr. Wilson], in discussing this question, stated that the cost of wheat in New England is about $1.70 per bushel, while in Illinois, Iowa, and Wisconsin the price is about 65 cents per bushel. The Canadian wheat is the only wheat that comes in competition with our own. Canada being nearer New England than the wheat-growing States, more than makes up the duty in the reduced cost of transportation.

What is true of wheat is equally true of other grains. Therefore the farmer has practically no protection at all, and whatever benefit he derives is from what the home market furnishes for home products. Unfortunately for the farmer, the market price of wheat is fixed by the price which the surplus will bring abroad, or the price of wheat in London or Liverpool. At that market, where the surplus is sold, and which fixes the value of the whole crop, he comes in competition with the grain produced in the Crimea, in Hungary, and in the region of the Baltic, from fields cultivated by what is known, in comparison with our own, as pauper labor.

But I am told we must so legislate as to furnish a home market for all our agricultural products, and this can only be done by high tariff. Any one examining the subject will see that our agricultural products increase more rapidly than our population, so that if we do not export these products in their natural condition we must do so by converting them into manufactured articles and export these articles. But this can not be done under a high tariff, for all nations will buy manufactured products where they are the cheapest, and the nation selling the cheapest will control the market. This rule excludes our highly-taxed manufactures made from highly-taxed materials from the markets of the world, although we have natural advantages possessed by no other nation.

[Charles J. Folger, Secretary of the Treasury, annual report, 1883.]

In the recommendations of the President and those of this Department, and the action of Congress, and in the expression of public opinion, there has been substantial accord as to how the needed reduction of the revenue should be brought about. It has been generally conceded that the internal-revenue taxes, except those upon spirits, fermented liquors, and upon the circulation of banks, might well be abolished. There has been difference whether the tax upon tobacco should be abolished or modified. There were but few advocates of the immediate total abolition of taxes upon spirits or fermented liquors. My last report said that taxes upon spirits and tobacco, being upon things not needful, should be retained rather than those upon the common necessaries of life; which, as a proposition, is not to be controverted. But it was conceded by all that a substantial reduction should be made upon nearly all imported articles subjected to duties.

[Henry Cabot Lodge, Massachusetts, September, 1884.]

Grave public questions confront us. There is a large, perilous, and growing surplus in the revenues. It must be removed, not by needless and extravagant expenditures, not by abolishing the proper taxation of whisky and tobacco, not by a stupid and injurious and horizontal reduction for politics only, but by plain business methods, by freeing entirely those great necessaries of life which enter into the daily consumption of every household, and by wise and discriminate reductions.

[John D. Long, of Massachusetts, September, 1884.]

There are only two ways to reduce the tariff. One by raising the tariff to a prohibitory height, which nobody advocates; the other, the free-list. The free-list is the honest revenue reformer's hope.

[Henry Wilson, late Vice-President.]

Men who have looked with hungry eye upon a Treasury overflowing with surplus millions do not wish to see the source from which those coveted millions are derived dried up. Now, as in times past, political ambition is not unwilling to sacrifice the business interests of the country in the hope to win political power. * * * I think American labor will be best protected by taxing all

the necessaries of life lightly; placing the raw materials which enter into our manufactures on the free-list; raising revenue to support the Government upon articles that come in competition with our manufactures and upon the luxuries of life, which are consumed by the more wealthy classes of society.

[Oliver P. Morton, of Indiana, April 30, 1872.]

Now, I wish to say to the Senate that I am strongly convinced that we should go further, and reduce the tariff in material respects upon many other articles. * * * The country expects a large reduction, the country knows that it can be made, the country has been promised this reduction, and the dominant party here is responsible to the country for this reduction, and will be held responsible if it is not made.

[James A. Garfield, April 1, 1870.]

We have seen that one extreme school of economists would place the price of all manufactured articles in the hands of foreign producers by rendering it impossible for our manufacturers to compete with them, while the other extreme school, by making it impossible for the foreigner to sell his competing wares in our market, would give the people no immediate check upon the prices which our manufacturers might fix for their products. I disagree with both these extremes.

I hold that a properly adjusted competition between home and foreign products is the best gauge by which to regulate international trade. Duties should be so high that our manufacturers can fairly compete with the foreign product, but not so high as to enable them to drive out the foreign article, enjoy a monopoly of the trade, and regulate the prices as they please. This is my doctrine of protection. If Congress pursues this line of policy steadily we shall year by year approach more nearly to the basis of free trade, because we shall be more nearly able to compete with other nations on equal terms. I am for a protection which leads to ultimate free trade.

Mr. Chairman, examining the possibilities of the situation, I believe the true course for the friends of protection to pursue is to reduce the rates on imports wherever we can justly and safely do so, and, excepting neither of the extreme doctrines urged on this floor, endeavor to establish a stable policy that will commend itself to all patriotic and thoughtful people.

[Senator Allison, of Iowa, March 25, 1870.]

This large internal-revenue tax was made the excuse and the cause of the advance of the tariff of July 14, 1862, and June 30, 1864. I quoted the language yesterday of the then chairman of the Committee on Ways and Means in 1862, Mr. Thaddeus Stevens, himself a protectionist, and certainly in favor of the protection of the great interest of Pennsylvania, iron. He made a pledge upon this floor in 1862 that those additions of duties upon manufactured articles imported in this country were made necessary because of the internal-revenue taxes. Both he and Mr. MORRILL, subsequently chairman of the Ways and Means Committee, declared that the act of June 30, 1864, was a temporary measure, a war measure, and was not intended as a measure which should remain upon the statute-book as a protective tariff in the time of peace.

[William M. Evarts, Secretary of State, May 17, 1879.]

The average American workman performs from one and one-half to twice as much work in a given time as the average European workman. This is so important a point in connection with our ability to compete with the cheap labor manufactures of Europe, and it seems at first thought so strange, that I will trouble you with somewhat lengthy quotations from the reports in support thereof.

For the first time our manufactures are now assuming international proportions. At a time of universal depression we have met those nations which held a monopoly of the world's markets, met them in their strongholds. Within the last fifteen years we have demonstrated our ability by the brilliant development of our own resources to exclude by honest competition foreign manufactures to a large extent from our shores.

The question which now peremptorily challenges all thinking minds is how to create a foreign demand for these manufactures which are left after supplying our home demands. We can not stand still, for the momentum of increase will soon become so great that it will push us outward anyway. To push us safely and profitably is of so much importance as to almost overtop all other public questions of the hour. This question appeals equally to the selfishness and patriotism of all citizens, but to the laborer it appeals with tenfold force, for without work he can not live, and unless we can extend the markets for our manufactures he can not expect steady work, and unless our manufactures can undersell foreign manufactures we can not enlarge our foreign markets.

The first great truth to be learned by the manufacturers and workingmen is that the days of sudden fortunes and double wages are gone. We must realize the fact that ocean steam communication has annihilated distance and brought the nations face to face. This drawing together of the nations means equalization in trade, profits, wages, etc., the advantage being with those who soonest accept the situation. In the near future the workingman of New York can not expect twice or thrice the wages of his fellow-workingman in Europe while all other things—food, rent, clothing, etc.—are on an equality.

Under no consideration must we have strikes; under no consideration must our factories lie idle. If our manufacturers can not run their establishments profitably—and capital will no more remain permanently invested unprofitably than will labor work for nothing—and pay the prevailing wages, our working people must help them to make profit by consenting to a reduction of wages!

[James A. Garfield, July 13, 1868.]

Unless the tariff men take heed, unless they consent to a rational and considerate adjustment of the tariff such as only can be made by the full light that a careful statistical study of the subject will bring, I fear from them, more than from any other source, a reaction which will bring us by and by into free trade and all its consequences of evil to the manufacturing interests of the country.

I desire to say that, in my judgment, it is not the best mode of defending a tariff to denounce every man who does not pronounce the shibboleth after our fashion as an enemy of the tariff.

[Representative John H. Gear, of Iowa, January 16, 1880.]

To a State whose products are in the main agricultural, as are those of Iowa, anything which enhances the cost of railways, thereby even incidentally in the least degree increasing the expense of the transportation of her products to the seaboard, which is her great market, is a question of great interest to all. In view of their greater strength and durability, which lessens the cost of replacement, all the great trunk railway lines of the country are adopting Bessemer steel rails. The manufacturers of this class of rails in the United States are controlled by a combination of not exceeding, I think, ten firms in number.

This combination is protected by a high and specific tariff, which prevents the importation of foreign rails to any extent, thereby increasing the cost of the railways of the country. Without discussing the tariff question in all its bearings, it may well be considered whether it is wise legislation, by a tariff exceptional in its character, to put immense profits into the pockets of a monopoly composed of but few persons at the expense, indirectly, not only of Iowa farmers, but of the whole West. It would, therefore, be well to instruct our Senators and Representatives in Congress to examine into this subject with a view of removing by Congressional legislation any discriminations which may be found to exist in the tariff on steel rails against the interests of Iowa producers.

[James A. Garfield, March 10, 1871.]

I was surprised at a remark of the distinguished gentleman from Michigan. He asserted that there is no item in the whole tariff that can stand alone on its own merits, but that all must be taken in a lump in order to stand. That coal must take salt by the hand, and they, too, must take something else by the hand; and thus all interests unite with all forces before they can make a stand before the country. If this remark be true it strikes a blow at the whole tariff system, a blow I am not willing to strike. I am unwilling to admit that bad taxes must be tied to good ones and thus be kept afloat. I think it unwise to continue this duty on coal, and I am therefore in favor of its repeal.

[Representative Nelson, of Minnesota, March 29, 1888.]

In the face of these platform pledges, in the face of these admissions from unwilling witnesses, in the face of the large, ever-growing and threatening surplus, taken from the people by taxation and used by certain banks without any consideration therefor, and in face of the fact that so many of the barest necessaries of life are loaded down with the highest kind of tariff taxes, it makes me sick at heart to think that there are leading men on this side of the Chamber who can find at this juncture, and under these circumstances, no other field for tax reduction than the internal-revenue taxes on spirits and tobacco. Surely these things are not the diet on which the poor laboring man keeps his family.

Worthier, better, and juster, it seems to my mind, would it be to give our people—the toiling masses—cheaper food, cheaper fuel, cheaper clothing, and cheaper shelter—cheaper because released from the heavy and unnecessary bondage of high-tariff taxes. I will put free sugar, free coal, free salt, and free lumber against free whisky and free tobacco under all circumstances, and so will the great mass of the American people.

[Senator John Sherman, January, 1888.]

The tariff ought to be carefully revised, with a view to correct any inequalities or incongruities that have grown out of the change of values since the passage of the act of 1883; every imported article which does not compete with our domestic industry and is essential to the comfort and wants of our people should be placed on the free-list; every raw material of industry which does not compete with our own productions should be specially selected for the free-list.

[Representative Fitch, of New York, May 16, 1888.]

In the interest of the Republican party, and in the interest of common fairness, I propose to ask gentlemen on this side of the House to consider for a moment how the present tariff, which we have promised to revise, now affects the people whom I have described, and to consider what they pay taxes on in the general distribution of the customs taxes now in force.

They pay upon everything. Look for a moment at what they eat. There is a tariff duty on beef, on pork, hams and bacon, butter and lard, cheese, molasses, grapes, wheat flour, oats, corn meal, rye, barley, potatoes, raisins, vinegar, honey, rice and rice meal, sugar, extract of meat, pickles, currants, apples, salt, and condensed milk. The list is substantially an inventory of the stock of the grocery store at which they buy. There is a duty on the coal which warms them, on their cooking and household utensils, on their entire clothing from their hats to their stockings, on the medicine given them when they are sick, and on the roofs over their heads.

[James A. Garfield, May 18, 1872.]

And I know, moreover, that for nearly two years the wholesale price of American salt in Toronto, Canada, was $1 lower per barrel than the same salt was selling for on the New York side of the lake. That is, we produced it, shipped it across, paying whatever portage, freights, and transportation were required, and then sold it to our Canadian neighbors at $1 per barrel less than it was sold to people on our shores. Certainly, gentlemen will not want a duty continued that enables that thing to be done.

[Senator Henry L. Dawes, of Massachusetts, June 29, 1886.]

The duty must be levied on the raw material or on the manufactured article. If you levy it on the raw material you discriminate against American labor, and if you levy it on the manufactured article you discriminate in favor of American labor. You must have either a protective tariff or a tariff which discriminates against American labor.

[John Sherman, 1872.]

It must be remembered that the present duties, taken together, are far in excess of what they were before the war, and that they have been three times largely increased since the passage of the Morrill tariff act of 1861. * * * Such excessive protection not only ceases to diversify production, but forces labor into protected employments. If the present rates of duty were high enough during and since the war, when home industry was burdened with heavy internal taxes—with stamp duties, income taxes, and high rates on raw materials—then surely they are now too high when all these taxes are removed.

[Hugh McCulloch, ex-Secretary of the Treasury, December, 1887.]

In the main I agree with those views. I am very glad to see Mr. Cleveland insist with such emphasis upon putting the issue squarely before the people. His action, under the circumstances, marks him as a man whose ability has been greatly underestimated. There is no question over which the General Government has jurisdiction that is of such vital importance as the financial policy which we are to pursue. Mr. Cleveland has marked out a course which can safely be followed.

[Governor McGill, of Minnesota, December, 1887.]

The people of the Northwest are naturally tariff reformers. Democrats and Republicans find no difference on this material issue. The result is that I am glad to see the President take such a radical position on the question. I am sure it will meet with general approval all over the Northwest.

[Republicans vote for free coal, June 6, 1870.]

Mr. Ward submitted the following:

"*Resolved*, That the Committee of Ways and Means is hereby instructed at the earliest moment practicable to report a bill to this House to abolish the tariff on coal, so as to secure that important article of fuel to the people free from all taxes."

Ayes—Allison, Cullom, Dawes, Hale, Hawley, Logan.

[Horatio C. Burchard, of Illinois, March 24, 1870.]

If a duty averaging nearly 100 per cent. on the cost of the foreign article is necessary to maintain this branch of industry (salt), we may well consider if it were not better to abandon it.

The business under a tariff of 15 per cent. from 1857 to 1861 seems to have been flourishing. Does it require more protection as the business becomes established?

But the chief objection to the duty on salt is, that of the $3,000,000 paid for revenue and protection, the greater part is paid by sections of the country and industries that receive no corresponding benefits.

The chief consumption of salt is by those engaged in fisheries, and in raising and curing beef and pork.

It affects the farmer doubly; as a consumer, for personal use, he pays his equal share of as much of the tax as falls upon commodities, and as a producer it increases the first cost of the exportable product of his farm.

[Senator Trumbull's amendment to tariff bill, March 26, 1872.]

And that from and after the passage of this act salt shall be placed on the free-list, and no further import duties shall be collected on the same.

Yeas—Blair, Hamlin, Logan, Sumner, and Windom.

[Mr. Allison, in Congress, March 24, 1870.]

I will say with regard to the duty on wool and woolens, that I regard it not as an intentional fraud, but as operating as though it were a fraud upon the great body of the people of the United States. I allude to the woolen tariff, a law, the effect of which has been to materially injure the sheep husbandry of this country. In a single county in the State of Iowa, between 1867 and 1869, the number of sheep was reduced from twenty-two thousand to about eighteen thousand in two years, and what is true of this county is true to a greater or less extent of other counties in Iowa, and during this time the price of wool has been constantly depreciated.

Mr. LAWRENCE. I should like the gentleman to inform me how a reduction of the duties on wool and woolen goods would inure to the advantage of the wool grower?

Mr. ALLISON. I will tell the gentleman how, in my judgment, the wool grower will be benefited. As the law now is the tariff upon fine wools of a character not produced in this country is 100 per cent. upon their cost. The tariff upon woolens of the same class is only about 50 per cent., so that the finer woolen goods are imported, and not the coarser fabrics. Before the tariff of 1867 our manufacturers of fine goods mixed foreign fine wools with our domestic product and were thus able to compete successfully with the foreign manufacturer of similar wools. But being prohibited from importing this class of wools, these fine goods can not now be produced in this country as cheaply as they can be imported. Consequently, mills that were formerly engaged in producing these goods have been compelled to abandon business or manufacture the coarser fabrics. If they could afford to manufacture those fine goods, they would make a market which we do not now have for our fine wools to be mixed with other fine wools of a different character from abroad. This want of a market, as I understand it is the reason why our fine wools now command so low a price. There is no demand for them at home, and we can not export them in competition with fine wools grown in other countries.

[Chester A. Arthur's letter of acceptance, 1880.]

Such changes should be made in the present tariff system of taxation as shall relieve every burdened industry and enable our artisans and manufacturers to compete successfully with those of other lands.

[Henry Wilson, in the Senate, 1857.]

The manufacturers, Mr. Chairman, make no war upon the wool-growers. They assume that the reduction of the duty on wool, or repeal of the duty altogether, will infuse vigor into that drooping interest, stimulate home production, and diminish the importation of foreign woolen manufactures and afford a steady and increasing demand for American wool. They believe this policy will be more beneficial to the wool-growers, to the agricultural interests, than the present policy. The manufacturers of woolen fabrics, many of them men of large experience and extensive knowledge, entertain these views, and they are sustained in these opinions by the experience of the great manufacturing nations of the Old World.

Since the reductions of duties on raw materials in England, since wool was admitted free, her woolen manufactures have so increased, so prospered, that the production of native wool has increased more than 100 per cent. The experience of England, France, and Belgium demonstrate the wisdom of that policy which makes the raw material duty free. Let us profit by their example. If our manufactures are to increase, to keep pace with the population and the growing wants of our people; if we are to have the control of the markets of our own country; if we are to meet with and compete with the manufacturers of England and other nations of Western Europe in the markets of the world, we must have our raw materials admitted duty free or at a mere nominal rate. We of New England believe that wool, especially the cheap wools, manila, hemp, flax, raw silk, lead, tin, brass, hides, lin-seed, and many other articles used in our manufactories can be admitted duty free, or for a mere nominal duty, without injuring to any extent any considerable interest of the country.

In closing, Mr. Chairman, the remarks I have felt it my duty to submit to the Senate and the country, that the Commonwealth I represent on this floor—I say in part, for my colleague, Mr. Sumner, after an enforced absence of more than nine months, is here to-night to give his vote, if he can raise his voice, for the interest of his State—has a deep interest in the modification of the tariff of 1846 by this Congress. Her merchants, manufacturers, mechanics, and business men, in all departments of a varied industry, want action now before the Thirty-fourth Congress passes away. They are for the reduction of the revenue to the actual wants of an economical administration of the Government: for the depletion of the Treasury, now full with millions of hoarded gold; for a free-list, embracing articles of prime necessity we do not produce; for mere nominal duties on articles which make up a large portion of our domestic industry, and for such an adjustment of the duties on the productions of other nations that come in direct competition with the product of American capital, labor, and skill as shall impose the least burdens on that capital, labor, and skill.

[Senator Sherman, March 22, 1872.]

I beg Senators who are casting votes to remember the result of those votes. We have now by the vote of the Senate thrown off a revenue amounting to about $17,000,000. We have left untouched all the high taxes of the tariff unabated and undiminished. These taxes are higher than they ever were before in the history of this country, or any other country in the world. Those taxes are retained at war rates. Let me remind Senators that four times during the war we increased the tariff rates, once by 50 per cent. throughout. The rates at the beginning of the war, in 1861, were fixed by the Morrill tariff bill, and that was regarded as a protective tariff; it was passed by the friends of protection, and gave all the protection that was claimed by the friends of protection to American industry. It is what is commonly denominated a protective tariff. The rates prescribed by that tariff were four times increased during the war; once by a single blow 50 per cent. was added to the rates. They have never been diminished except here and there on casual articles, and two years ago we took off about one-third of the duty on tea and coffee and added a few articles to the free-list. All the other war duties remain.

[In the Senate, April 22, 1872.]

On Senator Lyman Trumbull's amendment to place salt and coal on the free-list, Mr. Morrill, of Vermont, said:

On this question I am paired with the Senator from Vermont. I understand that the Senator is in favor of free coal, and I am against free salt. [Laughter.]

The VICE-PRESIDENT. The Senator from Vermont?

Mr. MORRILL, of Vermont. Yes, sir; myself. [Laughter.]

And then the vote was taken and Mr. Morrill recorded as absent. Among those voting for the amendment were Senators Hamlin, Logan, and Windom.

[House Journal, June 27, 1870.]

Mr. Reeves introduced the following resolution:

"Whereas salt is an article of prime necessity and universal consumption, which, proportionally to numbers, forms a larger item in the domestic economy of families of small or moderate means than it does in those of the wealthier classes, and ought, therefore, at all times to be lightly taxed, as is consistent with a due regard to the revenues needed for an economical administration of the Government; and

Whereas in any genuine and well-considered scheme of revenue reform, duties which tend directly and largely to augment the cost of such a commodity as salt should be reduced in preference to others which bear less heavily upon the resources of the great body of the people: Therefore be it

"*Resolved*, That the Committee of Ways and Means is hereby directed and instructed to report to this House forthwith a bill reducing the present duties on all classes of salt 50 per cent."

Voting for this resolution were DAWES and HOAR, of Massachusetts; KELLEY, of Pennsylvania; Schenck, of Ohio, and Wheeler, of New York.

[House Journal, February 19, 1872.]

On motion of Mr. HALE to suspend the rules and instruct the Committee of Ways and Means to report a bill placing coal and salt on the free-list, the following voted in the affirmative: HALE, HAWLEY, and William A. Wheeler.

[Senator Joseph R. Hawley, August 4, 1882.]

I will not vote for the entire abolition of direct taxation, nor can the gentleman find a wise government or a wise head of finance in any foreign country that is in favor of taking all duties from whisky and tobacco. They are the legitimate plunder of the tax-collector, the legitimate plunder of the exchequer in every government of the world. They all get a large part of their revenues from them.

[Representative John A. Kasson, of Iowa, July, 1866.]

And now what does this bill do? It raises the tariff on lumber, which is so necessary to the Western prairie farmer; on nails, without which he can not drive his boards on his house or build his fence; and on salt, without which he can not preserve his beef and pork. There is hardly a thing we consume which this bill for ets to raise the duty upon. Every prominent necessity of life, food, fuel, shelter, and clothing, is embraced and made more expensive to the consumer throughout the country. Even on boys' pocket-knives the duty is increased about three times, 600 per cent., and yet it is said this is a tariff for mere protection.

[Senator James W. Grimes, of Iowa, January 24, 1867.]

Mr. President, the man who opposes the passage of this bill must expect to be slandered. The "protectionists," as they choose to call themselves, have already opened the vials of their indignant wrath upon the heads of those whose opposition they anticipated. Threats of utter political extinction are hurled against every man who, in the exercise of an independent judgment, is not prepared to impose upon his constituents the burdens which the various manufacturing combinations demand. That portion of the public press subsorned to their interests is rife with charges that "the capital is thronged with free-traders, and that British gold is operating to secure American legislation for British interests." Every man is condemned in advance who would inquire before he would vote.

We know what all this means, and so far as I have the ability I am resolved that the people shall know what it means.

It means that two or three large manufacturing interests in the country, not satisfied with the enormous profits they have realized during the last six years, are determined at whatever hazard to put more money in their pockets; and to this end they have persuaded some and coerced other manufacturing interests to unite with them in a great combination demand for what they call protection to American labor, but what some others call robbery of the American laborer and agriculturist.

It is the fashion to denounce every man who does not favor a prohibitory tariff as a free-trader. The charge is made that free-trade agents are at work to influence Congress and that our tables are encumbered with free-trade document. Who has seen these free-trade agents? I have yet to see the first man who was in favor of free trade, nor have I seen any man who was opposed to a revenue tariff which would incidentally protect such branches of American industry as needed the fostering aid of the Government. It is on questions of detail that we differ. We disagree as to how much money shall be taken from the pocket of Peter to support and enrich his brother Paul.

[John A. Logan, in the House, April 18, 1870.]

Now, when the gentleman, who seems to be the protector to an especial manner of the great labor interests of the country, speaks of this protection being the protection of the labor of this country, I ask him: Does not every farmer and mechanic in this broad land make use of iron in all kinds of labor? The 4,000,000 men that have been freed recently are laborers, are producers, not manufacturers. They are not men of skilled labor; they evidently are not the men who are protected. And then there are the men in the Northwest who produce corn, wheat, oats, pork, and beans, etc.; they are producers and consumers, and are not protected; and it is they who pay this large amount of money into the pockets of the manufacturers of this article. And when a gentleman stands upon this floor and tells me that this high, this extraordinary high tariff is for the protection of the laboring men of this country who are not skilled laborers, I tell him I do not understand how he can possibly substantiate such a theory.

[The late Emory A. Storrs, of Chicago.]

Finally, what is a tariff? It is a tax. It is nothing less and nothing but a tax. It is a tax which we do not pay to the Government; for where protection begins revenue ceases. The consumer is impoverished, the Government is not aided.

[Judge Thomas M. Cooley, of Michigan, in Constitutional Limitations.]

Constitutionally a tax can have no other basis than the raising of revenues for public purposes, and whatever governmental exaction has not this basis is tyrannical and unlawful. A tax on imports, therefore, the purpose of which is not to raise revenue, but to discourage and indirectly prohibit some particular import for the benefit of some home manufacturer, may well be questioned as being merely colorable, and, therefore, not warranted by constitutional principles.

[Representative Benjamin Butterworth, of Ohio.]

Every nation that is worthy the name is seeking to enlarge the area of its trade and commerce, to enlarge the opportunity to buy and find new markets in which to sell.

[Senator Justin S. Morrill, of Vermont.]

The tariff was intended to be revised, so that there should be some reduction in the cost of living. It was obvious from the first that woolens and wools would have to submit to their fair, equitable, and just share.

[Levi P. Morton, April 5, 1880.]

Mr. TOWNSHEND, of Illinois, moved to discharge the Ways and Means Committee from further consideration of House bill No. 5265, and that the same be passed. The bill was as follows:

"*Be it enacted*, etc., That sections 2503, 2504, 2505, of Title XXXIII of the Revised Statutes of the United States be revised and amended so that the duty on salt, printing type, printing paper, and the chemicals and materials used in the manufacture of printing paper, be repealed, and that said articles be placed on the free-list."

The result was—yeas 112, nays 80, not voting 100. Among those recorded as voting ay is Levi P. Morton, of New York.

[Report of the Tariff Commission, 1882.]

The commission became convinced that a substantial reduction of tariff duties is demanded, not by a mere indiscriminate popular clamor, but by the best conservative opinion of the country, including that which has in former times been most strenuous for the preservation of our national industrial defenses. Such a reduction of the existing tariff the commission regards not only as a due recog-

nition of public sentiment and a measure of justice to consumers, but one conducive to the general prosperity, and which, though it may be temporarily inconvenient, will be ultimately beneficial to the special interests affected by such reduction. * * * Excessive duties, or those above such standard of equalization, are positively injurious to the interest which they are supposed to benefit. * * * And in the mechanical and manufacturing industries, especially those which have been long established, it would seem that the improvements in machinery and processes made within the last twenty years, and the high scale of productiveness which has become a characteristic of their establishments, would permit our manufacturers to compete with their foreign rivals under a substantial reduction of existing duties. * * * The average reduction in rates, including that from the enlargement of the free-list and the abolition of the duties on charges and commissions, at which the commission has aimed is not less on the average than 20 per cent., and it is the opinion of the commission that the reduction will reach 25 per cent.

[John B. Hay, of Illinois, March 14, 1870.]

Resolved, That it is the sense of this House that our present system of taxation is exorbitant and needlessly burdensome, and that a reduction of taxation is demanded, both of tariff and internal taxes, to the lowest amount consistent with raising revenue sufficient to meet the ordinary expenses of the Government, to discharge the interest of the national debt, and to maintain the national credit; and that a tariff for revenue with duties properly adjusted must necessarily afford all the advantage to which any interest is entitled.

March 14, 1870, S. S. Marshall submitted the following:

"*Resolved*, That the present depressed condition of the business and the various industrial interests of the country demand of Congress prompt action in relieving the people of all burdens of taxation not absolutely necessary to provide for the wants of the Government economically administered; and that in reforming existing tariff laws legislation should be based upon these principles:

"First. That no duty should be imposed on any article above the lowest rate which will yield the largest amount of revenue.

"That the maximum revenue duty should be imposed on luxuries, etc."

On a motion to lay this motion on the table, Garfield, HALE, HAWLEY, and ALLISON voted in the negative.

[Senator P. B. Plumb, of Kansas, January 17, 1883.]

I do not ask that any duty shall be increased. No one raising anything within the State of Kansas and no manufacturer in that State asks for an increase of duty on anything. We do ask that a ring—if I may use that expression without offense—a collection and combination of interests located upon the eastern frontier of this country, near to the seat and source of power, easily accessible to tariff commissions and easy to get their ears, shall not have their own way about everything of this kind, entirely irrespective of the sections of this country remote from the seat and sources of power.

Mr. President, some of us have got to be consulted before this bill finally passes, and some of us will be consulted after the bill has passed in regard to the reasons for the action or non-action taken. I say now to the persons who have the run of this thing, to those who have had control and are better posted, and have been able by arts and by various processes to do those things which were not thoroughly understood—I beg of them to consider that the people are watching this proceeding and that they want no higher taxes, but lower taxes, and that in giving the protection for American industry they want to give a decent chance to a class of people who, by reason of their calling, can not be protected at all, but who have got to take their chances in the markets of the world for their products, hard products to raise, expensive products to get to market, and in the production of which there is the smallest margin of profit.

I was talking with a farmer from Massachusetts to-day about this thing. He said he had as good a farm as there was in the old Bay State, and yet he said that he could barely make both ends meet, and he complained to me that one of the reasons why he could not do so was because everything else that surrounded him was so much protected that it simply took the difference between profit and loss in his calling and left him a very slim chance indeed from year to year.

Reconstruction of the Federal Courts.

SPEECH

OF

HON. GEORGE E. SENEY,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, September 20, 1888,

On the bill (H. R. 8190) to define and regulate the jurisdiction of the courts of the United States.

Mr. SENEY said:

Mr. SPEAKER: In the Committee on the Judiciary my vote was cast against this bill. While the minority of the committee have made no formal presentation of their views in opposition to this measure, it will be remembered by my colleagues that it was stated in committee that these views would be presented to the House, if not in a report then in debate.

This bill, it will be noticed, is entitled "A bill to define and regulate the jurisdiction of the courts of the United States," and is reported by the Judiciary Committee as a substitute for House bill No. 1199, introduced in January last by the gentleman from Arkansas [Mr. ROGERS]. But, sir, if we wish to understand all that the substitute proposes, and which is the bill now before the House, we must not rely upon its title. The substitute as well as the original bill ought to be carefully read and thoughtfully studied.

Before calling the attention of the House to the provisions of the bill, let me speak for a moment of the report of the committee accompanying the bill. This report tells us that the bill should become a law because it will destroy the judicial despotism of our present judicial system by creating an intermediate appellate court with power to revise the final judgments of the United States district courts in all civil cases and in all criminal cases, except misdemeanors.

The precise meaning or force of the expression "judicial despotism," as applied by the majority of the Judiciary Committee to the present judicial system, is not very clear to my understanding. If there be any despotism in our judicial system and it can not be got rid of in any other way than by creating another Federal court, then, perhaps, the intermediate court, for which this bill provides, ought to be established, but if the despotism does not exist, but is merely imagined, then there is one reason less for creating such a tribunal. Again; the committee's report informs the House that this bill, if a law, will simplify the whole Federal judicial system by making it, in many respects, like the judicial system in force in several of the States. When it is remembered that there are thirty-eight States, and that their judicial systems widely differ, we are in doubt as to which of the States we are to follow if we would favor this measure.

But for a time let us put the report to one side and take a look at the bill. The bill provides for what the majority of the committee are pleased to term an "intermediate court," not, however, by creating a new judicial tribunal to be known by that name, but by taking the present circuit court and so changing the laws respecting its jurisdiction and the laws organizing it as to make the circuit court a different tribunal from what it is under existing law. One of the noticeable changes proposed is the increase in the number of circuit court judges. The bill calls for nine additional circuit court judges, each at a salary of $6,000 per annum. While the annual expenditure required by this provision of the bill is not large, yet it is not unworthy of considerate thought when legislating respecting our Federal courts.

Again, the bill is open to very serious objection on account of its provision respecting the removal of causes from State courts to United States courts. Under existing law, long in force, certain causes commenced in a State court may be removed for trial and judgment to a circuit court of the United States. It is very questionable whether the right to remove should be extended beyond the limits prescribed by existing statutes. This bill authorizes a removal to either the circuit or district court, and for this reason this part of the bill ought not to become a law. While it may be well enough to provide by law for the removal of certain causes from a State to a Federal court, there is no good reason why the removing suitor should be allowed to choose between two courts rather than be limited to one.

With respect to the jurisdiction of the district courts the bill is quite satisfactory. It provides that the district courts shall have the jurisdiction conferred by existing laws, and, in addition, all the original jurisdiction now vested in the circuit courts, except in habeas corpus, mandamus, and prohibition.

Upon the circuit courts of the United States the bill confers no original jurisdiction, except, as just stated, in mandamus, prohibition, and habeas corpus, and as to other writs necessary for the proper exercise of appellate jurisdiction.

It will be seen, therefore, that the bill proposes to make the jurisdiction of the circuit courts, except as to the writs named, purely appellate. In all civil causes the bill provides that the circuit courts shall have appellate jurisdiction by writ of error in cases proper for such writ, and in all other cases by an appeal; and, strange as it may appear, in criminal cases the provision is that the circuit courts shall take appellate jurisdiction by an appeal, and also by writ of error. Why two ways rather than one for getting into the circuit court from the district court? In criminal cases the review by the circuit courts may be upon a writ of error, or it may be upon appeal which the bill makes a matter of right; but when a writ of error is proper and when an appeal is proper, or whether or not both remedies are proper, and both are to be pursued at one and the same time, the bill is not clear.

Criminal judgments are best reviewed upon a writ of error, and hence provision for their review in some other way, particularly upon appeal, is objectionable for obvious reasons. In civil cases how is it to be determined and by whom, whether a given case is to be taken to the circuit court by a writ of error or by an appeal?

In prescribing remedies statutes ought to be more than ordinarily certain and explicit. Nothing should be in doubt; there ought not to be even a remote chance for mistake. There is nothing in our whole judicial system more deserving of reproach than that which turns a party out of court because he mistook his remedy; or, in other words, because he came in by appeal instead of by writ of error, or by writ of error instead of appeal. One plain, adequate, and complete remedy is sufficient, and more than one is wholly unnecessary.

The better thought of the legal profession is against cumulative remedies. In our reports may be found case after case where justice was denied a party because of a mistake of his counsel in choosing a remedy. The case of Stickney *vs.* Wilt, 23 Wallace, 150, well illustrates this point. Upon reading this case it will be seen that valuable rights were lost because of a mistake as to the remedy. The late bankruptcy act authorized an appeal from the district court to the circuit court, where the petition made a case in equity, while in all other cases not strictly in equity or at law the remedy provided was a petition to review in the circuit court the judgment of the district court.

There were strong reasons for believing that the case was one for re-

view, and strong reasons also for believing that the act required an appeal, and between a review and an appeal the party invoking the appellate jurisdiction had to choose at his peril. The case was taken from the district court to the circuit court by a petition in review, but in the Supreme Court it was held to be appealable and not the subject of review, and this holding closed the door to all inquiry as to the merits of the controversy.

Sir, if we are to have two ways for getting from an original jurisdiction to an appellate jurisdiction, either in civil or criminal cases, each ought to be clearly and plainly defined and thus make a mistake in choosing impossible. According to my understanding, one purpose of the bill is to make the circuit court a mere paper tribunal, with a jurisdiction limited to a review of the record made in the district court, and if this be so there is no reason why both a writ of error and an appeal should be authorized in civil cases, nor any other mode of review prescribed in criminal cases than by writ of error.

Again, it will be noticed that the bill provides that in equity cases the judgment of the circuit court upon questions of fact shall be final and conclusive, subject to the right of either party to have the facts specially found, while in cases at law provision is made for a full and complete record by a bill of exceptions, and causes thus made may be taken to the Supreme Court, either by a writ of error or by appeal. In capital cases the bill provides that they be tried in the district court, and provides also that the judgment of the district court in such a case may be reviewed upon appeal or by a writ of error in the Supreme Court, but it will be noticed that the bill gives no intimation to the accused when his remedy is an appeal or when it is by a writ of error, so that he, in a matter involving his life, is exposed to whatever may be the consequences of a mistake in choosing between two remedies.

The objections we have urged against the bill, because it gives the right to review in the circuit court the civil and criminal judgments of the district court, either upon appeal or by a writ of error, apply with equal force to that provision of the bill which authorizes a writ of error or an appeal to the Supreme Court from the circuit court in civil and capital cases, and therefore they need not be repeated.

Another objection to the bill is because of the provision which limits the appellate jurisdiction of the Supreme Court in civil causes to those in which the matter in controversy exceeds the sum or value of $10,000, exclusive of costs.

Under existing law the limitation is $5,000. Under this bill, if this sum or value be less than $10,000, even a penny less, the Supreme Court would have no power to hear and determine the controversy. The change from $5,000 to $10,000, it is said, will greatly relieve the Supreme-Court docket, and for this reason, and this reason alone, is it urged. The limitation, if fixed at $10,000, will not affect any cause now on the docket of the Supreme Court, and while in the future it would no doubt keep out of that court causes which would get there if the limitation was $5,000, yet we must not forget that in relieving the Supreme Court by fixing the limit at $10,000, we make the court of last resort practically a rich man's tribunal. Yes, the limitation, if changed from $5,000 to $10,000, will relieve the Supreme Court by reducing the number of cases which otherwise would be upon its docket, yet such a limitation would operate as a denial of justice to many a poor or well-to-do suitor. If the Supreme Court needs relief from an overcrowded docket it ought to be afforded in some other way than by closing its doors against those who have but little of this world's goods.

Again, the Supreme Court is authorized to take jurisdiction where the amount in controversy is less than $10,000, if the judgment of the circuit court directly concludes, by way of estoppel or by agreement of parties, an amount in value equal to or in excess of $10,000. My best efforts at understanding the meaning or intent of this provision have been in vain. In what way this provision may affect the right to have a review of the judgment of the circuit court in the Supreme Court in certain cases is by no means clear. If this be an exceptional jurisdiction, it ought not to be conferred, or if conferred, it ought to be done in words which will vest no discretion in the court, but, on the contrary, vest an indefeasible right to an appeal or a writ of error in the parties to the suit.

Mr. Speaker, this bill aims to cure all of the defects in the Federal judicial system, but, to my mind, there is one defect which gives more offense than all of the others, and this the pending bill, instead of removing, makes infinitely worse. Respecting the organization of the Supreme Court, the circuit courts, and the district courts, in the beginning, or of the subsequent legislation enlarging their jurisdiction, or providing for its exercise, enough perhaps has been said.

In establishing these courts one hundred years ago no doubt it was thought best to have the one dependent to a great extent upon the other, and for this reason, perhaps, no circuit court judges were then created, but the circuit court was made to consist of a judge of the Supreme Court and a judge of the district court.

Why the legislation of that period did not go further under this dependent plan of organization and authorize the judges of the Supreme Court to sit in the district courts, and the judges of the district courts to sit in the Supreme Court, if not as judges, then as advisory members, is not at this time important to inquire. When these courts were first established perhaps there was no necessity for having judges specially appointed for the circuit courts, and, therefore, judges were made for the Supreme Court and for the district courts, thus constituting the circuit court, to use the language of the majority of the Judiciary Committee, an intermediate court, where the low-court and high-court judges could meet and compare notes and interchange views.

Possibly when these courts were first established judicial timber was scarce and that then no more could be obtained than what was necessary to supply the Supreme Court and the few district courts, but the judicial woods had a larger supply at the time the appointment of nine circuit court judges was authorized (1869), and then was a most fit occasion to have reconstructed our judicial system upon a plan more in accord with the thoughts then entertained by our people. But it was not done. We are now near twenty years in advance of that unimproved opportunity, and again the subject of the organization and jurisdiction of the three Federal courts is before us for consideration.

The bill we are considering is bad, because it adheres strictly to the original plan of organization, and it is bad because it makes the Federal courts more interdependent than they are under the existing system. The bill, it will be observed, provides that in capital cases the accused shall be tried, virtually, by the district and circuit court at one and the same time. "In the trial of indictments for crimes the punishment whereof is capital," says the bill, a judge of the circuit court shall sit with the district judge in the district court. Will any gentleman on this floor tell the House why, even in capital cases, a district court of the United States ought to have the help of an outsider, a judge of another court, if you please, upon the trial? In civil causes, involving great interests, and presenting difficult and intricate questions, and in all other criminal cases, cases in which heavy fines and long imprisonments are imposed, the district judge acts upon his own knowledge of the law and the facts.

A district judge is supposed to be qualified to try all civil causes and qualified to try all criminal causes, capital cases not excepted. Indeed, under our judicial system as it is and has been from the beginning a judge of the district court was thought to have all the judicial talent necessary for a judge of the circuit court, and hence the law for nearly a century has made him a member of the circuit court.

Again, the bill provides that the circuit courts shall consist of a judge of the Supreme Court and two circuit court judges, any two of whom shall constitute a quorum, and in the absence of these judges the number of judges necessary to make a quorum may be supplied from the district court bench of the circuit. In proposing to organize the circuit courts in this manner there is reason to believe that the friends of this bill are of the opinion that circuit courts can not be held without help from the Supreme or district court bench.

Again, the bill provides that a circuit judge may hold the district court either with or without the district judge.

A circuit judge may hold the district court—

Says the bill—

in place of or in aid of the district judge, as the occasion may require.

Mr. Speaker, a judicial system so constructed must be disliked, and dislike for it intensifies at the thought that the same judge who decides a case in the court below may decide it again in the court above. So hateful are these features of this bill that the promoters of this measure, from sheer necessity, no doubt, were obliged to insert a provision that no district judge before whom a cause or question may have been tried or heard in the district court shall sit on the trial or hearing of the same question or cause in the circuit court. In this provision we have an acknowledgment full and complete upon the part of the friends of this measure that a judicial system such as we have under existing laws, or such as this bill proposes to establish, is fundamentally wrong.

Sir, if it be necessary to relieve the present system from a part of the odium which is now upon it, equally necessary is it to relieve it from the whole. As long as a judge of the Supreme Court may decide in the circuit court what he may again decide in the Supreme Court, so long will the present system be hated. And as long as a Federal judge is authorized to sit in the circuit court in review of his opinions formed in the district court, so long will our judicial system be a reproach to free institutions. Sir, that portion of this bill which authorizes a supreme judge to sit in the circuit court, a circuit court judge to sit in the district court, and a district court judge to sit in the circuit court, shows not only that the present judicial system is weak and indefensible, but as well the purpose of this bill to continue it in force, and to this my opposition is fixed and unalterable.

From these vices, for vices they are, the present system ought to be thoroughly purged. The law which compels a party to submit his cause to a court one member of which, in another court, formed and expressed an opinion respecting it, and that, too, upon full advice and after mature deliberation, is, from every point of view, an evil enactment. Such a law does little if anything more than make an opportunity in the court above for a judge to insist and persist in the opinion he held in the court below. Instead of doing the part of an upright judge, in many cases he plays the rôle of the advocate, and with inordinate zeal presses his opinions upon his associates, and at a time, bear in mind, when the door of the consultation-room is closed against all save the members of the court.

While such a statute may not be repugnant to the Federal Constitu-

tion, it certainly is not in strict accord with the guaranty found in the constitutions of some of the States, that all courts shall be open and every person for an injury done him in his land, goods, person, or reputation shall have remedy by due course of law and justice administered without denial or delay. Our jury system, of which we so proudly and so justly boast, would be universally execrated if it permitted a juror to sit upon the trial of a case respecting which he had formed and expressed an opinion. A fair and impartial trial by a jury means that all jurors having opinions as to the case shall be excluded from the panel. A fair and impartial trial by a court means that no one of its members shall have opinions previously formed or expressed.

Hence if it be right to provide in this bill that a district judge shall not sit in the circuit court in a cause heard by him in the district court it is equally right to forbid a Supreme judge from sitting in a cause in the Supreme Court which he heard in the circuit court, and also to forbid a circuit judge from hearing in the circuit court what he heard in the district court; and the failure of this bill to so provide renders it unworthy a place among our statutes.

But we are told, sir, that the provisions of this bill wou'd, if enacted into law, give great relief to the Supreme Court of the United States. In support of this statement we are reminded that the causes now upon the docket of that court can not be heard and determined inside of three years, and that the number of new causes docketed during the year exceed the number disposed of during the same period of time. Upon pending causes it is plain that the bill, in case it becomes a law, can have no effect.

Whether this bill passes or does not pass, the time required to hear and determine all docketed causes will be the same.

Relief may be expected to some extent through the prohibitory limitation which the bill imposes on the appellate jurisdiction of the Supreme Court. Under this limitation it will be impossible to get into the Supreme Court causes like many now upon its docket. We have already argued that the jurisdiction of the Supreme Court ought not to be fixed so as to operate as a denial of justice to suitors whose rights have the value of $5,000; and what has been said upon that point need not be repeated. Again, the circuit courts and the district courts, it is expected, will contribute largely to this relief. But they will not, for the plan upon which it is proposed to reorganize these courts is illy conceived and will fail in its execution.

Sir, to my mind there are better ways for relieving the Supreme Court than those proposed by this bill. Of the ways suggested that of increasing the number of Supreme Court judges seems to have a good many friends. In my judgment nine judges for this tribunal are sufficient, and the addition of more, even one, would take from rather than add to the usefulness and efficiency of that court. To increase the present number with a view of dividing the court into sections would be in effect to establish two courts when the Constitution says there shall be one. A court composed of nine judges will dispose of more business than will a court composed of more than nine, and the decisions as a rule will command higher respect.

In the States, or in most of them, the courts of last resort have to do with questions of the highest importance and which affect large and varied interests, and in none do the number of the judges exceed nine. New Jersey leads with nine. Maine and Maryland each have eight. Seven States, including New York, Pennsylvania, and Illinois, are content with seven each. The State of Ohio and ten other States have five. Four States have four, and thirteen have three. From these facts it will be seen that the courts of last resort in the thirty-eight States are composed of one hundred and eighty-four judges, and that the average number to a court is five. From all this we may well conclude that the Supreme Court of the United States with nine judges is well composed, and to increase the number would be unwise.

Sir, the Supreme Court would be largely relieved by a repeal of the law which compels the judges of that court to sit in the circuit courts. The Supreme Court of the United States ought to be an independent tribunal, and neither it nor its judges ought to have any connection with another court except what may be required for the proper exercise of an appellate jurisdiction. The sessions of the Supreme Court are held at the seat of Government, and therefore no court duties ought to be performed by either of its judges at any other place. To require a judge of that high tribunal to sit in an inferior court is wrong, and the law which compels it ought to be stricken from the statute-book.

The reasons for making a judge of the Supreme Court a judge of the circuit court may have been good and sufficient at the time it was done; but in this day those reasons are without force, and other reasons strongly suggest that the best policy is to relieve the Supreme judges from attendance upon the circuit courts, and require from them no official duties except those which rightfully and exclusively pertain to the high office of a justice of the Supreme Court of the United States. The law which makes a judge of the Supreme Court a member of the circuit court ought to be repealed, and no bill to reconstruct the Federal courts is complete without such a repealing provision. The repeal of this law would enable the Supreme Court to continue its sessions two or three months longer each year, and thus would the time of the judges now required in the circuit courts be given to their duties in the Supreme Court.

Again, the Supreme Court would be greatly relieved if the circuit courts were constructed and organized differently from what they now are, and differently from what is proposed by the pending bill. A considerate reconstruction of the circuit courts would not only relieve the Supreme Court, but add largely to the present standing of the circuit courts. While the circuit courts of the United States hold a very high place in the public mind, they can be raised higher by proper legislation. It is true that under our judicial system the judgments of a circuit court can not be as high authority as the judgments of the Supreme Court, yet it is possible for us to make them equally sound, wise, and learned, and if this be accomplished the other questions involved in this discussion are less difficult to consider.

It is within our power to so constitute the circuit courts as to make them in many cases the court of last resort. This is not to be done, however, by excluding parties from the Supreme Court, but by making the circuit courts equal, not in the number of judges, but in their ability and character, to the Supreme Court. A judge of the circuit court ought to be fit in every respect for a judge of the Supreme Court. Three such judges in the circuit courts would give higher character to those tribunals—higher than they have hitherto had. If the circuit courts were so composed, there is reason to believe that litigants in many cases would accept their judgments and make no appeal to the Supreme Court to review them. Such circuit courts would make little business for the Supreme Court, and hence to a very considerable extent they would be courts of last resort. The Supreme Court, had we such circuit courts, would not have one case upon its docket where now it has five.

But there is still another way to relieve the Supreme Court. Under existing laws and by the provisions of the pending bill patent and copyright causes are heard in the Supreme Court upon the facts as well as the law. If the judgment of the circuit court in this class of causes was made final and conclusive as to the facts, subject to the right of either party to have the facts specially found by this court, this would give great relief to the Supreme Court. And if the circuit courts were differently constituted, their judgments in patent and copyright cases might be made final without harming in the least any interest, public or private.

Mr. Speaker, in this contention for a better judicial system I insist that the three Federal courts be made independent tribunals. The Supreme Judges and the district judges ought to be put out of the circuit courts and the circuit judges ought to be put out of the district courts. Those judges ought to be the sole judges in their respective courts, and under no circumstances ought they to sit in judgment in any other court. Sir, more than three courts we do not need. In reconstructing these courts a few more judges may be required, but this will add to the usefulness of our judicial system, and therefore it ought not to meet with objection.

We now have seventy-five Federal judges—nine in the Supreme Court, ten in the circuit courts, and fifty-six in the district courts. In this connection it is to be observed that thirty-seven years ago, when our population was 25,000,000, we had forty-four Federal judges. Ohio then had a population of 2,000,000, and for her three courts of common-law jurisdiction there were thirty-two judges. But in the appointments of a judicial system that State is now far in advance of the United States. Our population is now perhaps 58,000,000, and our judicial force for three courts is seventy-five. In Ohio, with a present population of perhaps 3,500,000, the judicial force for the same number of courts is one hundred and three. It seems incredible that there are twenty-eight more judges in the courts of Ohio than are in the United States courts, yet the official records verify the statement. Other States may possibly make showings in this respect not unlike Ohio.

The Supreme Court, sir, so far as the number of judges are concerned, is well composed, and so, too, are the district courts with a single judge; and a repeal of the laws requiring these judges to sit in the circuit courts and a repeal of the law which authorizes a circuit-court judge to sit in the district court—this done, the three Federal courts are independent tribunals. As the number of district courts increase with the growth of the country the number of district judges will increase, but more than one judge for a district court is not necessary, and when he is disabled from any cause to hold his court, authorize it to be held by another district judge. A district court thus constituted with the original jurisdiction it now has, and with the original jurisdiction now in the circuit courts, it is believed would be a court faultless in organization. With such an organization the responsibility for the administration of justice in the district court would not be as now divided between its judge and a judge of the circuit court, but, on the other hand, it would be personal—individual—with the district judge.

If we would have the circuit courts independent tribunals we must by proper legislation so constitute them. As to their jurisdiction, let that be original in habeas corpus, quo warranto, mandamus, and procedendo, and appellate in all other cases. Let the United States be redistricted for circuit-court purposes, and instead of nine circuits have twelve—in each circuit constitute a court of three judges equal in ability to those upon the Supreme Court bench, two to be a quorum, and in case of the inability of either judge to attend let his place be filled by another circuit judge, and require two terms of the circuit court to be held in each district in each year.

Such a tribunal would be essentially distinct and in every respect

independent. The circuit courts thus reconstructed would make these tribunals the equal in every particular of the Supreme Court, except in the number of judges. Will it be said that such a reconstruction of the Federal courts will make twenty-six more Federal judges? Be it so. With this addition the number of Federal judges will be one hundred and one, which is two less than the number of judges in the three State courts in Ohio, and less no doubt than in several of the other leading States of the Union. The number of persons holding office under the General Government largely exceeds one hundred thousand, and it is believed that less than a thousand are in the judicial department. Will it be said that twenty-six additional circuit judges will add $156,000 to our annual expenditures? Yes, this is true. The annual salaries of the Federal judges now aggregate $203,000, and with twenty-six additional judges this sum would be increased to $359,000.

In a single State—New York—no doubt the judicial salaries paid to the judges of State courts exceed this sum, and probably in Pennsylvania, and it may be in Illinois, and also in other States. The State of Ohio pays her judges for her three courts yearly salaries amounting to $294,000, and besides each of the eighty-eight counties in that State has a judge for its probate court, who draw nothing from the public treasury, but have fees instead of fixed salaries, which are paid by those for whom they do service. Estimating these fees at $200,000 a year, it will be seen that Ohio judges are paid yearly $201,000 more than the sum now paid each year to the Federal judges, and $135,000 more than they would receive if twenty-six were added to the present number. A judicial system for the United States which costs less money to maintain than a judicial system in a single State like Ohio, ought not to be complained of because of the expense.

Mr. Speaker, with the circuit court judges out of the district courts these tribunals will be independent; with the Supreme Court and district court judges out of the circuit courts these tribunals will be also independent, and so, too, will be the Supreme Court of the United States. The circuit courts reconstructed in the manner we have indicated will be made the equal or nearly so in standing of the Supreme Court. Each of these courts thus constructed would have ample time to dispose of its business and parties would not suffer from delay. To secure such a judicial system we may well wait a little longer rather than make a law out of the bill now before the House.

Question of Privilege.

REMARKS

OF

HON. CHARLES N. BRUMM,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, September 6, 1888.

Mr. BRUMM said:

Mr. SPEAKER: I rise to a question of privilege. Inasmuch as the attention of the House has been called to my extravagance in expending 10 cents for each of three postage-stamps for the delivery of a letter to my colleague, Mr. SCOTT, I think I may as well read that letter and his reply.

Mr. BLAND. Mr. Speaker, what is there before the House?

The SPEAKER. The gentleman from Pennsylvania [Mr. BRUMM] states that he rises to a question of privilege.

Mr. BLAND. We would like to have the question of privilege stated before these letters are read.

Mr. BRUMM. I have risen to a question of privilege, and I am proceeding to state it.

The SPEAKER. The gentleman will state it.

Mr. BRUMM:

HOUSE OF REPRESENTATIVES UNITED STATES,
Washington, D. C., August 22, 1888.

DEAR SIR: About three months ago you cast reflections on my conduct, charged me with making certain false statements about you on the floor of the House of Representatives, and said, *inter alia*, you would bring me before the bar of the House and make me prove it, etc.

Ever since then I have been patiently waiting for you to take some action in the premises, and as you seem to have abandoned the subject I feel it due to myself to show that you (not intentionally, I hope) have misstated the facts, that what I said was true, and that I am not guilty of the charges you made or the reflections you cast on me.

I will therefore, to vindicate myself, rise to a question of privilege some time before Saturday, September 1, and as I do not want to do injustice to you I wish to know what day will be most convenient for you to be present.

A prompt reply will greatly oblige,

Yours, respectfully,

CHAS. N. BRUMM,
Member Congress.

Hon. WILLIAM L. SCOTT.

ERIE, PA., *August* 23, 1888.

Hon. CHARLES N. BRUMM.
House of Representatives, Washington, D. C.:

Your letter of 22d received too late for me to be in Washington, without great inconvenience, on Saturday, but will return latter part of next week.

W. L. SCOTT.

Mr. BLAND. I rise to a point of order.

The SPEAKER. The gentleman will state it.

Mr. BLAND. So far as the gentleman from Pennsylvania [Mr. BRUMM] has gone this matter seems to be simply a question between the two gentlemen from Pennsylvania [Mr. BRUMM and Mr. SCOTT] which arose in debate here, and I do not see that there is any question of privilege involved.

The SPEAKER. The Chair does not think there is any question involved in the reading of the communications which have passed between the gentlemen from Pennsylvania, but the Chair supposed that this reading was simply preliminary to a statement of the question of privilege.

Mr. BRUMM. It is simply preliminary to what I am about to say. If the gentleman will possess his soul in patience he will see the bearing of it.

Mr. BLAND. The gentleman might take up an hour or more in stating what his question of privilege is.

Mr. BRUMM. It will be time enough when I have stated it. The gentleman need not be alarmed.

On Saturday, May 5, 1888, Hon. THOMAS R. STOCKDALE, of Mississippi, made a speech on the floor of the House, the House being in Committee of the Whole House on the state of the Union, having under consideration the bill H. R. 9051, to reduce taxation, etc., in which speech he tried to show, following in the wake of most free-traders, that the tariff was responsible for employers employing Pinkerton and other detectives, and Coal and Iron police, etc. While he was trying to show that I rose and the following colloquy took place:

Mr. BRUMM. Is it not true that the very men who have employed the Pinkerton men in all these coal strikes are free-traders, headed by Mr. SCOTT, of this House; Mr. Corbin, of New York, and Mr. Cox, of Pennsylvania, all free-trade Democrats.

Mr. MCMILLIN. Does the gentleman charge that Mr. SCOTT has done so? Does he assume to say that he has?

Mr. BRUMM. I assume to say that he has, and I am responsible for that statement and am ready to prove it.

Mr. MCMILLIN. Well, you and he can settle it between you. He says it is not true.

Mr. BRUMM. Mr. SCOTT, Mr. Corbin, and Mr. Cox, Democratic free-traders——

Then Mr. STOCKDALE proceeds with his speech.

I find in the RECORD of May 17 a speech of Mr. SCOTT, in which he speaks of certain contracts under seal, etc., and as to what he has done and will do in reference to the workingmen; and then I asked this question:

Mr. BRUMM. Will the gentleman include also his anthracite miners?

Mr. SCOTT, Yes, the anthracite miners, too.

After that Mr. SCOTT proceeds to say:

I will stand upon my record at home and with my people. And if I have ever been the oppressor of labor, if I have ever ejected a man from his home, if I have ever endeavored in my life, although I have been, I may say, a large employer of labor, to put one laborer in the place of another, or to force one man in the place of another; if I have employed a detective—not a Pinkerton detective merely, but any other kind of a detective—to come and protect my property or to protect it against the men that are working for me, or have worked for me, I, sir, will resign my seat and leave this Hall the day it is proved.

Mr. BRUMM. Does the gentleman not contribute to pay the coal and iron police?

Mr. SCOTT. I never so contributed. I know you made a statement on this floor that I had employed Pinkerton's detectives, which is false.

Mr. Speaker, this is the way it appears in the RECORD of May 17th; but as was shown by my colleague, Mr. DALZELL, who read from the stenographic report, and which I know to be accurate because I was present and heard it; the insertion should be as follows:

I never so contributed. I know you made a statement on this floor that I had employed—

not Pinkerton detectives, but—

coal and iron police. It is false.

And stops there. It should have proceeded—

It is false as hell itself.

That is exactly what took place.

Mr. BRUMM. And I will prove it.

Mr. SCOTT. I will make you prove it. I am going to bring you before the bar of this House and make you prove that charge.

Mr. BRUMM. All right; I will be there.

Mr. SCOTT. Mr. Chairman, the gentleman's argument in regard to my employing a $10,000 cook has the same foundation for truth that some of his other statements have; and if such were the fact, sir, I could only compare the wages paid my cook with the wages paid by his clients at the Edgar Thomson Steel Works. As to the salaries paid my secretaries, or at least those who assist me in my business, if he refers to the men in my employ, I can tell him that there are a good many of them who get more than $5,000 a year.

Now, I have nothing more to say. I have been identified with the laborers of this country all my life; I have worked and toiled with them; and when I start out to rob anybody or to get anybody's money it will not be the money of the wage-worker of this country. [Applause.]

In the RECORD of May 22 I find the following, in an altercation be-

tween my colleagues, Mr. SCOTT and Mr. DALZELL, which took place in my absence:

Mr. SCOTT. Now, Mr. Speaker, that was the utterance of the gentleman from Pennsylvania [Mr. BRUMM] during my absence from the House, but the CONGRESSIONAL RECORD of the next morning did not show one word of what has just been read. But, sir, the gentleman from Pennsylvania who uttered that took occasion to see that it was sent out in the public press of this country, charging me with engaging Pinkerton's detectives and being in alliance with Mr. Corbin and other gentlemen from Pennsylvania whom I have never seen and do not know. And the gentleman from Pennsylvania [Mr. DALZELL] now gets up in defense of the charges he makes against me and tries to show that I have been misrepresenting Mr. BRUMM as to the charge he made against me. At the time that he fell from the Pinkerton police he dropped into the local police. I send to the desk and ask to have read a telegram received by me from the superintendent of the mines in Mr. BRUMM's district. This telegram is sent in reply to an inquiry of mine, "Have you ever employed a Pinkerton detective?"

The Clerk read as follows:

"SHAMOKIN, PA., *May* 10, 1888.

"W. L. SCOTT, *Washington:*

"No, sir, never had any occasion to employ detectives.

"HOLDEN CHESTER."

And I ask you to keep that name "Holden Chester" in memory.

Mr. SCOTT. Now, sir, that is all I have to say in regard to this question. If the gentleman [Mr. DALZELL] is satisfied with what he stated, and is willing for this whole thing to go before the country in the condition in which he has put it, it is perfectly agreeable to me; and I will not detain the House by discussing it further.

Mr. TOWNSHEND. Who is Holden Chester, who signs that telegram?

Mr. SCOTT. He is my superintendent at the mines in Mr. BRUMM's district.

My colleague, generally inaccurate, is in error when he says that his colliery is in my district. I am glad he has none there. It is on the border of the neighboring district in Northumberland County.

Now, the speech that was made by Mr. STOCKDALE, of Mississippi, on May 5, was not inserted in the RECORD on the following day, but his remarks were withheld for revision, and if my interruptions as a matter of fact did not appear in the RECORD of the next day, as alleged by my colleague, Mr. SCOTT, it was through no fault of mine and certainly because of no action on my part, because they were printed in Mr. STOCKDALE'S speech, and he having withheld his remarks for revision, of course my assertions and interruptions did not appear in the next day's RECORD.

When the gentleman asserts that I had published broadcast the facts as to my statement, he errs again. I published nothing of the kind. I presume the press got hold of it and probably published it, and in that way it was circulated, but I had nothing to do with it, and hence the gentleman does me a great injustice in both respects.

Now, Mr. Speaker, as to the charge that he employs Pinkerton's detectives or Coal and Iron police, and that with regard to his assertion that if he has ever been the oppressor of labor or had ever ejected a man from his home, or ever endeavored in his life to put one laborer in the place of another, or to force one man into the place of another, or if he has ever employed a detective or any of Pinkerton's men, or any other kind of detective, then on being confronted with the fact he will resign his seat on the floor of this House.

I claim, sir, that I shall prove he is guilty or that some "William L. Scott" is guilty of every phase of the charge and of the statement in the RECORD. It is true he does not charge me directly with having withheld the publication of my remarks in the RECORD, but he does it by telling only a part of the truth and not the whole of it.

The usual form of an oath that has existed for centuries indicates the various kinds of falsehoods that may be stated when it says, "You shall tell, first, the truth; second, the whole truth; third, nothing but the truth." The first kind of falsehood is that indulged in by the ignorant and common blackguard. The second is a higher order of falsehood, and is such as was indulged in by the mocker of religion when he quoted from the Bible, "There is no God," but failed to recite the whole paragraph, which says, "The fool hath said in his heart there is no God." The third is the very pink and essence of this art, and the more insidious and dangerous, because it tells a part of a truth and not the whole of it, as was demonstrated by Mahomet when he established his religion on the great dogma that God is God, and then maintained it with fire and sword with the false dogma, "I, Mahomet, am his prophet." The latter is the usual style indulged in by the professional charlatan who enters the arena as the friend and champion of labor and proclaims, "I am an employer of labor," as a great truth, and then, while coining his millions out of the sweat and blood of his workingmen, dons the martyr's robe and asserts, "I only do it for sweet charity's sake," declaring that while he is under no obligation to the workingman, yet the workingman should be very thankful that he is permitted to work for him under the reduced wages brought about by himself and his co-conspirators—the lowest wages to which they can possibly reduce him.

I have not said that my colleague is guilty of all of these kinds of falsehood; but, sir, there is, as I said before, some "William L. Scott" guilty of all of them; and as my colleague says that he is not guilty, and that the charges are as false as hell—if he is the truthful and honorable gentleman that he represents himself to be, I am extremely anxious to find out that other "William L. Scott, of Erie." I shall read first a few extracts from newspapers [derisive cries on the Democratic side], and will then give some more substantial proof right in his own locality. Do not be alarmed, gentlemen; you will get all you want of it.

In speaking of this memorable strike yesterday Mr. George Mains, now a resident of West Newton, but who was at that time employed at No. 1 mine, in Scott Haven, said——

Mr. BLAND. I will not raise the point that this is not a question of personal privilege, as everybody knows it is not; but I hope this will not be taken as a precedent hereafter.

Mr. MCCLAMMY. I hope the gentleman from Pennsylvania will be allowed to proceed.

The SPEAKER. The gentleman will proceed.

Mr. BRUMM (reading):

"I am glad you came to see me about this, for ever since SCOTT'S speech I felt as though the public should know how far Mr. SCOTT has told the truth. During the reading of his speech I could not help calling him a liar many times."

"Did any evictions take place at Scott Haven during the strike of 1880?" asked the Leader man.

"Yes, indeed. After the men were on strike for some time and refused to go to work at Mr. SCOTT'S terms he turned on them like a lion. He was then far from being labor's friend—what he now claims to be. I will never forget the day he did his dirty work. It was one of the coldest days that came during the spring of 1880, but, notwithstanding this, all who refused to go to work were ordered to vacate the company's houses on that day. Some obeyed the order on Monday, but others, on account of the cold weather, still held on to their houses. Wednesday arrived, and with it came David Orr, the constable, from West Newton, with a posse of men to carry out the orders of the company."

Mr. WILSON, of Minnesota. I rise to a question of order.

The SPEAKER. The gentleman will state it.

Mr. WILSON, of Minnesota. Mr. Speaker, we have business of great importance with which we ought to proceed; and we have heard enough of this matter to know that it would not, perhaps, be very edifying to anybody to have it continued. I therefore make the point, Mr. Speaker, that there is no question of privilege in this matter. I think it is wrong to waste the time of the public in this way.

Several MEMBERS. Let him go on.

Mr. WILSON, of Minnesota. No; I raise the question, and insist on it. [Cries of "Go on!"]

Mr. BRUMM. Does the gentleman want to discuss the point of order?

The SPEAKER. The Chair thinks that strictly speaking this does not present a question of privilege. Still, the gentleman has commenced his remarks and proceeded thus far; and the Chair thinks that there was a sort of understanding at least between the gentleman now on the floor and the gentleman on the other side of the House [Mr. SCOTT] that these statements should be made this morning, as the attempt was made the day before yesterday and again on yesterday by the gentleman from Pennsylvania [Mr. BRUMM] to obtain the floor. Therefore, unless the point of order is insisted upon, and the Chair is compelled to decide it, the Chair thinks that the gentleman from Pennsylvania should be allowed to proceed.

Mr. WILSON, of Minnesota. I understand the Chair does not rule on the question.

The SPEAKER. The Chair does not rule on it. The Chair has stated, however, that he does not think it presents strictly a question of privilege under the rules of the House, but that the gentleman from Pennsylvania is proceeding under what is supposed to have been an understanding.

Mr. WILSON, of Minnesota. Very well, if there has been a compact of that sort I do not press the point; but I protest that this is——

Mr. SCOTT. I hope the gentleman will be allowed to proceed.

Mr. BLAND. In that connection, I hope time will be given to each side.

The SPEAKER. This understanding, about which the Chair speaks, was that the gentleman might proceed with his statement, and that there should be only one hour given on each side.

Mr. SCOTT. I do not want more than ten minutes. I hope that the gentleman will be allowed to proceed and finish his remarks, but I desire to ask the gentleman about one fact if he will allow me to put a question to him.

Mr. BRUMM. I will yield to a question, but not to a speech.

Mr. SCOTT. The question in dispute between you and myself grew out of the language and a charge that you made against me that I had used Pinkerton detectives. You made that charge when I was absent from the House. I denied that charge. Then you accused me of employing Reading Coal and Iron detectives, and I denied that charge; and I said that I would bring you before the House and make you prove it. That was the only question between you and myself growing out of that whole transaction, and what you are interjecting here is not relevant to the issue between you and myself.

Mr. BRUMM. By the time I get through the gentleman and all the members on this floor will see that it is very relevant and pertinent. I shall not read any more from this at present, but have it printed with my remarks.

Mr. SCOTT. Mr. Speaker, I object to his printing anything in the RECORD. Whatever he has got to print in the RECORD he must verbally state here.

Several MEMBERS on the Democratic side. That is right.

Mr. BRUMM. If I have time I will read it afterwards, but I will read something now that will be more substantial. I have here a letter, which I may read or may not, as it will depend upon my time.

Here is a letter written by Mr. Wild, president of the Amalgamated Association of Iron and Steel Workers:

PITTSBURGH, PA., *May* 11, 1888.

DEAR SIR: Hearing that you are to make your speech on the tariff issue to-morrow, and learning that you desire some authentic data regarding the past course of that avowed enemy of organized labor, Mr. W. L. SCOTT, we herein give you a history of what occurred at Mr. SCOTT'S rolling-mill at Erie, Pa., in 1882. It is part of our published proceedings of convention, as you will observe, and has passed into history so far as our organization is concerned. It is needless to say that he used every device known only to tyrannical capitalists such as W. L. SCOTT is, and as a result he, by means of his "iron-clad" agreement, here appended, annihilated our organization in his Mount Hickory rolling-mills at Erie and evicted the men living in the company houses who refused to sign said agreement.

You will observe that in his circular he claims to be unable to pay the men the wages demanded, and yet he and his free-trade colleagues on the Ways and Means Committee claim that low-priced iron and steel, etc. (which would follow the passage of the Mills bill in order to preserve our markets from foreign competition), has no bearing on wages.

We request that you engraft this in your speech; and as the representatives of thousands of men who are benefited by a protective tariff, as we believe the whole country is, we give you liberty to make such disposition of this as you see fit.

Annexed is the data referred to.

Yours, truly,

WILLIAM WEIHE, *President.*
WM. MARTIN, *Secretary.*

Hon. CHARLES BRUMM,
Washington, D. C.

Mr. BRUMM. The paper that he refers to is a very long one. I showed it to Mr. SCOTT this morning and told him that I would have it printed in the RECORD.

Mr. SCOTT. I signed that paper.

Mr. BRUMM. You signed a part of it.

Mr. SCOTT. I signed the whole of it.

Mr. BRUMM. You signed a part of it and the workmen signed the other part. I will only read a few extracts from it, and from what the gentleman says he signed. "When this mill was started, in May, 1879, its policy was to employ non-union men." And in the same paper, which the gentleman says he signed, it says:

Individual contracts will be made with each employé of the mill. These contracts will be in the hands of the superintendent on Wednesday, July 5, and the men who desire to continue to work in the mill must notify the superintendent, and those who are unwilling to do so must prepare to vacate the premises occupied by them belonging to the company.

[Applause on the Republican side.]

Now, the answer of the man I also shall ask to have printed if the gentleman thinks it will do him no harm.

Mr. SCOTT. There is nothing in that, and you can print everything you read there.

Mr. BRUMM. I have a letter here which is confidential, but I have inquired from my colleagues [Mr. BAYNE and Mr. DALZELL] and they say the party is a responsible gentleman, and they assure me he is thoroughly reliable. I will only treat his name as confidential, as he is afraid he might have himself black-listed and have to remove from that section of country. [Derisive jeers on the Democratic side.] Oh, well, they have been driven away as you in the South have driven them away.

Mr. BLAND. Do I understand the gentleman proposes to read a letter without giving the name of the party?

Mr. BRUMM. I do, unless you object. [Evidences of dissent on the Democratic side.] I will not, if you object.

I have a letter from Mr. Gilbreath, who is an officer of the Typographical Union of Erie, Pa. I shall not read it at present, for fear my time shall be too short, and I shall ask to have it printed in the RECORD, as it shows Mr. SCOTT'S conduct at the Erie docks, where he discharged workingmen and employed Italians and Hungarians, and where he favored child-labor and refused to accede to the demands of the Typographical Union on child-labor [applause on the Republican side], and that he runs a "rat" office. That term is understood by workingmen very thoroughly.

Now, I shall have printed, if not objected to, a copy of a letter which he sent to his superintendent, a Mr. Taylor, on the subject of evictions. The letter has been extensively published, and the substance of it is that he insisted upon the eviction of tenants if they would not agree to a reduction of wages while they were on strike. I hold in my hand an affidavit establishing the genuineness of that letter:

McKEESPORT DAILY NEWS,
McKeesport, May 25, 1888.

STATE OF PENNSYLVANIA,
County of Allegheny, ss:

Personally came before me James L. Devenny, who, being duly sworn, doth depose and say that the annexed fac-simile of a letter written by W. L. SCOTT, of Erie, Pa., to his mine superintendent at Scott Haven, Pa., is a correct copy of the original, which was given to Mr. Devenny in eighteen eighty-five (A. D. 1885).

JAS. L. DEVENNY.

Sworn to and subscribed this 25th day of May, 1888.
[SEAL.] JOHN W. STEWART,
Notary Public.

Now, Mr. Speaker, I shall take time to read the iron-clad contract that we have all heard so much about. It is as follows:

MINER'S CONTRACT.

This agreement, made this 28th day of June, A. D. 1887, between the South West Gas Coal Company, of the first part, and ——— ———, of the second part, witnesseth: That the said party of the second part has agreed, and by these presents does agree, to enter into the employment of said party of the first part, as a miner of coal, to commence on the 28th day of June, A. D. 1887, and continue therein until either party hereto shall give the other thirty days notice to the contrary, when, at the expiration of such period, this contract shall cease and determine; but during the continuance of the same the party of the second part agrees to abide by, adhere to, and observe the rules and regulations hereto appended, which are hereby made a part of this contract, and to abide by and observe all other rules and regulations promulgated from time to time by the said coal company, with the consent of the party of the second part, for the purpose of regulating mining and other employment in and about the coal mines of the said coal company, and not to be absent without leave, except in case of sickness or other unavoidable contingency that would prevent him from work; also to keep his room in good working order.

The said party of the first part agrees that in case steady and continuous work can not be furnished the party of the second part, during the life of this agreement, that such work as may have to be done shall be fairly divided with, and apportioned to the said party of the second part, on the basis of all the men so employed at and during such time; also to pay the said party of the second part for each and every ton of coal mined by him, and delivered on pit cars at the face of the room where the same is mined, after it is screened over the screens of the company, the same price per ton that is paid by the Penn or Westmoreland Gas Coal Companies, for and during the time the said second party hereto is mining said coal; and in case the men at the Penn or Westmoreland Gas Coal Company's mines should stop work for any cause whatever, when the said second party hereto is working under this contract, that then and in that case the said party of the second part shall be paid for all coal mined by him during the time said Penn or Westmoreland Gas Coal Company's men are not at work, the price per ton that the Penn or Westmoreland Gas Cas Coal Company's men were receiving at the time when they stopped work; and in case the Penn or Westmoreland Cas Coal Company's men resume work, and are paid a higher rate per ton for mining than that received by them when they stopped work, that then and in that case the said party of the second part shall receive in addition to the price per ton already paid, or to be paid, for all coal mined by him during such period of suspension of work at the Penn or Westmoreland Gas Coal Company's mines, an additional amount for same, equal to the difference between the price paid per ton at the time of such suspension, and the higher price agreed to be paid by the Penn or Westmoreland Gas Coal Companies to their men; and for all coal mined on and after the date of such resumption of work by the Penn or Westmoreland Gas Coal Companies the payment to the second party hereto to be as hereinbefore provided. All payments to be made on the regular pay-day, and in accordance with the rules and regulations aforesaid; and the pay-day will be on the ——— ——— of each month for all wages or moneys the party of the second part may have earned during the last month previous to such pay-day.

And the party of the second part further agrees that he will not stop work, join any "strike" or combination for the purpose of obtaining or causing the company to pay their miners an advance of wages, or pay beyond what is specified in this contract, nor will he in any way aid, abet, or countenance any such "strike," combination, or scheme for any purpose whatever during the time specified in the first clause of said contract. And if the second party shall violate any of the provisions of this contract in this regard, at any time, he shall thereby forfeit all claims for coal previously mined and not paid for, and the first party be released from liability therefor.

In witness whereof, the said parties have hereunto set their hands and seals the day and year first above written.

THE SOUTH WEST GAS COAL CO.,
By J. F. HOSACK,
Agent and Superintendent.
——— ———.

———, ———,
Witness.

Then follows the poor, wretched miner's signature after that of Hosack, the superintendent.

Mr. O'FERRALL. What is his name?

Mr. BRUMM. Never mind his name; you shall not have him black-listed. Then come the rules and regulations of the South West Coal Company, which I will read:

RULES AND REGULATIONS OF THE SOUTH WEST GAS COAL COMPANY.

[Adopted for the purpose of regulating mining and other employment in and about their coal-mines.]

I. Every employé of the company will be expected to perform a full day's work in his respective line of employment, unless the foreman of his department orders less time to be worked.

II. Any suspension of work during working hours by any portion or all of the company's employés, for the purpose of holding or attending any meeting for any purpose whatsoever, whether above or below ground, affecting the operations of the company's mines, is positively forbidden.

Mr. Speaker, I had some experience myself in the system of coal mining, and I know that very often a case arises when the boss imposes upon the men some new burden, and under this regulation they can have no immediate remedy, but must submit to whatever the boss chooses to impose upon them until they stop work that day. That one day's service, at least, you have got secure against those whom I call your slaves.

III. The company will not deal with any committee purporting to represent any league, organization, or combination of workmen, but will deal directly and individually with each of its employés.

IV. Any employé feeling aggrieved in any respect must present his claim to the pit-boss, in person. If they fail to adjust the matter in a manner satisfactory to the employé, it may be referred to the superintendent (if either party desire), whose decision, upon the hearing of both sides of the question, will be final.

V. Any employé who may have been discharged by the company, or who may leave, with the consent of the company, shall receive all arrearages of pay due him at once.

VI. No person will be allowed to interfere in any manner with the employer's just right of employing, retaining, and discharging from employment, as provided herein, any person or persons whom the superintendent or pit-boss having charge of the mines for the time being may consider proper; nor cause, or interfere in any way by threats or menace, or otherwise, with the right of any employé to work, or engage to work, in any way, and upon any terms, and with whom he may think proper and best for his interest, or the benefit of his family.

VII. No employé will be permitted to fill his place by another man without the consent of the pit-boss or superintendent.

VIII. Every employé will be paid once a month at the regular pay-day all wages or moneys he may have earned during the last month previous to such pay-day, after deducting any indebtedness which such employé may owe to the company, or which the company, with the consent of such employé, may have assumed to pay to any other person.

This regulation is to evade the law and to enable the employers to carry on what are known as "pluck-me stores."

IX. It shall be the duty of every miner working in the mines to keep his room in said mines in good order and repair; and any such miner who shall willfully, negligently, or carelessly suffer his room to get out of order or repair, and who shall not, upon request, immediately put the same in repair, the company may put such room in repair at the expense of the miner in default, and may retain the amount of such expense from the next or any future payment to which said employé would be otherwise entitled, until fully reimbursed for such expense.

X. No miner who has left the employment of the company, whether voluntarily or by discharge, will be entitled to receive any arrearages of pay due him for labor performed, whether on the regular pay-day or during the interval preceding pay-day, until he shall have put his room in perfect working order, as required by his contract with the company. All miners leaving said employment will be required to procure the certificate of the pit-boss that they have complied with the requirements of this rule, as aforesaid, before making application at the company's office for final payment.

That is, a matter of dispute between the boss and the employé must be adjusted, holding the miner under duress, before the employer will pay the employé the wages due.

XI. Any tenant of the company, upon leaving its service, whether voluntarily or by discharge, will not be entitled to receive any part of the wages due him for labor performed, until he shall have vacated the premises occupied by him, and presented the keys of the same at the office.

Mr. Speaker, this is the ironclad bludgeon that is used against labor organizations and against the individual miner and laborer in the State of Pennsylvania by the gentleman who stands up in this House as the mouthpiece of the Executive to put through by the gag-law the Chinese bill, in order to hoodwink the workingmen into the idea that he has something like kind feeling for them. Mr. Speaker, in my judgment, it is adding insult to injury when these gentlemen imagine for a moment that the workingmen of this country are to be gulled as easily as that. You discount too much, sir, the intelligence of the workingmen. You presume that you can for a long lifetime be their worst oppressor and then deceive them by putting through a Chinese bill that will last only three years, although we have had a law on the subject for seven years which your Administration has for nearly four years failed to better.

Although a treaty has been negotiated, and we have no official knowledge as yet whether it has been accepted by China or not, the gentleman from Pennsylvania attempts to make political capital for himself and his party by rushing through this law upon mere rumor of the rejection of the treaty; but my word for it, the ides of November will show that the workingmen know their friends better than you imagine.

But, Mr. Speaker, the gentleman says that he has never wronged a workingman. If there is any species of wrong that an employer can do a workingman that is more tyrannical, more searching, more effectual than any other, it is done through what is known as the "pluck-me-store" system, a system by which the employers force the workmen to deal in their stores, charging them whatever price they please, and then grumble and growl if the workingmen happen to be a little economical and do not spend all their wages. I have here a letter from the office of the Leader, published in Pittsburgh, which I will read:

No. 133 FIFTH AVENUE, PITTSBURGH, PA., *May* 25, 1888.

DEAR SIR: Your favor of 23d instant at hand. As requested, we send you two of SCOTT's store coupons used by the Youghiogheny River Coal Company at their stores in Scott Haven. The coupons run as follows: One cent, 10 cents, 25 cents, 50 cents, and $1. They are compiled in books worth $5 and $10 each. We also inclose one of the stubs of the books.

Hoping that they may be of some service to you, we remain,

Yours, respectfully,

LEADER PUBLISHING COMPANY.

N. B. You need not return them.

Hon. C. N. BRUMM,
Washington, D. C.

In addition to this I have a letter, which I shall not have time to read, which says that these books of coupons are printed in the office that is known as the "rat" office, which is controlled by Hon. WILLIAM L. SCOTT, which the writer of this letter says is run by a company which is "limited," and the limit of which is the length of Hon. WILLIAM L. SCOTT's pocket-book. I exhibit to the House this stub of coupons used by this coal company, and this 25-cent order, and this 1-cent order. What they have this 1-cent order for I do not know, unless it be that the gentleman also runs a peanut stand there.

[Mr. BRUMM then exhibited the stub and coupons, as shown.]

No. 2877.] [$10.

BOOK OF COUPONS

ISSUED BY

THE YOUGHIOGHENY RIVER COAL CO.,

GENERAL MERCHANDISE AND SUPPLY DEPOT,

Scott Haven, Pa., and branches.

(Across the face in red:) Store No. 2.

No. 3795.] [25.

THIS COUPON, numbered and registered, is good for its FACE VALUE in MERCHANDISE at the store of

YOUGH. RIVER COAL CO.

(On the margin:) The Youghiogheny River Coal Co.'s store, general merchandise and supply depot, Scott Haven, Pa.

[3782]

COUPON

ONE CENT.

NOT GOOD IF DETACHED.

Mr. SCOTT. If I had it would not be any smaller than you are. [Laughter and applause on the Democratic side.]

Mr. BRUMM. Mr. Speaker, imagine this great representative of the President of the United States, the reputed owner of twenty millions of wealth, the president and director of some 22,000 miles of railroad——

Mr. SCOTT. Oh, that has all been said over again in the Senate and in the House; the country knows all about it.

Mr. BRUMM. Well, I propose to put it to you now, sir. Imagine, I say, this great man getting down to 1 cent barter with his workingmen and keeping a penny peanut stand!

Mr. SCOTT. The mistake was in not employing you to attend to it. [Laughter on Democratic side.]

Mr. BRUMM. In the first place, your money could not employ me, because I would be afraid you would cheat me out of my wages afterwards. [Jeers on the Democratic side.]

On the subject of police I shall read from an official paper which I have received from Harrisburg:

PENNSYLVANIA, OFFICE OF THE COMMONWEALTH,
Harrisburg, June 11, 1888.

DEAR SIR: I can find no record of A. J. Weaver as policeman; but I do find that March 4, 1879, John A. Weaver, of Northumberland County, was commissioned policeman for the Mineral Railroad and Mining Company, Summit Branch Railroad Company and Lykens Valley Coal Company, for the counties of Dauphin, Northumberland, Schuylkill, and Columbia. The application is signed by Holden Chester—

That is the Holden Chester the gentleman got his telegram from.

Mr. SCOTT. The same man.

Mr. BRUMM (continuing to read)—

Superintendent Mineral Railroad and Mining Company, per R., and a request by S. P. Wolverton to issue the commission for J. A. Weaver at present, and that the superintendent would call for the other commissions, for the application contained three names, namely, John A. Weaver, Timothy Reagan, and Thomas Steele.

Very truly, yours,

WILSON N. GERHART, *Chief Clerk.*

Hon. CHARLES N. BRUMM.

The paper I have just read shows the commissioning of these policemen by this company. The gentleman may say that he never was connected with this company; but this company transferred its rights as to three collieries, the Hickory Ridge, the Swamp Ridge, and another one, to this gentleman; and these policemen had charge after the transfer as well as now. I have an affidavit here, as follows:

SHAMOKIN, *June* 4, 1888—

This is a letter which was afterwards sworn to—

SHAMOKIN, *June* 4, 1888.

DEAR FRIEND BRUMM: Your favor of recent date, asking me whether I was commissioned as a local coal and iron police, etc., is at hand. In reply would say that I was first commissioned in 1872 as policeman for the Mineral Coal Company with jurisdiction in Northumberland, Schuylkill, Columbia, and Montour Counties. I still hold that commission. The Union Coal Company now own three collieries that were then owned by the Mineral Company; they are Hickory Ridge, Hickory Swamp, and Green Ridge collieries. I served process of eviction on half a dozen tenants of said collieries in 1885 during a strike for higher wages when the men were idle four or five months, afterwards going back to work on smaller wages than before. Two of these tenants, I remember their names, are Dennis Cannon and Robert Graham. Service was dated July 25, 1885. Edwin Ludlow was superintendent at these collieries at that time. A. J. Weaver was a coal and iron policeman and was regularly employed as a special policeman for these collieries for a good while.

How about the action of Congress on the Petersburgh mine explosion—

By the way, he was the man who set fire to the match that exploded the Petersburgh mine, and he was inquiring about that matter—

I do not think we are recognized as we deserve to be. You know all about it, and as an old schoolmate and playmate, as well as comrade, I would like you to take some interest in it.

With best wishes for your success,

Your old friend,

HARRY REESE.

STATE OF PENNSYLVANIA, *County of Northumberland, ss:*

Personally appeared before me a notary public in and for the said county, Harry Reese, a resident of the borough of Shamokin, county and State aforesaid, who, being duly sworn according to law, doth depose and say that the facts contained in the foregoing letter are true to the best of his knowledge and belief.

HARRY REESE.

Sworn and subscribed this 4th day of June, A. D. 1888.

[SEAL.] J. Q. ADAMS, *Notary Public.*

Now, Mr. Speaker, some time ago a committee was down here to wait on Mr. SCOTT, to get him to pay the same wages that were being paid by the Reading Railroad Company. He promised this committee, in my presence, to have it adjusted, and said he would have the matter arbitrated. They went home, and nothing was done to arbitrate the matter. I saw Mr. SCOTT afterward, and he then declared to me that the reason nothing was done was because these men were Knights of Labor, that they belonged to labor organizations, and he would not deal with them or have anything to do with them. I reminded him of his promise. He did not care what was the promise he made to

them; he would give them to understand they must go to work first; he would recognize no men that came in the capacity of organized laboring men or as committee men. The affidavit says:

STATE OF PENNSYLVANIA, *County of Northumberland, ss:*

Be it remembered that on this 14th day of June, A. D. 1888, before me, a notary public in and for said county, personally came William Hodgert, who, being duly sworn according to law, doth depose and say, that during the years 1883 and 1884 he was living at Green Ridge, Nothumberland County, Pennsylvania, in a house belonging to the Union Coal Company.

That is the company that Mr. SCOTT is in control of.

That there are a great many houses belonging to said coal company all of which were occupied by the men employed at the colliery at that place, which said colliery also belongs to the said Union Coal Company. That your deponent while living there was employed in said colliery as a miner, and that he received his money from the said company regularly after they had deducted the amount due them for rent of house occupied by him. That on or about the 4th day of January the said colliery ceased work to make repairs that were claimed to be necessary, and remained idle from the said 4th day of January, 1885, to about the middle of April following. That the men then went back to work, and that within two or three days after they had started to work the said company gave them notice that there would be a reduction in their wages of each car. That the men refused to work for them at this reduction and at once instituted a strike, demanding that the 5 cents per car which had been taken from them be restored and that the 5 cents per car which had been taken from them in January of the same year also be allowed them. That the said colliery remained idle from then up to July 27 following. That during all this time your deponent lived in the same house he had been living in, and that on or about the 17th day of July he was served with a notice from the said company to vacate the premises within ten days, and that said notice was served by Al. Weaver, of Shamokin, a member of the Coal and Iron police force. That upon the expiration of the time for which said notice was given, namely, on July 27, 1885, your deponent moved from said premises in obedience to said notice.

WM. HODGERT.

Sworn and subscribed to before me the day and year aforesaid.
[SEAL.]

W. B. FAUST, *Notary Public.*

STATE OF PENNSYLVANIA, *County of Schuylkill, ss:*

On the 1st day of June, A. D. 1888, personally appeared before me, the undersigned, a justice of the peace in and for the said county, W. H. Lee, a citizen of St. Clair, county of Schuylkill, State of Pennsylvania, who upon being duly sworn deposes and says that he served on a committee.

This repeats and swears to what I have stated in reference to the committee; it corroborates under oath the statement I have made.

A MEMBER. Give the substance of it.

Mr. BRUMM. The substance of it I have given: that Mr. SCOTT had agreed the matter should be adjusted; that he went back on that agreement, and assigned no other reason at the time than that they were organized laboring men, although they told him at the time what they were.

PENNSYLVANIA, *County of Northumberland, ss:*

Be it remembered on this 14th day of June, A. D. 1888, before me, a notary public in and for said county, personally came John O'Brien, who, being duly sworn according to law, doth depose and say that he is a citizen of the United States and a resident of the borough of Mount Carmel, in said county of Northumberland, where he has resided for almost three years; that some time in the year 1884 he moved to Green Ridge, in said county, and went to work as a miner for the Union Coal Company, and at the same time moved into one of their houses which they rented to their employés; that he worked for the said Union Coal Company until the strike for better wages was instituted in April, 1885, and lived in one of their houses until September of the same year; that some time in July, 1885, he was served with a notice to vacate the premises he was occupying within ten days, and that said notice was served by Al Weaver, of Shamokin, a member of the Coal and Iron police force.

JOHN O'BRIEN.

Sworn and subscribed to the day and year aforesaid.
[SEAL.] W. B. FAUST, *Notary Public.*

I have here the affidavit of Mr. Davis, corroborating further what I have said as to Mr. SCOTT'S promise to pay as much wages as anybody else was paying for similar work, and his failure to do so.

Mr. Speaker, how much time have I?

The SPEAKER. Allowing for the interruption of the gentleman from Pennsylvania [Mr. SCOTT], the gentleman has six minutes remaining.

Mr. BRUMM. Well, it is hardly worth while to go on further for those six minutes, and I will reserve them, although I have other proofs and affidavits which I hope I will be permitted to print in the RECORD.

The SPEAKER. The gentleman reserves his remaining time.

Mr. SCOTT then replied, after which

Mr. BRUMM proceeded: I ought to have my own time to reply to what I allege on his part as falsehood, and which I regard as a new question of privilege. When he speaks of the Coal and Iron police and detectives, he simply goes into special pleading and relies on technicalities and upon a definition of terms, because he himself admits the rest of the charge made in saying that those he employed are what are called Coal and Iron police, as shown by the RECORD. But, besides that he has nothing to contradict my sworn statements positively made by disinterested parties, and he has no statements except the affidavits of those who are his own employés, who are his superintendents, who do not directly even contradict it. They enter into special pleading, as to dates when certain companies were changed, and therefore assume that he is not responsible, although he was a stockholder!

Mr. SCOTT. I deny that. It is not true; that is false.

Mr. BRUMM. I know you have denied a great many facts that are so, but your denial amounts to very little. What he has quoted from a newspaper as to what I said with reference to the Coal and Iron police I would say the only difference between the gentleman and myself is that I told all about them; I acknowledge it to be true; but what was charged as to him he falsifies and tries to wriggle out of. I did say the Coal and Iron police for certain purposes were necessary institutions, but went no further. I never denounced them as an institution. I merely said that it was your people that employed them and you must be responsible, and that is all that amounts to. Now, sir, there was another Coal and Iron police he employed, as the extract I shall have printed will show, and which if I had time I would read. One of the witnesses is a Democratic constable, the other a Republican, and this very Hoosac, from whom he has affidavits, is charged by one of these men, I think it is the Democrat, with being a detective, and that the work of a detective and that of a Coal and Iron police are one and the same thing, and they know that and I know that, and when you prove one you prove the other, and I could prove it if I had the time. There is no difference substantially.

There is one point I wish to make yet, and it is with reference to his employment of this contract labor. In the district I traveled over, in the mines at Mount Carmel, he employs Italians by the hundred and employs Hungarians, and has them packed together in shanties like sardines in a box, and they live as bad as any Chinamen ever lived, and he has misplaced and transplanted American-born citizens, Irish, German, Welsh, and English, by the laborers whom he gets in there and who can be got in no other way except from the padrone and contract system among the Italians and Huns. I would like to know, Mr. Speaker, what is the difference between the padrone system which he pursues and that of the Chinese Six Companies; the one like the other brings the Italians into the country under contract that he employs, for there is no other way of getting them.

I am now speaking from my own personal observation, and the gentleman [Mr. SCOTT] dare not deny it. I name the localities: Hickory Ridge, Hickory Swamp, Eagle Ridge, at and around Shamokin and Mount Carmel. The testimony that I have not time to have read, or even to attempt to read, will fully sustain me in every position that I have taken, not only as to the policeman, but as to the gentleman's evictions, as to his imposing upon the workingmen, as to his "pluck-me" stores, and the manner in which he conducts his "pluck-me" store business. It will show that he forces his men to deal in those stores and forces them to rent his houses; that unless they rent from him they can not work; that when single men are employed he makes them board in this stable, where he has them huddled together just as many as he can possibly pack in, and that for this stable he receives an exorbitant rent. I ask that gentlemen will read this testimony, the whole of it. I am only sorry that I have not had time to read it myself and comment upon it as I proceeded; but read it, gentlemen, and it will satisfy you all.

Mr. DUNN. Regular order.

Mr. SCOTT. Mr. Speaker, I object, as I objected in the beginning to the gentleman [Mr. BRUMM] being permitted to put anything in the RECORD that he has not uttered or had read here. During his last six minutes he said he was going to put this, that, and the other thing in. I want to know what it is, and I object.

Mr. BRUMM. I will show the gentleman what it is.

[Cries of "Regular order" on the Democratic side.]

Mr. BRUMM. What I propose to put in are additional affidavits and statements of which I read parts, and I shall insist on putting them in as a matter of right.

The SPEAKER. Under the rule, the gentleman can not print anything in the RECORD not spoken or read, unless by consent. The regular order is demanded. The Clerk will report the title of the pending bill.

Mr. HATCH. I did not hear the last remark of the Speaker. I want to know whether any leave has been given to the gentleman from Pennsylvania [Mr. BRUMM] to print any paper in the RECORD that he has not had read?

The SPEAKER. The Chair stated to the contrary when the gentleman from Pennsylvania [Mr. SCOTT] objected.

Mr. BRUMM. I rise to a parliamentary inquiry.

The SPEAKER. The gentleman will state it.

Mr. BRUMM. I wish to inquire whether when a member in his remarks reads part of a paper, the statement of witnesses in his own defense, on a question of privilege, he is to be cut off in this way? On the question of privilege I would have unlimited time under the rules of the House; but I was prevented from reading these papers because it was contended that I would be given only an hour, although I had a right to as much time as was necessary to vindicate myself, and I desire now to know whether under such circumstances, having started to read a part of these statements and these letters, naming the authors of them, I am not to be permitted to put the statement and the letters on record.

The SPEAKER. Nothing but what has been spoken or read on the floor can go into the RECORD, except by consent.

Mr. BRUMM. If he was innocent he would not object.

Mr. BLAND. Mr. Speaker, the gentleman from Pennsylvania [Mr. BRUMM] had no right to one minute's time except by unanimous consent. [Calls of "Regular order!"]

The SPEAKER. The regular order is demanded.

The Tariff.

SPEECH

OF

HON. JOHN D. STEWART,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, September 17, 1888,

On the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue.

Mr. STEWART, of Georgia, said:

Mr. SPEAKER: I am well aware of the fact that the "tariff" has not only been elaborately discussed upon this floor, but has received great consideration by the American people. This is quite reasonable, when we remember that it is a question which largely affects our material prosperity. And as the issue between the two great political parties on this question has been so sharply defined by the opposing candidates for the Presidency, I shall therefore beg the indulgence of the House while I submit some views touching this matter; possibly the views of no member of the Republican party has received wider circulation than those of Hon. WILLIAM MCKINLEY, of Ohio. I therefore desire to call attention, not only to his views as expressed on this floor, but especially to positions which he sought to maintain recently in a speech delivered by him in the State of Georgia. In opening his remarks he announced that he had come to discuss a subject of great national concern, one affecting sixty millions of people. It is quite true that the tariff as an economic question is one of supreme importance, and if it be a benefit all alike should enjoy it. But, unfortunately, a protective tariff seeks to promote the interest of favored classes and discriminates against others who are least able to bear it. This I propose most abundantly to demonstrate in this discussion. As many of the arguments used by my distinguished friend are so contrary to the true theory of our American institutions, and in my opinion so detrimental to our best interests, I am not willing that they shall pass unchallenged.

The gentleman at great length insisted that the taxing power of the Government could be used not only for raising revenue, but for the purpose of fostering "infant industries;" in other words, to aid industries not belonging to the public, but to individuals. Let us consider this argument for a time. Section 8, and Article VIII, of the Constitution of the United States, provides:

The Congress shall have power to lay and collect taxes, duties, imposts and excises; to pay the debts and provide for the common defense and general welfare of the United States.

Was this grant of power to collect taxes for private or for public purposes? If duties are so levied as that the interests of one man or class of men are promoted thereby, will any reasoning mind contend that such conduct is for the "common defense or for the general welfare of the United States?" Will any constitutional lawyer for a moment contend that the Government has authority under the taxing power to extend aid to any one in conducting a private business?

Judge Cooley, in discussing this question, declares that—

Constitutionally a tax can have no other basis than the raising of revenue for public purposes, and whatever governmental exaction has not this basis is tyrannical and unlawful. A tax on imports, therefore, the purpose of which is not to raise revenue, but to discourage and indirectly prohibit some particular import for the benefit of some home manufacturer, may well be questioned as being merely colorable, and therefore not warranted by constitutional principles.

Judge Miller, of the Supreme Court of the United States, in discussing the legality of a tax levied by the city of Topeka, Kans., has declared:

Of all powers conferred on the Government that of taxation is most liable to abuse. This power can as readily be employed against one class of individuals and in favor of another, so as to ruin the one class and give unlimited wealth and prosperity to the other, if there are no implied limitations of the use for which the power may be exercised. To lay with one hand the power of the Government on the property of the citizen and with the other bestow it upon favored individuals to aid private enterprises and build up private fortunes is none the less robbery because it is done under the forms of law and is called taxation. This is not legislation, it is a decree under legislative forms. Nor is it taxation. Beyond a cavil there can be no lawful taxation which is not laid for public purposes.

In passing I would ask the gentleman if this is not good authority.

The supreme court of Maine, in considering this question, has declared that—

No public exigency can require private spoliation for the private benefit of favored individuals.

The supreme court of Iowa has held—

No authority or even dictum can be found which asserts that there can be any legitimate taxation where the money to be raised does not go into the public treasury.

And the court further declares—

That the uniform weight of judicial authority is that taxes are to be imposed for the use of the people and not for the special benefit of individuals.

Of course tariff taxes are legal and proper when laid for purposes of raising revenue for the Government. But when such taxes are not raised for revenue, but imposed for the purpose of giving special advantages or protection against competition, then the Government uses the taxing power to aid private concerns, and every dollar of taxes so collected is both oppressive and tyrannical, for the reason that the money does not go into the Treasury of the Government, but into the pockets of preferred classes. Will the gentleman deny this proposition?

If there was any one proposition more strenuously insisted upon than any other by the gentleman in his Chautauqua speech, it was that under the Constitution power was conferred upon Congress to so legislate as to benefit one industry, although it might result in injury to others.

In refutation of this proposition I desire to submit some testimony of a high character.

President Jefferson, in 1801, declares that—

Agriculture, manufactures, commerce, and navigation, the four pillars of our prosperity, are the most thriving when left most free to individual enterprise.

President Jackson, in 1837, declared—

That the General Government had no power to raise revenue or impose taxes except for the purposes enumerated in the Constitution. And if its income is found to exceed these wants it should be forthwith reduced and the burdens of the people so far lightened.

President Polk, in his message to Congress in 1845, used the following language:

Taxation, direct or indirect, is a burden, and it should be so imposed as to operate as equally as may be on all classes in the proportion of their ability to bear it. To make taxing power an actual benefit to one class necessarily increases the burden of the others beyond their proportion, and would be manifestly unjust. It is true, protection to domestic industries is of popular import, but it should apply under a just system to all the various branches of industry in our country. The farmer or planter who toils yearly in his field is engaged in domestic industry, and is as much entitled to have his labor protected as the manufacturer.

There is so much of wisdom, statesmanship, and patriotism in the following statements made by President Polk, on March 4, 1845, that I will ask to have the same included as a part of my remarks:

One of the difficulties which we have had to encounter in the practical administration of the Government consists in the adjustment of our revenue laws and the levy of the taxes necessary for the support of Government. In the general proposition that no more money shall be collected than the necessities of an economical administration shall require, all parties seem to acquiesce. Nor does there seem to be any material difference of opinion as to the absence of right in the Government to tax one section of country or one class of citizens or one occupation for the mere profit of another. In levying tariff, revenue should be the object, protection the incident. To tax one branch of home industry for the benefit of another would be unjust. No one interest can rightfully claim an advantage over others, or to be enriched by impoverishing others. I have heretofore declared that I was opposed to a tariff for protection merely and not for revenue.

President Fillmore, in 1850, said:

A high tariff can never be permanent. It excludes competition, and thereby invites the investment of capital in manufactures to such excess that when changed brings distress, bankruptcy, and ruin upon all who have been misled by its faithless protection.

President Pierce, in 1855, said:

It is now generally conceded that the purposes of revenue alone can justify the interposition of duties on imports.

And again he says, referring to the report of the Secretary of the Treasury, that—

A reduction of duties, with a view to raising revenue and not protection, may now be regarded as the settled policy of the country.

President Arthur said, in discussing our system of tax and tariff legislation—

That our merchant marine should be raised from its enfeebled condition, and new markets provided for the sale beyond our borders of the manifold fruits of our industrial enterprises.

That there should be a healthful enlargement of our trade with Europe, Asia, and Africa, which should be sought by reducing tariff burdens on such of their wares as neither we nor the other American States are fitted to produce, and thus enabling ourselves to obtain in return a better market for our supplies of food.

President Arthur, in 1882, also declared—

That it was a maxim of political economy that all taxation are burdens, however wisely or prudently imposed. And that substantially all agree in the doctrine that only such taxes ought to be levied as are necessary for a wise and economic administration of the Government.

Again he declares—

That the present tariff system is unjust; it makes unequal distributions both of its burdens and its benefits.

Mr. Kasson, a Representative from Iowa, in 1886 declared that such a system is simple robbery, taking from one home industry and paying it to another. He said it is an attempt against the law of Providence to force the people of this country to pay more for what they need than by the laws of Providence they would otherwise need.

Mr. Storrs, who stood high in the councils of the Republican party, denounced this system of taxation, declaring that it was a scheme for the private enrichment of the manufacturer.

President Cleveland, in discussing this question of unequal taxation, declares the system vicious, inequitable, and illogical. But why refer to what others have said regarding this system of taxation? Is there not a sense of justice in the mind and heart which instinctively declares that a system of taxation which takes from one class of men in order to enhance the riches of another class is not only contrary to the

genius of our American institutions, but is most oppressive and necessarily unconstitutional?

The gentleman saw proper to give what he claims to be the true definition of a protective and free-trade policy. Without stopping to discuss these definitions as an abstract question, and without repeating the constitutional argument heretofore presented, it will be quite sufficient to say that those who favor a revenue tariff are not undertaking to arrange a new scheme of taxation on a free-trade basis. We are dealing with existing conditions as we find them. Large and numerous industries have grown up in this country, and we would raise revenue only to the extent of public necessity, and should this afford incidental benefits to these industries we would gladly see their usefulness enlarged. As to the definition of Hon. Mr. Tucker, to which the gentleman referred, it is the same as given by Mr. Walker in the tariff of 1846, and this act certainly resulted in no harm to the country. Under it we sought to establish the policy that the exchange of products between two countries must necessarily be beneficial.

The basis of all trade consists in the exchange of products, and we would extend and broaden our commerce so as we might have access to the markets of the world in which to dispose of our surplus and sell or exchange our products in that market which offers the greatest inducements. This, in my opinion, should constitute the true American system, rather than that policy which would circumscribe our trade to the boundary of our own possessions. As to the manner in which England conducts her financial affairs, to which the gentleman referred, it is only necessary in reply to say that England buys our cotton, our surplus grain, and other products. If we refuse to trade with England, or make the rate of our import duties so high as in a large measure to force her products out of our market, in such case what shall be done with our cotton? We produce more than is necessary for home consumption. What would become of our surplus grain? Does it need an argument to convince any one that the more we extend our commerce the greater will be the benefit to our people? We do not simply seek to copy England's policy, but seek an exchange of products which may benefit both countries, and without which policy we would have no market for our surplus products, which would necessarily result in reducing the price of both our products and our labor.

The gentleman dwelt at great length on the adoption of that policy which by imposing a high rate of duty on foreign imports he claimed would necessarily develop the fields, factories, and mines of our country, and would also maintain high rates of wages and bring general prosperity. This entire argument was based upon the presumption that a protective tariff does not increase the price of products to the consumer. This argument has been so often refuted that it would seem unnecessary for me to make a reply. In the very nature of things how is it possible for us to impose a high rate of duty on imported products so that the manufacturer of such products in this country can sell theirs at a higher price, at such rate as to maintain high wages, and at the same time make the manufacturer rich, and that all this will not increase the price of the product to the consumer?

The argument is illogical, fallacious, not to say ridiculous. In 1867 Senator Sherman, of Ohio, in a speech declared—

that every duty on imported merchandise imposed a burden upon the purchaser; that it gave to the domestic manufacturer an advantage equal to the duty.

Surely my friends on the other side of the Chamber will accept this as good authority. Do not the facts abundantly establish the proposition that this condition of things helps the capitalists, burdens the consumer, and only tends to deceive the laborer, for where is the evidence that the laborers of this country are rapidly accumulating fortunes?

The gentleman announced with seeming triumph that a protective tariff was in accordance with the highest law of nature—that of self-protection. In reply to this let it be taken for granted that the capitalist as well as the wage-worker in favored industries is benefited by a protective tariff. Does the gentleman for a moment contend that it would be legally or morally right that the taxing power of the Government be turned over to one individual, so that he can gather up part of what his neighbor's make? This is the complaint we have against this "American system."

Shall seven millions of farmers pay a tax of 47 per cent. to help along one and three-fourths millions of persons who are engaged in protected industries? Shall the Government become the guardian of a favored industry and leave the remainder without guardianship? When we press the gentleman's logic to its last analysis what is it? It amounts to this, that it is both constitutionally and equitably right to so adjust the rates of duties or so select subjects of taxation as to secure advantages to some classes over others. It must necessarily follow, if the foregoing be true, that it would be both constitutional and equitable for the Government to raise an excess of revenue by taxation for the purpose of applying the same to the promotion of private and favored enterprises. If we aid one by direction, the other indirectly, and by both methods take so much money from the people by taxation, what difference does it make to them, and would the gentleman for a moment say that he is in favor of the latter proposition?

In discussing the relation of the Government to the people, the true philosophy of the situation is this: We must suppose that all men voluntarily select their business avocations and start with an even race the business of life; and it is not to be presumed that the Government will step in and by the use of the taxing power make one avocation more profitable at the expense of others; but this is exactly what the so-called American system is doing. The farmers toil and bear burdens for the benefit of certain protected industries, and the gentleman and his political associates look on with complacency, as well as to say,

Lay on, Macduff;
And damn'd be him who first cries, "Hold, enough!"

I take pleasure in serving notice on the gentleman that this state of things can not last. The storm is gathering. "The handwriting is on the wall." The scales are falling from their eyes. If we mistake not, when the ides of November come the toiling millions of this country will rise in their might and hurl from place and power those who maintain this oppressive system.

The gentleman sought to illustrate his theory of taxation by insisting that Atlanta taxed itinerant traders. This illustration must have fatigued the gentleman's imagination. If Atlanta imposes a tax on itinerant traders, most certainly it is a tax for revenue and not for protection; and the gentleman must have known that under the Constitution of our country the city of Atlanta could not discriminate between one of her own citizens and another citizen of Georgia, or between the citizen of Maine and the citizen of Ohio. Will not the gentleman see that his illustration was most unfortunate, and while referring to the subject of taxation by the city of Atlanta I think the city, with its rapid prosperity, which has challenged the admiration certainly of Georgia, if not of the whole South, will fitly furnish an illustration well calculated to show the fallacy of the gentleman's theory of taxation.

Atlanta in her progressiveness has established a trade not only with the people of Georgia, but with Alabama, Tennessee, North and South Carolina, and Florida. She affords a great market where the products of the farm and the mine and skilled artisan in large quantities are exchanged for goods and necessary articles. This exchange has been most beneficial to both parties. It has built up one of the finest cities in all the land. Now let us apply the gentleman's theory. If products from the country districts of Georgia or from the surrounding States had been subjected to a high rate of duty before they could be admitted into Atlanta, what would have been the result upon the prosperity of that city? Could it have prospered? Could the burnt city have risen like magic?

Was it not the free-trade system which Atlanta has enjoyed above every other consideration to which her greatness may be ascribed; and it this system has proven so beneficial in the growth and prosperity of Atlanta why would it not apply with equal force to the prosperity of our country? I beg to suggest that while our American States are sovereign, yet between them we have had free trade; and who can overestimate this fact in accounting for our great State and national prosperity? By the improved methods of the application of steam to machinery the distance between this and other countries becomes a matter of small moment, and when the markets of the world shall have been opened to our commerce and the raw material of other countries brought here and placed under the manipulations of our skilled mechanics and artisans, who can foretell the grandeur that is in store for our people?

The honorable gentleman urged with apparent confidence that a high-tariff system was justified from the fact that it furnished to our people a home market. Nothing could be more deceptive on the part of our protection friends than this cry of the home market. It is a mere catchword and most misleading. We have a home market and always will have. It was not created by law. It is based on the principle of supply and demand. But this is no reason why we should not have access to the markets of other countries. With a country great in resources, one upon which nature has bestowed its grandest gifts, with our broad acres and salubrious climate, with a population whose skill may well challenge the admiration of mankind, with machinery and implements unexcelled, we will always have a surplus, unless in case of great draught or pestilence. And shall we with a purpose simply to benefit one-fifth of our population be shut in as well as shut out from the markets of other nations?

It is inconsistent with that great purpose which marks the civilization of the age to insist that we shall be confined to the home market. Our resources are abundant and almost boundless. Why, then, shall we be influenced by that narrow and contracted policy which would make us dependent alone on the home market? It appears from the statistics that American products which sold in the European markets from 1853 to 1880, consisting of breadstuffs, provisions, cotton, etc., amounted to $8,000,000,000. Is not this fact of itself conclusive proof that we should not be confined to the home market, but that all of the highways of the world should be opened to our commerce? Take another statement: In 1880 the value of all farm products was $2,500,000,000. Of this amount $242,000,000 was cotton, of which $211,000,000 were exported, leaving cereals and provisions to the value of $2,289,000,000; and of this amount $375,000,000 worth were exported, leaving about $1,914,000,000 to be consumed at home.

Is not this statement, taken from the census of 1880, well calculated to convince any unprejudiced mind that the home-market theory is a delusion? China well illustrates what a home market will accomplish for a nation. During the last three thousand years in a great measure she has kept the accumulations of her own people within her own borders. What a spectacle her condition presents to the civilized world to-day. She has reduced the home-market theory to its last analysis. Possibly no people on earth can subsist on so small an amount as the Chinese. And to-day, in the industrial arts, she in her infancy. Her people are the slaves of capital. I would present China to my protection friends as an object lesson on home market; and would ask, do they want the sad fate which has been visited the people of China to be meted out to the people of America?

The honorable gentleman from Ohio, in his Chautauqua speech, in discussing the effect of a protective tariff upon the farming interests of this country, used the following language:

> Next to the laborer the farmer is the immediate beneficiary of the American system. It brings to his plantation a city of consumers. The farmer and the factor are brought into close proximity. The problem of transportation is largely eliminated. He finds a market not only for staple products which would bear transportation, but for many products which, but for a home market, would waste and decay in the fields. I need not tell a farmer in this neighborhood of the beneficial effects of a home market. His own experience is better than any philosophy. Atlanta has given him an object lesson. It has increased the value of his farm products and enhanced the value of every foot of ground he owns.

We all admit that America is primarily and essentially an agricultural country. Of all the great interests of this country agriculture is pre-eminently the most important. If crops are plentiful and the prices of products good, all other interests prosper. If agriculture suffers, other interests of the country suffer likewise. For a number of years, from drought and bad legislation, agriculture has languished, and the honorable gentleman no doubt was well aware of the fact that many Southern farms are mortgaged heavily, and farming for a number of years has proved to be unprofitable to many engaged in it. And no doubt he fancied that any proposition proposing to benefit the condition of the farmer would be received most favorably by them. I not only controvert the gentleman's proposition, but maintain that of all classes of people of the United States, a protective tariff affects most injuriously the farmers.

What are the facts? Facts are more potent and reliable than theories. In the United States there are engaged in agriculture about 7,670,493 persons; in manufacturing, about 2,738,895 persons. The value of farms in 1880 was $10,197,096,776, and the value of capital in manufacturing was $2,790,372,606. Of the products raised by the farmers of the United States in the year 1887 there was exported, in round numbers, about $100,000,000, and for the payment of which in a large measure the farmer received goods of foreign manufacture; upon which goods there was an average duty of 47 per cent. That is to say, for every hundred dollars' worth of goods imported, a deduction of $47 was made by the custom-house officers. Who were compelled to bear this loss? Will any one assert that it was not a loss to the farmer?

Let us consider some specific articles commonly used by farmers. There was imported in the year 1886:

Cotton-ties, at original cost	$603,394
Duty paid on same, at 35 per cent	211,188
Aggregating	814,582

Whose loss was this, if not the farmers'?

The duty on bags and bagging imported in the year 1886 for grain and cotton amounted to, at 40 per cent., $482,240. Will the gentleman deny that this large sum of money was a loss to farmers? And in addition to this there was used of home-made bagging for grain and cotton about $16,000,000. A large per cent. of this amount was profit—the result of the high-tariff system.

Take for instance the article salt. In the year 1886 we imported $1,493,397 worth of salt, upon which there was a duty collected of $706,324. There was of home production used about $5,000,000, and doubtless the price of this was enhanced as much as two millions, the result of the tariff system. I think it but reasonable to claim that there was at least $2,700,000 paid on salt in the year 1886 directly the result of the protective tariff, and of this amount at least one-half was paid by the farmers.

Take another article in common use, that of window-glass, upon which there is an average duty of 86 per cent., and from the best data that can be obtained it is probable that more than $5,000,000 annually are paid by the people of this country on acconnt of this high protective system, and a large proportion of this is paid by the farmers.

I will trespass upon the time of the House to call attention to one other article, that of crockery. In 1886 home-made estimated at $10,000,000; imported, $4,992,214; duties collected, $2,829,535; making a total $17,821,749, the average duty being 57 per cent. At a reasonable calculation this country paid in 1886 about $6,000,000 for the privilege of using crockery, and a very large proportion of which was used by farmers. There was collected on cotton cloth in 1886, such as are mostly use by farmers, duty to the amount of $1,701,795. I might multiply articles until the heart would grow sick. Under our present tariff the farmer pays on articles in common use the following tariff rates:

	Per cent.		Per cent.
Brick	35	Paper	25
Horseshoe nails	31	Castor oil	1.02
Trace chains	53	Castile soap	50
Handsaw	40	Epsom salts	30
Files	40	Window-glass for houses	80
Spool thread	60	White lead for paint	54
Bags and bagging for grain	40	Iron used in making stoves	45
Combs and brushes	30	Hollowware, pots and kettles, etc	53
Alpaca umbrella	50	Crockery, common	55
Iron and steels average for farm use	45	Glassware, common	45
Tin cups, dippers, etc	42	Table cutlery and spoons	45
Tin for canning fruits, etc	34	Pickled and salt fish	25
Shingles for roof	25	Salt	86
Barbed wire	55	Sugar	86
Cotton hosiery and undershirts	45	Sugar	48
Woolen hats and caps	75	Vinegar	36
Gloves	60	Pickles	35
Blankets	60	Rice	1.23
Alpaca dresses	63	Carpets, common	74
Woolen dresses	70	Furniture	35
Scissors	45	Looking-glass	60
Hair-pins	45	Men's clothing, wool	48
Needles	25	Woolen hosiery and undershirts	75
Ink	25		

I herewith submit a table which I have prepared, showing the benefits which will accrue in the conduct of a small farm should the Mills bill become a law:

	Value.	Duty.		Net. saving.
		Per cent.		
One cook-stove	$35.00	47=	$16.45	
By Mills bill		31=	10.85	
				$5.60
One set crockery	12.00	55=	6.60	
By Mills bill		35=	4.20	
				2.40
One set cheap glass-ware	4.00	56=	2.24	
By Mills bill		41=	1.64	
				.60
One set cheap cutlery	2.00	50=	1.00	
By Mills bill		35=	.70	
				.30
Two carpets, $12 and $15	27.00	47=	12.00	
By Mills bill		30=	8.00	
				4.00
Sugar	20.00	60=	12.00	
By Mills bill		50=	10.00	
				2.00
Molasses	10.00	47=	4.70	
By Mills bill		35=	3.50	
				1.20
Salt	3.00	40=	1.20	
By Mills bill		Free list.		
				1.20
Two suits each for father and two sons, six suits, $14	84.00	54=	45.36	
By Mills bill		45=	37.80	
				7.56
Two suits each for mother and two daughters, six suits, $14	84.00	82=	68.88	
By Mills bill		40=	33.60	
				35.28
Twelve pair shoes, $2.50 each	30.00	30=	9.00	
By Mills bill		15=	4.50	
				4.50
Six wool hats, $1 each	6.00	73=	4.38	
By Mills bill		40=	2.40	
				1.98
Six fur hats, $2.50 each	15.00	52=	7.80	
By Mills bill		40=	6.20	
				1.60
Six ladies' hats, $3 each	18.00	70=	12.60	
By Mills bill		40=	7.20	
				5.40
Six bonnets for ladies, $3 each	18.00	70=	12.60	
By Mills bill		40=	7.20	
				5.40
Farming tools, including plows, gear, hand-saw, ax, draw-knife, chains, etc	60.00	47=	28.20	
By Mills bill		34=	13.60	
				14.60
Medicines	20.00	*48=	9.80	
By Mills bill		30=	6.00	
				3.80
Thread, needles, thimbles, scissors, etc	12.00	35=	4.20	
By Mills bill		20=	2.40	
				1.80
Four pairs blankets, $3 each	12.00	70=	8.40	
By Mills bill		40=	4.80	
				3.60
Two umbrellas, $2.50 each	5.00	40=	2.00	
By Mills bill		30=	1.50	
				.50
Cotton hosiery, undershirts, etc	8.00	45=	3.60	
By Mills bill		30=	2.40	
				1.20

By Mills bill		43=	.86	
				.34
Starch	4.00	94=	3.70	
By Mills bill		47=	1.88	
				1.82
Rice	10.00	113=	11.30	
By Mills bill		100=	10.00	
				1.30
Total cost under present tariff	501.00		189.27	
Under Mills bill			104.98	
				84.29

* Average.

Will our farmers carefully consider these figures and ask themselves the question, How is it possible that a protective tariff is beneficial to them when about 50 cents of every dollar they invest in the common necessaries of life are for the benefit of somebody else?

In view of the facts was there ever a system of taxation devised which is more oppressive in character than that of the protective-tariff system as it affects the farming class of this country?

Take one other illustration showing the iniquity of this system: Suppose that one of our farmers should ship to Liverpool 1,000 bushels of wheat, and that the Liverpool prices was $1 per bushel, and suppose that he should exchange this for cloth at 50 cents per yard; when he reached the custom-house at New York with his cloth the custom-house officer should say, "I demand and will take 1,000 yards of your cloth for import duties; you can carry the other thousand yards home with you."

Again, suppose that one of our farmers should ship to Liverpool 1,000 bushels of corn and exchange the same for 1,000 pairs of shoes; when he reaches the port of New York the custom-house officer would say, "Leave with me 500 pairs of these shoes for custom dues; the other 500 pairs you can take to your home." And if the farmer should sell his wheat or corn in Liverpool for money and should seek to purchase shoes or clothes in this country the deduction would be the same, as the home manufacturer would add to the original cost of the articles the ordinary custom-house duties.

From 1849 to 1860, under what is known as the Walker act, we had low tariff. From 1860 to 1880 we had a period of high tariff. Now let us see if statistics do not demonstrate the fact that the tariff in fostering "infant industries" has most injuriously affected the farming interests of the country. In 1850 the estimated wealth of the country was $7,000,000,000; of this amount farmers owned $4,000,000,000. In 1860 the estimated wealth was $16,000,000,000; the farmers' share was $8,000,000,000. This was a period of low tariff. In 1880 the estimated wealth of the country was $43,000,000,000. The farmers' share was $12,000,000,000. From this it will appear that under a revenue tariff the agricultural interests of the country increased in proportion to all other interests, but under the high protective tariff from 1860 to 1880, agriculture increased $4,000,000 and the protected industries $23,000,000. Are not farmers industrious? Are they not honest and frugal? And how can this state of things be accounted for if the position of the gentleman from Ohio, that protective tariff benefits the farmer, is a correct one?

Farmers by assiduous toil have supplied the home market and produced a surplus, and this surplus they have exchanged for clothing, medicine, and other needful articles, upon all of which they have paid a high duty, and the assertion that high tariff benefits them is not only misleading but absolutely untrue. Farmers should ever keep in mind that tariff is a tax, and a tax that they pay for some one else.

The gentleman from Ohio, as well as others of his political faith, insist that a protective tariff is most benefical to the laboring men of this country. If this be true, then all should sing pæans of praise to the American system. But of all the devices resorted to to increase the gains of the manufacturing class this is the most specious.

Why not claim that the tariff laws regulate heat and cold, the changes of the moon, or some other of the laws of nature? If this position of protectionists be true, that tariff regulates wages, then it must follow that wages are low in a low-tariff country and high in a high-tariff country. What are the facts touching this matter? Germany and France have a high tariff and masons get $4 to $5 per week, and in free-trade England masons get $8 per week. Germany and France pay common laborers $2.60 to $3 per week, free-trade England pays $5 per week, and about the same rates apply to other wage-workers.

If tariff regulates wages and benefits labor, then for the same class of work wages should be uniform in this country; but an investigation shows that New York pays laborers less than Chicago, Philadelphia more than St. Louis.

In 1880 in Alabama hands in blast-furnaces received 98 cents per day, in Virginia for the same work they received 82 cents per day—this was unskilled labor—and in Pennsylvania the same kind of laborers were paid $1.02. Take the yearly wages of hands in the woolen mills. In 1880 in New York they received $285, in Indiana $230, and in Ohio $196. In the cotton mills in 1880, in New York they received $281, and in Georgia $181. How can this all be accounted for on the theory that the tariff regulates wages? It only shows the utter folly of the claim of our protective friends. As all must know and should have the candor to admit, the wages are regulated by various causes.

The law of supply and demand is the most potent; the question of rents and the price of provisions in various localities enter largely into the account, and climatic influences affect the price of labor. Let us concede that it is true, for sake of argument, that a protective tariff does increase the wages of those working in manufactories, but how does this benefit those who do not labor in factories? The bricklayer, carpenters, roofers, plasterers, common carriers, merchants, and tradesmen; they compose the greater part of our wage-workers. Have they no rights? Are they to be outlawed? By what right are they to be disinherited? Are they aliens or bastards in the sacred household of protection? I submit their cases to the tender mercies of our protection friends.

I submit as another evidence that a protective tariff is not beneficial to the laboring man: for a number of years the country has had high protective tariff and there has grown up between labor and capital an antagonism bitter and uncompromising. Never before in the history of the country has the relation between labor and capital, between the wage-worker and his employer, been so unsatisfactory. We have had strikes and lock-outs (amounting almost to revolution), which in the last six years has resulted in the loss of from fifty to sixty millions of dollars to the wage-workers; property has been destroyed and blood has been shed. Organizations have been formed, and so great has been the antagonism between the wage-worker and his employer, that many have become alarmed, and have entertained fears about the perpetuation of our American institutions.

How can this state of things be reconciled with the idea that a protective tariff is beneficial to the laboring man? Is it not true in the protected industries that large fortunes are accumulating in the hands of the employers, and that these millionaires are growing strong, aggressive, and insolent, and are forming combinations or trusts, by which they have advanced the prices of many articles which are of absolute necessity, and the result is that the wage-workers have become distrustful? In view of these facts how can any reasoning mind claim that protective tariff is beneficial to labor?

From 1846 to 1868, under a low tariff, this state of things did not exist. Strikes were scarcely known; between capital and labor there was no antagonism. In discussing the proposition that a protective tariff benefits the people of our country, our friends are accustomed to resort to the census reports, and put together a large number of figures, and are constantly exclaiming "See what the tariff has done." "Behold the high development which it has wrought." Will the members of this House indulge me for a moment while I expose these misstatements, not to say wanton misrepresentations. For I now here declare that the highest prosperity of the country is realized under a low tariff. In 1850 our population was 23,191,876; in 1860 it was 31,442,321; this was an increase of 35 per cent. In 1870 our population was 38,573,851; in 1880 our population was 50,155,783—an increase of only 30 per cent. From 1850 to 1860 we had low tariff; from 1870 to 1880, a high tariff.

In 1850 we had 9,021 miles of railroad; in 1860, 30,635 miles of railroad, an increase of 239 per cent. in ten years. In 1870 we had 32,904 miles of railroad. In 1880 we had 93,349 miles of railroad, which shows that under a high protective tariff our gain was much less than under a low tariff. Take the valuation of real estate: In 1850 it was valued at $7,066,562,986; in 1860, at $12,055,053,118, a gain of 70 per cent. In 1880 it was valued at $16,902,993,543, a gain of 41 per cent. for the preceding ten years. Take our manufacturing industries: In 1850 the amount of capital invested was $533,245,351; in 1860, $1,209,953,715, a gain of 89 per cent. In 1870 the valuation was $2,118,208,769; in 1880, $2,790,272,600, an increase of 58 per cent. And I might extend these remarks by showing the condition of nearly all our industries, establishing the fact that the country enjoyed the greatest prosperity during the period of low tariff, and especially is this true in reference to all commerce as well as the values of personal property.

It would seem that candor would induce the friends of protection to cease the oft-repeated declaration that the country has prospered most during the period of a high protective tariff. While it may be true that wealth has rapidly increased in the hands of a few who are at the head of our protected industries, and who are engaged in the management of great corporations, and who have been the participants in trusts and combinations, yet it is not true during the period of a high protective tariff that the wealth of the great mass of our people has rapidly increased.

It is quite noticeable that the gentleman from Ohio in his Chautauqua speech failed to call the attention of the country to its present financial condition. There is now locked up in the vaults of the Treasury of the United States about $130,000,000 money which was gathered from the people by an excessive and unjust taxation. This money belongs to the people and the business interests demand that it be returned to them. It was wrung from their hard earnings by the "American system," or in other words by a protective tariff, and as time progresses we are collecting about $10,000,000 each month more than our necessities demand. This large surplus of money in the Treasury is a standing menace to good government. It tends to corrupt legislation, and when the friends of revenue reform bring forward a measure which would only tax the people an amount necessary for an economical administration of the government the gentleman from Ohio is found working with might and main in opposition to this measure, seeking to maintain his "American system," contributing all his strength of mind and character for the maintenance of a system whose burdens gather thousands from the hard earnings of the toiling millions of this country, and in view of such conduct on his part it does not appear to me consistent that he should pose so conspicuously as the friend of the laboring man.

And no one knows better than the gentleman from Ohio that the present is a war tariff, and that while it is true that originally there were many articles upon which duty was collected which have since

been stricken from the schedule, yet unfortunately for the country changes have been made in the interests of the rich and not the poor. At one time duties were collected on the wealth of the country, and railroads, banks, incomes, and other articles which affected the rich, but these have been repealed, and the necessaries of life have to bear the burden, being subjected to a rate of duty of about 47 per cent. This proposition in itself should demand the consideration of every patriot. I most heartily join in voicing the sentiment of the gentleman that we have a great country and a great people, but our greatness is not on account of the tariff, but was attained in spite of it.

We are a great people, great in moral and intellectual force. We are proud of our citizenship in this the greatest of Republics. We glory in our Constitution and in all our institutions of free government. They have been handed down to us, made hallowed by the blood and prayers of our fathers; and may a kind Providence save them from the "Briarian arms" of the American system as taught and practiced by the Republican party. The gentleman from Ohio must have felt much elated after delivering his recent speech in finding his name in the papers heralded forth as "Ohio's giant" and "The greatest of living statesmen." While I realize that he went forth as the "Jupiter Tonans" of his party, and while I would not detract one iota from his well-earned reputation as an orator and statesman, yet I would venture to ask, is he not mortal? Indeed,

> "Upon what meat doth this our Cæsar feed
> That he is grown so great?"

Pensions.

SPEECH

OF

HON. WILLIAM D. OWEN,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 21, 1888.

Mr. OWEN said:

Mr. SPEAKER: On Saturday, the 28th day of July, my colleague [Mr. MATSON], chairman of the Invalid Pension Committee, delivered through the pages of the CONGRESSIONAL RECORD an address to the voters of Indiana on the subject of soldiers' pensions. It is the most unique and singular address ever delivered in this House. It is a discussion of pensions for political purposes.

My colleague's committee had no bill on the Calendar under discussion at the time. Neither was the subject of pensions in any way before the House. He projected this discussion upon a House which, so far this session, has not been greatly disturbed by any effort on his part to secure the passage of his general pension bills.

As chairman of the Invalid Pension Committee he is supposed to be thoroughly conversant with pension legislation. Are we to understand that he has, while exercising the functions of that office, prepared this address, and that it is to go to the voters of Indiana as a carefully prepared semi-official statement of the part taken in the pension legislation of this country by the two great parties? If so, it is pitiful to see to what vagaries of mind a political interest will drive an otherwise good man.

This double-barreled address, at long range, on the Hoosier voter, has been shrewdly constructed to raise doubts in unwary minds and lead the innocent and hitherto unpensioned claimant into a new political association which will be of no benefit to him. The controlling sentiment of that association is unfriendly to the pensioners' cause, and if it be a second time successful on the 6th of next November it will feel then so securely established in power that it will say to its Northern allies as the gentleman from Kentucky [Mr. BRECKINRIDGE] said concerning the widows' pension bill last session, "This thing has gone far enough," and the lamb, having lain down inside of the lion, will be heard of no more forever.

In the address there is a manifest attempt to impress the voter that the Republican party has not been very much of a friend to the Union soldier after all—that it has neglected and shamefully abused him—but that the party whose brains and leadership and three-fourths of whose electoral votes were lately in the interest of the rebellion, and who, on this floor, repudiate that secession was a crime, and proclaims treason is a difference of opinion, and that the Lost Cause is a coerced and sleeping patriotism, and whose 105 Representatives out of the party's 167 shall in caucus shape the party's legislation, is the only old, original, and genuine John Jacob Townsend brand of Union lovers and liberal pension advocates of the Union soldier.

I had always thought my friend a sturdy Cromwellian statesman. I had never suspected that he had a sportive mind, and that out of his stentorian tones you could pick a grim joke like this, but it is in him. When I came to this part of his speech, I settled myself down for a good time. I uncorked my soul and let it go on a spree. I felt a sense of rollicking and joyous delight as I saw a Hoosier in one little speech on the solemn subject of pensions put COX and MASON and ALLEN on the retired-list. There is a broader sense of humor in this than in anything that has occurred since this Administration made Chester A. Faulkner chief of a division in the Pension Office, or the late General VOORHEES proclaimed that Indiana had vindicated him.

I find reason sufficient for all these singularities of my esteemed colleague in the fact that he is the Democratic candidate for governor of Indiana.

We are not particular about the issue in the campaign. If it shall be the tariff, we will go before the people on the Mills bill. If it is on loyalty to the soldier and his cause, we will accept that. There is nothing mean in an Indianian. He will accept anything that has politics in it. We have more politics to the square foot than any other State in the Union. Our girl babies are born singing campaign songs, and our boys come whooping along in a hurry so as to get in the first drum corps.

The gentleman says that one of the President's objections to the dependent bill, vetoed last session, was that it gave equal pensions to the short-term and large-bounty men with the long-term men. There is appearance of reason in this position, but we do not grant pensions because of length of service, but for loyal service. I do not complain because the pittance is great to any, but because it is so little to all. Mr. Cleveland has no right to complain because of the short-term, large-bounty men. Who made large bounties a necessity? The Democratic national convention in 1864 declared the war for the Union a failure. Its papers and orators attacked the administration so maliciously and audaciously that it produced a public distrust until the heart of loyalty staggered and large local purses were raised and county pledges given for the relief of families while the men were at the front, and offers of large Government bounties were necessary to give courage to the country and prove that the war could and would be prosecuted to the preservation of the Union. Had Mr. Cleveland and his coadjutors withdrawn their attacks on the rear and given a real, actual, and uncriticising support to the prosecution of the war, instead of closing in April, 1865, it would, when Lee was swept back from Gettysburgh's heights, have closed on July 4, 1863.

THE ISSUE.

The distinguished chairman says that he will set out the issue and the only issue between the parties upon this question of soldier relief.

He says the Democratic position on the dependent bill is to eliminate the condition of dependence and grant a pension to all soldiers now suffering from a disability not contracted in the service, and "without reference to their financial condition;" that the Republican position is to grant pensions to all soldiers who are suffering from disability contracted since the service which incapacitates them for the performance of manual labor and who are "financially dependent."

Mr. Chairman, this demonstrates how cleverly an issue can be made when one man makes it. No gentleman on this floor knows better than my friend that the Republican members are so intensely in favor of pension legislation that although they may support one bill in preference to another, they will support almost any bill that may be proposed in behalf of the soldier. The difficulty in this House is to have any kind of a general pension bill brought to consideration. If the distinguished chairman had devoted one-half as much time and ability in securing a day for the consideration and passage of the dependent or arrears bill as he has to preparing a pension speech for Indiana, that bill would long since have become a law.

The per diem rating to the man who is disabled since the war, who has financial resources, is a just and merited badge of honor and I am in favor of it, but to the man who is incapacitated for labor and is wholly without means and "dependent for his support," 90 cents or $1.80 per month from the Government whose life he saved, "as her remembrance of his valor," is enough to make patriotism weep. To demonstrate that my friend does not mean all he says concerning Republicans and Democrats in the issue he makes, I here insert the bill he himself has introduced during this session of Congress:

EXHIBIT A.—HON. C. C. MATSON'S BILL.

A bill for the relief of honorably discharged soldiers and sailors who are now disabled and dependent upon charity for a sustenance.

Be it enacted, etc., That all persons who have served one year or more in the military or naval service of the United States, in any war in which the United States has been engaged, and who have been honorably discharged therefrom, and who are now, or who may hereafter be, suffering from mental or physical disability not the result of their own vicious habits or gross carelessness, and which incapacitates them for the performance of any manual labor, and who are dependent upon public charity for their sustenance, shall, upon making due proof of these facts, according to such rules and regulations as the Secretary of the Interior may provide, be placed upon the list of invalid pensioners of the United States, and be entitled to receive $8 per month; and such pension shall commence from the date of the filing of the application in the Pension Office, upon proof that the disability then existed, and continue during the existence of the same on the degree herein provided.

THE MILLS BILL OR THE ARREARS BILL.

It is estimated that it will require $250,000,000 to pay the arrears of the soldiers—as every soldier who has applied for a pension since July 1, 1880, which has been granted him, draws only from the date

of his application. This $250,000,000 is not now in the Treasury. Hence the gentleman found it necessary to make a statement concerning his vote in favor of the Mills tariff bill, which measure proposes, if it is passed, a reduction of $80,000,000 in the Government revenues. Now, there are but $132,000,000 of surplus in the Treasury. The fiscal year just closed, June 30, accumulated $53,000,000 of this surplus.

The Secretary of the Treasury has reported to us that the revenues for this fiscal year will be $440,000,000. Our appropriations are $421,000,000, so at the close of this year there will be a surplus of only $19,000,000. Hence, if the Matson arrears bill should pass, there would be no money in the Treasury with which to pay the soldier his dues.

After the gentleman states that there will probably be collected each year a sufficiency to pay the arrears as they are adjudicated, he skips the present great necessity of $250,000,000 that are to be required at once. He finds it necessary to state further that a tax could be levied in another direction and upon the incomes of the wealthy of the nation. This matter was proposed by Mr. Morrison in the Forty-ninth Congress. It received the general execration of the soldiers throughout the country.

The Government from her gathered revenues pays out her money in a thousand different directions. There is no specific tax levied for a specific purpose. Above all taxes the direct excise has been the most obnoxious to the people in all ages of the world, and yet we here find this distinguished champion of the soldier interests proposing to single him out from the other objects in the Government and levy an obnoxious and inquisitorial tax for his support. There is not a soldier in the land but would spurn to be thus made the pauper beneficiary of wealth. The poor soldier, uncared for, may go hobbling along the streets with his back bowed under the weight of toil during his remaining years, but he does not propose that the millionaire, rolling by in his carriage, shall say "There is a man I am helping to support!"

Plainly, he who votes for the Mills bill and desires it to pass does not in reality support the arrears bill. My colleague felt this so keenly that he made a very clear statement of what he would do when these two votes were presented to him and he compelled to choose one of them. He said:

> But it has been represented that this bill (arrears) antagonizes the progress of tariff reform, and that the enactment of this law would be hostile to the Mills bill.
>
> I am now, and have been constantly since that overshadowing issue was made, a consistent and earnest friend of every measure that has been proposed for relief from overtaxation. I yield to no one in devotion to this cause, for I believe it to be the cause of all the people, and the soldiers are only a part of the great body-politic.

In plain language, he means that he would rather vote to reduce protection and decrease the revenues than to retain the revenues and pay the soldier his arrears. I was not prepared to hear him say that the tariff overshadows all duty to the soldier. I was amazed when he declared that the soldier was only a part of the great body-politic, and that he must not stand in the way of the Democratic party's proposed tariff reform—free trade to the Northern farmer's products and protection to the Southern planter's. When it comes to striking down protection, wages, industries, happy homes, prosperity, and the arrears bill for the soldier, I am against him and in favor of this country and the soldier who saved it.

CONCERNING ARREARS.

Many members have introduced bills these seven years looking to the granting of arrears of pensions, but none of these have ever come to a final consideration on the floor of the House. The distinguished chairman says concerning the arrears bill:

> I have reported this great measure of relief in both Congresses prior to this one.

Here again my colleague falls into an inaccuracy. He did not report such a bill as this (arrears) in the last, the Forty-ninth Congress. Nor did he report such a bill in the prior, the Forty-eighth Congress. He has never reported such a bill prior to this time. A thousand dollars lies in a bank in Indianapolis, Ind., placed there by John C. New for any man that will make his affidavit, stating time and place where he heard General Harrison state that a dollar a day was enough for a workingman. As no one has called for that thousand dollars or will ever do so, it is an idle surplus in the treasury. I will give my colleague a check for that thousand dollars if he will produce his favorable report of an arrears bill to this House prior to his nomination for governor of Indiana.

THE TRUTH CONCERNING THE ARREARS ACTS.

I am satisfied the people have the impression that heretofore when the soldier received his pension he also received arrears with it. That is, when the Pension Office granted him, say, $10 pension per month, that it was dated back and he received the $10 per month from the time of his discharge, and that a Republican Congress declared that this should be stopped, and passed a law that arrears should not be allowed on pension claims filed after July 1, 1880. I am sustained in such impression by the fact that of the large number of petitions I have received asking for an arrears bill, every one of them state that "the financial straits of the Government at the resumption period and the burden of the bonded debt made it necessary to restrict arrears to soldiers, but such reason does not now exist," etc.

This is all a mistake. By the general law of the land a pension begins at the date of application when granted in the Pension Office or on the date of signature by the President if passed by Congress. To permit the pension to commence at the time of discharge has always required a special act of Congress. So that instead of the Republican party limiting the arrears, it is by that party's legislation that they have been granted. At the inception of our present pension laws in 1862 the then Republican Congress passed an act declaring that if a soldier applied for a pension within one year of his discharge his pension should begin at the date of his discharge. If he did not apply for a pension until after the year, then it did not begin at the time of his discharge.

On the 4th of July, 1864, another law was passed granting arrears if the soldier applied within three years after discharge.

On July 2, 1868, another law was passed extending the time granting arrears to five years from the time of discharge. It was then supposed that every pension claim would be filed long before the expiration of this five years' limitation. The Government was not only gracious in extending this time, but also in limiting it, for the soldier's evidence was dying and moving away, and the Government was kind in urging him to a prompt action. Many soldiers are to-day unable to make the necessary proof in cases that are entirely worthy, because of the death of their evidence or its removal. On March 3, 1873, another five years' limit was enacted, and when the general revision of the laws was made this limit was incorporated and began running on January 22, 1874.

These several acts granting arrears have been introduced by Republicans and were passed by a Republican Congress, which, up to this time, was Republican in both branches.

UNLIMITED ARREARS.

The Democrats carried the country in 1874, and on March 4, 1875, the first Democratic Congress since 1861 took its seat. The House continued Democratic until March 4, 1881. In 1878 Mr. Cummings, a Republican, introduced a bill absolutely repealing all limitation of arrears and granting the soldier, at whatsoever time he might apply for his pension, his arrears back to date of his discharge. That bill slumbered in the Democratic committee until the 19th day of January, when Mr. Haskell, a Republican, moved to discharge the committee from further consideration of the measure and suspend the rules and pass the bill. It passed, receiving 164 votes to 61 against it, as follows:

Democrats for the bill	48
Democrats against the bill	61
Republicans for the bill	116
Republicans against the bill	None.

As the bill passed under suspension of the rules it required two-thirds, or 150 yeas, of which 150 the Republicans furnished 116 and the Democrats the remainder.

This bill was taken up in the Senate on January 16, 1879, and after brief debate it was passed by a vote of 43 to 3.

The ayes were 27 Republicans and 16 Democrats, and the 3 nays were all Democrats.

The arrears act was not introduced by a Democrat, was not moved by a Democrat, was not passed by Democratic votes. A majority of 13 Democrats in the House voted against it. Every vote cast against it in either House was by a Democrat.

That act received the approval of President Hayes January 25, 1879, and became a law:

IT REPEALED THE ARREARS LIMITATION ABSOLUTELY

and for all time. It created no new limitation. It was a measure of full relief. It was a Republican law.

Under the Cummings act the soldier obtained his arrears whenever he chose to apply for a pension, but for eight years no such arrears have been granted.

LIMITED ARREARS.

When and where and how was this new limitation enacted?

W. A. J. Sparks, late Democratic Commissioner of General Land Office, was at that time a member of the Appropriations Committee of this House, and near the close of that session he brought in the appropriation bill in which provision was made to pay arrears under the Cummings act, and added to it this section:

> *Provided*, The application for such pension has been or is hereafter filed with the Commissioner of Pensions prior to the 1st day of July, 1880, otherwise the pension shall commence from the date of filing the application.

This Sparks proviso repealed the Cummings act after July 1, 1880.

I recite the history of these enactments that the soldier may know that every dollar of arrears he has received was the result of Republican legislation. That under the Cummings act he would have been receiving his arrears to-day, but the Sparks amendment on an appropriation bill has cut him out of those arrears where his application for pension has been filed since July 1, 1880.

MATSON'S AMAZING CLAIM.

I now desire briefly to recite all other pension legislation of the country since 1860, because my colleague [Mr. MATSON] has reaffirmed his statement made in this House, July 7, 1886, that—

> All the legislation friendly to the soldier that has amounted to anything since the war has been given by a Democratic House of Representatives.

That statement is correct or it is not correct.

I have been at some pains to get a transcript of pension legislation with accompanying facts throughout, but have completed my list only to 1875, and I have to acknowledge obligations for the data I here use to the gentleman from Michigan [Mr. CUTCHEON] and use by his permission. We all accept his recitations of fact without question, for he is one of the most conscientious and painstaking, as well as one of the ablest gentlemen on this floor.

THE BEGINNING OF PENSIONS.

Our Government was practically without a pension system when the war came, and out of the necessities of that war was passed the foundation act of our present system on July 14, 1862. It was necessarily crude and defective, but it was a patriotic move in the right direction. A great system of legislation is inaugurated along general lines, and by experience its inequalities are remedied and proper amendments are made, and wise adaptations are given it as unprovided-for developments may indicate.

When the Republicans turned Congress over to the Democrats on the 4th of March, 1875, after fourteen years of continuous control, in addition to countless minor acts were fifteen great measures of pension legislation on the statute-books.

Each one of these acts, great and small, was to remove some friction in the law, or to add a proper amendment looking to the building up and making broader and better this generous and patriotic department of our Government.

The great system under which the Pension Office is now run, with its army of clerks, its platoons of special examiners in the field, its payment of $80,000,000 yearly to the veterans, is all under the law which was founded by the Republican party and amended from time to time and finally codified in 1874. The additions since that time to the law have been very few and very simple.

PENSIONS FROM 1875 TO 1885.

My colleague says that whatever defects there may be in the pension laws are legacies of Republican rule. Well, since the close of the war the Republicans have had control of this House twelve years, and my friend's party has had control of it for twelve years. Now, what have you done to alter and amend this legacy of defects, and broaden and liberalize the pension laws?

"You broadened a law and gave a separate pension for the loss of both a hand and a foot by act of February 28, 1877. It reached two hundred and twenty-one soldiers.

"By act of March 3, 1877, pensions were granted in certain cases to soldiers who had engaged in rebellion against the United States.

"On March 8, 1878, you amended the Republican law of February 14, 1871, granting pensions to the survivors of the war of 1812. It reduced the term of service from 60 to 14 days. It provided that a widow's pension should cease if she should marry.

"The act of June 18, 1878, makes the pension of a lieutenant-commander in the Navy the same as that of lieutenant commanding.

"The act of June 20, 1878, limits the fee of claim agents to $10.

"The act of June 17, 1878, increased the pensions of soldiers and sailore who had lost either both hands, both feet, or the sight of both eyes to $72 per month. These were all receiving $50 per month. It affected about two hundred pensioners.

"The act of February 19, 1879, provides for paying three months' extra pay to the officers and soldiers engaged in the military service of the United States in the war with Mexico. A very large proportion of these were in the South.

"The act of June 9, 1880, was intended to prevent the reduction of the pensions of certain petty officers in the Navy.

"The act of 1883 making the soldier's enlistment *prima facie* evidence of soundness."

This completes the pension legislation of the Democratic Congress up to the 4th of March, 1885, except the arrears act, concerning which I have already spoken.

VETOES.

I will use this interim between a Republican and Democratic President to speak of vetoes. My colleague makes the soft impeachment that "there may be difference of opinion upon some of the vetoed bills, but there is no ground for the reckless charge by political opponents for the purpose of appealing to the passions or prejudices of the ex-soldiers."

Now, I submit there have been no reckless charges made. It has not been necessary to make any reckless charges. All that has been necessary to do is to "Tell the truth."

The distinguished gentleman [Mr. MCKINNEY] delivered a speech recently in the House, and it is remarked that he was put forward by the President and Commissioner of Pensions to defend them from certain charges, and the great elaboration with which that speech is prepared at least gives color to the fact that it had its origin in the Pension Office. Mr. MCKINNEY says:

> We can only judge of a man's character by his daily life. We judge of a man's sentiments regarding any question before him by his treatment of that question. President Cleveland has had ample opportunity to show his feelings toward Union soldiers, and we have no hesitancy in placing his record before the country as a representative of the Democratic party.

I accept the definition here given, and, like the fathers, "submit facts to a candid world." Let us see how many pension bills have been approved and disapproved by the various Presidents. The count stands as follows:

	Approved.	Vetoed.
Grant	575	8
Hayes	307	.....
Arthur	736	.....
Total	1,618	8

So, from Grant to Arthur there were 1,618 pension bills approved and 8 were vetoed.

How stands the case with President Cleveland?

In the Forty-ninth Congress, 949 pension bills were passed. The Constitution plainly says that "if the President approve the act, he shall sign it." Hence, if he does not sign, he does not disapprove. Of these 949 acts—

President Cleveland vetoed	124
Disapproved (refused to sign)	156
Pocketed and defeated	1
Total number disapproved	281
Approved and signed	668

Thus it will appear that President Cleveland, while approving 668 private pension bills, disapproved of 281. His disapprovals are nearly one out of every three bills.

In all the years of Republican administration there were but eight vetoes of pension bills. Five of these were because the Pension Office had granted the pension while the bill was pending in Congress, and the special act was vetoed by the President because it was for the benefit of the pensioner. The three pension bills that were really vetoed by the Republican Presidents in twenty-four years were because the claimants were deserters.

KEEPS UP THE RECORD.

During the present session of Congress 319 pension bills have been passed. Of these the President has vetoed 55 and disapproved of 50, making 105 disapprovals. He appears to be keeping up the record of the past two years of one disapproval to every three bills passed.

I think comment is unnecessary. It is idle to talk about President Cleveland signing more bills than any Republican President. The facts are a President can not sign any more bills than Congress passes and sends to him. So the test is how many has he vetoed. My friend MCKINNEY says:

> We judge a man's sentiments regarding any question before him by his treatment of that question.

When the question of signing or of vetoing and disapproving pension bills came before the Republican Presidents in twenty-four years they vetoed three, and the claimants in these cases were proven to be deserters.

Of the pension bills that have come before him in three and one-half years President Cleveland has vetoed one hundred and seventy-nine and has disapproved two hundred and six.

My friend MCKINNEY says:

> President Cleveland has had ample opportunity to show his feelings toward Union soldiers, and we have no hesitancy in placing his record before the country as a representative of the Democratic party.

In view of the facts tabulated and presented here, it is evident that President Cleveland has exercised his ample opportunity to show his feelings toward the Union soldier, and I am sorry my friend MCKINNEY asserted that he stands before the country as a representative of the Democratic party.

Mr. MATSON challenges any one to state a case where the President has animadverted unnecessarily upon any soldier when vetoing his bill. When a man is without anything else to defend his cause, I like to see him defend it with audacity. Why, sir, the recital of the President's veto jests and heartless innuendoes against soldiers were made a thousand times in the Indiana campaign in 1886, and before the lash of that recital my friend's majority for Congress shrank more than a thousand votes.

Take the case of John Herbst, which Mr. MCKINNEY quotes from with commendation at such great length, and I will show it to be heartless treatment of a loyal man. Herbst was captured by the rebels and confined in Belle Isle, Salisbury, and Andersonville. Finally, to escape the awful horrors of his confinement, he conceived the idea of joining the rebel army and then escaping to the Union lines. Before he carried out his object he was taken prisoner with many others by the Union troops. His case was investigated and his story found to be true and he received an honorable discharge from the Union Army. Having died as a result of his army troubles, a pension was granted him by Congress, and in vetoing the bill President Cleveland said:

> No record is furnished of the number of battles in which he fought against the soldiers of the Union, and we shall never know the deaths and the wounds which he inflicted upon his comrades in arms.

This is a very patriotic strain from the Executive, but I venture to say there is not a man who served in the rebel army and is acquainted with the evidence in this case but will say that such a man as John Herbst, standing in the rebel battle lines, never fired his musket when it was likely to do any injury to his late comrades in arms.

There were not many soldiers who left the prison pens and volunteered in the rebel army, but in the history of all nations there are records of men who have, by volunteering in the lines of the enemy, sought to and made escape ultimately back into the line of their friends. My friend McKINNEY can doubtless see no virtue in this. It is strange how devoted he becomes to loyalty and honor when he gets a Union soldier in a rebel prison.

The President continues:

But I will take no part in putting a name upon our pension-roll which represents a Union soldier fighting against the cause he would uphold, nor should it be for a moment admitted that desertion and treachery are excused when it avoids the rigors of honorable capture and confinement.

His capture was honorable, I have no doubt, and the confinement was honorable so far as he was concerned, but his confiners were not honorable. Let the twenty thousand spirits that went out from the misery and horrors of Belle Isle to their Maker make answer. Let the sixty thousand soldiers, with all the indescribable misery and woe and torments of Andersonville and Libby, who went from torment to torment unto their death, answer if their confiners were honorable. These prisons, with their torture and their crime, are the most horrible blots on the pages of modern warfare and a shame to the nation's civilization.

A friend has just handed me a clipping from a newspaper concerning this affair which I insert here:

In striking contrast with this case is another. F. C. Armstrong was also a soldier in the Union Army. He was not captured and never experienced the horrors of a rebel prison, but, after the battle of Bull Run, when the Union cause looked dark and Northern Copperheads were chuckling over the anticipated failure of the war, he deserted and voluntarily joined the rebel army. He fought so well on that side that he was promoted, and continued to serve under the stars and bars till the end of the war, when he graduated with honor into the Democratic party. There also he has won promotion, for the discriminating President who vetoed John Herbst's widow's pension, appointed F. C. Armstrong to an Indian inspectorship.

Mark the difference in the two cases. Herbst was captured, Armstrong was not. Herbst enlisted in the rebel army to escape the horrors of Andersonville, while Armstrong deserted voluntarily. Herbst intended to rejoin the Union Army; Armstrong did not. Herbst was captured by Union forces and received an honorable discharge, while Armstrong fought on the other side till the end of the war. Herbst died of disease contracted in the service, while Armstrong still survives. Herbst's widow asks for a pension and Armstrong asks for an office. The President vetoes the pension bill and appoints the deserter an Indian inspector. Herbst's widow pines in poverty and Armstrong enjoys a Government salary.

STRANGE CLAIMS.

Our Democratic friends make very singular claims concerning the issuance of pensions. They seem to be under the impression that Mr. Cleveland grants each pension given a soldier. Every time a list is granted it is published by a partisan press that the Administration has granted such a number of pensions, when, in fact, the Republican party created the law under which every one of these pensions is granted. Whenever a prominent citizen receives a pension in some small town, the papers forthwith assert that Mr. Cleveland gave him a pension.

A CURIOUS NEGLECT FOR SOLDIER-LOVERS.

Mr. MATSON says the Republicans have had control of the Government until 1885 and have absolutely controlled all legislation. Now, this is another one of his information vacuums. The Democrats have had control of this Congress since March, 1875, with the exception of two years. If such was your devotion to the soldier, and so great were the defects in the pension laws, why did you not formulate valuable action in his behalf and pass it and keep on passing it each session you met, and if a Republican Senate would not agree to it, or a Republican President should disapprove of it, you would have shown your sentiments and the blame for the wrong would rest where it belonged.

But the CONGRESSIONAL RECORD, unfortunately for your sentiments, shows that every pension act from 1875 to this hour save one was passed by Republican votes, and on every bill save that one enough Democractic votes were recorded against it to defeat it. In a word, if none but Democrats had been in Congress during these fourteen years, all measures of relief for the Union soldier would have been defeated.

PENSIONS FROM 1885 TO DATE.

Let us examine the history of general pension legislation since you have had control of the Presidency. Mr. MATSON says:

But, really, Mr. Chairman, I submit that a record of substantial benefits accomplished under Democratic rule will be much more satisfactory than a record of fulsome promises, recklessly disregarded by the Republicans, and believing that the honest and deserving ex-soldiers of the Republic desire to know what has been done, and are willing to make up their judgments upon the records of the two parties.

He then gives a table of pension certificates issued during the past three years. The table says that 168,231 more pension certificates were issued under the three years of Commissioner Black than under three years of ex-Commissioner Dudley. Now, this is so good a showing that my colleague did himself and his party an injustice in not setting forth a statement in detail of how so much work is done. I am compelled to acknowledge to you, because I am devoted to the soldier's interest, that this is an enormous increase. My esteemed friend declared he would submit a record of substantial benefits accomplished under Democratic rule, but his well-known modesty got the upperhand of him and he did not give the record substantially. I shall come to his relief and give it for him.

First. These 168,231 pension certificates more than were issued during the three years of Dudley's control have not been issued because more work was done in the office, as the hours of work have not been increased nor the force decreased.

Second. It is not because the Commissioner of Pensions has been at his post more regularly than ex-Commissioner Dudley, for he was reported absent from his post one hundred and nineteen days during the past year.

Third. It is not because the office was managed for political interests under ex-Commissioner Dudley and has been free of political interests under Commissioner Black, for the boastful charges made by Commissioner Black against ex-Commissioner Dudley were, by a public investigation, singularly disproved, and there is now nothing left but the recklessness of party slander to sustain that charge.

In contradistinction to this, the Pension Office is at this time engaged in political work in the State of Indiana, and in my Congressional district. It is being done by John Lux, special examiner, located at Logansport, which place is my home. He has caused to be published in a daily paper, of which our Democratic postmaster is the proprietor, certain affidavits seeking to convict James T. Bryer, editor of the Journal, a Republican paper, of unjustly assailing Commissioner Black, and these affidavits thus used are a part of the pension files.

When an examiner is in the field, all the papers in a given case are sent him, and he secures additional information concerning the case involved. He is the Pension Office in the field. Papers once placed in the Government's hands can not be taken therefrom, nor copies thereof be made, except under a special grant. Evidence taken by the special examiner is as much in the hands of the Government office as if placed within the walls of the Pension building, yet John Lux used pension information thus placed in his hands in an effort to convict a Republican editor of an assault on the Pension Office.

The facts in the case are as follows: Albert D. Richards, pensioned for an injured hand, lost that hand by an accident, told A. R. Putney that Commissioner Black had revoked his pension on the ground that his army disability no longer existed. Now, such a thing would be an outrage, if true, but under the pension laws it could not be done; but the public at large do not understand all about the workings of these laws. Mr. Putney, with a just indignation at a wrong done an old soldier, gave Richard's statement to the Republican editor, who properly characterized such an act in his paper. Examiner Lux, under order to investigate the case, took the statement of the Republican editor. He secured a statement from Richards, who had moved from the city, that his pension had not been revoked and that he had never so stated. Lux caused the editor's statement to be printed in the Democratic paper, and followed it by the affidavit of Richards, which resulted in a vigorous attack against the Republican editor for a "base fabrication" concerning Commissioner Black.

Whereas, the facts are Richards did state that his pension was revoked; he so stated to A. R. Putney in the presence of Major Gordon, a reputable citizen, and of Mr. Hammontree, a gentleman of such high character that as a Republican he has been three times successively elected to offices in that city and township which is three hundred Democratic majority. He made such statement to Doctor Banta and many other well-known citizens. Pension Examiner Lux did not give these latter statements to publication.

The Pension Office, through its representative, Examiner Lux, has prostituted the records of the United States Government to a political and partisan purpose, and that he is a malicious, vindictive, and unscrupulous partisan in such action is evidenced by the fact that he withheld from publication the affidavits of well-known and reputable citizens that would have shown that the defamer of the Pension Office was in reality Albert D. Richards, and not the Republican editor.

Fourth. If the increase is not because of the management of the office, then it must be the result of legislation in Congress. Let us give the pension legislation of the past three years a "substantial" consideration, and we may there discover the real truth about these magnificent figures.

THE WIDOWS' BILL.

Seven bills were introduced for widows' pensions in the Forty-ninth Congress. I am told that six of these were introduced by Republicans and one by a Democrat. That is of small concern. I suppose the committee made a report answering to all of these bills. Mr. MATSON proclaims that President Cleveland signed this bill. Well, why should he not? Is it for a moment to be supposed that any man, whomsoever he may be, elected to the Presidency of this Republic, would veto a general bill increasing a widow's pension from $8 to $12 a month?

It is a curious condition of affairs, when the President signs a pension bill instead of vetoing it, that a proclamation of congratulation is issued to the country.

Let us get at the evidence as recorded on this bill. When the bill was up for consideration my colleague, General BROWNE, offered as an

amendment the bill he had introduced to repeal the Sparks arrears limitation. General BROWNE'S bill was at that time before Mr. MATSON'S committee and had not been reported to the House. A filibuster ensued which prevented the House from taking a vote on Mr. BROWNE'S amendment. On February 2 Mr. MATSON moved to suspend the rules and pass the bill with an amendment relating to date of marriage and without the Browne amendment. When Mr. MATSON made this motion as he did it was not possible for General BROWNE'S motion to be voted upon, because after a motion has been made to suspend the rules and pass a bill no amendment is permitted.

The distinguished chairman of the Invalid Pensions Committee, who now seeks to stand before Indiana as the champion of the arrears bill, instead of reporting such a bill and seeking its passage at the last Congress, actually, by a parliamentary movement, defeated all possibility of the passage of such a bill at that time. The vote to increase the widows' pensions from $8 to $12 was passed by 198 yeas and 66 noes, as follows:

Democrats for the bill	80
Democrats against the bill	66
Republicans for the bill	118
Republicans against the bill	None

Now, as two-thirds of the Democrats did not vote for the bill, under the rules of the House it could not have passed. It took Republican votes to save it, and it got them every one. If there ever was a pension measure that appealed to humanity and kindly patriotism it was the widows' bill, and yet 66 Democrats voted against it, enough to have defeated it if only Democrats had been in Congress. The Republican vote saved the bill. In power or out of power the solid Republican vote can always be depended upon in favor of the Union soldier.

This bill increased the widows' pensions from $8 to $12 per month, and 102,568 widows, minors, and dependent relatives of Union soldiers were benefited by it.

This makes a very large hole in the 168,231 pension certificates. The impression prevails in some localities that this 168,231 increase in the pension certificates means that that many persons have been added to the pension-rolls, but not a single one of these 102,568 are new pensioners. This required no additional work in the office except to issue certificates to these old pensioners for $12 instead of $8 per month.

He next recites the amputation bill of August 4, 1886, which increased the pension of 10,092 existing pensioners. This measure passed the House without a recorded vote. On going to the Senate it was amended, and when it came back to the House General CUTCHEON called it up and moved its passage, and Mr. Morrison, the distinguished leader of the Democratic party in the House at that time, made objection and defeated the passage of the bill. At another time Mr. MATSON moved to take it up under suspension of the rules, and it was passed by the following vote:

Democrats voting for the bill	75
Democrats voting against the bill	51
Republicans voting for the bill	91
Republicans voting against the bill	None.

So two-thirds of the Democrats did not vote for the bill, and it was passed by Republican votes.

After the Democratic party casts enough votes against a measure to defeat it they can not in any fairness claim it as their legislation. If the Republicans, being in the minority, cast enough votes to overcome the defeat, and especially if all their votes are cast for the measure, then by all fairness and parliamentary usage the measure is Republican legislation. For this reason the widows' increase bill and the amputation bill can not be justly claimed by my colleague, but those 112,000 pensions belong to the Republican party.

He next calls attention to the Mexican pension bill, by which 21,704 persons were granted pensions. These were actually new pensioners. Those heretofore given were only increases of existing pensions. It is not fair for either of the political parties to claim the passage of the Mexican bill.

It passed the House substantially by unanimous vote, only 5 votes being recorded against it—3 being Democrats and 2 Republicans.

This gives, under the three acts, 133,364 additional pension certificates granted under Commissioner Black's administration out of the 168,000 claimed to the credit of the Democratic party.

The CONGRESSIONAL RECORD thus gives a very clear statement of how these enormous additions that have been claimed by our Democratic friends were made to the pension-roll. We then have 35,000 pension certificates remaining that have been issued by Commissioner Black in his three years in the office more than were issued by ex-Commissioner Dudley. That the office under management of Commissioner Black should only make an increase of about 12,000 a year over Commissioner Dudley is really astonishing. He certainly has not done the work in that office he ought to have done under the circumstances.

The reasons are found in the following facts: When Colonel Dudley became Commissioner of Pensions he found six hundred clerks in the office. This number was so inadequate to the business that three hundred thousand pension claims lay corded up in the office with all their evidence untouched. Three hundred thousand pension claims of which not one page of evidence had been examined. Three hundred thousand pension claims, not one of which had ever had its "jacket" off. The office was three hundred thousand claims behind in its business. In his second year Commissioner Dudley succeeded in getting a Republican Congress to increase his number of clerks, a thing neglected by the Democratic Congress that had ruled in this House for the prior four years. These clerks had to be educated. They must have a technical training for their work. Efficiency in a semi-judicial pursuit like this comes only by experience.

When Commissioner Dudley retired from the office he left it with 1,600 clerks, a force of trained, experienced and efficient officials, so singularly proficient in their duties that the majority of them are at their posts to-day. The work of the office was practically up at the date of his retirement. That is, no large number of cases were awaiting turn for consideration nor cords of new claims awaiting their first examination.

Commissioner Black entered the office at this stage. Now, observe the parallel! Dudley found the office with 600 clerks; Black found it with 1,600. In his second year Dudley increased his force 1,000, and every man had to be educated for his work; Black has educated but few. Dudley found the office 300,000 cases behind; Black found the claims examined to date. Dudley had but gotten the 1,000 new men into efficient service when he retired; Black took the 1,600 with all their experience. Black issues only 35,000 more pensions in his three years than Dudley in a like three years. It is plain if Dudley had continued in the office he would have increased this number by 150,000 pensions.

My friend next cites the granting of arrears from the death of their husbands in cases of all widows of the late war whose pensions have been or may hereafter be granted. He says this law will favorably affect some 10,000 widows already on the rolls and many more who will apply for their pensions hereafter. The question is, who is responsible for the widows' arrears bill? Although a widows' arrears act had several times been introduced in Congress, no bill had ever been reported favorably to the House. When Mr. FORAN, a Democrat, having in charge the appropriation bill for pensions, asked its passage by the House, the gentleman from Iowa, Mr. CONGER, a Republican, moved to amend by adding to the bill that "arrears of pensions from the death of their husbands be granted in all cases of widows of the late war whose pensions have been or may hereafter be granted." Mr. FORAN made a point of order against the amendment, but it was so clearly germane to the bill that the Chairman held it was parliamentary. The bill as amended passed the House without a recorded vote. In the Senate, Mr. COCKRELL, of Missouri, moved to strike out the amendment, and the vote in the Senate is recorded:

Democrats for striking out the amendment	20
Democrats against striking out the amendment	1
Republicans for retaining the amendment	22
Republicans against retaining the amendment,	None

And so the widows' arrears bill passed the Senate by Republican votes, and had there been no Republicans in the Senate the bill would have been defeated by a vote of 20 to 1.

I have now made an examination of the pension legislation in Congress from 1862 down to 1875, when the Republicans ceased to have a majority on this floor; and also during Democratic control on this floor, from 1875 to 1885, two years of which time the Republicans had a majority here. And, lastly, our attention has been directed to the legislation since Mr. Cleveland became President.

On last Monday Mr. MATSON, as chairman of Pensions, obtained the floor and called up and passed the deaf bill without division. I am glad it passed, although it benefits less than five hundred soldiers. Why did he not call up the dependent-pension bill? Twenty members on this side called aloud to him to do so. Why did he not call up the arrears bill? Many of us called aloud for that also. Soldiers from our State had been here within ten days to ask him to do so. When he goes home in a few days the veterans will ask, "Why was it, when you had possession of the floor as Pension chairman, you did not call up one of the measures that would have brought relief to fifty thousand soldiers?" They will also say to him that nearly every chairman of a committee in the House has, by application to the Committee on Rules, had special days set apart for their bills, why have you not done so? The Calendar does not show that you have any such day, and the RECORD does not show that you tried to get one." More than a dozen Republicans have publicly made such request. The Republican caucus made such a request. Nearly every Republican signed a petition praying for a pension day. My colleague, Mr. JOHNSTON, not a member of the Pensions Committee, ventured to offer a resolution asking the Committee on Rules to give a day. The time is not granted, and yet we adjourn for whole days. We turn to you as the one in authority, and ask, "Why do you not secure a day, or having the floor, why do you not call up one of these bills?"

We have learned in this investigation that the Republican party is the author and founder of our present great system of pension legislation; that every pension measure, except one, which has passed this House, has been passed by Republican votes, and would not have passed if there had been none but Democrats in Congress, and that in all thes e

twenty-six years of pension legislation there has been but one Republican vote against a pension bill.

In view of these facts, without suggestion or comment, I am willing to leave with the people of the country a decision on the remarkable claims put forward by my distinguished colleague.

Mr. Chairman, I have but a thought further to add. It is claimed that we pay the largest amount for pensions ever paid by any government before. I know it, but no government ever had such cause before. No government ever had such wrong-headed and unjustifiable rebellion before. No government was ever builded on the rights of man before. No government had ever overthrown the tyranny of kingcraft and enthroned the people as rulers before. The principle for which this war was waged is without parallel on any field of strife for conquest or for patriotism. It brought for final arbitrament the unsolved problem of the capacity of the people to rule themselves. Hitherto every effort to maintain a government of the people, for the people, and by the people had met with disaster. The last gauge of battle, after the conflict of centuries, was pitched on our shores. And union, and the best form of liberty, and the sovereignty of the people, and loyalty prevailed.

The soldiers who lie buried and those who live and whose pensions we are discussing are the Marathon band who won this measureless achievement. They left their hearthstones when their country called. They severed forever, so far as their act might do so, every tie of home. The babe kissed good-bye knew not that it might be forever. Wives and mothers wept, but with Spartan faith made surrender for the country's cause. Prayers were ministering angels between the family and the bivouac and battle-field. Nearly five hundred thousand of these men saw home nor kindred more. They went forth at their country's call without thought of reward or dream of renown. They went because their country's life was in peril, and laid upon her altar man's highest sacrifice, his life, if need be, that his country might live. Victorious the survivors came back, with malice toward none and charity for all.

Twenty-three years have passed since the close of the great conflict. Those who are left to us now are but a remnant of the mighty squadrons. They are filing down the hill where the shadows grow longer, and are rapidly falling out of the ranks. In a few more years the last veteran will have fought his battles over for the last time and joined the camp on the eternal field.

While they remain with us may the hand that shall ever be raised to draw a line of division on the Union's devotion to these heroes be smitten with defeat. Let our soldiers be so securely above partisan interest that the people all shall agree that the nation which they saved with one heart yields to them abundantly of whatever they may need in the hours of their final march.

Pensions.

But let them remember that these soldiers are still a power in the land, and that the men who stormed the heights of Vicksburg and Missionary Ridge, who rolled back the high tide of rebellion at Gettysburgh, and marched through Georgia to the sea, will be heard from in the coming battle of ballots.

SPEECH

OF

HON. A. C. THOMPSON,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Friday, September 21, 1888.

Mr. THOMPSON, of Ohio, said:

Mr. CHAIRMAN: I do not propose to make any argument to show that the ex-soldiers of the Union Army deserve at our hands the highest consideration. It will be conceded that we are indebted to them for the preservation of the Government and the maintenance of the Union. All the promise of our future as a nation was made possible by their services in the war for the Union. We owe everything to them, and while we can never adequately compensate them for their services, we may yet do something to alleviate the sufferings of those disabled by disease and wounds, and smooth and make easier the down-grade of their lives. Animated by this sense of what is due to our soldiers, bills have been introduced here in their interest which deserve the attention and the favorable consideration of the House. Among others are the following House bills:

First. House bill 4982, "Prohibiting the allowance of fee in any claim for increase of pension on account of the increase of disability for which the pension was allowed." This bill was reported favorably to the House on the 6th day of February, 1888, and placed on the Calendar. Report No. 242.

Second. House bill 1422, "Relating to pensions granted by special acts of Congress." This bill provides that a special-act pensioner may surrender his certificates and receive such pension as he would have been entitled to had not the certificate been issued. This bill was favorably reported and placed on the Calendar February 20, 1888. Report No. 736.

Third. House bill 1333, "To amend the pension laws in relation to the payment of pensions." This bill provides that when a pensioner has been adjudged legally incompetent to manage his own estate the pension shall be paid to his wife or to a guardian, etc., but an order for such payment can only be made by the Commissioner of Pensions, after an investigation by a special examiner upon ten days' notice to the pensioner. This bill was reported favorably and placed on the Calendar March 7, 1888. Report No. 873.

Fourth. House bill 1420, "For pensioning prisoners of war." This bill was reported favorably and placed on the Calendar March 7, 1888. Report No. 895.

Fifth. House bill 1688, "Relating to claims by dependent parents." This is substantially section 1 of the "dependent bill" vetoed by the President, and is a section to which he made no objection in his veto message. This bill was reported favorably and placed on the Calendar March 13, 1888. Report No. 1076.

Sixth. House bill 1537, "To allow soldiers and sailors in the United States service who have lost both arms an increase of pension"—an increase to $100 per month. This bill was reported favorably and placed on the Calendar March 17, 1888. Report No. 1187.

Seventh. House bill 9961, "Relating to arrears of pension." This bill was reported favorably and placed on the Calendar May 14, 1888. Report No. 2120. And the following Senate bills:

First. Senate bill 181, "Granting pensions to ex-soldiers and sailors who are incapacitated for the performance of manual labor, and providing for pensions to dependent relatives of deceased soldiers and sailors." This bill was reported favorably to the House and placed on the Calendar April 14, 1888. House Report No. 1694.

Second. Senate bill 1000, "To increase the pensions of certain soldiers and sailors who are utterly helpless from injuries received or disease contracted while in the service of the United States." This bill provides a pension of $72 a month, and was reported favorably to the House and placed on the Calendar May 8, 1888. House Report No. 2065.

The purpose of these bills certainly commends them to the favorable consideration of all right-thinking people. There should be in time a revision of the pension laws which will remove the inconsistencies and inequalities which exist and do equal justice to all the soldiers of the Republic who have fought for their Government. But the legislation proposed in these bills should be enacted now and not compelled to await a general revision. The needs of the soldiers and the justice of their claims require this, and Congress should not adjourn until these bills become laws.

Congress has been in session since the 5th day of December, 1887, a period of nine months and seventeen days, and only two pension bills of a general nature have become laws—the bill providing that pensions of widows shall commence from the date of the death of their husbands, and the bill increasing the rate of pension for deafness. Surely this is not fair treatment of the Union soldiers; and I charge and will demonstrate from the record of the proceedings of this House that this failure to do justice to the soldiers of the Union rests upon the Democratic membership of this body.

The House met on the 5th of December, 1887, and the committees were announced on the 5th day of January, 1888, and, as already shown, the bills referred to were reported and placed on the Calendar at various times from February 6 to May 14, 1888. The tariff bill was reported on the 2d day of April, and the debate thereon began on the 17th day of April and ended on the 21st of July, 1888, when the bill passed; so that there was ample time before the debate on the tariff bill began to have passed these bills, except the two Senate bills and the arrears bill, which were not reported in time, and there has been an abundance of time to have passed all of them since the tariff bill was passed. The majority of the members of the House are Democrats, and a majority of the members of each and every committee of the House are Democrats.

The Speaker and all the officers of the House are Democrats, and it was within the power of the Democratic membership of the House to have taken up and passed any of these bills had they desired to do so. Notwithstanding the opposition of the Republican membership they were able to take up and pass the tariff bill, and certainly would have had no trouble in passing any or all of these pension bills, assured as they were of the hearty and cordial support of the Republican membership. As early as April 3, 1888, the Committee on Rules, who have exclusive jurisdiction in the matter, reported a resolution to the House setting apart days for the consideration of business from the following committees, namely, the Committee on Commerce, the Committee on Military Affairs, the Committee on Pacific Railroads, the Committee on Territories, the Committee on Public Lands, the Committee on Foreign Affairs, the Committee on Agriculture, the Committee on Public Buildings and Grounds, and the Committee on the Judiciary (see

CONGRESSIONAL RECORD, page 2740), but reported no day for the consideration of the business of the Committee on Invalid Pensions.

But I am not content to stop with this negative evidence of the failure of the Democratic membership of this House to do justice to the Union soldier. I propose to show that by management and by open opposition the Democratic majority in the House have prevented the possibility of general pension legislation at this session. Earnest efforts were made from time to time by Republican members of the Committee on Invalid Pensions and by other Republican members of the House to secure a day for the consideration of the business of the Committee on Invalid Pensions, but they were defeated in every instance by the Democratic majority of the House. On the 26th day of March, 1888, Mr. MORRILL, of Kansas (Republican), introduced a resolution setting apart the 2nd and 3d days of May for the consideration of the business of this committee, and, because of the known hostility of the Committee on Rules to any such resolution, moved its reference to the Committee on Invalid Pensions.

This reference was opposed by the Democratic membership, Mr. ROGERS, of Arkansas (Democrat), and Mr. COWLES, of North Carolina (Democrat), leading the opposition, and upon the yeas and nays being taken the vote stood, yeas 135, nays 100. Of the nays, 74 were from the South. (See CONGRESSIONAL RECORD, page 2335.) The resolution was reported back to the House by Mr. MORRILL favorably, and was placed on the Calendar, where it was forced to remain until the Committee on Invalid Pensions was called in regular course during the second morning hour under Rule XXIV, paragraph 5. This rule provides as follows:

> After the morning hour shall have been devoted to reports from committees (or the call completed), the Speaker shall again call the committees in regular order for one hour, upon which call each committee, on being named, shall have the right to call up for consideration any bill reported by it on a previous day, on either the House or Union Calendar. And whenever any committee shall have occupied the said hour for one day, it shall not be in order for such committee to designate any other proposition for consideration until all the other committees shall have been called in their turn; and when any proposition shall have occupied two hours on this call it shall thereafter remain on the Calendar as unfinished business and be taken up in its order: *Provided*, That when the hour herein prescribed shall expire, while the Committee of the Whole House on the state of the Union is considering a bill, the said committee shall rise without motion therefor.

During the tariff discussion this call was dispensed with from time to time and the committee was not called until the 16th day of August, 1888. Upon this call, being the very first opportunity the committee had had for that purpose, the resolution of March 20, amended by substituting the 29th and 30th days of August for the 2d and 3d days of May, was called up by Mr. MORRILL for consideration, but the Democrats filibustered against its passage and consumed the hour. The next day the hour was consumed in the same way, and under the rule the matter then became unfinished business. The opposition was led by Mr. ROGERS, of Arkansas (Democrat), Mr. BLAND, of Missouri (Democrat), and Mr. CRISP, of Georgia (Democrat). The vote on the first day stood ayes 117, noes 7. The Democrats refused to vote, and consequently, as the vote shows, there was no quorum. Thereupon a call of the House was ordered, and the roll being called, disclosed one hundred and seventy-four members present, being eleven more than a quorum, and pending the taking of this vote the hour to which the Committee on Invalid Pensions was entitled under Rule XXIV expired.

On the second day the vote stood as follows, ayes 119, noes 5. A call of the House was again ordered, and upon the roll being called it again appeared that 174 members were present. At the close of this roll-call, six minutes of the hour to which the committee was entitled, still remained, and this was consumed by a motion to adjourn, made by Mr. CRISP, of Georgia, upon which a division was called for and tellers asked, and pending the taking of the vote by tellers the hour expired. (For these proceedings see CONGRESSIONAL RECORD pages 8345, 8346, 8347, 8348, 8389, 8390, and 8391.) The resolution having become unfinished business, and because of other unfinished business which had already accumulated, there was no longer any opportunity to bring it before the House, except by some affirmative action of the House authorizing it, as by a suspension of the rules or by unanimous consent or by a direct vote to take it up and consider it at once. In order, if possible, to force some such action upon the House, Mr. LYMAN, of Iowa (Republican), gave notice that he would object to any business being done in the House without a quorum until some time should be given for the consideration of general pension legislation, and he did object to the consideration of business without a quorum being present until the 21st day of August when, after a statement to the House that he only desired to fix and emphasize the responsibility for the failure of pension legislation upon the Democratic membership of the House, he withdrew his opposition, having failed, however, to move the Democratic majority to take any steps or to permit anything to be done in the interest of the Union soldier. These proceedings will be found in the CONGRESSIONAL RECORD for August 16, 17, 19, 20, and 21. Particular reference is made to pages 8356 and 8538, which show the remarks of Mr. LYMAN.

On the 23d of April, 1888, Mr. MORRILL, of Kansas, introduced a second resolution setting apart the 23d and 24th days of May, 1888, for the consideration of the business of the Committee on Invalid Pensions, which was referred to the Committee on Rules, and was never heard of afterwards, although a petition was presented to that committee, signed by every Republican member of the House, asking that the resolution be considered and reported. On the 4th day of June, 1888, that being under the rules of the House a day on which motions might be made to suspend the rules, Mr. MILLS, of Texas (Democrat), moved to suspend the rules and pass a resolution setting apart days for the consideration of the business of the following committees: The Committee on Public Lands, the Committee on Military Affairs, the Committee on the Pacific Railroads, the Committee on Territories, and the Committee on Commerce. Thereupon Mr. CANNON, of Illinois (Republican), asked to be permitted to offer an amendment giving two days to the Committee on Invalid Pensions for the consideration of its business, but Mr. MILLS objected and demanded the regular order. Upon a vote being taken by tellers there were—ayes 95 and noes 2, and Mr. CANNON made the point of "no quorum." Mr. MILLS thereupon withdrew his resolution, sacrificing his resolution rather than permit it to be amended so as to include the Committee on Invalid Pensions, and moved that the House resolve itself into Committee of the Whole House on the state of the Union for the consideration of the tariff bill, but was interrupted by Mr. MCKINLEY, of Ohio, who propounded to the Speaker an inquiry as to whether he (the Speaker) would recognize some gentleman to offer a resolution fixing a day for the consideration of general pension legislation. But the Speaker refused to answer him, saying that "the recognitions of this day are within the discretion of the Chair."

When the vote was taken upon the motion of Mr. MILLS the Republicans refused to vote, breaking the quorum, and rather than permit a day to be fixed for the consideration of pension legislation Mr. MILLS moved an adjournment of the House, which was carried by Democratic votes and the day lost, the House adjourning at 2 o'clock. During these proceedings the following colloquy took place between Mr. MILLS, Mr. MCKINLEY, Mr. REED, and the Chair, which fully illustrates the hostility of the Chair and the Democratic membership of the House to the proposition to set apart time for the consideration of pension legislation (page 5251):

ORDER OF BUSINESS.

Mr. MILLS. I move that the House now resolve itself into Committee of the Whole House on the state of the Union for the further consideration of House bill No. 9051; and pending that I move that all debate on the paragraph under consideration and amendments thereto be closed in ten minutes, on which I demand the previous question.

Mr. MCKINLEY. I desire to make an inquiry before proceeding with the consideration of this question. When the resolution offered by the gentleman from Texas a few moments ago——

The SPEAKER *pro tempore*. That has been withdrawn. [Cries of "Regular order!"]

Mr. MCKINLEY. I wish to submit a question in reference to that matter before proceeding——

The SPEAKER *pro tempore*. The Chair will state that it is not in order pending this motion, on which the gentleman has demanded the previous question. That cuts off all debate, and the resolution mentioned by the gentleman from Ohio is not before the House.

Mr. MCKINLEY. I do not rise to debate the question, Mr. Speaker. [Cries of "Regular order!"]

The SPEAKER *pro tempore*. The regular order is the demand for the previous question.

Mr. MCKINLEY. I rise to propound a parliamentary inquiry.

The SPEAKER *pro tempore*. The gentleman will state it.

Mr. MCKINLEY. And it is in the interest of the orderly business of this body. If, when the resolution offered by the gentleman of Texas is disposed of——

The SPEAKER *pro tempore*. That has been disposed of. [Loud calls of "Regular order!"]

Mr. MCKINLEY. I desire to inquire of the Speaker if, when that is disposed of, he will recognize some gentleman to offer a resolution fixing a day for the consideration of general pension legislation?

The SPEAKER *pro tempore*. That is not a parliamentary inquiry. The Chair will decide questions of recognitions as they arise.

Mr. MCKINLEY. I wish to get a statement from the Chair.

The SPEAKER *pro tempore*. The Chair does not think the gentleman presents a parliamentary inquiry.

Mr. MCKINLEY. The Chair, then, declines to say that he will recognize any gentleman for the purpose of moving to fix a day for the legislation I have suggested?

The SPEAKER *pro tempore*. The Chair will decline to answer what is not a parlimentary inquiry when propounded as a parliamentary inquiry.

Mr. MCKINLEY. I move to amend the motion by making it forty minutes.

The SPEAKER *pro tempore*. The question is on ordering the previous question.

Mr. REED. I rise to a parliamentary inquiry.

The SPEAKER *pro tempore*. The gentleman will state it.

Mr. REED. If this proposition of the gentleman from Texas to go into Committee of the Whole is voted down, will it then be in order for the Chair to recognize some gentleman for a motion to suspend the rules and fix days for the consideration of pension legislation?

The SPEAKER *pro tempore*. The recognitions of this day are within the discretion of the Chair, the subjects upon which the recognition will be given and the time of the recognition, and the Chair states that on this day it is in order under the rules to move to go into Committee of the Whole, which motion is now pending.

Mr. REED. Will it be in order for the Chair, if the Chair is so disposed, to recognize a motion to suspend the rules and fix a day for pension legislation?

The SPEAKER *pro tempore*. The Chair has already answered the gentleman.

Mr. REED. Will the Chair answer that parliamentary inquiry squarely and fairly?

The SPEAKER *pro tempore*. The Chair has answered the gentleman's inquiry. The question is on ordering the previous question on the motion of the gentleman from Texas.

Mr. REED. Will the Chair answer a parliamentary inquiry?

The SPEAKER *pro tempore*. The question is on ordering the previous question.

The question being put, the Speaker *pro tempore* stated that the ayes seemed to have it.

Mr. ANDERSON, of Kansas. I call for a division.

Mr. REED. I desire to make a parliamentary inquiry.

The SPEAKER *pro tempore*. The House is dividing.

Mr. REED. The House is dividing because the Chair is overriding parliamentary law.

Mr. DUNN. But the gentleman from Maine can not override the Speaker.

The question being taken, there were—ayes 97, noes none.

Mr. MCKINLEY. No quorum.

Mr. MILLS. I call for the yeas and nays.

(See CONGRESSIONAL RECORD pages 5250, 5251, 5252, 5253, and 5254.)

On the 12th day of July, 1888, on motion of Mr. MILLS, unanimous consent was given to set apart time for the consideration of the business from the Labor Committee, and upon motion of Mr. TOWNSHEND, of Illinois, like consent was given to set apart time for the business of the Committee on Military Affairs. Thereupon Mr. EZRA B. TAYLOR, of Ohio (Republican), asked unanimous consent to set apart an evening for the consideration of general pension bills, but Mr. BLAND, of Missouri (Democrat), objected, and demanded the regular order, the Democratic membership of the House thereby refusing to give its consent to the setting apart of time for the consideration of the business of the Committee on Invalid Pensions, although according it to other committees. (See CONGRESSIONAL RECORD, page 6738.)

Under the rules and organization of the House the minority may obstruct the majority in doing a given thing, or may prevent them from doing it at all, but can never control legislation nor compel the consideration of any particular business. Bills, when introduced, go to appropriate committees, who, if they take action at all, report them back either favorably or adversely. If favorably, they go upon the Calendar for the consideration of the House. They are taken up in the House for consideration, when presented by the committee reporting them, during the second morning hour, as provided in Rule XXIV, or under a special order fixing a day for the consideration of the business of the committee, or under a special order fixing a day or time for consideration of the particular bill, or under a suspension of the rules, or by unanimous consent, or under privilege, or by a vote of the House to consider the particular bill at once. Motions to suspend the rules can only be entertained on the first and third Mondays of each month. When there is no special order in the way, when no committee is occupying the attention of the House under Rule XXIV, when there is nothing before the House under suspension of the rules, under privilege, or by unanimous consent, or by a vote of the House to take up some particular bill, the unfinished business may be called up in the order in which it stands on the Calendar and be considered, but that time rarely ever comes, especially after the session has been continued for some time, and never comes in opposition to the will of the majority.

The record of the proceedings of the House therefore not only shows that the Democrats have never exercised the power of their majority to fix a day for the consideration of general pension legislation, but, on the contrary, have refused to do so, and have filibustered and wasted the time of Congress rather than permit a proposition of that kind to be even considered. On the other hand, the record shows that the Republicans have exhausted every parliamentary resource to compel the consideration of such legislation, but have been defeated in every effort in that direction by the Democratic membership. The morning hour which belonged to the Committee on Invalid Pensions was consumed in filibustering, the petition to the Committee on Rules was treated with contempt, the Speaker refused recognition to suspend the rules, and Democratic objection was made to a request for unanimous consent. Pension bills, not being like appropriation bills, privileged, nothing can be done in that direction, and we are compelled, therefore, to abandon for this session, at least, all efforts to secure justice for the Union soldier, and there is nothing left but to appeal to the people and take their verdict in November.

Under this Administration the Union soldier is ignored and the Confederate gray has become fashionable. The Union soldier is scouted at, reviled, and made the subject of thick-witted Presidential jokes; the great organization into which the survivors of the grand army of the Union are gathered for the purposes of "fraternity, charity, and loyalty" is denounced in terms of malignancy and hatred, and the flags they captured from the enemies of their country, trophies significant of the victory of loyalty over treason, mute but eloquent witnesses of the power of the Government, are sought to be returned to the hands from which they were taken. Is it any wonder, then, that a Democratic House of Representatives, under such inspiration, should refuse justice to the veteran soldier of the Union?

But let them remember that these soldiers are still a power in the land, and that the men who stormed the heights of Vicksburg and Missionary Ridge, who rolled back the high tide of rebellion at Gettysburgh, and marched through Georgia to the sea, will be heard from in the coming battle of ballots, and their might and strength will prevail as it did in the days when they offered their lives for their country, and they will place the administration of the Government in the hands of one of their own number, a Grand Army man, who marched and fought with them, a statesman of ability and experience, a citizen of pure life and character, an honest man and a true-hearted gentleman, who commands the confidence, respect, and love of all who know him—Benjamin Harrison, of the State of Indiana.

The Tariff.—A Plea for the Industrial Civilization of America.

The third stage of a continuing contest between our two great Social Forces.

REMARKS

OF

HON. JEHU BAKER,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, July 19, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. BAKER, of Illinois, said:

Mr. CHAIRMAN: The debate upon this bill has taken a wide range. Long volumes have been spoken and written upon it. Our statistics have been made a harp of a thousand strings, yielding some of the strangest discords, as well as some of the master harmonies which express the true music of the instrument.

I have paid as close attention as possible to the whole course of the debate on both sides, and can testify that culture has done admirable work in our country during the last twenty years. For, comparing the present with two decades agone, I think I clearly see a higher average intelligence among the members of this House than existed then, which is the same as to say (this being a representative body) that the great constituencies represented in this Hall, now amounting in the aggregate to more than sixty million souls, have felt and are feeling the impulse of that growing mental development which keeps step with the magnificent progress of our Republic.

I find in this fact a completely reassuring prophecy that the momentous issue now made up between a higher and a lower type of industrial civilization for our country will be settled in favor of the higher and against the lower by those millions of intelligent freemen who will express their opinion on the question from the Lakes to the Gulf and from ocean to ocean in November next.

This debate has been called, and very often called, a great one. However this may be when measured by that severe and just standard of criticism which knows nothing and favors nothing but that reach and compass of knowledge and thought which grasps and expresses the total significance of a question, it has at all events and in every view been great in its subject-matter; great in the relation it sustains to our millions of workingmen, our millions of business men, and our still more numerous millions of agriculturists, all bound together in one sympathetic whole, and all to prosper or all to suffer, accordingly as wisdom or folly may triumph in the impending contest between the two opposing economical forces which divide our people; accordingly as the cheap labor of Europe, of Asia, of Africa, of Australia, of South America—in short, accordingly as the cheap labor of the entire outlying world, and its low grade of human living, re-enforced by the cheap labor of the six or seven millions of recently emancipated slaves and their descendants in the southern section of our own country, shall or shall not be permitted to drag down and debase the industrial civilization of all America. Or, as the question may be stated in words of still wider import, whether a state of things shall or shall not be maintained in our country which, while tending to save the masses of our own people from industrial degradation, will at the same time serve as a standard, as a pattern, as an example, for the ultimate elevation of the working masses of other nations.

Such, sir, is the question in its just elevation and its true import. It deeply concerns the welfare of our country, and it concerns the welfare of humanity at large. For in the development of that better civilization to which the world is aspiring, and which looks to the elevation of the masses of mankind, a great lead is a great advantage for all. The lead of America is already great beyond any example in history, and it promises to become incomparably greater in the future, if she shall only continue to conquer in the future as she has in the past those reactionary forces in her own bosom which have heretofore threatened and which still threaten, under modified forms, to break her career and debase her life.

It is readily seen, by the very statement of the question, that it is one of a very high order, second only to the two preceding questions which have been settled, and settled in the right way, by the good genius of the American people. I allude, of course, to the question whether slavery should be perpetuated in, and dominate our country; and the question whether, in default of the possibility of that, our Union should be broken into fragments. Both these questions have been determined in the negative, with the unanimous approval of every human being on the globe, whose heart pulsates in sympathy with the higher as distinguished from the lower aspirations of humanity. Not a man in America can now be found who will say that he deplores the destruction of slavery; not one who will say that he

regrets the fact that our Union was not destroyed. All now admit that slavery was economically bad, and not one can be found who will claim that it was morally right. All now admit that the union of our States is full of beneficence for our whole people and for every section of our country; and not one can be found who will deny that the preservation of the Union was the preservation of civilization on our continent.

And yet what a mighty commotion was recently seen on both these points in the direct opposite sense! What multitudes of speeches, of pamphlets, of sermons, of books, of newspapers—numerous enough altogether to freight a ship—were written and published to prove that our black Pompeys and Cæsars and Dinahs and Dilceys are "my money" by the everlasting will of Almighty God! And what tremendous military appliances were brought to bear for the destruction of the Union, for the blotting of the United States from the political map of the world! All now see these matters in another light, and in the right light. Both the great elements of our Republic, the Blue and the Gray, are progressively coalescing in one common patriotism and in the realization of one grand national destiny. But the beneficent work of sectional harmony and of unification under dominant national ideas is not yet finished. Two great questions still remain, one of which is postponed for the moment, whilst the other is the burning question of the hour. The postponed question is whether or not the votes of a vast number of American citizens shall be suppressed on the ground of race, and yet be counted in the basis of representation in this House—than which nothing could be a greater outrage upon the rights of the people and the fundamental principles of our Republic. This question I say is postponed for the moment. The burning question of the hour is whether or not the industrial system of the United States shall be maintained upon a higher or debased to a lower plane.

This is certainly a question of immense importance, second only, as I have said, to the two preceding questions—whether or not slavery should be perpetuated in and dominate our country, and whether, that being thwarted, our Union should be broken up.

It is certainly very natural that that great social force which is coextensive with the old seat of slavery, that is, coextensive with the old slaveholding States, and whose traditions and immediate antecedents connect it so directly with the defunct régime of slavery and slave labor, should be found pretty solidly united on the wrong side of this question; and it is equally natural that that other great social force, which is coextensive with the old seat of free labor, that is, coextensive with the old free States, should be found pretty solidly united on the right side of the question; for blood tells not more effectually in the descent of individuals than general causes tell on the life of great groups of men.

And thus it is clearly seen in a highly rational and comprehensive manner that our country is now passing through the third stage of a great and protracted contest between its two principal social forces, the one of these forces being essentially Southern, but cropping over into the North, the other essentially Northern, but cropping over into the South.

The first stage was, as we have seen, relative to the matter of slavery; the second relative to the matter of the Union, whilst the third and present stage is relative to the matter of the industrial status of our country.

All three of these stages or phases of conflict between the two forces are bound together in historical and rational sequence, and all three will be found bound together, as I firmly believe, by a similar destiny as regards their final outcome.

The Southern social force was beaten by the Northern on the question of slavery and slave labor, and the event has proved that the South was benefited equally with the North by the destruction of slavery.

The Southern social force was beaten by the Northern on the question of secession and war for the disruption of our Federal system, and the event has proved that the South has been benefited equally with the North by the preservation of the Union.

And now, in the third stage of the great contest, which so deeply concerns our industrial civilization, the outcome very plainly promises to be similar to the two preceding ones; very plainly promises to be a triumph of the higher over the lower industrial type; a triumph which, like its predecessors, will scatter its blessings equally over the North and over the South—over the North, in the way of giving stability, assurance, and extension to her now threatened industrial system; over the South, in the way of carrying to her a new life, a new energy, a new developing force, which shall lay hold upon her vast natural resources, and through a thousand diversified appliances bring forth not only her immense material wealth, but, what is still higher and more important, bring forth the latent ability, skill, and talent of her people. These are the things that make a people great. These are the things that put the widest interspace between savagery and civilization. These are the things that distinguish the spirit of progress from the spirit of retrogression. These are the things that distinguish the genius of the Republican party from the genius of the Democracy. The one advocates a policy which would build up the South in all the diverse richness of her native resources of crude material and crude mind. The other, wedded to the bad traditions of the past, wedded to the inherited taint of slavery and slave labor, aspires to a policy which, while failing to diversify and elevate the industrial condition of the South, would inevitably drag down and degrade that of the North.

Manifestly the general view which I have presented, that a continuing contest has been and still is going on in our country between its two leading social forces for and against the permanent establishment of the great and beneficent principles of our national life, carries us to the bottom meaning of the present phase of the contest; and manifestly it is only when we consider the supreme importance of these principles, each and severally, and in their united meaning, that we can fitly comprehend the rational significance of what we are about to-day.

Let the entire matter be put in short, and in terms so plain that the thread of reason running through the whole can not be mistaken.

Firstly, one of the two great social forces in our country has spent thirty years, extending from about 1830 to 1860, in the work of cultivating American politics from the standpoint of negro slavery. This can not be denied. It is fixed in recent and certain history.

Secondly, this same social force has spent four years, extending from 1861 to 1865, in the work of endeavoring, by vast military appliances, and at an immense cost of blood and treasure, to break our Republic into fragments. This also can not be denied. It is fixed in recent and indelible history.

Thirdly, this same social force, constituting the main substance as it does, and taking the lead as it does, of a great political party, is now aspiring to dominate the entire industrial system of the United States, meantime drawing its fiscal inspiration, as it most naturally does, from the tariff doctrine of the father of nullification, John C. Calhoun, and from the same tariff doctrine as formally and definitely expressed in the constitution of the so-called Confederate States of America—which is in direct opposition to the tariff doctrine of the Constitution of the United States, as interpreted and acted upon by Washington, by Jefferson, by Madison, by Monroe, by Jackson, by Lincoln, and Grant, and under which the industrial system of our country has rapidly become the most progressive and gigantic industrial system in the world. Neither can what is here said be denied by candor and intelligence; and if denied it is capable of the most rigorous proof in every part and in every particular.

This, then, is the situation of the hour stated in the fewest possible words: Here is a powerful social force in the bosom of our Republic, recently allied with the cause of slavery and slave labor—recently allied with the cause of secession and war for the destruction of the Union, and now, at this very hour, like a twice defeated giant, gathering itself up for one main determined effort to get governmental control of the enormous industrial interests of a country which it was unable to ruin by the rot of slavery, and unable to cut in two by the edge of the sword!

Let the roster of the two great social forces be called with reference to their respective shares in the industries of the country. The following table, drawn from the census of 1880, exhibits in one view the manufacturing industries of the entire "Solid South" as compared with those of all the rest of the country. If looked at with some attention it will be seen that it teaches a lesson of startling significance at the present moment.

Capital invested, number of employés, wages paid, and value of the product of manufacture in each State and Territory of the United States, according to the census of 1880.

States and Territories.	Capital invested.	Number of employés.	Amount of wages paid.	Value of products.	Population.
Alabama	$9,668,008	10,019	$2,500,504	$13,565,504	1,262,505
Arkansas	2,953,130	4,557	925,358	6,756,159	802,525
Delaware	15,165,822	12,638	4,267,349	20,514,438	146,608
Florida	3,210,680	5,504	1,270,875	5,546,448	269,493
Georgia	20,672,410	24,875	5,266,152	36,440,948	1,542,180
Kentucky	45,813,039	37,391	11,657,844	75,483,377	1,648,690
Louisiana	11,462,468	12,167	4,360,371	24,205,183	939,946

WM. F. SWITZLER,
Chief of Bureau.

TREASURY DEPARTMENT,
Bureau of Statistics, August 1, 1883.

It is seen from the table what a meager relation the manufacturing industries of the Southern States sustained to our whole system in 1880—a relation which is no doubt substantially the same to-day. All of these States together had invested less than 13 per cent. of the capital, employed less than 14 per cent. of the operatives, paid less than 11 per cent. of the wages, and turned out less than 12 per cent. of the total manufactured products of the United States! And yet from the prairies of Texas, from the forests of Arkansas, from the woodland pastures of Kentucky, from the everglades of Florida, from the cotton-fields of Mississippi, from the rice swamps of Carolina, comes a policy which proposes to dominate the gigantic industrial system of the North and of the entire country! Who shall say that here is not a case for the display of self-respect on the part of the Northern voter, as well as loyalty to the industrial interests of our common country, North and South? Who shall say that we are not indeed in the midst of the third stage of a momentous, continuing contest between the two great social forces of our country—in the first of which the one stood for liberty, the other for slavery; in the second of which the one stood for union, the other for disunion; and in the third of which the one is standing for a higher type of American labor and industry, the other for a lower? It is a situation well calculated to stir the blood and arouse a just enthusiasm. That enthusiasm is impending in every direction. I believe it will do its work as effectually as the great works of the past have been done. I believe it will sweep the North, invade the South, and save the country from industrial degradation!

I have said that the economical principle of the Southern social force finds its expression in the constitution of the so-called Confederate States. It is in these words:

> Nor shall any duties or taxes on importations from foreign nations be laid to promote or foster any branch of industry.

The words "promote or foster" are practically equivalent to the word "protect." The idea set out in the Confederate constitution excludes, as far as possible, the idea of protection of American labor and industry; and there can be no doubt whatever that this is the idea, that this is the principle, of that dominant Southern social force which controls the Democratic party. Nothing can be more certain than that it is the bottom purpose of that party, led as it is, to overthrow the American system of protection by a series of successive steps. This bill is only the first step in the direction of the ultimate objective point. It is confessedly "tentative," confessedly a beginning merely. And there can be no rational doubt that the destruction of the American protective system would have a most powerful tendency to degrade our labor and lower our industries to a level with the standard of the Old World. This would be an exceedingly bad step to take—a step that would break the progressive career of our industrial people.

As the leading plea for the accomplishment of this great mischief, it is said that a tariff that protects has the effect of burdening the consumer with an increase in the price of the home article to the extent of the duty upon the foreign one. This absurdly erroneous statement admits of scores of demonstrative refutations, derived from particular instances; but the practical, the certain, the crushing refutation, is found in the general statement that under our present tariff system the whole volume of our enormous home manufactures has declined in price to the consumer, whilst at the same time wages have advanced, home markets have been built up, and employment given to a vast amount of home labor which else had been employed in foreign countries. The case is absolutely one sided.

I have collected a large number of illustrations of the movement of the price of home manufactures to the consumer under our present system, to several of which I will draw attention. They teach their own lesson in terms too plain for misrepresentation.

STEEL RAILS.

Average price of steel rails in Pennsylvania from the time they were first made in commercial quantities (1867) *to the present time.*

[Compiled from data derived from Mr. James M. Swank, general manager of the American Iron and Steel Association.]

	Currency per ton.		Currency per ton.
1867	$166.00	1878	$42.25
1868	158.50	1879	48.25
1869	132.25	1880	67.50
1870	106.75	1881	61.13
1871	102.50	1882	48.50
1872	112.00	1883	37.75
1873	120.50	1884	30.75
1874	94.25	1885	28.50
1875	68.75	1886	34.50
1876	59.25	1887	37.13
1877	45.50	1888	30.00

For the purpose of accurate comparison I will observe that the currency price of steel rails in 1867 ($166) equaled $120 in gold, and that the currency price of steel rails now ($30) equals $30 in gold, so that the actual decline in price from 1867 to 1888 has been from $120 per ton to $30 per ton; that is, a decline of 75 per cent. upon the cost in 1867. Thus in connection with this very important matter of steel rails we observe an enormous decline of cost to the consumer under our present tariff system. Meanwhile let it be observed in addition that we have this industry in our own country, employing here the capital and skill and labor, and giving an extension to our home market, instead of being dependent for all these upon foreign countries, besides sending abroad a higher price for the rails, a result which would inevitably follow the crippling or breaking down the industry at home. Let such facts as these be looked at coolly and dispassionately, and it will be clearly seen what a great public benefit has sprung from the building up and maintaining this great industry in our own land, a benefit which extends to every class of our citizens—farmers, workingmen, business men, and capitalists.

PLATE-GLASS.

I compile the following table from data furnished me by Mr. N. T. De Pauw, president of the great glass-works at New Albany, Ind.:

	Per square foot.
Average selling price of plate-glass in United States prior to starting American factories, about	$2.50
Now	.89

Prices of plate-glass to dealers, per square foot, from 1863 to 1870:

Then	$3.05	$2.26	$1.66	$3.39	$3.26	$2.09	$2.07	$1.68	$1.98	$2.00
Now	.93	.95	.76	1.04	.97	.73	.92	.93	.97	.88

Mr. De Pauw adds:

> Please bear in mind that the prices named in 1863-'70 were the prices these dealers paid for their goods. The prices named for the present are prices to consumers, and, for comparison, 20 to 30 per cent. should be added to the 1870 prices to cover freights, insurance, expense, and profits.

We see, then, what an enormous reduction has taken place in the price of plate-glass since the establishment of the industry in the United States—passing from dollars to cents per square foot! Meantime note the additional advantages of having the industry in the United States, the investment of the capital here instead of abroad, the employment of the labor here instead of abroad, the cultivation of the artistic skill of our own people instead of that of foreign countries, the support of a market at home in place of a foreign one! All these advantages are to be added, in addition to a greatly lower price to the American consumer, and I may still add, the advanced wages to the American worker. It is amazing that a political party could be formed and maintained in the United States that can not see these plain and weighty things, and which would blindly subvert, as far as it can, the very foundation on which they rest—protection to American interests while raising revenue for the Government.

COMPARATIVE PRICE OF SALT IN 1860 AND 1887.

I compile this table from a memorial of the Saginaw Board of Trade, February 18, 1888:

	Barrels.
Salt product of Michigan, 1860	4,000
Salt product of Michigan, 1887	4,200,000

Cost of salt along the Great Lakes, including a barrel worth 20 cents in—

	Per barrel.
1860	$2.35
1866	1.80
1871	1.46
1876	1.05
1881	.95
1886	.65
1887	.58

Thus the product of Michigan salt has increased from 4,000 barrels in 1860 to 4,200,000 barrels in 1887, whilst the price has fallen from $2.35 per barrel in 1860 to 58 cents per barrel in 1887. Deducting the cost of the barrel, the salt in 1887 cost 38 cents per barrel to the first purchaser. The same amount of money in 1887 would buy more than five times as much salt as it would in 1860.

Here, again, in this highly important article we see a vast decline of price under our present system; and, in the face of such facts, people ought really to be too intelligent to pay any attention to the wretched stuff that we hear from ill-informed Democratic politicians about salt.

COMPARATIVE PRICES OF TEN GRADES OF BLANKETS FOR THE YEARS 1860, 1883, 1887, AND 1888.

I compile the following table from data furnished from the books of John and James Dobson, Philadelphia, manufacturers of blankets:

Years.	First grade.	Second grade.	Third grade.	Fourth grade.	Fifth grade.	Sixth grade.	Seventh grade.	Eighth grade.	Ninth grade.	Tenth grade.
1860.....	$2.00	$2.50	$2.25	$3.50	$3.75	$5.00	$7.50	$8.00	$10.00	$13.00
1883.....	1.25	1.80	1.62½	2.35	3.20	3.75	5.50	5.60	7.25	8.50
1887.....	1.06	1.53	1.38	2.00	2.72	3.19	4.58	4.78	6.16	7.23
1888.....	1.01	1.45	1.31	1.90	2.58	3.03	4.35	4.50	5.85	6.80

Thus the American-made blanket which cost $2 in 1860 costs only $1.01 in 1888; the blanket that then cost $2.50 now costs only $1.45; the blanket that then cost $2.25 now costs only $1.31; the blanket that then cost $3.50 now costs only $1.90; the blanket that then cost $3.75 now costs only $2.58; the blanket that then cost $5 now costs only $3.03; the blanket that then cost $7.50 now costs only $4.35; the blanket that then cost $8 now costs only $4.50; the blanket that then cost $10 now costs only $5.85, and the blanket that then cost $13 now costs only $6.80.

Here is certainly a very great diminution in the cost of blankets, under our present system, from 1860 to the present time, the present average price being in fact not greatly more than one-half of what it was then.

But I add a table showing what has taken place, in the mean time, in the matter of wages paid at the two periods to employés engaged in the manufacture of blankets.

COMPARATIVE PRICES OF LABOR CONNECTED WITH BLANKET MANUFACTURING IN 1860 AND 1888.

I adopt the following table, furnished by John and James Dobson, manufacturers of blankets, Philadelphia, from their pay-rolls:

	1860.	1888.
	Per week.	*Per week.*
Spinner, average	$6.00	$15.00
Piecer boys	1.50	3.50
Weavers	4.00	10.00
Finishers:		
Unskilled	4.50	9.00
Skilled	6.00	16.00
Dye-house hands:		
Unskilled	4.25	9.00
Skilled	8.00	25.00
Laborers:		
Common	$4.00	$7.50
Skilled	4.50	9.00
Engineer	6.50	16.00
Total	49.25	120.00

Thus it is seen from the two preceding tables that while the manufacturers' price for blankets is now not very much more than one-half of what it was in 1860, the pay to the workmen engaged in their manufacture is more than double what it then was. So, under our present system, the cost of blankets to the consumer has very greatly diminished, whilst the wages paid to the manufacturing workman has very greatly increased. What more or better could be desired, keeping in view meantime that we have the industry in our own country, the capital, the skill, the wages, and the home market for our farmers?

FLANNELS.

I learn from correspondence with the Brown Manufacturing Company, Dover, Me., that the price per yard of common all-wool twilled flannels was:

	Cents.
In 1860	27.0
Now	20.3

And I learn from the same source that the wages paid in the manufacture of flannels has advanced.

Blankets and flannels well represent woolen textures; and the great fall of their price to the consumer under our present system, and the increase of wages in their manufacture, are a complete refutation of all that is said by Democratic politicians about the cost of woolen goods.

FARM WAGONS.

There is no more interesting article supplied by our manufacturers to our farmers than good, commodious, cheap wagons, and I have therefore given this item careful attention. In reply to a letter of inquiry on the subject, Mr. Clem. Studebaker, president of the great wagon and carriage manufacturing company at South Bend, Ind., has sent me the following statement, under date of August 31, 1888:

Farm wagons at retail in 1860 sold from $85 to $100 each. Wagons of the same grade, though really better made, sell to-day at from $55 to $65 each. Common labor in 1860 brought from 75 cents to $1 per day; wagon mechanics got from $1 to $1.50 per day. Common laborers to-day get from $1 to $1.75; wagon mechanics get from $1.25 to $3.50 per day.

That is, to present the statement in its clearest form to the eye:

	Each.
Farm wagons at retail in 1860	$85 to $100
Same wagons, better made, in 1888	55 to 65
Difference in favor of to-day	30 to 35
	Per day.
Common labor in 1860	$0.75 to $1.00
Common labor in 1888	1.00 to 1.75
Increase in favor of to-day	.25 to .75
Wagon mechanics in 1860	1.00 to 1.50
Wagon mechanics in 1888	1.25 to 3.50
Increase in favor of to-day	.25 to 2.00

Thus the farmer, under our present system, buys a better wagon at a much cheaper price, whilst the mechanics and laborers engaged in the making of wagons get considerably better pay than in 1860.

SHOVELS AND SPADES.

I learn from correspondence with the establishment of Messrs. Oliver Ames & Sons, the famous manufacturers of shovels, spades, and scoops, at North Easton, Mass., that the net price of their shovels and spades to their largest customers was:

	Per dozen.
From fifteen to twenty years before 1861	$10.83
Now	7.86

Or about 72½ per cent. of the price before 1860.

Here, as everywhere else, we observe a marked fall in the price of articles of home manufacture which the farmer and the workman has occasion to buy.

PAPER.

I compile from a reliable source the following table showing the price of paper per pound in 1860 and in 1888:

	Cents.
Ordinary grades writing paper, 1860	16 to 25
Ordinary grades writing paper, 1888	9½ to 16
Book paper, 1860	11 to 13
Book paper, 1888	6½ to 7
News paper, 1860	8 to 10
News paper, 1888	4

The depreciation of prices here shown from 1860 to 1880 is 40 to 47 per cent. on ordinary grades of writing paper, nearly 50 per cent. on book paper, and more than 50 per cent. on news paper.

COTTON GOODS.

The following table, showing comparative prices of cotton goods in 1860 and 1886, I compile from a reliable source—that of Joshua Reece, jr., of the New York Journal of Commerce:

	1860.	1886.
	Cents.	*Cents.*
Standard sheetings.....per yard	8.73	6.75
Standard drillings.....do	8.92	6.25
Bleached sheetings.....do	15.50	10.65
Standard prints.....do	9.50	6.00
64 by 64 printing cloths.....do	5.44	3.31

Here, under our present system, is observed a marked decline of price in the case of those cotton goods which are most extensively used by the mass of the people.

The foregoing instances are only presented as examples, and they fairly represent the great decline of price to the consumers of our immense home manufactures under our present system. That decline of price has extended along the whole line of our home manufactured products, which now amount to not less than seven thousand millions of dollars' worth per annum—an immense saving to American consumers through the decline of price, and also by virtue of having these manufacturers, with the capital they employ, the workingmen they pay, the home markets they support, in our own country; a state of things directly and demonstrably the reverse of what the President so erroneously alleges.

The chairman of the Ways and Means Committee has the idea that a great increase of our imports is what the country wants, and that this would be accompanied by a corresponding increase of our exports. This view is of such grave importance, because of such grave mischief, that I have thought it well to give it a thorough refutation. To this

end I draw attention to the following table, and to the comments I shall make upon it, in connection with the theory of the gentleman from Texas:

TOTAL EXPORTS AND IMPORTS AND THE BALANCE OF TRADE OF THE UNITED STATES FROM THE ORGANIZATION OF THE GOVERNMENT, 1790 TO 1888, INCLUSIVE, NINETY-NINE YEARS.

This table has been prepared, at my request, by the Bureau of Statistics.

Value of merchandise imported into and exported from the United States from 1790 *to* 1888, *inclusive, also annual excess of imports or of exports (specie values).*

Year ending—	Exports.	Imports.	Excess of exports over imports.	Excess of imports over exports.
September 30—				
1790	$20,205,156	$23,000,000		$2,794,844
1791	19,012,041	29,200,000		10,187,959
1792	20,753,098	31,500,000		10,746,902
1793	26,109,572	31,100,000		4,990,428
1794	33,026,233	34,600,000		1,573,767
1795	47,989,472	69,756,268		21,766,796
1796	67,064,097	81,436,164		14,372,067
1797	56,850,206	75,379,406		18,529,200
17.8	61,527,097	68,551,700		7,024,603
1799	78,665,522	79,069,148		403,626
1800	70,971,780	91,252,768		20,280,988
1801	94,115,925	111,363,511		17,247,586
1802	72,483,160	6,333,333		3,850,173
1803	55,800,033	64,666,666		8,866,633
1804	77,699,074	85,000,000		7,300,926
1805	95,566,021	120,600,000		25,033,979
1806	101,536,963	129,410,000		27,873,037
1807	108,343,150	138,500,000		30,156,850
1808	22,430,960	56,990,000		34,559,040
1809	52,203,233	59,400,000		7,196,767
1810	66,757,970	85,400,000		18,642,030
1811	61,316,833	53,400,000	$7,916,833	
1812	38,527,236	77,030,000		38,502,764
1813	27,855,997	22,005,000	5,850,997	
1814	6,927,441	12,965,000		6,037,559
1815	52,557,753	113,041,274		60,483,521
1816	81,920,452	147,103,000		65,182,548
1817	87,671,569	99,250,000		11,578,431
1818	93,281,133	121,750,000		28,468,867
1819	70,142,521	87,125,000		16,982,479
1820	69,691,669	74,450,000		4,758,331
1821	54,496,323	54,520,835		24,512
1822	61,350,101	79,871,695		18,521,594
1823	68,326,043	72,481,371		4,155,328
1824	68,972,105	72,170,037		3,197,932
1825	90,738,333	90,189,310	549,023	
1826	72,890,759	78,093,511		5,202,752
1827	74,309,947	71,332,938	2,977,009	
1828	64,021,210	81,020,083		16,998,873
1829	67,434,651	67,088,915	345,736	
1830	71,670,735	62,720,956	8,949,779	
1831	72,295,652	95,885,179		23,589,527
1832	81,520,603	95,121,762		13,601,159
1833	87,528,732	101,047,943		13,519,211
1834	102,260,215	108,609,700		5,349,485
1835	115,215,802	136,764,295		21,548,493

1864	158,837,988	316,447,283		157,609,295
1865	166,029,303	238,745,580		72,716,277
1886	348,859,522	434,812,066		85,952,544
1867	294,506,141	395,761,096		101,254,955
1868	281,952,899	357,436,440		75,483,541
1869	286,117,697	417,506,379		131,388,682
1870	392,771,768	435,958,408		43,186,640
1871	442,820,178	520,223,684		77,403,506
1872	444,177,586	626,595,077		182,417,491
1873	522,479,922	642,136,210		119,656,288
1874	586,283,040	567,406,342	18,876,698	
1875	513,442,711	533,005,436		19,562,725
1876	540,384,671	460,741,190	79,643,481	
1877	602,475,220	451,323,126	151,152,094	
1878	694,865,766	437,051,532	257,814,234	

a Nine months.

Value of merchandise imported into and exported from the United States from 1790 *to* 1888, *inclusive, etc.*—Continued.

Year ending—	Exports.	Imports.	Excess of exports over imports.	Excess of imports over exports.
June 30—				
1879	$719,439,441	$445,777,775	$264,661,666	
1880	835,638,658	667,954,746	167,683,812	
1881	902,377,346	642,664,628	259,712,718	
1882	750,542,257	724,639,574	25,902,683	
1883	823,839,402	723,180,914	100,658,488	
1884	740,513,609	667,697,693	72,815,916	
1885	742,189,755	577,527,329	164,662,426	
1886	679,524,830	635,436,136	44,088,694	
1887	716,183,211	695,319,768	23,863,443	
1888	695,954,507	723,957,114		$28,002,607

The foregoing table is suggestive of many things, and it teaches several highly important lessons with unmistakable distinctness.

First, let it be looked at intelligently from beginning to end—from 1790 to 1888—and it will be seen that it absolutely refutes the theory of the chairman of the Committee on Ways and Means. In his opening speech in this debate that gentleman states his theory in these words:

> If to-day the barriers against importation were broken down, and our imports should increase from two to three hundred millions, that importation would create a demand for that amount of agricultural products to be exported to pay for them, and that would increase the price of farm products all through the land.

On the one hand this theory is connected with a matter so important in itself—the great farming interest of our country—whilst on the other hand it is so utterly unfounded, delusive, and mischievous, that my main object in having the foregoing table prepared was to present an occular and mathematical demonstration of its falsity. The theory is: let in "from two to three hundred millions" more of foreign imports per annum and there will be an increased annual outflow of two to three hundred millions more of our agricultural products; or, putting the theory in its shortest form—increase of imports carries with it an equal increase of exports. The actual experience of the United States for ninety-nine years, reckoning from 1790 to 1888, inclusive, shows conclusively that there is nothing in this theory.

Take the very first year of our national book-keeping, 1790. In that year our imports were, in round numbers, twenty-three millions and our exports twenty millions. The next year our imports were twenty-nine millions and our exports only nineteen millions, instead of being twenty-six millions, as they should have been according to the theory of the gentleman from Texas. In fact, there was an actual increase of six millions of imports in connection with our actual decrease of one million of exports.

Again, in 1799, our imports were seventy-nine millions and our exports seventy-eight millions, whilst the next year our imports were ninety-one millions and our exports only seventy millions, instead of being, as they should have been according to the theory of the gentleman from Texas, ninety millions, another instance of an actual increase of imports—to the extent of twelve millions—in connection with an actual decrease of exports to the extent of eight millions.

Again, in 1811, our imports were fifty-three millions and our exports sixty-one millions, whilst the next year our imports were seventy-seven millions and our exports only thirty-eight millions, instead of being, as they should have been according to the theory of the gentleman from Texas, eighty-five millions—still another instance of an actual increase of imports, to the extent of twenty-four millions, in connection with an actual decrease of exports to the extent of twenty-three millions.

Again, in 1847 our imports were one hundred and twenty-two millions and our exports one hundred and fifty-six millions, whilst the next year our imports were one hundred and forty-eight millions and our exports only one hundred and thirty-eight millions, instead of being one hundred and eighty-two millions, as they should have been according to the theory of the gentleman from Texas; still another instance of an actual increase of imports—to the extent of twenty-six millions—connected with an actual decrease of exports to the extent of eighteen millions.

Again, in 1863 our imports were two hundred and forty-three millions and our exports two hundred and three millions whilst the next year our imports were three hundred and sixteen millions and our exports only one hundred and fifty-eight millions, instead of being two hundred and seventy-six millions, as demanded by the gentleman's theory; that is no less than one hundred and sixteen millions short of the amount of the exports called for by the theory!

These are instances in which an actual increase of imports has been attended by an actual decrease of exports, the direct reverse of what is called for by the theory of the gentleman from Texas.

But the table throughout abounds in instances of another sort, showing that where there has been an increase of both imports and exports there is no such ratio between the two as is called for by the theory of the gentleman from Texas.

Thus, in 1835, our imports were one hundred and thirty-six millions and our exports one hundred and fifteen millions, whilst the next year our imports were one hundred and seventy-six millions and our exports only one hundred and twenty-four millions, instead of being one hundred and sixty-four millions, as called for by the theory of the gentleman from Texas.

Again, in 1849 our imports were one hundred and forty-one millions and our exports one hundred and forty millions, whilst the next year our imports were one hundred and seventy-three millions and our exports only one hundred and forty-four millions, instead of being one hundred and seventy-two millions, as called for by the gentleman's theory.

Again, in 1856 our imports were three hundred and ten millions, and our exports two hundred and eighty-one millions, whilst the next year our imports were three hundred and forty-eight millions, and our exports only two hundred and ninety-three millions, instead of being three hundred and nineteen millions, as called for by the gentleman's theory.

Again, in 1858 our imports were two hundred and sixty-three millions and our exports two hundred and seventy-two millions, whilst the next year our imports were three hundred and thirty-one millions and our exports only two hundred and ninety-two millions, instead of being three hundred and forty million, as called for by the gentleman's theory.

There is still another class of cases in which diminished imports are accompanied with enlarged exports. Thus, in 1876 our imports were four hundred and sixty millions and our exports five hundred and forty millions, whilst the next year our imports diminished to four hundred and fifty-one millions, or nine millions less, and our exports increased to six hundred and two millions, or sixty-two millions more.

And again, in 1880 our imports were six hundred and sixty-seven millions and our exports eight hundred and thirty-five millions, whilst the next year our imports diminished to six hundred and forty-two millions, or twenty-five millions less, and our exports increased to nine hundred and two millions, or sixty-seven millions more.

I have been thus particular in giving many instances from the table in order to demonstrate the falsity of the theory of the chairman of the Committee on Ways an Means. But the whole table refutes the theory. Nowhere in it can be detected the law of trade which he advances, that increase of imports is accompanied by an equal increase of exports. In some instances the imports increase while the exports decrease. In other instances the imports increase in a ratio vastly greater than the exports. In other instances the imports diminish while the exports greatly increase.

Most obviously, as clearly shown by the whole table, there is no such relation between our imports and exports as the chairman assumes. Most obviously the fundamental causes of the increase and decrease of our exports and imports are the irregular and fluctuating demand of the world's market for the one and the irregular and fluctuating demand of our own market for the other; and this is utterly inconsistent, as the table shows from beginning to end, with the chairman's crude idea that a vast increase of our imports, amounting to hundreds of millions annually, artificially brought about by a change in our tariff, would bring with it an equally vast increase of our exports.

The chairman's theory is not only fallacious and delusive, it is alarmingly mischievous. It is absolutely certain that the hundreds of millions of additional imports annually which his theory calls for would work a great displacement of American labor, would transfer a great amount of American industry to foreign countries, and would thus greatly diminish the industrial production of our own people and the purchasing power of our home markets; and on the other hand it is just as certain that this would not be attended by a corresponding increase of exportation of our products, agricultural or other, fundamentally depending, as this last unquestionably does, not upon the measure of our imports, but upon the unstable and vacillating demand of the world's market, in which we are competed against by all the world, in which we are competed against by great and increasing masses of wheat grown in Russia at a labor cost of about $60 per annum, and by other great masses grown in India at a labor cost of about $30 per annum, whilst the like labor cost in the United States is about $220 per annum, more than three and a half times what farming labor costs per annum in Russia and more than seven times what it costs per annum in India! These figures are not my own. They are approximations obligingly furnished me by the Department of Agriculture. And I have derived from the same highly intelligent and credible source a statement showing what an enormous increase of wheat-growing for exportation has taken place in Russia and India upon the basis of their wretchedly-paid agricultural labor. Here it is in short:

	Bushels.
Russian wheat for export in 1865	37,491,096
Russian wheat for export in 1885	95,370,450
Increase	57,879,354
India wheat for export in 1868	558,852
India wheat for export in 1887	41,588,235
Increase	40,929,383

Let these figures be attentively considered by the American farmer. Let him consider the amazing absurdity of laying off "from two to three hundred millions" of our home manufactures and of admitting a like increase of foreign imports, with a view to getting a market for his surplus wheat 4,000 miles away, and in competition with the wheat produced by the ryots of India and the peasants of Russia!

As regards wheat, I believe the problem for the solution of the American farmer is simple. Let nine acres of wheat be planted instead of ten; let the tenth acre be devoted to the greater diversification of our agriculture, and the whole difficulty is solved. Above all things, let not the farmer imagine for a moment that his interests can be promoted by the injury of his home markets and the substitution of foreign ones. These home markets are his best friends. Step by step they are absorbing the surplus he has to sell. In 1880 only about 80 per cent. of that surplus was sold at home; now 90 per cent. or more is bought and paid for by his home markets; and the time is not distant when the home demand will so far absorb the products of the farmer that they will only seek a foreign market when that market pays well.

Let the farmer note, let the workingman note, let the business man note, that the scheme of the chairman of the Ways and Means Committee, as stated by himself, demands that the "barriers against importation" be so "broken down" as to increase our imports "from two to three hundred millions" annually; and let them note that this is the whole pith and substance of the present raid upon our tariff system.

And then let them reflect upon the immediate necessary effect of this. Let them ask and seek a correct answer to the question: How much American-employed labor would be displaced by an additional "two to three hundred millions" of foreign-made goods to take the place of like goods made in the United States? Fortunately, our statistics for 1880 enable us to answer this question with proximate accuracy. I have made the calculation myself, and find that two hundred millions of American-manufactured goods gave employment to 102,040 employés, and that three hundred millions gave employment to 153,060 employés. Supposing each employé to have on the average three dependents upon him besides himself, the amount of displacement of American workingmen and their dependents would be from 408,000 to 612,000 persons. Where would these go, and what would they do? Not to any of our home manufacturing employments, for as we have seen they would have been driven out of these in deference to foreign workmen. Not to the farm, for they have no training, no qualification for that, and, besides, the farmer would have no earthly use for them. Where, then, would they go and what would they do? The answer is, this great number of our people would be struck by industrial paralysis—to the obvious injury of the farmer by crippling his home market, and to the obvious injury of every other class of business by striking out of existence so great an amount of American labor, employment, and production, and the substitution therefor of the labor, employment, and production of foreign countries. I think I have never witnessed a more absurd crudity than that which is apparent on the very face of the scheme proposed by the chairman of the Ways and Means Committee.

BALANCE OF TRADE.

But if anything can add to the absurdity of the chairman's scheme it is seen in the fact that it would, beyond all manner of doubt, have the direct effect of fixing the annual balance of trade firmly and steadily against the United States. What is a balance of trade? It is the difference between what a nation sells and what she buys. If she sells more than she buys the balance is in her favor, and it adds to her stored-up wealth; if she buys more than she sells the balance is against her, and has to be paid out of her stored-up wealth. There can be no question that a balance of trade in favor of a nation is a very desirable thing, and that a balance of trade against her is a very undesirable thing. The case is clearly similar in principle to that of an individual or a family doing business. If they sell more than they buy their trade is prosperous; if they buy more than they sell their trade is not prosperous.

Now, what would be the effect on our balance of trade if we should adopt the scheme of the chairman of the Ways and Means Committee? What would be the effect of so breaking down the barriers against importation as to increase our imports "from two to three hundred millions" per annum? We have seen what part of that effect would be; we have seen that it would paralyze a vast amount of our home labor and industry by substituting foreign labor and industry in their stead; we have seen the bad effect of this upon the farmer in the way of weakening the purchasing power of his home market; and we have seen its bad effect on every other sort of business in the way of substituting a great amount of employment in foreign countries in place of a like amount of employment in our own country—all of which, taken together, is more than enough to consign the scheme to the execration of every intelligent American.

But what would be its effect upon our balance of trade? To put the question is to answer it. The indisputable effect of "two to three hundred millions" more of annual importations would be in the direction of throwing the annual balance of trade against us; and this, in addition to the other evils of the scheme which I have pointed out, is sufficient to stamp it as one of the crudest, most superficial and mischievous proposals that was ever put forward under the guise of statesmanship for the acceptance of an enlightened people.

Let the preceding table be looked at with some care in reference to

the question of balance of trade. The lesson it teaches is of the greatest national importance. During the first twenty-one years, from 1790 to 1810, inclusive, when our manufactures were in a feeble condition, a solid block of balances of trade is observed against us; thence for the next sixty-five years, from 1811 to 1875, inclusive, there were but fifteen years when we had a balance of trade in our favor, and only two occasions when we had this favorable balance for two successive years; whilst for the last thirteen years, from 1876 to 1888, inclusive, we observe, for the first time in our history, a solid block of twelve years of balance of trade in our favor, and only one year against us, very clearly showing that under our present tariff system, which required some time to overcome obstructions and develop its natural effect, the balance of international trade has at last been turned in our favor, there to permanently remain, with probably few interruptions, unless we shall have the folly to break down the system which has finally secured this great national advantage; and which, while securing a good of such inestimable value, has diversified our home industries, built up our home markets, given the greatest possible employment to our home people, supplied manufactured commodities at a greatly diminished cost to our home consumers, paid increased wages to our home workingmen, developed the prodigious resources of our own country, and gone a wonderful way in bringing forth the admirable genius, talent, and skill of our own countrymen and countrywomen.

The folly which would turn the dial of time back upon these things, the folly which would subvert these great national advantages, I regard as the most marked folly that has place in our political history, always saving and exempting the folly of attempting to perpetuate and extend slavery in our Republic, and the folly of secession and war for the destruction of our Union. As we have seen, the first-named folly stands in close historical sequence to the last two. It has its head, its lead, its abiding inspiration in the same social force and sectional center; it is a tradition of the same national malady; it is expressly and definitely embodied and proclaimed in the Confederate constitution of disunion and national ruin, and I believe it awaits its early day to become as defunct, for the good of all, as that constitution and the dire mischiefs it proposed for our country.

There was another and marked folly which I had nearly overlooked. It was that of the immediate predecessor of the chairman of the Committee on Ways and Means. This was the folly of a "horizontal" reduction of the tariff all along the line; without any regard to high or low, long or short; without any regard to the question whether the industries of the country could bear the cut or could not bear the cut; without any regard to proportions, conditions or qualifying circumstances—elements which statesmen and even politicians usually pay particular attention to. All should be cut 20 per cent. short, whether they could stand it more, or stand it less, or not stand it at all.

Here was simplicity simplified. Here was the most difficult and complicated art made easy, and very easy. It was only necessary to draw the knife and cut, even as a savage chief in the exercise of his primitive science cuts, whether with the actual knife or with his crude judgments. Amazing as it may appear, this folly actually led a great party as represented in this House during two Congresses; but it is now gone to its place in the back chambers of memory; it has been smitten dead by the good sense of the people; no party does it reverence any more, or even recalls it with respect; and I do not doubt that the present folly of the present chairman of the Ways and Means Committee will speedily join it in fit fellowship, as a thing of the past, smitten equally dead by the good sense of the people.

As the matter of balance of trade is of such great moment in this discussion, and as the trade-sheet of the United Kingdom sheds important light upon the pending issue in our own country, I draw attention to it in this connection. It teaches a highly significant lesson.

Merchandise imported into and exported from the United Kingdom, with the excess of imports or exports for each year from 1854 *to* 1887, *inclusive.*

[From official British publications.]

Year.	Imports.	Exports of British, foreign, and colonial produce.	Excess of imports.
1854	$741,601,326	$563,643,344	$177,957,982
1855	698,551,280	567,878,212	130,673,068
1856	839,686,125	677,515,848	162,170,277
1857	914,144,972	711,357,236	202,787,736
1858	800,947,218	680,252,894	120,694,324
1859	871,990,931	757,679,863	114,311,068
1860	1,024,548,493	800,643,115	223,905,338
1861	1,057,742,929	782,579,091	275,163,838
1862	1,098,451,664	808,657,224	289,794,440
1863	1,211,364,411	958,225,573	233,138,838
1864	1,338,054,745	1,034,713,351	303,341,394
1865	1,319,173,275	1,064,943,864	254,229,411
1866	1,437,030,118	1,162,634,501	274,395,617
1867	1,339,178,736	1,098,868,007	240,310,729
1868	1,434,126,443	1,108,483,846	325,642,597
1869	1,437,857,131	1,153,483,751	284,423,380
1870	1,475,802,590	1,187,818,128	287,984,462
1871	1,610,886,833	1,380,016,278	230,870,555
1872	1,726,116,521	1,530,946,561	195,169,960
1873	1,806,869,996	1,513,504,689	293,365,307

Merchandise imported into and exported from the United Kingdom, with the excess of imports or exports for each year from 1854 *to* 1887, *inclusive*—Continued.

Year.	Imports.	Exports of British, foreign, and colonial produce.	Excess of imports.
1874	$1,801,007,464	$1,448,515,983	$352,491,481
1875	1,819,776,951	1,370,466,370	449,310,581
1876	1,825,690,362	1,249,603,334	576,087,028
1877	1,919,443,382	1,228,041,906	691,401,476
1878	1,794,622,816	1,194,647,194	599,975,622
1879	1,766,499,960	1,210,704,240	555,795,720
1880	2,001,248,678	1,393,835,999	607,412,679
1881	1,932,109,943	1,445,753,325	486,356,618

1883	2,077,467,869	1,486,409,501	591,058,368
1884	1,898,025,366	1,440,326,242	457,699,124
1885	1,805,315,553	1,320,786,077	484,529,476
1886	1,702,610,586	1,307,468,038	395,142,548
1887	1,762,780,440	1,366,333,923	396,446,517

WM. F. SWITZLER, *Chief of Bureau.*

TREASURY DEPARTMENT, BUREAU OF STATISTICS, *August* 20, 1888.

It will be seen from the above table that from 1854 to 1887, inclusive, there has been a very large and unbroken balance of trade against the United Kingdom. But the table does not exhibit the case in its full force. A very large part of the exports set out in the table is not of British but of foreign and colonial produce, amounting from 1876 to 1887 to considerably more than $250,000,000 per year; so that the adverse balance for each of these years as against the exports of British produce alone must be increased by more than $250,000,000 above the sums set out in the table, which brings it up to an enormous annual sum as against the exports of the United Kingdom considered in herself—a sum not less than six to eight hundred million dollars per annum.

Now, the practical application of this situation in the United Kingdom to the American question before us is extremely obvious. What could be more natural than that England should desire to unload a part of her crushing adverse balance of trade upon the shoulders of the United States? And this is precisely what the scheme of the chairman of our American Ways and Means Committee would accomplish. His "two to three hundred millions" more of annual imports would come mostly from England. This would transfer a considerable part of England's adverse balance of trade to the United States, whilst at the same time replacing a great part of American labor and industry by English labor and industry.

In view of all that has been said, what can be more wonderful than that such a scheme can find a following in the United States strong enough to organize a party? But the United States has seen even a more wonderful thing, and got over it. It has seen that same social force which is now leading this invasion against American industries allied heart and soul with English sentiment in a scheme for the destruction of the American Republic! As the good sense and patriotism of the American people warded off the one danger, they can be relied upon to ward off the other. We can confidently expect that the triumph of liberty over slavery, the triumph of the Union over disunion, will be followed now, in the third stage of the great contest between the two forces, by the triumph of a higher over a lower type of industrial civilization for our Republic!

The Expenditures of the Present Administration as Compared with those of the Preceding Administration.

SPEECH

OF

HON. JOSEPH D. SAYERS,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, September 24, 1888.

The House having under consideration the report of the committee of conference on the disagreeing votes of the two Houses upon the bill (H. R. 10540) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1889, and for other purposes—

Mr. SAYERS said:

Mr. SPEAKER: The gentleman from Illinois [Mr. CANNON], whom I regret to note is absent from the House, delivered, a few days since, a carefully prepared speech, in which he sought to make the impression not only that the Democratic members of this House have been exceedingly extravagant in the appropriation of the public money, but also that the executive department of the Government has been unwise and profligate in its disbursement.

This is, indeed, a most serious charge, and if it be true, would demonstrate most clearly and convincingly that the Democratic party is wholly unfit to administer the public affairs, and is therefore unworthy of the continuation of popular confidence.

Sir, heretofore and all along its existence, whether in power or out of power, it has been a distinguishing characteristic of the great political organization now in the control of this House to be careful and economical in the matter of expenditure; and it has been oftentimes, here and elsewhere, denounced in unmeasured terms for its seeming parsimony in providing the means necessary to the proper and successful administration of the Government.

On the other hand, it can not be denied that the history of the Republican party shows it to have uniformly pursued a policy of which great liberality in the disbursement of revenue is a most prominent and permanent feature. In the absence of the gentleman from Illinois [Mr. CANNON] I will not quote his own utterances, so often delivered upon this floor, as to his views respecting liberal appropriations. I prefer to call the attention of members and of the country to the differences that have uniformly arisen between the Senate, of which the Republicans constitute the majority, and the House of Representatives, which is controlled by the Democrats, in the matter of appropriations.

These differences bear indisputable and conclusive testimony as to the antagonistic relations of the two parties upon this subject, and outweigh the votes and speeches which reflect only the opinions of particular members. They are the embodiment and expression of party policy, and may therefore be accepted as official declarations.

I beg to submit to the House the following:

Increase proposed by the Senate of appropriations as they passed the House, and reduction of the Senate amendments made in conference on the insistence of the House during the fiscal years 1883 *to* 1889, *inclusive.*

Fiscal year.	Increase by Senate amendments.	Reduced in conference.
1883	$7,933,082.02	$3,129,398.68
1884*	4,238,333.35	1,634,167.87
1885	20,139,643.82	8,525,539.46
1886	10,091,807.16	5,665,659.47
1887	13,392,795.82	10,458,146.96
1888	35,046,210.61	18,380,782.71
1889†	21,890,447.58	10,460,330.37
Total	112,732,320.37	58,254,025.52

*The amount of the river and harbor bill, $8,047,000, which passed the House, for 1884, is not considered, as it failed to be considered by the Senate for the want of time.

†The sums for 1889 include the general deficiency bill as reported to but not yet passed by the Senate, and the sum total of the sundry civil bill as agreed upon by the conference committee, allowing $500,000 for the Library building.

Total increase by Senate	$112,732,484.30
Receded from in conference by Senate	58,254,025.52
Net increase of appropriations, 1883 to 1889, by Senate amendments	54,478,458.78

This statement, Mr. Speaker, speaks for itself. It is the evidence of deliberate action, and is the very best testimony which can be adduced by which to establish beyond controversy the line of difference that has always separated the two parties upon this important subject.

It is said, however, that the expenditures as authorized by the present and the last Congresses will be such as to exhaust the surplus and thus to render unnecessary any reduction of the revenue through a revision and reform of the tariff.

Sir, the policy of the present Administration, as I shall hereafter show, demonstrates that it is one thing to appropriate and another thing to expend. But should the expenditures correspond with the appropriations, there will still be left in the Treasury a dangerously large surplus.

To illustrate, let us take the appropriations for public buildings, which were:

For the year ending September 30—	
1886	$2,791,150.89
1887	4,820,396.68
1888	7,750,281.71
Total	15,361,829.28

The appropriation for 1888 contains an item of $2,000,000 on account of the custom-house, etc., in New York.

I am informed by the Supervising Architect of the Treasury that of such appropriations the average actual expenditure has been and will probably continue to be as follows:

	Per cent.
First year	8
Second year	22
Third year	70

The appropriations for rivers and harbors for the present year was $22,397,616.90. It will be borne in mind that the bill for this purpose in the year 1887 failed, which necessarily made that for 1888 so much larger than the one for 1886.

But the expenditure of this sum during the present fiscal year will most probably not exceed $16,798,212.65, if so much. It will also be remembered that until the present year there has been no appropriations for fortifications since 1886. The bill which passed the present Congress appropriated $3,972,000. Of this sum it has been estimated by the Ordnance Bureau that the expenditures will be:

During the fiscal year ending June 30—	
1889	$772,000
1890	1,500,000
1891	700,000
1892	1,000,000
Total	3,972,000

Take the appropriations for the "increase of the Navy."

Act of—	
March 3, 1885, appropriated	$1,895,000
August 3, 1886, appropriated	2,500,000
March 3, 1887, appropriated	3,920,000
September 7, 1888, appropriated	3,760,000
Total appropriated for "increase of the Navy"	12,075,000
Of the first sum there is still in the Treasury	423,352
Of the second sum there is still in the Treasury	1,222,243
Of the third sum there is still in the Treasury	3,180,738
Total yet unexpended	4,826,333

As the plans for the ships provided for in the act of September 7, 1888, have not yet been prepared, it is quite certain that the actual expenditures under it during the current fiscal year can not possibly reach so much as $1,000,000.

I have cited these examples, Mr. Speaker, in order to point out the methods of expenditure as they are followed in the Departments. There are other appropriations and expenditures of a similar character, which it is not necessary to mention. These will be sufficient in order to show that there will be no appreciable reduction of the surplus in consequence of the appropriations of the present Congress.

But let us see how it has been as to ordinary disbursement and administration. After the lapse of twenty-four years the Democratic party came into the possession and control of the executive department of the Government on the 4th day of March, 1885. Its President was a man without any previous practical experience in Federal affairs. But he brought with him to Washington a most enviable reputation for executive ability and incorruptible integrity, manifested and developed in his own State when charged with high and responsible public duties.

He selected his advisers and near subordinates in office, and with them he proceeded to administer this great Government. Has his administration been economical and efficient—so much so as not only to retain the confidence of those who gave to him his eminent place, but so as also to successfully challenge the criticism of those who would overthrow him?

On the 30th of June, 1888, Mr. Speaker, the present Administration completed three full fiscal years of its management of the affairs of the Government, known respectively as the fiscal years 1886, 1887, and 1888. A comparison of the expenditures of the Executive Departments during this period with those of the three fiscal years immediately preceding, namely, 1883, 1884, and 1885 exhibits the following result, embracing all the expenditures of the Government of every character except the interest on the public debt, the bond purchases, and the expenses of the postal service:

Aggregate for the fiscal years—	
1883, 1884, and 1885	$604,562,047.60
1886, 1887, and 1888	616,942,233.71
Excess of expenditures during 1886, 1887, and 1888 over 1883, 1884, and 1885	12,380,186.11

As the case thus stands it would seem that the administration of President Arthur has decidedly the advantage, and unless it should appear upon further examination that the present Administration has been charged by law with duties and disbursements of such a character as to justify this excess of expenditure, the comparison will be against it, and the Democratic party must be held before the bar of public opinion as guilty of wasteful and unnecessary extravagance.

But, sir, how does the matter stand?

I admit that with the balance against the years 1886, 1887, and 1888, as compared with the years 1883, 1884, and 1885, the burden is upon the party in power to explain this excess of expenditure, and to exonorate itself, if it be possible, from censure. Acknowledging this excess to be $12,380,186.11, let us now inquire as to how it accrued. Turning to the books of the Treasury, we find that during the years 1886, 1887, and 1888 there was expended for—

Pensions	$218,722,474.59
Bounties and back pay to Union soldiers	2,104,488.66
National Home for Disabled Volunteers and for the soldiers' homes	7,771,299.02
Making a total of	228,598,252.27

And during the years 1883, 1884, and 1885 for—

Pensions	$177,541,069.19
National Home for Disabled Volunteers and for the soldiers' homes	4,001,735.90
Bounties and back pay to Union soldiers	1,163,051.62
Making a total of	182,711,856.71

Deducting the sum total of 1883, 1884, and 1885 from the sum total of 1886, 1887, and 1888, we have left $45,876,395.56 as excess of expenditure for pensions, bounties, and back pay to Union soldiers, and the support of soldiers' homes during the years 1886, 1887, and 1888 over the payments on like account during the years 1883, 1884, and 1885.

This amount alone, Mr. Speaker, is $33,496,209.45 more than the entire excess of expenditures during the three years of this Administration over the three years immediately preceding.

In other words, if the present Administration had limited the payments on account of pensions, bounties, and back pay to Union soldiers and soldiers' homes to the amounts which had been paid out during the same period under the last administration, the total expenditures of this Administration would have been $33,496,209.45 less than for a like period under the Republican administration.

It may be well to state in this connection that during the fiscal years 1887 and 1888 only $2,500,419.11 were paid to the survivors of the Mexican war and their widows under the act of January 29, 1887.

Surely, Mr. Speaker, our Republican friends will not have the hardihood and effrontery to complain of and to condemn this increase of expenditure for pensions, for bounties, and back pay, and for the homes for Union soldiers, even though it has occurred under a Democratic administration.

Upon the hustings, in both Halls of Congress, through the press, in their conventions, national, State, county, municipal, precinct, and ward; in their legislative assemblies, from their executive chambers, in their organizations, military and semi-military, political and non-political, they are wont to express their extreme fondness and undying devotion for the Union soldier.

They claim for themselves the exclusive championship of his rights, and yet, strange to say, at the very same time and in the very same breath they denounce the present Administration and especially the President as hostile to the soldier, and condemn him for an excess of expenditure, caused by an increase of $45,993,686.05 in the matter of pensions, bounties, and back pay, and for soldiers' homes, not taking into the account $2,500,419.11 paid the survivors of the Mexican war and their widows during the fiscal years 1887 and 1888.

Now, sir, candor compels me to say that I do not intend to constitute myself the soldier's advocate on this occasion. I believe that he has been more than well paid for his services. History does not show such liberality upon the part of any government, existing or in the past, in rewarding its citizen soldiery as is displayed by the United States. But it does not lie in the mouth of any Republican, and particularly of the gentleman from Illinois [Mr. CANNON], to condemn the increased expenditures of the present Administration over those of its immediate predecessor, during the years named, when the facts, the indisputable and uncontroverted facts, show that were it not for the items of "pensions" and "national homes" and bounties and back pay the balance would be largely against the Republican administration. What a mockery upon justice and fair play! Ay, what a deception is being practiced upon the popular mind in the failure to openly and in a manly way attribute the excessive expenditure of 1886, 1887, and 1888 over 1883, 1884, and 1885 to the true cause and in withholding all the facts from the people!

If we compare, Mr. Speaker, the expenditures of the different branches of the public service during the same period the results attained will be indeed gratifying.

Upon an examination we find that the actual expenditures of the Indian service for the last three fiscal years were $18,542,988.73, and for the three years immediately preceding $20,391,084.26—a difference of $1,848,095.53 in favor of the present Administration.

The total expenses of the Navy Department during the fiscal years 1886–'88, inclusive, were $45,975,452.19, and during the fiscal years 1883–'85, inclusive, were $48,597,117.28—a saving by this Administration of $2,621,665 09.

The sum of $111,407,614.70 covered all the expenditures of the War Department during the past three fiscal years, while those of 1883, 1884, 1885 amounted to $131,011,564.76—a difference in favor of the first mentioned years of $19,603,950.06.

All other expenditures, Mr. Speaker, excepting for pensions, are classed under the head of civil and miscellaneous items, the total of which for the last three fiscal years, excluding the postal service, was $214,022,860.74, and for the years 1883, 1884, and 1885, $222,551,103.71, making a reduction of expenditures during the Democratic years of $8,528,242.97.

To this amount there should also be added as not in any sense properly chargeable as expenditures of this Administration, the following sums:

Alabama claims and expenses of commission	$2,059,109.49
Refund of duties and payment of drawbacks upon exported articles of American manufacture	2,536,467.74
Purchase of Louisville and Portland Canal	387,000.00
New Orleans Exposition	326,000.00
	5,308,577.23

Adding this sum to $33,496,209.45, and deducting $2,500,419.11 paid as pensions to the survivors of the Mexican War and their widows, and we have $36,304,367.57, which fairly represents the greater economy of the present Administration in the matter of the ordinary expenditures of the Government, which are, in a measure, under the control of the Executive Departments.

An explanation of these items, Mr. Speaker, may be necessary to a thorough understanding of their character and of the position which they should occupy among the expenditures of the Government.

Excepting the two items of $326,000 and $387,000, they are net increases over expenditures for the same purposes in 1883, 1884, and 1885.

The item, $2,059,109.49, for "Alabama claims and expenses of commission" was upon judgments of the second class paid in 1887 under awards by the Court of Commissioners of Alabama Claims re-established by the act of June 5, 1882.

Judgments of the first class were paid in 1876 and 1877. These judgments were rendered by a commission appointed by President Arthur, and mainly before the present Administration came into power.

The expenditure of $2,536,467.74, "refund of duties and payment of drawbacks upon exported articles of American manufacture," should not be held as a proper charge against the three last fiscal years, because it was made in pursuance of laws enacted long before the present Administration came into power, and it is of such a character as can not possibly be within the control of the executive branch of the Government. It consists of payments due as drawbacks upon exports, chiefly of tin and sugar, and it may increase or diminish accordingly as such exports are greater or less. The item, "$387,000, purchase of Louisville and Portland Canal," was an expenditure in payment of bonds of the canal company, which matured in 1886, and which it was made the duty of the Government to discharge by the act of May 11, 1874.

Mr. PAYSON. What canal does the gentleman specify?

Mr. SAYERS. The Louisville and Portland. By the act of May 11, 1874, the Government assumed the payment of the company's bonds, some of which were paid in 1886.

The expenditure of $326,000 for the New Orleans exposition, for which an appropriation was made, I believe, by the Forty-eighth Congress, also fell upon the present Administration, and was paid in 1886.

Mr. ROGERS. Let me interrupt the gentleman to ask him to more fully explain what he means by the present Administration liquidating the expenses of the New Orleans exposition.

Mr. SAYERS. I mean that when the present Administration took charge of the public affairs it found in existence a law making an appropriation in aid of the New Orleans exposition, and that $326,000 of it was still in the Treasury, and it became the duty of the Department to apply this sum in pursuance of the law enacted during President Arthur's administration.

Thus stands the account, Mr. Speaker, between the two administrations—Republican and Democratic—and it is for the country to decide which has been the most economical in expenditure.

Mr. PAYSON. Will it interrupt the gentleman if I ask him a question?

Mr. SAYERS. Not at all.

Mr. PAYSON. I understand my colleague [Mr. CANNON] when he addressed the House on the 19th of September to say and to charge that the expenditures under the Democratic administration were in excess of those of the last Republican administration, and this general charge the gentleman now having the attention of the House was answering. I desire to inquire of him whether he wants the House and the country to understand that the Democratic party has been more economical in the management of the affairs of the Government than its predecessor, and I would like to know if he desires to be understood as saying that the figures he gives show that in the performance of its administrative duties a less amount of money has been expended under this Administration than under the last one?

Mr. SAYERS. I do.

Mr. PAYSON. And that there have been no new officers and increase of salaries?

Mr. SAYERS. So far as any new offices are concerned, I will not state that. I will, however, say that in my opinion there has been a discharge of more than a corresponding number of officials who were in the employ of the Government at the time when the present administration came into power and their places have not been since filled. This includes employés.

Mr. SPRINGER. And every increase has been voted on by the gentlemen on the other side of the House.

Mr. SAYERS. I believe so.

Mr. SPRINGER. And they have insisted that we should put them on.

Mr. PAYSON. There is but a shadow of truth in the suggestion of my colleague.

Mr. SPRINGER. How large?

Mr. PAYSON. A shadow.

Mr. SPRINGER. There is not only the shadow, but the substance.

Mr. PAYSON. My colleague [Mr. CANNON] said that there had been an increase of three hundred and fifty officers added to the great

army we heard of four years ago. Does the gentleman concede that?

Mr. SAYERS. I do not know about that. I will not admit nor deny it; but I will state in answer that there have been more officials and employés dismissed and their places not filled in the service of the Treasury Department alone than is embraced in that list.

Mr. PAYSON. I shall be glad to see a list of them. My colleague also stated that the increase of salary caused by the creation of the 358 officers aggregated $52,431.90 each year. Does the gentleman from Texas admit the accuracy of these figures?

Mr. SAYERS. I will not.

Mr. PAYSON. Will the gentleman deny the accuracy of these figures?

Mr. SAYERS. I will neither admit nor deny their accuracy for the reason that I have not investigated it. The gentleman, however, does understand me to say that more than 358 officials and employés have been dismissed from the service of the Treasury Department alone since the 4th of March, 1885, and their places have not been filled. I believe that the exact number so dismissed from the service in the Treasury Department in Washington, and to whom no successors have been appointed, is 310. I am informed that there have also been dismissals from service in that Department of officials who do not reside in Washington and their places abolished.

But, Mr. Speaker, if it should be claimed that the comparison for the past three years should be made with the fiscal years 1882, 1883, and 1884, then it will be found that the results, as I have before given them, will be substantially the same.

The expenditures for pensions during the years 1882, 1883, and 1884 amounted to $182,786,995.65, and the expenditures for the same purpose in 1886, 1887, and 1888, after deducting the payment to the Mexican war pensioners of $2,500,419.11, were $216,222,055.48, which leaves a balance against the Republican years in the matter of pensions equal to $33,436,060.83.

If to this we add $3,782,530.92, which is the increase of the Democratic years over the Republican years for bounties and back pay to Union soldiers and for the support of soldiers' homes, we here have a balance for pensions, back pay, and bounties to Union soldiers and soldiers' homes against the years 1882, 1883, and 1884 and in favor of the years 1886, 1887, and 1888, amounting to $37,218,591.75.

The total expenditures for the past three fiscal years, excluding pensions, interest account, bond purchases, and the postal service, were $390,023,419.84; and the total expenditures for the fiscal years 1882, 1883, and 1884, excluding pensions, interest account, bond purchases, and the postal service, were $399,913,109.27, making a net decrease during the Democratic years of $9,889,689.43. To this should be added the following items, which are in no proper sense chargeable as ordinary expenditures, and which are net increases:

Increased payments on account of bounties and back pay to Union soldiers and support of soldiers' homes	$3,782,530.92
Increased payments on account of drawbacks and refunds, much of which had come over from the Republican administration	10,075,723.57
Sinking funds for Pacific railroads	3,568,768.17
Alabama claims	5,739,000.00
Total	23,166,022.66

This will give us $33,055,712.09 as a total net decrease of expenditures during the past three years as compared with 1882, 1883, and 1884.

It may be proper to say, Mr. Speaker, in reference to the item "sinking funds to the Pacific railroads," that the service performed by these roads for carrying mails and transporting troops is paid from appropriations made for those branches of the service and appears in the statement of expenditures of the Post-Office and War Departments, and is deposited in the Treasury to the credit of the sinking funds created for those companies by the act of May 7, 1878. When drawn from the Treasury and invested, as required by the terms of the law, it necessarily appears a second time as an expenditure on the books of the Treasury Department, although not an actual expenditure, as the bonds purchased for the funds are in the custody of the Treasury Department and the amount has already been charged in the expenditures of the War and Post-Office Departments.

I will now, sir, ask the attention of the House to a comparison of the annual expenditures of the Executive Departments for each of the last three years with the corresponding year four years previously.

Excluding the interest account, the expenses of the postal service, and payments for pensions the increase in expenditures in 1886 over 1882 was $15,092,825, and the decrease in expenditures was $20,895,000, making a net decrease of $5,802,175.

Among the items of saving we find—

Mints and assay offices	$252,000
The internal-revenue service	722,000
The expenses of collecting revenue from customs	110,000
Repayment to importers	233,000
The light-house establishment	311,000
The construction of public buildings	140,000
The Pay Department of the Army	230,000
The Commissary Department	610,000
The Quartermaster's Department	2,510,000
The Ordnance Bureau	93,000
The Bureau of Yards and Docks	$422,000
Equipment and Recruiting	211,000
Bureau of Navigation	208,000
Bureau of Ordnance	44,000
Bureau of Construction and Repair	425,000
Bureau of Steam Engineering	87,000
Bureau of Provisions and Clothing	128,000
Bureau of Medicine and Surgery	88,000
Miscellaneous items, Navy Department	502,000
The public-lands service	1,057,000
Miscellaneous civil items, Interior Department	455,000
Indian Affairs	3,638,000

Contrasting the expenses of 1887 with 1883 upon the same basis, omitting the $5,739,000 paid for Alabama claims, we find the net reduction of 1887 over 1883 to be $1,832,000.

In the comparison and among the decreased expenditures of the former over the latter year are—

Miscellaneous expenditures of the State Department	$295,000
Mints	202,000
Internal-revenue service	1,712,000
Building revenue steamers	86,000
Marine-Hospital Service	66,000
Light-house establishment	81,000
Coast Survey	115,000
Construction of public buildings	660,000
Miscellaneous expenditures of the Treasury Department	606,000
Salaries and contingent expenses of the War Department	55,000
The Commissary Department	553,000
The Quartermaster's Department	4,834,000
The Ordnance Department	304,000
The Engineer's Department	172,000
Military Academy	61,000
Miscellaneous expenditures of the War Department	137,000
Salaries and contingent expenses in—	
The Navy Department	$22,000
The Marine Corps	33,000
The Bureau of Yards and Docks	344,000
The Bureau of Equipment and Recruiting	72,000
Bureau of Navigation	75,000
Bureau of Construction and Repair	697,000
Bureau of Steam Engineering	451,000
Bureau of Provisions and Clothing	184,000
Bureau of Medicine and Surgery	59,000
The public lands service	1,723,000
Indian affairs	1,168,000
The Post-Office Department	26,000
Salaries and miscellaneous expenses of the Department of Justice	157,000
Expenses of the United States courts	276,000
Unenumerated	39,000

If we compare 1888 with 1884 upon the same basis, we have a net reduction of $2,821,500; and among the items of decrease appear:

Salaries and contingent expenses of the Treasury Department	$38,000
Internal-revenue service	1,343,000
Rebate of taxes	3,535,000
Repayments to importers	563,000
Drawbacks	310,000
Coast and Geodetic Survey	152,000
Salaries and contingent expenses of the War Department	228,000
Buildings and grounds in Washington	241,000
Quartermaster's Department	2,591,000
Medical Department	136,000
Ordnance Department	242,000
Engineer Department	439,000
Signal Service	54,000
Navy Department:	
Bureau of Equipment and Recruiting	209,000
Bureau of Navigation	22,000
Bureau of Ordnance	40,000
Bureau of Construction and Repair	401,000
Bureau of Steam-Engineering	392,000
Miscellaneous	1,058,000
Interior Department:	
Public lands service	1,354,000
Indian Affairs	250,000
Unenumerated	40,000

We also observe, Mr. Speaker, a marked decrease in the rate of expenditure per capita, the average rate per capita of expenditures for the Republican years being $4.72, and for the Democratic years $4.36.

Probably, Mr. Speaker, the best evidence of the superior economy of the present Administration is to be found in a comparison of the balances of unexpended appropriations at the end of each fiscal year, which were as follows:

Balances for the fiscal years 1886, 1887, and 1888	$38,099,915.24
Balances for the fiscal years 1883, 1884, and 1885	27,091,986.55
Balances for the fiscal years 1882, 1883, and 1884	28,774,482.38

Thus we see that there was covered into the Treasury and carried to the surplus fund $11,007,928.69 more in 1886, 1887, and 1888, than in 1883, 1884, and 1885; and $9,325,432.86 more than in 1882, 1883, and 1884. Such, sir, is the record of the two administrations as it is made from the facts and figures taken from the books of the Treasury Department. This record can not be successfully impeached, and bears most eloquent and convincing testimony to the honesty, economy, and prudence of Democratic management.

As to its efficiency, permit me, Mr. Speaker, to call the attention of the House to the operations of some of the Departments during the past three years. It would not be possible for me to review the work of every Department and of its various bureaus, offices, and divisions within the compass of a single speech. I shall content myself with a reference to such only as I have had the time and opportunity to care-

fully investigate, and shall leave to other gentlemen upon this floor the opportunity to speak of what has been left unmentioned.

THE NAVY DEPARTMENT.

The House and the country, Mr. Speaker, are familiar with the methods of business which were in vogue in this most important branch of the public service while under control of the Republican party. Extravagance and corruption disgraced its administration. Immense sums of money were expended in the purchase of inferior material and unnecessary supplies and in the repair of vessels. In fact we ceased to have a navy worthy the name. There was not a ship afloat that, in case of war, would have been able to stand a thirty minutes' close engagement with even a third-rate vessel of any important maritime power.

Everything connected with the Department bore the appearance of decay—not because of the failure of Congress to make the proper appropriations for its support, but only because of a gross mismanagement in every branch, afloat and ashore.

Such was the condition when the present Secretary took charge. Undaunted by the deplorable appearance of things which everywhere met his view, he immediately entered upon a reform.

Chaos immediately yielded to order, extravagance to economy, sloth to energy, carelessness to watchfulness.

To illustrate the good results which immediately followed, Mr. Speaker, I invite the attention of the House to those kinds of expenditure which are not controlled by statute, but which are greater or less accordingly as the administration is prudent, honest, and economical, or careless, dishonest, and extravagant—that is, the ordinary expenditures. The following statement is conclusive:

Years.	Administration.	Ordinary expenditures.	Surplus balance.	Deficiency.
1883	Republican	$6,560,701.67		$121,859.28
1884	Republican	6,142,256.52		149,935.75
1885	Republican	5,435,292.57		105,942.65
1886	Democratic	5,020,942.30	$380,125.19	
1887	Democratic	4,870,522.47	280,310.78	

Here, sir, is presented, in its most striking form, the difference between Republican and Democratic administrations. It will be observed that during the Republican years the ordinary expenditures were not only much larger, but also that deficiencies constantly accrued; while, on the other hand, in the Democratic years there were surplus balances notwithstanding a decrease of expenditures. It will not, it can not be said that the administration of 1886 and 1887 was less energetic and efficient than that of 1883, 1884, and 1885. The history of the Department during those years utterly refutes such a proposition. Why, then, this difference in the expenditures? There is but one answer. It need not be stated. Every candid mind will accept it as true—indisputably true.

But the vicious mode in which the Department was conducted during the Republican administration can be better illustrated by a table showing the overpayments made while it was in power as compared with later years. We find that there was overpaid, in the various branches of the service, in—

1881	$61,634.10
1882	174,204.13
1883	273,964.54
1884	189,758.37
1885	218,441.53
1886	24,632.03
1887	15,223.07

While it would scarcely be expected that there should have been no overpayments, considering the nature of the service, yet the carelessness exhibited during the years 1883, 1884, and 1885 was evidently so gross as to become criminal, and could not have possibly occurred under an honest, wise, and economical management.

But, Mr. Speaker, let us see how the new Secretary dealt with the Navy proper? It must be admitted that his administration of the Department has been all that could be desired. But he was not content with this reform, great and valuable as it was, and he proceeded without delay to the rebuilding of the Navy. He found four monitors, whose construction had been in an uncompleted state for several years, and one dispatch-boat and three cruisers, which were under contract. I shall not detain the House to speak as to these latter four vessels. It will be unnecessary to recall their unpleasant history.

Congress immediately responded to the Secretary's suggestions as to the necessity of replacing the old, worn-out, and almost useless vessels which constituted our Navy with ships equal in armament, construction, and speed to the best war-ships afloat.

The manufacturing industries of the country were induced to compete for their building, and though four years have not yet elapsed since the present Administration came into power, the enterprise, industry, and ability of the Secretary has already accomplished the work shown in the following statement:

Statement of the vessels authorized to be built since March 3, 1885.

Date of act.	Names of vessels.	Tonnage.	Estimated cost.	Amounts appropriated.	Amounts not expended and in Treasury Aug. 31, 1888.
Mar. 3, 1885	Newark, Charleston, Yorktown, Petrel.	10,401	$3,195,000	$1,895,000	$423,352
Aug. 3, 1886	Baltimore, Nesurius, Maine, Texas, Torpedo-boat, Puritan, Amphitrite, Monadnock, Terror.	35,618	10,278,046	2,500,000	1,222,243
Mar. 3, 1887	Philadelphia, San Francisco, Concord, Bennington.	11,813	*6,520,000	3,920,000	3,180,738
		57,832	19,993,000	8,315,000	4,826,333
Sept. 7, 1888	4 steel cruisers, 1 armored, 3 gunboats, 1 practice ship.†	25,600	9,000,000	3,760,000	
	Total	83,432	29,593,000	12,075,000	

Probable amounts that will be expended during 1888–'89 ..... $3,473,352
Probable amounts that will be expended during 1889–'90 2,555,000

* And to complete the double-turreted monitors and vessels under acts March 3, 1885, and August 3, 1886.

† The plans for these ships not having been, as yet, prepared it is not possible to form an estimate of the expenditures.

Ten of these vessels are in course of construction at private ship-yards and under contracts made with citizens of our own country, one has been completed, and the remaining two are being built by the Department in its own works at New York and Norfolk.

It is safe to say that the four last authorized to be built will be pushed forward as rapidly as circumstances will permit, and, sir, the time is not distant when the American Navy, though small in the number of its ships, will resume its ancient prestige upon the seas.

But, Mr. Speaker, this is not all.

Previous to June 30, 1885, the Ordnance Bureau of the Department could, at its utmost, produce only eight 6-inch guns and carriages with their equipments in one year. Already their capacity has been increased to fifteen 6-inch guns and thirty 6-inch carriages, with their equipments, per annum, and within a short period of time the Government shops will be prepared to produce every twelve months twenty-five 6-inch guns and twelve 12-inch guns with their carriages and equipments, these calibers being taken as a basis. Surely the record of this Department since March 4, 1885, is indeed good, and this Administration can proudly point to it as an evidence that the public money can be honestly expended and in such a manner as to give entire confidence to the people.

THE POST-OFFICE DEPARTMENT.

There is no Department of the Government, Mr. Speaker, that involves a greater amount of detail and requires keener and more constant vigilance, not only in order to maintain its efficiency, but also to guard itself against extravagance and fraud in their every variety, than that which supplies mail facilities to the country. Its operations, whether good or bad, wise or unwise, go directly to the homes of the people, and are most sensibly and deeply felt by all classes and conditions in life. A brief and hurried glance at the manner in which it has been conducted since the 4th day of March, 1885, will not only be interesting, but it will also show as well a marked improvement and increase in the character and extent of the service as in the economy which has been practiced as compared with former administrations. That its workings may be the better understood we will have to consider it from two points of view—one as a means by which the postal service is conducted, the other as the service itself, extending not only throughout our own country, and following the foot-steps of the citizen wherever they may carry him, but also providing communication with other lands and with strange peoples.

The former is maintained by annual appropriations of a definite character, and these appropriations are to be found in the legislative, executive, and judicial acts of Congress; the latter—that is, the service itself—is provided for in another and an independent act, which applies the receipts of the Department for postages and mail-carriage to various items of expenditure, and supplements these receipts with whatever appropriation that may be necessary in order to give to the people an efficient postal service.

Let us first consider, Mr. Speaker, that division of the Department which superintends and conducts the service. Congress provides a stated sum for its maintenance, and this sum involves two kinds of expenditure; one of these kinds consists of salaries of officers and employés, the number, classification, and pay of which is defined by law. Here discretion is not allowed the Department. The other kind of expenditure is contingent in its character, and may be greater or less, economical or extravagant, wise or foolish, accordingly as the Department is conducted prudently and efficiently.

Contrasting the year ending June 30, 1885—the last Republican year—with the year ending June 30, 1886—the first Democratic year—we find that in the latter year there was a decrease over the former year, in contingent expenditures, of $91,094.25, notwithstanding the year 1886 was charged with the expense of an additional building, as directed by the act of March 3, 1885; of foreign postage, and of free penalty envelopes. These three items of expenditure, as I have said, were not imposed upon the year 1885, and, in the aggregate, they amounted to $7,074.99.

Deducting, therefore, this amount from the entire contingent expenditure of 1886, we have a clear gain of $34,361 in the first year of the Democratic administration over the last year of the Republican administration in the management of the contingent fund—the contingent expenditure of 1885 being $118,381.25.

Notwithstanding this diminution in 1886 over 1885, the Department buildings were much improved in every respect and better fitted for occupancy.

In the year 1887 there was a further reduction in this character of expenditures of about $2,500, and in the year 1888 the same economy was maintained.

So you see, sir, that in this matter alone there was saved to the Government fully one-third of the amount expended under the Republican administration, and that, too, without the slightest detriment to the public service. But that the difference between the two administrations in the manner of handling the public funds entrusted them by Congress may be the better observed let me call the attention of the House, Mr. Speaker, to an item in the contingent expenditures—that for the publication of the Postal Guide. Every member is familiar with the publication. In the year 1875 this book was purchased by the Department at a cost of $19,703.67, and the price annually increased until it reached, in 1883, $53,016.88. Congress then took notice of the extravagance, not to use any harsher phrase, that was being perpetrated, and in the following year, 1884, the cost was reduced to $30,579.73, and in 1885, the last Republican year, to $26,834.19.

In 1886, mark the difference, only $13,708.60 was expended for the purpose, and for this sum a much larger number of copies were procured and issued than in any previous year, exceeding the number in the year 1883, when the highest price was paid, by 2,700 annuals and by 82,772 monthly issues.

Regarding the postal service itself it will probably be necessary to suggest, Mr. Speaker, that a contrast between the expenditures of the two administrations, to be a just one, should take into the account not only the exact amounts expended by each, but also the rapid growth of our population and the extent of territory which is covered by our mail facilities, and the points, almost without number, to which they reach. There is an annual increase from 2,000 to 3,000 post-offices, necessitating the continual and oftentimes rapid enlargement of the bulk and volume of the mails, which, while they may add somewhat to the revenue, yet in a country sparsely settled like ours in many localities disproportionately enhance the cost.

I shall now invite the attention of the House to the reduction which the present Administration has made in the cost of the service to the general Treasury.

At the end of the fiscal year 1885, Mr. Speaker, there was a cash deficiency of about $7,000,000, and it was estimated that the deficiency for the year ending June 30, 1886, would be at least $9,000,000, provided that the same ratio of expense and increase was maintained as in former years. To make this future deficiency the much more certain it was taken into account that, on the 1st of July, 1885, the beginning of the first Democratic year, the postage upon newspapers would be reduced from 2 cents per pound to 1 cent, and the unit of weight of letter postage increased from one-half an ounce to one ounce. This reduction of the newspaper and letter postage, it was apprehended, would reduce the revenue to the extent of not less than $2,000,000, and thus necessitate an increase of the demand upon the general Treasury to supply a deficiency of at least $9,000,000 in the year ending June 30, 1886, the first year of the present Administration. The cost of the service for this year was estimated by the last Republican Postmaster-General at $56,099,169.50; the appropriations by Congress were $54,183,642.14, but the expenditures were limited to less than $51,000,000.

The result, however, was far different from what had been predicted. Instead of a deficiency at the close of the fiscal year 1886 of $9,000,000, there was a reduction of the deficiency of 1885 by more than $100,000, and during the second year of Democratic administration the deficiency fell from nearly $7,000,000 in 1885 to $4,000,000 in 1887, and in the third year, that is, in the fiscal year 1888, it fell much lower, a small fraction over $2,000,000.

It may, however, be claimed that this great and rapid reduction should be attributed to a corresponding increase of receipts. But such was not the case. True it is that the receipts were increased to an extent, but not so much as to cause such a reduction and in so short a time. Other forces, Mr. Speaker, were operating. Economy, honesty, and efficiency were at work, and good results followed, as always will follow when these great principles of action have full and fair play, unhindered by extravagance, fraud, and incompetency.

The rate of expenditure had been diminished, as I shall endeavor to show.

The table which I now submit for the consideration of the House, prepared from official data accessible to any one who may desire to investigate for himself, indicates an average annual increase of expenditure during the last six years of Republican administration, of 6.8 per cent.:

Year ended June 30—	Total on account of year's service.	Increase over previous year.	
		Amount.	Per cent.
1880	$36,414,429.03	$3,030,301.53	9.0
1881	39,722,783.06	3,308,354.03	9.0
1882	40,441,192.06	718,409.00	1.8
1883	43,559,749.22	3,118,557.16	7.7
1884	47,074,580.14	3,514,830.92	8.0
1885	49,538,302.09	2,463,721.95	5.2

But, sir, how was it in 1886, 1887, and in 1888, the first, second, and third years of Democratic control?

The expenditures for 1885 were $49,538,302.09. As I have before stated, it had been predicted by the Republican Postmaster-General that for this year there would be a deficiency of at least $9,000,000 should the same ratio of expense and increase be maintained as in former years. The prophecy would have been fulfilled if the same causes had existed, and the expenditures for 1886 would have been more than $52,900,000, instead of falling, as they did, to $50,839,346, which was over $2,000,000 less than the average annual increase for the last six years of Republican management.

A change had taken place—vastly for the better. Hitherto the ratio of the increase of cost had been above the ratio of the increase of receipts as the result of Republican methods of administration. For the years 1886, 1887, and 1888, and we may safely assert for 1889 also, the rule was to be different, and the ratio of the increase of receipts was to rapidly approach the ratio of the increase of cost instead of lagging far behind.

But, sir, let us see how this new relation of revenue and expenditure was established. There was no reduction either in the number of offices or of routes. On the contrary, they were increased and have been constantly increasing during the present Administration.

The cost of the star service had regularly increased every year, except one, previous to the Democratic Administration, but through the wise and efficient methods of the Democratic Postmaster-General they were during the year ending June 30, 1886, decreased $562,437.67, and a still further reduction was made in the fiscal year of 1887.

The following table shows the condition of this service for the years stated:

	Miles traveled.	Annual cost.	Rate per cent.
Average for years 1879-1885	77,705,236	$5,925,537.00	7.67
For 1887	84,259,284	5,119,640.30	6.05
Total	*6,554,048	†805,887.70	‡1.62

*Miles gained. †Saved. ‡Decrease.

The contrast herein presented, Mr. Speaker, is striking, and the Democratic showing as to service in the second year of its existence does not suffer. The number of miles traveled in the Democratic year 1887 exceeds those of an average of seven Republican years by 6,554,048, with a diminution in cost of $805,887.70, and at a decrease of 1.62 per cent.

Now, sir, let us compare the cost of steam-boat service as between the two administrations. On the 30th of June, 1886, the end of the first Democratic year, the cost of this service was $446,419 as compared with $594,849 in 1885, thus saving to the Government in this branch of the service in the first year of the present Administration $148,430, or above 25 per cent.

In the year 1887 there was an additional reduction of $70,000. A like reform and retrenchment, Mr. Speaker, was effected in the mail-messenger service, whose annual rate of cost was on the 1st day of July, 1885, $879,217. On the 1st day of July, 1886, it was $831,223, thus saving to the Government in one year $47,994 in this class of expenditures, though twenty-two new routes had been created during the same time, with an increase in the total mileage length of them all.

In 1887 there was a further increase of one hundred and sixty-three routes, and an additional decrease of $5,311.39 in their annual maintenance.

So, too, sir, with the postal-car service. Upon examination it was found that favoritism had been practiced, and an illegal and unauthorized expenditure had been made to certain favored railroad companies for postal-car service during Republican administrations, and amounting to, June 30, 1885, $979,959.67. This involved an annual charge to the Government of $80,161.73.

A Democratic Postmaster-General unceremoniously put an end to this gross exhibition of extravagance, favoritism, and fraud, and the expenditure was discontinued. The land-grant railroads were also com-

pelled to comply with the provisions of the law in respect to the transatio i of the mails, and in this matter an annual expense of $12,-176.0 was saved; and in addition thereto these roads were compelled to refund to the Government the sum of $69,647.91 which they had been illegally paid.

Through the courtesy, Mr. Speaker, of the distinguished chairman of the Committee on Post-Offices and Post-Roads [Mr. BLOUNT], of whose labor and information I have availed myself on this occasion, I submit to the House the following statement from a very able speech delivered by him in the Forty-ninth Congress:

Amount of expenditure for supplies furnished for use of the Post-Office Department and the postal service during the fiscal year ending June 30, 1886, under contracts made since March 4, 1885, the date of commencement and duration of such contracts, the cost of like kinds and quantities of supplies at the prices in the contracts in force March 4, 1885, and the amount and rate of saving by the new contracts.

Articles.	Date of commencement of contract.	Duration of contract.	Expenditure year ended June 30, 1886.	Cost of like kinds and quantities of supplies in contracts in force March 4, 1885.	Saving by new contracts.	
					Amount.	Per cent.
Adhesive postage-stamps	July 1, 1885	Four years	$114,969.09	$150,045.93	$35,076.84	23.3+
Postal cards	do	do	168,826.06	193,498.11	24,672.05	12.7+
Registered package, tag, and official envelopes	do	One year	72,366.21	127,703.22	55,337.01	43.3+
Mail-bags and mail-bag catchers	April 1, 1885	Four years	211,577.24	247,195.13	35,617.89	14.4+
Wrapping-paper	July 1, 1885	One year	11,216.25	12,099.78	883.53	7.3+
Wrapping-paper for facing slips	do	do	17,700.00	29,100.00	11,400.00	39.1+
Twine	do	do	69,522.00	78,424.50	8,902.50	11.3+
Marking and rating stamps	do	do	9,420.40	10,967.74	1,547.34	14.1+
Letter-balances, test-weights, and scales	do	do	1,120.00	638.00	482.00	75.5+
Stationery for postal service	do	do	23,189.93	24,221.54	1,031.61	4.2+
Stationery for Department	do	do	6,953.55	7,189.29	235.74	3.2+
Total			706,860.73	881,083.24	174,222.51	19.7+

This table will bear a close analysis and well illustrates the very diverse methods of the two adminstrations in the making of such contracts. It is not a wonder, sir, that our postal system cost so much under Republican rule. The Government was almost without protection during those days. In the contracts of the first year of the present management there was a saving, as to the supplies mentioned, of $174,-222.51.

As to supplies furnished postmasters, I beg to lay before the House the following extract from the report of the Postmaster-General for 1886:

This division of the Department underwent an investigation in April and May, 1885, the results of which were laid before you in the report of last year, exhibiting many serious irregularities and arousing the suspicion of peculation. The changes in its methods which were then and since made have been advantageous to the service, and corroborated by results of the inferences of that investigation. Notwithstanding an addition, required by the growth of the service, of over 35,000 record books, over 55,000 facing-slips, over 3,500 reams of wrapping paper, and of 11,100 pounds of ink, and 5,475 ink-pads in the purchases and issues of the year, the total expenditures under the five items of appropriation in the postal-service act—for paper, twine, balances, and scales, stamps, and ink, and stationery, which embraces all the charges of the division except printing at the Government Printing Office, amounted to but $153,465 during the last fiscal year, as against $189,097.40 in the previous year, or a saving in expenditure of nearly 19 per cent., while there was almost an equal percentage of increase in the quantities of goods supplied.

In the comparison of the quantities of twine issued during the two past years the value of the change in methods is very manifest. It was discovered by the investigation mentioned that the twine which had been accepted was deficient in yardage to the pound, but the extent of loss inflicted on the Government was only to be conjectured. It transpires that owing to the care taken to secure the stipulated article during the past year, the amount required for use was many thousand pounds less than the quantity paid for the year before, notwithstanding the increased necessities of the service; and the division superintendent estimates the actual saving accomplished at 140,000 pounds, which would have cost $11,600.

There remains a balance of these appropriations unexpended of nearly 32 per cent., and the experience of the year will justify some reduction in the appropriations for these articles of supply even beyond the reductions already made in those for the current year.

Comment upon the methods which were affirmatively adopted or permitted without objection by the Republican administration of this great department is unnecessary. The facts which I have presented are prominent illustrations of the manifold evils which characterized its management, and are in striking contrast with the reforms, not only in the kind of service but also in its reduced cost to the people, as accomplished under Democratic control.

The increase in the number of post-offices and routes has been great; but it is most gratifying to know that the receipts and expenditures are rapidly reaching the same figures, and that the postal service is hastening to a self-sustaining basis, when it will no longer be to any extent a charge upon the public Treasury.

An inspection of the records of the Department will show:

Post-offices:	
June 30, 1885	51,252
June 30, 1888	57,376
Routes:	
June 30, 1885	21,832
June 30, 1888	24,869
Length of routes:	
June 30, 1885 ..... miles	365,251
June 30, 1888 ..... do	380,379
Net increase from June 30, 1885 to June 30, 1888:	
Post-offices	6,124
Routes	3,037
Length of routes ..... miles	15,128

In the light of such an improvement in the service during the three years of the Democratic Administration, it will be exceedingly interesting to analyze and to reflect upon what is contained in the following:

Statement showing the receipts and expenditures of the Post-Office Department for the fiscal year ending June 30, 1888, compared with the fiscal year ending June 30, 1885.

Gross postal receipts for the year ending June 30, 1888	$53,233,579.13
Gross postal receipts for the year ending June 30, 1885. See page 870 of report of the Postmaster-General	42,560,843.83
Increase:	
Amount	10,672,735.30
Per cent	25.0
Expenditure for the year ending June 30, 1888	$55,250,000.00
Expenditure on account of the year ending June 30, 1885. See page 870, report of the Postmaster-General	49,782,619.09
Increase:	
Amount	5,087,380.91
Per cent	10.9
Cost for every dollar of receipts, 1888	$1.03
Cost for every dollar of receipts, 1885	1,17
Number of warrants and drafts drawn in 1888	99,957
Number of warrants and drafts drawn in 1885	80,054
Increase	19,903
Per cent	24.8

Percentage of receipts to expenditures, 1888, 96.3, or, in other words, the amount of receipts was 93.3 per cent. of the expenditures.

Percentage of receipts to expenditures, 1885, 85.4, or, in other words, the amount of receipts was 85.4 per cent. of the expenditures.

In 1888 the expenditures exceeded the receipts 6.7 per cent. In 1885 the expenditures exceeded the receipts 14.6 per cent.

Deficiency to be supplied from the general Treasury, 1888, $2,020,000.

Deficiency to be supplied from the general Treasury, 1885, $7,221,775.26.

Number of orders made by the Postmaster-General from March 4, 1885, to June 30, 1888, requesting the auditor to readjust the compensation of postmasters who rendered false returns of business, in order to increase their compensation, 521.

Amount the auditor was requested to charge back, $246,624.60.

Number of orders made since March 4, 1885, involving the accounts of postmasters for false returns, appointed prior to March 4, 1885, 449, or 87 per cent.

Number of orders made since March 4, 1885, involving the accounts of postmasters for false returns, appointed after March 4, 1888, 72, or 13 per cent.

Amount recovered by the orders involving accounts of postmasters appointed prior to March, 4, 1885, $239,074.43, or 97 per cent.

Amount recovered by the orders involving accounts of postmasters appointed after March 4, 1885, $7,550.17, or 3 per cent.

I am quite sure, Mr. Speaker, that with such facts as I have presented before them the people will most heartily approve the administration of the Post-Office Department during the past three fiscal years.

THE GENERAL LAND OFFICE.

There is no question, Mr. Speaker, in which the people of the United States are more deeply interested than that which pertains to the public lands. Their continued happiness, contentment, and prosperity will depend, in a great measure, if not altogether, upon the extent to which the realty of the country is owned by the masses. Moderately-sized holdings, generally distributed among the people, are an absolute necessity to the public welfare, while immense landed estates in the possession of the few can but produce the greatest harm to society.

And it is equally true that corporate power and wealth should be rigidly restrained from their acquisition. As to the entire truth of these propositions there can not be two opinions.

As our population increases the land question becomes more serious and important. In former days, when the public domain of the United States amounted to 1,819,889,987, all acquired previous to the late civil war except Alaska, which consists of 369,529,600 acres, no danger was apprehended as to the speedy absorption of our land; but today the problem is to so provide that comfortable homes may be within the easy reach of the wage-workers of our people.

The Administration of Mr. Cleveland fully appreciated the gravity of the situation in this respect, and it has been a prime policy since its advent to power to restore to the public domain so much as could be of the very large amount which had been lost through reckless, improvident, and corrupt legislation while the Republican party had possession of the Government, or which had been fraudulently and illegally gotten possession of by individuals, syndicates, and corporations.

The General Land Office has therefore been exceedingly active during the past three years in co-operating with and in furthering the views and wishes of the Democratic majority in the House; to evidence which, Mr. Speaker, I submit the following:

DEPARTMENT OF THE INTERIOR, GENERAL LAND OFFICE,
Washington, D. C., September 18, 1888.

Statement showing the quantity of land actually restored to the public domain, and of land recommended for recovery by the action of the General Land Office and Secretary of the Interior, from March 4, 1885, *to June* 30, 1888:

	Acreage.	Total acreage restored.
LANDS ACTUALLY RESTORED TO THE PUBLIC DOMAIN.	*Acres.*	*Acres.*
Lands in granted railroad limits restored	2,108,417.33	
Forfeiture of railroad grants under acts of Congress	11,148,067.00	
Railroad indemnity lands restored	21,323,600.00	
Private land claims—withdrawn lands restored	759,553.85	
Entries under pre-emption, homestead, timber culture, desert, mineral, and timber land laws canceled in regular course of examination and proceedings in General Land Office for abandonment, illegality, and other causes	29,729,761.48	
Invalid State selections (internal improvements and swamp)	984,310.85	
Total actually restored to the public domain and opened to entry and settlement		66,043,710.51
RECOVERY OF LANDS RECOMMENDED.		
Lands within railroad grants recommended for recovery:		
Recovery of land recommended and pending for review of Secretary	12,300.00	
Recovery of land recommended and pending on appeal before the Secretary	1,500,000.00	
Suits recommended for the recovery of land	818,687.18	
Railroad forfeitures under bills now before Congress	*54,323,996.00	
Private land claims:		
Recommendations to Congress to reject claims heretofore favorably reported	4,732,480.15	
Resurveys ordered reducing area of claims	629,500.00	
Suits recommended to vacate patents	635,255.00	
Lands forfeited in Oregon and recommended for recovery under grants for military wagon-roads	2,368,320.00	
Total recommended for recovery		65,020,538.33
Grand total actually restored to the public domain and recommended for recovery		131,064,248.84

*Under the bill which recently passed the Senate the quantity of land forfeited will equal 5,627,436 acres, but the aggregate quantity forfeited under the bills of the two Houses, if adopted, will equal 54,323,996 acres as above.

The above statement has been compiled from the official records of the General Land Office.

S. M. STOCKSLAGER, *Commissioner.*

Sir, the most unfriendly political partisan can not but admit the unwonted activity and the great success of the General Land Office, during the past three years, in the effort to recover for the people the lands of which they had been wrongfully deprived. In a word, it has left undone nothing which could have been done, and it has done nothing which ought not to have been done. Its work is its own highest and best eulogy, and the past history of the office can show no record at all approaching that of the present administration in its zeal for the public welfare and in its untiring energy to restore to the people the splendid heritage left them by our fathers.

DEPARTMENT OF JUSTICE.

It is possible, Mr. Speaker, that there are but few members of Congress entirely familiar with the operations of the Department, its onerous and diversified responsibilities, the innumerable demands that are constantly made upon it from every quarter, and the immense amount of business that daily claims its attention. The building assigned it is the least extensive and imposing of all the departmental structures, and the ordinary passer-by would scarcely believe that within its walls forces are at work, opinions are prepared, and orders are made which through our methods of judicial procedure oftentimes reach to the uttermost nooks and corners of this vast country.

But, sir, it is of the work of this Department during the years 1882 and 1887, and inclusive, that I desire to speak. Not counting the expenses of the courts, the expenditures were as follows:

1882	$181,355.74	1886	$188,235.42
1883	233,723.46	1887	204,156.33
1884	204,585.98	1888	199,644.61
Total	619,665.18	Total	582,036.36

Being a net decrease in the expenditures of 1886, 1887, and 1888, as compared with those of 1882, 1883, and 1884, of $37,628.82.

The total number of officials, including employés, in the Department was:

1882	58
1883	71
1884	77
1885	80
1886	80
1887	79
1888	79

The expenses of the United States courts were:

1882	$3,192,393.67
1883	3,372,465.45
1884	3,246,566.06
1885	3,299,703.23
1886	3,561,124.39
1887	3,217,672.58
1888	3,310,188.03

This shows an excess in such expenditures during the years 1886, 1887, and 1888 over 1882, 1883, and 1884 of $277,559.82, and deducting therefrom $37,628.82 we have $239,931 as the net increase of the Democratic over the Republican administration in the matter of expenditures during the years stated.

The principal objects for which expenditures in the courts are incurred are the pay of marshals, jurors, witnesses, prisoners, bailiffs, attorneys, assistant attorneys, clerks, commissioners, and rents.

It will, therefore, readily be seen that such expenditures, where equal economy and honesty prevail, must necessarily depend, to a very great extent, upon the amount and character of business transacted.

Let us now, Mr. Speaker, briefly review the work of the courts during the years 1882–1887, inclusive, taking into account only such cases as those to which the Government was a party, and also those to which it was not a party, but which it was its duty to defend, and which it did defend.

After a thorough and most careful investigation, the following tables have been prepared and are believed to be entirely correct:

Number of civil causes to which the Government was a party.

Year ending June 30—	Terminated.	Pending.
1882	1,973	2,494
1883	1,597	4,432
1884	1,548	6,152
1885	1,658	2,146
1886	1,379	2,826
1887	1,777	3,054

Number of criminal causes to which the Government was a party.

Year ending June 30—	Terminated.	Pending.
1882	6,358	3,891
1883	7,792	5,722
1884	12,308	5,437
1885	11,977	3,808
1886	10,479	5,593
1887	12,905	7,346

Number of civil suits to which the United States was not a party, but which it was its duty to defend and which it did defend.

Year ending June 30—	Commenced.	Pending.	Terminated.
1882	10,530	23,271	7,439
1883	12,124	27,791	8,327
1884	11,700	30,372	8,738
1885	11,967	29,308	8,952
1886	12,326	31,455	10,109
1887	10,769	29,479	9,332

In the tables which I have read, Mr. Speaker, the suits pending and terminated in the Court of Claims have not been included, nor have I been able to include the work of the courts for the year ending June 30, 1888, because all of the returns from these courts for that year have not yet reached the Department. It is sufficient to say, how-

ever, that the civil suits and criminal prosecutions to which the United States was a party and those other suits which it was compelled to defend in 1888 largely exceeded those of other years.

As instances, there were more than 2,100 habeas corpus cases arising under the Chinese restriction act of 1882, which would be included in the statement for 1888; and in the Court of Claims alone, outside of the several circuit and district courts, the claims now pending against the United States aggregate more than 10,000 and involve nearly $200,000,000.

It may also be observed that it was not until the advent of the present Administration that any serious attempt was made to enforce the anti-polygamy acts of 1862 and 1882.

The Republicans have ever proclaimed themselves the special and implacable foes to Mormonism.

The highly penal act of 1862 and providing for the forfeiture of all the property of the Mormon Church exceeding $50,000 in value, and the Edmunds act of 1882, still more penal in its provisions, and prohibiting polygamy, bigamy, and unlawful cohabitation, were the fruits of their legislative efforts to repress Mormon practices and to destroy its power.

The Republicans were in the full and exclusive control of the executive and judicial departments, and not an obstacle stood in the way of an honest and an earnest attempt to enforce these laws.

What followed?

The records show that under these acts only six prosecutions were instituted; one in 1875, one in 1881, and four in the fall of 1884. Not a single step, however, was taken to enforce forfeitures.

There can be no excuse, however thin and untenable, behind which the administrations then in power can shelter themselves. The laws, the criminal, the evidence, the court, the jury, the power to execute every judicial order and decree, all were present, but the prosecution was not ready, and so it continued until 1885.

A new and entirely different President was then inaugurated, whose purpose it was to vindicate every law by its rigid and impartial enforcement, so that if the law in a particular case were bad, it would thereby be the sooner repealed; but if good and wholesome, its blessings would the more speedily accrue to the people.

The Department of Justice was given strictly in charge to carry this policy—so just and so wise—into practical operation all along the line, and the result was that under these two acts five hundred and eighty-nine persons have been separately tried and convicted; $73,000 of fines and forfeitures inflicted and collected, and near two hundred criminal prosecutions are still pending. In 1887 an act was passed providing for the forfeiture of the franchise of the Church of Jesus Christ of Latter Day Saints and of the Perpetual Emigrating Fund Company, and within three months from the passage of that act proceedings were instituted under it to declare the forfeitures; a receiver was appointed; over $800,000 are now in his hands; and final decree, if not already made, will be had before the 1st of January next.

Comment is wholly unnecessary. The facts which I have given, Mr. Speaker, clearly illustrate the wide difference between the Republican and the Democratic administrations.

The former pretended, the latter acted; the strength of the former was expended in declamation, the latter evinced its sincerity by action—prompt, decisive, and continued action.

As the result of these suits and prosecutions, conducted in so vigorous a manner under the direction of the present Attorney-General, the Mormons have realized the danger of their position and have framed both organic and legislative enactments looking to a strict and full compliance with the sentiment of the country in regard to their habits and practices.

The expenditures of this Department—maintaining, as they do, all the judicial officers of the United States, from the Supreme Court to the commissioners who first receive information, including marshals, attorneys, and their assistants, jurors, witnesses, clerks, and rent of buildings—must necessarily increase as our population becomes larger and the volume of business greater; but, sir, during the past three years the expenses have been enlarged to no small extent through the operation of the following laws:

An act providing for the reference of the French spoliation claims to the Court of Claims, approved January 20, 1885.

The anti-polygamy act, approved March 3, 1887.

An act to provide for the adjusting of land grants to railroads and for forfeitures of unearned lands, approved March 3, 1887.

An act creating the Interstate Commerce Commission, approved February 4, 1887.

An act regulating the importation of opium, approved February 23, 1887.

An act giving the courts jurisdiction over crimes against the Indian police, approved March 2, 1887.

An act regulating the sale of oleomargarine, approved August 2, 1886.

An act establishing the railroad commission, approved March 3, 1887.

An act for protecting the interests of the United States in the Potomac Flats, approved August 5, 1886.

An act providing for the bringing of suits against the Government, approved March 3, 1887.

It may be worth the while, Mr. Speaker, to add that under the act of January 20, 1885, regarding the French spoliation claims, fifty-five hundred and sixty-nine suits were instituted in the Court of Claims, which, as all the other suits in this court, have not been included in the tables which I have been using before the House.

I trust and believe, sir, that this very short and hasty explanation of the vast and varied and important matters that annually come to this Department for settlement and adjudication, and which must necessarily continue to increase in number, variety, and importance as our population grows and our wealth enlarges and the affairs of the people become more complicated, will not only amply justify the small increase of expenditure in latter years, but that it will also induce Congress to hereafter treat the Department in a manner becoming its high importance in the Government and to respond to its necessities with alacrity and with liberality.

I will not delay the House longer on this occasion, but very shortly I hope to be able to present data, coming from official sources, which will disprove the statement made by the gentleman from Illinois [Mr. CANNON] relative to the increase of offices and salaries during the present Administration, or rather to show that wherever there have been increases, either in offices or salaries, there have been greater reductions elsewhere. Of my ability to do this, I do not doubt. Concluding, then, Mr. Speaker, I am impressed with the belief that this has been an honest, an economical, and a bold administration in every Department, and if Congress and the country will respond to the President's effort to reform and to reduce the tariff, the total results of a four years' Democratic rule, after the lapse of so long a time, will not only be extremely gratifying to the party which came into power on the 4th day of March, 1885, but they will bring many and rich blessings to the sixty millions of people who live within our borders.

Department of Agriculture.

SPEECH

OF

HON. PRESTON B. PLUMB,

OF KANSAS,

IN THE SENATE OF THE UNITED STATES,

Monday, September 17, 1888,

On the bill (H. R. 8191) to enlarge the powers and duties of the Department of Agriculture and to create an Executive Department to be known as the Department of Agriculture.

The pending question being on the amendment to strike out section 5, proposing to transfer to the Department of Agriculture the weather service of the Signal Service Bureau—

Mr. PLUMB said:

Mr. PRESIDENT: The main effect of this bill, if it shall pass, will be to make the head of the Department of Agriculture a member of the President's Cabinet. The Agricultural Department is often spoken of as a bureau, but by the act of its creation, passed in May, 1862, it is named as a department, and the head of it reports directly to the President, who in turn transmits its reports to Congress. But by reason of the fact that it was not named as an Executive Department, there has never been any constraint upon the President to take the head of that department into his Cabinet, that is to say, to bring him into his councils, into that association with him whereby he consults with him in regard to the affairs immediately under his charge or in regard to any other matters which affect the public interest.

It has been often said that nothing would be gained to the agricultural interests of the country by elevating this department in the manner proposed; that it now has, or will in time have, all the useful functions that it would have if it were made an Executive Department. But I think this is one of those cases in which names are things. There is no more reason in fact why the President of the United States should take into his Cabinet councils the Attorney-General or other member of his present Cabinet than that he should take into the same counsel the Commissioner of Agriculture. It is true of the Attorney-General and it is equally true of the other members of the Cabinet that the President consults with them especially about the functions which are committed to them respectively by law in which they chiefly act in his name, performing duties which pertain to the chief executive authority of the country, acting practically as the adjutants of the President.

They are a part of the executive power of the country, a part of the executive power of the Presidential office, and as they execute the will and authority of the President they report to him in form and manner as he may direct. But it is not important that for this purpose alone they should be members of his Cabinet and meet with him collectively at certain stipulated periods. If all the purpose of this assemblage was for such information as pertained only to the jurisdiction of each, it would not be either necessary or desirable that all should come together, nor that there should be formal meetings.

The President does not need in any way to bring them into his presence to consult with them, although of course he may do so, and might do so in the case of the Commissioner of Agriculture. He does so in the case of the heads of the Executive Departments, but he does not do it primarily, as I take it, for the purpose of consulting them about the particular things which concern their Departments, except as it may relate to appointments to office or something of that kind; but he brings them together around his Cabinet table as a body of councilors, all to discuss the duties and affairs of each, and to advise and be advised with concerning the entire round of executive affairs, and as to that which, being within the purview of executive duty, concerns the public interest.

Therefore, in determining what addition shall be made to that board we are to consider not alone the particular things which pertain to the immediate jurisdiction of the official whom we thus provide with a place at the President's Cabinet table, but we are to consider it with relation to the interests of the entire country. I have no hesitation in saying that it is more to the interests of this entire country in every material way that the President shall consult with the head of the Department of Agriculture than it is that he shall consult with the Secretary of War, the Secretary of the Navy, or the Attorney-General, or any other one of the heads of the Departments with whom now the law practically imposes upon him the duty of consulting.

The Department of Agriculture was created in 1862, with limited powers and jurisdiction. It has grown very much since that time, and yet it has never had its proper place in the public estimation. This has been the result partly of imperfect administration, but largely on account of the fact that it has lacked the full dignity of a department. It has suffered also on account of the ridicule which certain influences in official places have voided upon it as the representative of agricultural interests, in which the distribution of seeds has been alluded to as its principal function, which has been associated with the promotion of the personal interests of Senators and Members of the House.

But notwithstanding all these adverse circumstances and influences the Department has constantly grown in influence, in effectiveness, and in scope by means of increased appropriations, with the addition of new functions, and has constantly widened its horizon.

Mr. GEORGE. And it has grown in public favor.

Mr. PLUMB. As the gentleman from Mississippi well remarks, it has grown in public favor as well, and it has taken hold upon the good-will, the confidence, and the judgment of increasingly large portions of the American people, who see in its operations, present and future, the prospect of great good to that industry in which they are primarily interested, and which so much concerns the well-being of all the people.

Nearly or quite one-half the people of the United States are engaged in farming. This important interest has not heretofore been the subject of any considerable legislation in its favor. It has seemed to most of those charged with the duty of legislation that agriculture should be satisfied with indirect benefits. It has been assumed that the farmers could take care of themselves, and that they would not only work out their own salvation but take good care that the supply of needful agricultural products should not fail. We discuss at great length and legislate in direct behalf of manufacturers and their employés. They are represented by powerful organizations, which can bring to bear influences which, standing as they are made, to do for public opinion, constrain legislation. The farmers can not so promptly or thoroughly organize, and their influence is less felt. We have legislated for the benefit of wage-workers proper, in response to every demand—wisely and properly, I think—but the time has come when we should take into serious account the interests of the farming classes. They have not and will not bring upon us the pressure we have had from other sources. They are too widely scattered and their interests are too widely divergent to enable them to organize with facility.

The Senator from Connecticut [Mr. PLATT] says, *sotto voce*, "grangers." Yes, there have been grangers, and there are grangers, and there will be more of them. This and similar organizations exist and are useful, but their influence can not be so directly brought to bear as can that of persons who live closer together, within easy reach of each other and nearer to the capital.

Mr. PLATT. If the Senator will excuse me a moment, I meant nothing by that suggestion except that there were organizations among the farmers, and very properly so.

Mr. PLUMB. I understand that. I did not understand the Senator's remark to be at all contemptuous.

Mr. PLATT. Not at all.

Mr. PLUMB. On the contrary, I understood him simply to mention the existence of farmers' organizations as a fact. While these organizations have been useful, yet they have not contributed as powerfully as they ought to have done to the formation of public opinion, and they have not as promptly or as effectively influenced legislation as other organizations representing other and smaller interests have done.

That the idea which is embodied in the proposition of the pending bill is not out of keeping and is supported by good authority is admirably sustained by the following quotation from the eighth annual address of President Washington, in which he expresses what is the truth to-day as much as it was when the sentiment was uttered:

> It will not be doubted that, with reference either to individual or national welfare, agriculture is of primary importance. In proportion as nations advance in population and other circumstances of maturity, this truth becomes more apparent and renders the cultivation of the soil more and more an object of public patronage.

I do not think we have made mistakes in legislating for other interests except, perhaps, relatively; but we have done that for other organizations and interests which so far we have practically omitted to do in the interest of that class of people, as large as all other classes put together, the farmers of the United States.

There is no useful calling which stands upon a more precarious foundation in the sharp competitions of the world than that of the agriculturist. That which he produces from the soil is heavier and more bulky in proportion to its value than any other subject of transportation. Necessarily, therefore, the transportation and other charge which must be paid upon it, if it is to find market at a distance, will absorb a large proportion of its value in that market. Even a small addition to charges for transportation, commission, insurance, and so on will prove to him the difference between profit and loss.

Mr. GEORGE. And from trusts and combinations.

Mr. PLUMB. The Senator from Mississippi suggests also the burden from trusts and combinations. These constitute additional burdens, no doubt, and there is this further to be said: The farmer is located more permanently at the place where he performs his labor than those of any other class of people, and must take what comes to him, and can not go from that base of his hither and yon and everywhere seeking and finding employment and adjusting himself to new conditions. He is compelled to accept more that is unfavorable as inevitable. He must often sell whether the market is favorable or unfavorable. He can not charge bad debts off on somebody else. His individual shipment is so small that if withheld it will not affect the market, and he can not make effective combination against transporters, nor in fact control or favorably affect the market in which his products are inevitably to be sold. He is very liable, so far as that which he is obliged to sell is concerned, to be a victim of combinations and circumstances over which he has no control.

Mr. GEORGE. Mr. President——

The PRESIDENT *pro tempore*. Does the Senator from Kansas yield?

Mr. PLUMB. I do.

Mr. GEORGE. I desire to ask the Senator from Kansas, for I know he is posted on that point, if there is not some commercial combination or arrangement by which the beef-raisers of the West get very small prices for their cattle, and the beef-consumers in the rest of the country pay very large prices?

Mr. PLUMB. There is, or at least has been, such a combination which has proved very injurious to the producers of cattle. Combinations are also often formed among railroad companies whereby the prices of the transportation of agricultural products are improperly increased, and even the smallest increase, as I have before said, is a large percentage upon the total value of the product transported.

Mr. GEORGE. Does not the farmer get about as little for his beef now as he ever did, if not less, and is not the consumer paying about as much or more than he ever did before?

Mr. PLUMB. At the present moment of time the price is somewhat better than it was three or four months ago; but taking the last three or four years the price to the cattle-producer has been phenomenally low, while at the same time, as suggested by the Senator from Mississippi and as I stated some weeks since in the discussion of this question upon another bill, the price to the consumer has not been diminished a particle. That only illustrates in the most forcible manner what I said a moment ago, that what is paid to the railroad companies, the commission merchants, and for all the devices which are applied to the transportation and to the handling of the product of the farm uses up the larger portion of the whole value, provided the transportation is to a distant market, and frequently so much that no profit is left to the producer.

Mr. GEORGE. I wish to call the Senator's attention to something a little more specific as to the difference of prices, and I think he can state it. Is not the difference between the price which the farmer gets for his beef and the price which the consumer pays for it as much as 400 or 500 or 600 per cent.?

Mr. PLUMB. The difference is very large, and possibly as large as stated by the Senator.

Mr. GEORGE. It is enormous, is it not?

Mr. PLUMB. It is an enormous difference, and that difference is represented by the price paid for transportation, by commission charges, by interest, insurance, by the enormous and practically fraudulent profits of the cattle combine, the packers, and by those of the local butchers. All these contribute to the diminution of what otherwise might and ought to go to the stock-raiser.

The civilization of the nineteenth century is expensive. The wants, I might say the needs, of our people are not to be satisfied with a little. Each year their needs become greater—for more educational and religious facilities, more and better food and clothing, better habitations,

more that increases comfort, delights the eye and ear and gratifies the tastes, and all this means increased expense, and to meet this expense there must be either lower prices for what must be purchased, or greater wages for labor, or both. The hours of labor can not be increased, for the tendency is not only the other way, but there must be increasing leisure in order that the comforts and luxuries I have mentioned may be used and enjoyed. There must therefore be greater earnings from the same or less labor.

With us the problem is not as it is in China, where the survival of the fittest is the survival of him who can live on the least, but with us the survival of the fittest is that of him who can use the most. The American people rejoice each year in what they conceive to be their greater ability, or at least their greater determination, to have more of the good things of life than they had the year before.

At this juncture the American farmer is brought face to face with a new competition more threatening than anything which has preceded it, and a competition which has been brought about, measureably at least, by that condition of things which he has aided in developing, to which I have before referred. Nations and people which a few years ago were isolated, unambitious, satisfied to remain in the background, have been seized with modern ambition and are coming into the currents of civilization and the commerce of the world. Twenty years ago South America exported nothing but hides which entered into competition with the American farmer. Now the Argentine Republic is exporting corn to England, and hundreds of thousands of sheep are shipped to the United Kingdom and there sold in competition with American meats and at prices which contribute to depress their prices.

Mr. PAYNE. If the Senator would allow me, I should like very much if he would state during the course of his remarks the effect of the interstate-commerce law upon agriculturists?

Mr. PLUMB. I will speak of that in a moment. The table-lands of Mexico, South and Central America are adapted by soil and climate to the growth of corn, wheat, cotton, and other agricultural productions, and as these lands are reached by railroads from the coast it may be expected that their resources will be more fully developed and a constantly increasing quantity of their productions be found seeking outside markets.

The remote regions of Hungary, the farthest provinces of Austria, have been ransacked to bring into British markets beef which would take the place of the American product and reduce its price.

The British Government has devoted itself to the opening up of new areas of cultivation in India, to the minimizing of the effects of drought, and the wheat product of that country has enormously increased by comparison with what it was ten years ago. The labor with which that wheat is raised is paid for at 10 cents a day, and the laborer esteems himself well paid at that price. A somewhat similar condition of things as to wages exists in South America, and, as the Senator from Connecticut [Mr. PLATT] suggests, in Egypt, where wheat is raised for export.

In addition we shall soon be having the direct and active competition of the whole African Continent. The German Government, for the purpose of preventing the emigration of its subjects to America, has entered upon an extensive scheme of colonization in Africa. It has organized a company having substantially the functions of the old East India Company, which has taken possession of a large fertile area in the Dark Continent, and German subjects are to be induced, as they are being induced, to go there instead of coming to this country, in order that one of the results of their labor may be the continued aggrandizement of the Fatherland. They will make new markets for German manufactures and thus contribute to the prosperity of those left behind.

The British Government has recently organized a similar company to colonize, to develop, and bring under British control another large section of Africa. From all these areas there will come as the result of cheap labor applied to new, fertile, and cheap soil by colonists, whose first efforts are always in the direction of agriculture, new supplies of agricultural products to meet the products of American farms in the world's market.

I do not hazard anything in saying that unless conditions are markedly changed within the next five years India wheat will sell in New York, duty paid, in competition with American wheat.

Mr. PLATT. Wheat can be brought here from Liverpool sometimes for less than 2 cents a bushel.

Mr. PLUMB. This is liable to occur at any time. There are conditions of ocean transportation occasionally existing where that or any other heavy, bulky product can be brought practically as ballast.

The American farmer will have these new and threatening conditions to meet. He can not avoid them, nor can he rely upon new inventions of labor-saving machinery to overcome them. The advantages in this direction which he now has will no doubt be somewhat added to, but not sufficiently to enable him to cheapen his productions to the level of his new competitors. In this respect he is worse off than the manufacturing laborer. Therefore the competitive conditions under which he labors are far more injurious than those which attach under our system to that of labor in any other form.

I shall not go into the field to which this statement naturally invites me. But these facts appeal to Congress, representing the interests of the whole country, and should be taken into serious account. The passage of the pending bill is a very short step, but it is in the right direction. It gives added dignity to the calling of agriculture in its relations to the administration of the Government. It will constrain the President to take those interests into special account when he makes his recommendations to Congress, and it will contribute to bring those interests more directly within the purview of legislation by Congress designed for the benefit of the whole people. It is not that the laborer or manufacturer may be overlooked or neglected, but the farmer may be equally as well taken into account.

Perhaps we need not contemplate the possibility of a failure in our food supply. We have the most fertile area, the greatest diversity of soil and climate in the world, and the most intelligent and capable population engaged in farming it. But notwithstanding we import potatoes and other vegetables in increasing quantities, still we have a large surplus in the aggregate, and our exportations of agricultural productions is largely in excess of our importations. But climatic changes and the continued cultivation of the soil may bring conditions less favorable. Our farmers limit themselves largely to the raising of two or three staple products, the most necessary, no doubt, to meet the food requirements, but a considerable shortage in either would produce serious consequences. As population increases and the new areas subject to cultivation diminish the danger of this increases, and the liability itself is of a great deal more importance than it ever was before. There are many things to be taken into account as affecting the national welfare in connection with the interests of our agricultural population, which have not heretofore been taken into sufficiently serious account.

Our agriculture must be more diversified. Our people must look more and more not to the foreign market, with its ruinous competitions, but to the home market. The costs and risks of distant transportation must be saved, the field of agricultural labor must be widened; there must be no dependence upon outside food production, the chance of short supply especially, in the matter of staples, must be reduced to the minimum. How shall these results be brought about? That they are of importance can not be denied. That they enforce the desirability, if not necessity, of a thoroughly equipped department, possessing opportunity and dignity as a means to that opportunity there can be no doubt.

The department of agriculture in France has for one of its enumerated objects the prevention and cure of phylloxera among grapes. There is no need of enumeration here. What is wanted is an executive department having the confidence of President and Congress, which can not only recommend, but conditioned so that its recommendations will have weight, and Congress will make adequate appropriations and give needed authority from time to time to widen the horizon and prescribe the new fields of exploration and action.

I shall not go into details, but will content myself with a single illustration. Sugar is as much of an agricultural production as flour. Our people pay more for the sugar they use than they do for bread. The climate and soil of the United States are as well or even better adapted to the production of sugar-producing plants than France and Germany, yet our own people not only consume more sugar than any other people in the world proportionately, but they buy over 90 per cent. of it from outside, while France and Germany produce not alone enough for local consumption, but export large quantities each year.

This result has been due to the active and useful intervention of the government of those countries in behalf of this most important industry. Sugar is the object of national desire, and the German Government for many years gave an export bounty of $2 per ton for every ton of sugar which her people should export, with the result that the manufacture shortly exceeded the national consumption. Large quantities were sent to distant markets, and the industry was permanently developed, with the result that lands adapted to the production of the sugar-beet were enormously enhanced in value, this increased value per acre often reaching hundreds of dollars. Sugar was cheaper both at home and abroad. Meanwhile, partly on account of the competition and partly on account of improved methods of manufacture, but most largely on account of the improvement of the variety of beets used, the saccharine strength has gone up in a few years from about 4 per cent. to an average of over 15 per cent., with a maximum of over 22 per cent.

A somewhat curious fact in this connection is that the production of beets for seed is wholly apart from their production for sugar, being carried on at different places and by different persons.

There is no doubt that by the use of the beet alone, if we were remitted to that, this country could produce sugar just as well and perhaps even better than Germany can; but we have another plant which is still better from which we can produce not only all the sugar that we need, but under proper inducements produce it for export as well. The production of the sugar which the people of the United States use would occasion the employment perhaps of 5,000,000 or 6,000,000 people, and the relief to all the people from the payment of the enormous sum which is now paid foreign producers of sugar would be of immense consequence in lightening the burdens under which all our people labor. Our Government can not, of course, give inducements such as have been offered by Germany, but it can assist in experiments, and

can do much to direct our people into the ways by which greater diversity can be brought about in which they may be relieved from crushing competition, and whereby, also, we shall be enabled to produce the one great staple in which we are now deficient.

I only speak of this as an illustration. As we go on advancing in our civilization, we must adapt ourselves to new needs. Each year we ought to become more and more self-supporting in regard to those things which are essential to individual and national welfare. It was the action of the government in Germany as in France which stimulated the people of those countries to enter upon the manufacture of sugar.

But I do not care to dwell upon details. I only say that the time has come when the Department of Agriculture should be made an executive department, in order that the interests of the people who are engaged in that calling may receive that attention which they deserve and which they have not heretofore fully had.

Mr. President, I do not care so much about this fifth section, although nothing that has been said has shaken my conviction that the Weather Signal Service should be transferred to the Agricultural Department. But I am for the passage of the bill by the easiest, speediest way in which it can be obtained. If necessary to the early passage of the bill that the fifth section should be stricken out, then I am for striking it out. I do not so believe, however.

The argument which was read by the Senator from Michigan [Mr. PALMER], being the letter addressed to the Senator from Mississippi [Mr. GEORGE] by Captain Dunwoody, of the Army, but detailed for service in the Signal Service Bureau, loses its force, so far as I am concerned, when I consider that that officer has been away from his proper command practically ever since the Signal Service Bureau was established, and no doubt the great dread of his life is to be ordered back to it. I do not speak of this to disparage him in the slightest degree. He is an accomplished officer and no doubt fairly well posted in the duties he is detailed to perform. Every one who knows anything about the Army knows that the longer a man stays away from the performance of the military duties for which he was commissioned and for which he is presumably paid, the stronger the determination arises in his mind that he will never go back if he can help it. Therefore the argument is not entitled to much weight, because it is an argument from the basis of a personal self-interest, nothing more or nothing less.

The weather service, while originally limited to the report of storms for the benefit of commerce on the lakes, has been extended until now it embraces not only a similar service along the ocean coast, but on the land for the benefit of the agriculturists. Whether the benefits of the service are more largely realized by agriculture or by commerce is not material now, for from the standpoint of neither interest can this service be related to the jurisdiction of the War Department.

If it is, what would happen to it in time of war? Would the farmer, the mariner, the transporter, and whoever else was interested in the course of storms be told that he would have to wait until the war was over before operations would be resumed? The very suggestion that it is connected with military signaling (which is the foundation of the letter of which I have spoken) is enough of itself to emphasize the necessity of this transfer as speedily as possible. If it is to be an important agency in the development of our agriculture, in the commerce of our inland waters, that is all the more reason why it should not be made a tail to the kite of a little military signaling.

Every cadet at West Point is educated in the art of military signaling. He is expected to be able not only to do the signaling himself, but to teach the private soldier of his command to do the same thing. If we had a war one of two things would happen, either the military signaling would be cut entirely loose from the Signal Service Bureau, or the present Signal Service Bureau would be cut aloof entirely from that which it is doing in aid of commerce and agriculture.

But, as I had occasion to say on Friday, there is something entirely incongruous to my mind in this joining of these two opposite occupations and functions, that of production and that of destruction.

I know it is a favorite argument with some, "why not make use of our surplus Army officers?" Let us carry it a little further. Why should we limit the idea to the Signal Service? Why should we not make them heads of bureaus? It might be a good idea perhaps to put some of them into the Senate and a handful of them into the lower House of Congress. If we are carrying on the various Departments of the Government simply to make use of a few surplus Army officers, why not in fact let the Army and Navy embrace in the scope of their operations the carrying on of every civil Department of the Government, using a man to-day as Commissioner of Indian Affairs and to-morrow as second lieutenant of Company F of the Seventh Light Artillery, defending our coast against Canadian invasion? The whole scheme is entirely at war with our theory of the relations of the military and civil powers of the Government.

I would not employ permanently anywhere in the civil service a military officer. If there is no military duty for them to perform, let us provide some plan whereby they may without injustice to them be mustered out of the service, or at least be given opportunity to engage in private callings in which they can serve both themselves and the country.

Mr. President, the Senator from Wisconsin [Mr. SPOONER] has been kind enough to give me to be read in connection with my remarks on this subject a letter written by the president of the University of Wisconsin, which states in the most cogent way not only the argument for this transfer, but the demand which exists among intelligent people who have viewed the situation from the proper standpoint.

UNIVERSITY OF WISCONSIN, OFFICE OF THE PRESIDENT,
Madison, May 25, 1888.

MY DEAR SIR: I observe with gratification that the Hatch bill, relating to the Agricultural Department and the transfer of the weather service to it has passed the House by a very large majority, but I regret to learn that the Senate committee, in favorably reporting it, have stricken out the clause making the transfer of the Weather Bureau. Permit me to express the very firm conviction that this amendment is unwise. The transfer of the Weather Bureau appears to me to be one of the most excellent features of the bill. Indeed, from my perhaps partial standpoint, the most excellent. It seems obvious upon the statement of the case that a bureau of so great importance to the commercial world, and of so great possibilities to the agricultural interests of the country, should be placed in the hands of professional meteorological experts, and should be organized for its own ends. At present it is placed in the charge of a military officer, whose natural functions are entirely foreign to this service. It is furthermore connected with a military signal service whose methods and purposes are entirely foreign to those of the Weather Bureau. Almost the only thing they have in common is the name "signal."

It is obvious to all who have carefully studied the workings of the weather service that it needs reorganization on a modified basis if it is to advance in economic value and to become in the highest practicable degree subservient to the interests of agriculture. It must be rendered more exact, and be made more specifically applicable to the peculiarities of the different regions and to the needs of different agricultural industries. In other words, there must be a higher degree of local adaptation. This is entirely practicable, as it seems to me, and not by any means expensive, compared with the great results that can be obtained.

So far as I know all competent scientists who have given attention to this subject are of one opinion respecting the advisability of a transfer of the weather service to some civil department and the placing of it in the charge of an officer selected on account of his especial fitness for its duties.

At the closing Farmer's Institute a resolution was passed requesting me to correspond with members of Congress, urging this transfer, and further urging the reorganization and local adaptation of the system. In the pressure of other work it appears that I have been dilatory in properly representing this large and important body.

I should be much gratified if these views find a hearty response in your own convictions knowing that you will exercise a very important influence upon the disposal of the amendment.

Very respectfully, yours,

T. C. CHAMBERLIN.

Senator JOHN C. SPOONER,
Washington, D. C.

It is objected to the transfer now because it is desired to reorganize the Department before it is transferred. If it is to be reorganized it ought to be reorganized under the Department which is to operate it. Captain Dunwoody's letter expressly says that it is now in a bad condition. He says:

I would ask your careful attention to the provisions of section 5, which transfers this bureau in its present shape to the Agricultural Department without correcting any of the abuses or inefficiencies which may exist.

* * * * * * *

It is only urged that no transfer in block of a badly-arranged, and in some respects inefficient, *personnel* be enacted, but that a detailed organization, either civil or military, be provided for.

That is a confession from one who is entitled to speak as by authority that the present organization is inefficient, imperfect, and badly needs reorganization. Under whose auspices shall it be reorganized? Those of the Secretary of War, who is out of sympathy with it and has urged that it be transferred, or shall it be reorganized under the Secretary of Agriculture, alive to its importance, and who will, I have no doubt, reorganize it in such a way as to make it answer the purposes of its creation and the needs of both commerce and agriculture, which, confessedly, it is now doing only imperfectly?

If we wait until the War Department reorganizes the Signal Service in such a way as to answer this condition it will never be done.

Mr. President, the Senator from Ohio [Mr. PAYNE] asked me a question which I can not answer as satisfactorily as I could wish, and that was about the operations of the interstate-commerce law on railroad transportation as affecting the West. Probably the law has not operated to materially reduce rates west of the Mississippi. It has cut off some preferences, some favoritism. It has undoubtedly done much to render the service impersonal and to put the carriers in that relation to the public where they are constrained to serve all alike. But the dominion heretofore exercised by the ordinary general freight agent will be reluctantly relinquished.

He could and did put up and put down; he could and did make fish of one and flesh of another; he could and did make the grass grow in the streets of one town and to another give rates which brought prosperity. He was interested neither in the railroad nor the general public. He was in position largely to look out for himself and his friends, and this he did at the expense of his employer and the public. Such a power will be slowly surrendered, and I have no doubt there are some abuses of that sort yet lingering in the system, and that it is going to take years of purging and of overhauling at the hands of the Interstate-Commerce Commission, or somebody else possessing authority in order to make the railroad system of this country answer the purpose which it was designed by law to answer, and that is, to render to each man precisely the service it renders to every other man, and to render to every locality precisely the service it renders to every other locality, and to serve all at a reasonable price.

The system is the growth of a generation and a half of time. It has been built up piece-meal. It was originally the creature of local con-

ditions and local inducements largely. It never has been a harmonious whole. While localities fully supplied with transportation facilities were clamoring for legal control, localities not supplied were clamoring to have that control withheld in order that they might, by means thereof, and by offer of special advantages, secure such extension of the system as would meet their ambitions; and while these opposing conditions continued it was impossible that there ever should be any wise, any thorough, impartial control of the system established by law. The law has done something; but there is much more to do. Railroad owners and managers must be brought to the conclusion that the great power which they have must not be used for either favoritism or extortion. Until they do this there is more for the law to do.

Another Federal Court Unnecessary—No Court of Patent Appeals.

SPEECH

OF

HON. GEORGE E. SENEY,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, October 1, 1888,

On the bill (H. R. 9084) to establish a court of patent appeals, etc.

Mr. SENEY said:

Mr. SPEAKER: The bill before the House proposes to establish, at Washington, a court for the sole purpose of hearing and determining questions arising under our patent laws. The court of patent appeals of the United States is the name by which this tribunal is to be known, and its jurisdiction is to be appellate from the decisions of the Commissioner of Patents and the judgments, in patent causes, of the circuit courts of the United States, with a right of review, on appeal, in the Supreme Court of the United States.

The court of patent appeals is to be composed of a chief-justice and two associate justices, each at a salary of $6,000 per annum; of a clerk and one or more deputies, for whom the bill makes no provision as to salary or fees; of a marshal at a salary of $2,000 a year; of assistant marshals and court messengers, whose compensation is not provided for in the bill; of a reporter of the court's decisions at a salary of $2,500 per annum, and $1,500 additional if the court decisions make two volumes each year. The bill makes no provision for quarters for the court or its officers, or for furnishing them, or for fuel, light, stationery, or other necessary or contingent expense. Information as to all of these matters of expense is important if we would vote understandingly upon this measure.

That the bill will create at least twelve additional Federal offices is very certain, and equally certain that it will make an annual charge upon the Treasury of from $40,000 to $50,000. We now have the Supreme Court, fifty-six circuit courts, and the same number of district courts, a Court of Claims, and a supreme court for the District of Columbia—all maintained by money taken out of the Treasury. At this session of Congress the House passed a bill, which is now pending in the Senate, establishing an additional court called "court of Indian depredations," to consist of three judges, each at a salary of $4,000 per annum, with secretary, stenographer, messenger, and clerks, all at good salaries, and with rooms, furniture, fuel, lights, books, and stationery furnished at the expense of the Government.

Again, at this session the House voted to establish another United States court, to be called the "United States land court," with three judges, each at an annual salary of $5,000, with an attorney at $4,000 a year, and three stenographers at $1,500 each, and with clerks and messengers and reporter, all to be paid at the Treasury. If we by our votes establish a court of patent appeals, this House will have the distinction of doing its best to create three additional Federal courts at the same session, and adding at least fifty new names to the yearly pay-roll of the Government. It may be said by those who favor the pending bill that there is more need for a court of patent appeals than for a court of Indian depredations or for a United States land court. While this may be true, yet in my opinion there is no necessity, none whatever, for establishing either one of these courts, particularly the land court or the patent-appeals court. When the bill to establish the United States land court was under debate in the House, my reasons for opposing it were then stated, and the same reasons may be well urged against the bill to establish a court of patent appeals.

The House will not forget that there are two other bills upon the Calendar proposing legislation about the Federal courts and their judges. One bill proposes to make nine additional circuit-court judges, and to change in several important particulars the present construction of the Supreme, circuit, and district courts of the United States. The other bill proposes to increase the salaries of the district court judges in the aggregate about 25 per cent.

Without proper caution there is danger that the record of this House respecting Federal courts and Federal judges will be one which in the future will not be pointed to with pride.

But, Mr. Speaker, if the bill to establish a court of patent appeals has merit, it ought to be fairly considered, for if there is a necessity for such a tribunal it ought to be established. The argument most relied on by the friends of this bill is that if it becomes a law it will relieve the Supreme Court of the United States of much of the burden now imposed upon it by patent litigation. Sir, in my judgment, it will add to that burden. Under existing law the Supreme Court takes its jurisdiction in patent cases by appeal from the circuit courts, and these cases are heard in the Supreme Court upon both the facts and the law. The number of patent causes upon the docket of the Supreme Court is never small, and it is said, perhaps authoritatively, that much of the time given to the hearing and determination of this class of cases is used in the discussion and consideration of questions of fact. If this be the situation, it may be made different, and that, too, without establishing another United States court. A few moments of legislation in another direction will do more to relieve the Supreme Court than all of the provisions of the pending bill.

If the circuit courts in patent cases were authorized to find the facts, upon the request of either party, and make their findings a part of the record, the Supreme Court would be relieved of much of its labor in this class of litigation. Under such a change in the law long arguments upon the evidence would not occur in the Supreme Court, nor would the Supreme Court be required to study a voluminous record to ascertain the facts, but taking the facts as found by the circuit court it would be enabled to give its entire time to the questions of law. But if this change in the law will not secure earlier hearings in patent cases, and it be important that they be heard early, or in preference to other cases, then, rather than create a court for patent litigants and for nobody else, the circuit courts could be by slight additional legislation so constructed as to keep out of the Supreme Court the less important patent causes. Then, again, if for want of time the hearing of patent causes is delayed in the Supreme Court, earlier hearings could be had if the Supreme judges were relieved from attendance upon the sittings of the circuit courts.

But it is not necessary for me in presenting my views upon this feature of the pending bill to repeat what was said by me in my remarks September 21, 1888, on the bill to define and regulate the jurisdiction of the courts of the United States. It is sufficient in this connection to state that the repeal of the law requiring the Supreme judges to sit in the circuit courts and a reconstruction of the circuit courts in the manner indicated in those remarks would, it is believed, enable the Supreme Court to dispose of its business without delay. There would seem, sir, to be no more need of a distinct and separate court to try causes arising under our patent laws than there is for a distinct and separate court to try those who offend against our criminal statutes, or for a distinct and separate court for the trial of equity causes, or for a separate and distinct court to try admiralty causes, or for a separate and distinct court for the trial of actions at law, or for a separate and distinct court to hear and determine nothing except questions of constitutional law.

Why our inventors, or rather those who speculate upon the products of their brains, should have a court specially constituted for their use did not occur to me when this bill was before the Judiciary Committee, and has not occurred to me since.

But, sir, let us look further into this bill and see what it is that the friends of monopoly are asking us to do. Our laws do more than give to inventors, and their assigns, protection at great public expense, they give them a monopoly in the thing invented for seventeen years; and ow they ask us to organize a court for the sole purpose of settling heir disputes, and to provide for its maintenance by yearly appropriations from the public Treasury.

The bill, it will be seen, provides no original jurisdiction for the court of patent appeals, but gives to it appellate jurisdiction from the Commissioner of Patents, and from the United States circuit courts, and from the supreme court of the District of Columbia. From the Commissioner of Patents this bill authorizes an appeal in all cases touching the patentability of inventions, priority of invention among several claimants for patent upon the same invention, and the judicial practice of the Patent Office; also all cases touching the registration of trade-marks or labels and the rights of conflicting claimants therefor.

Although existing laws provide that where an application for a patent or a reissue of a patent has been twice rejected by the Commissioner of Patents the decision may be reviewed, on appeal, by the supreme court of the District of Columbia, yet perhaps it is an open question whether or not the supreme court of the District can, under the Constitution, take jurisdiction, for the reason that in refusing to issue a patent or reissue a patent the Commissioner of Patents exercises no judicial power. There seems to be no statute which, in express terms, makes the ruling of the Patents Commissioner in either case a judicial act, and in the absence of such a statute it is questionable whether the ruling is anything more than a ministerial act.

If this be the correct view of the question it follows that the court of patent appeals would have no jurisdiction in either of the cases which, under the pending bill, the Commissioner of Patents is authorized to decide; and therefore the Supreme Court of the United States

would have no jurisdiction by appeal from the patent appeals court. Possibly it may be thought that in authorizing the Commissioner of Patents to pass upon such questions as may come before him, or in authorizing an appeal from his rulings, judicial power is conferred; but to this it may be well urged that the presence or absence of judicial power in an executive officer ought not for obvious reasons to rest upon a mere implication.

That judicial power might be conferred upon the Commissioner of Patents to an extent that would make his rulings respecting either of the matters provided for in this bill the subject of review in the court of patent appeals no one doubts, but it will be seen upon a careful examination of the bill that it does not, in direct or indirect words, so provide. The pending bill provides for an appeal from the Commissioner of Patents to the court of patent appeals in a multitude of cases. In other words, the bill authorizes an appeal to the court of patent appeals from nearly every decision the Commissioner of Patents is required to make, and in addition to this it authorizes a further appeal in the same cases to the Supreme Court of the United States.

It is true that upon the right of appeal to the Supreme Court two limitations are imposed. The first one is that in the case sought to be appealed the amount involved shall be $100,000 or more, exclusive of costs. To what extent, if any, this limitation upon the right of appeal will keep patent causes out of the Supreme Court need not now be discussed. If the jurisdiction of the Supreme Court is to depend upon the fact whether $100,000 or a less sum is involved in a given case, by whom is this fact to be ascertained, and if by the Supreme Court how much more of its time would be required to hear and determine the case upon its merits? Under the second limitation an appeal is authorized when the Supreme Court deems the questions involved to be sufficiently important, or doubtful, to justify an appeal.

It will be seen, therefore, that the provisions of this bill make it possible for parties to get into the Supreme Court with their patent cases and to have them heard upon the question as to their right to appeal them, if not upon their merits. In what respect, then, will the Supreme Court be relieved in patent causes if this bill be made a law?

The court of patent appeals is to have appellate jurisdiction from the circuit courts of the United States and from the supreme court of the District of Columbia in all cases touching patents, copyrights, trademarks, and labels, without regard to the sum involved in the controversy, and from the judgment of the court of patent appeals an appeal may be taken to the Supreme Court of the United States subject to the two limitations mentioned but a moment ago.

It is not unreasonable to assume that in case the court of patent appeals be established that all the causes involving important or doubtful questions and all of the causes involving interests of the value of $100,000 will find a place upon the Supreme Court docket, and those of a different character will be on the same docket for hearing as to the right of appeal. Instead of relieving the Supreme Court by reducing the number of cases upon its docket this bill, in case it becomes a law, will, according to my understanding of its provisions, increase the labors of that court.

But there are other objections to enacting this bill into a law. If this court of patent appeals is a necessity—and unless it is it ought not to be established—it ought to be made a court of last resort in patent cases. There should be no appellant jurisdiction in the Supreme Court from the patent appeals court, or if any it ought to be in exceptional cases, and then limited to a review of questions of law.

The patent appeals court, if established, ought to be so composed that its decisions reviewing the decisions of a high tribunal like the circuit court would be, by reason of the ability and learning of its judges, acceptable to patent litigants, if not in all, then in much the larger number of cases. This would make the patent appeals court, to a very considerable extent, a court of last resort, and therefore the appellate jurisdiction of the Supreme Court could be confined to a few exceptional cases.

But, sir, to add one more to the present number of our Federal courts seemingly for no other purpose than to give a certain class of litigants one more chance would be very unwise.

More than two trials of the same cause upon the facts and the law—the first in the original jurisdiction and the second in the appellate jurisdiction—are not allowed under the judicial system in force in the States, and hitherto in the United States, but patent-right men, by the pending bill, ask for three trials in their cases, and to insure three trials they insist that two courts shall be created for their exclusive use. They would have us make a court out of a subdivision of the Department of the Interior and confer upon the Commissioner in charge the powers of a court and a judge. And for their second court they insist we shall establish a court of patent appeals.

The bill, it will be observed, divides patent-right controversies into two classes. Of those touching patents, copyrights, trade-marks, and labels, the circuit courts are to have original jurisdiction, the court of patent appeals appellate jurisdiction, and the Supreme Court appellate jurisdiction, or, in other words, three trials are to be had in such patent causes, one in each of these three courts. Of the other class original jurisdiction is in the Commissioner of Patents, acting as a court and judge; after him in the court of patent appeals, and after it, in the Supreme Court, or in other words, a trial before the Commissioner, and afterwards two more trials, one in the patent appeal courts and another in the Supreme Court of the United States.

But there is another reason why the court of patent appeals ought not to be established. The bill gives to this court a place in our judicial system above the United States circuit courts. The judgments of the circuit courts in patent cases are to be reviewed by the court of patent appeals, and this makes the circuit court the inferior tribunal. If a court lower than the Supreme Court and higher than the circuit court—an intermediate court, if you please—be essential in our judicial system, its jurisdiction ought not to be limited to the trial of patent causes. The jurisdiction of such a tribunal ought to extend to all causes in which the Supreme Court has appellate jurisdiction under existing laws.

And then, again, a court whose time is to be largely employed in reviewing the opinions of the Commissioner of Patents ought not to stand in our judicial system next in rank to the Supreme Court of the United States.

But, sir, there is still another objection to establishing this court of patent appeals. The bill, it will be observed, provides that the court of patent appeals shall hold its sessions at the seat of Government, and because of this its jurisdiction would extend into and over every State and Territory of the United States. Established in Washington, this court would be invested with power to bring before it from all parts of this vast country those of our countrymen who may have contentions under our patent laws. The jurisdiction of this court is to be wholly appellate, and whether it be from the rulings of the Commissioner of Patents or from the judgments of the circuit courts of the United States, it is to be exercised at Washington, and at no other place. Whatever may be thought of the other objections we have urged to this bill, the one now before us presents the question as to whether it is best to center at the Federal capital more of the judicial power of the Government or diffuse it throughout the States.

Against all legislation which tends to centralize the power of the Government, whether executive, legislative, or judicial, the representatives of the people ought to take a resolute stand.

The Constitution vests the judicial power of the United States in one Supreme Court and in such other inferior courts as the Congress may from time to time ordain and establish. While it is eminently proper that the Supreme Court should hold its sessions at the seat of the General Government, it is equally proper that the courts established by the Congress should hold their sessions nearer to the homes of the people.

That part of our judicial system which is under legislative control ought to be made the servant of the people, and hence to establish a court far distant from the place where the causes upon its docket originate, is to legislate in direct opposition to their interests. With the judicial power of the Government well centralized more and more will be our enactments in the direction of centering executive and legislative power at the seat of the General Government.

In providing for the exercise of judicial power by creating courts inferior to the Supreme Court the Congress should consult the interests of the people whom they are intended to serve. Where the causes to be tried in these courts originate, where the parties and their witnesses reside, there such courts ought to be held.

United States courts have been established in each of the States and the organized Territories. In each of the smaller States there is a district court and also a circuit court. Other States have been divided into two or more districts, and in each there is a district and circuit court, and in other States districts have been divided into two or more parts, and in each division district and circuit courts are held. These facts show very plainly that our policy in the past has been to locate courts at such points as were most convenient for the people. In a government like ours, where the people are the source of all power, a different policy would be unwise. Of our Government it has been truly said that it is of the people and by and for them, and hence no law not in harmony with this fundamental principle ought to be enacted.

This bill in proposing to establish another court at Washington, with a jurisdiction coextensive with our territorial area, antagonizes the better interests of the people, and for this reason if for none other it ought not to become a law. The present laws which give to the circuit courts original and to the Supreme Court appellate jurisdiction in patent controversies need no change, and of the changes suggested that of creating another court and putting it between these two high tribunals to review the one and then be reviewed by the other in patent causes to my mind is utterly destitute of merit.

Respecting appeals from the Commissioner of Patents, if the law ought to be different from what it is a change is easily made. Appeals from all rulings of the Commissioner of Patents may be authorized by amending the existing law upon that subject, and if there be doubt as to the validity of the law or the amendment it may be removed by enacting that such rulings, for appeal purposes, shall have the effect of judicial acts. But if the right of appeal from the Commissioner of Patents is to be enlarged, I shall insist that appeals to the supreme court of the District of Columbia shall be only in cases where the appellant is a resident of the District, and in all other cases the appeal shall be taken to the circuit court of the district wherein the appellant resides. Entertaining these views respecting the pending bill, my vote shall be against it becoming a law.

Effect of Tariff of 1857.

REMARKS
OF
HON. ROBERT M. LA FOLLETTE,
OF WISCONSIN,
IN THE HOUSE OF REPRESENTATIVES,
October 4, 1888.

The House being in Committee of the Whole on the state of the Union—

Mr. LA FOLLETTE said:

Mr. CHAIRMAN: The tariff debate of this session—conspicuously the most exhaustive on the subject in our history—drew largely for facts and illustrations upon the legislation and coincident events of 1846 and 1857. There has been wide difference of statement touching occurrences of those years, occurrences so recent it would seem that controversy over them could scarcely be possible in our time. As bearing upon some of the disputed questions, the following letter from Hon. Edward McPherson is of interest and value. It rescues certain facts and connected incidents from obscurity and possible loss.

I avail myself, therefore, of the general leave, to place it in the RECORD where they will be permanently accessible:

WASHINGTON, D. C., *October* 1, 1888

Hon. ROBERT M. LA FOLLETTE,
House of Representatives, Washington, D. C.

DEAR SIR: I have noted the differences of statement in the House of Representatives some weeks ago respecting the financial and business condition of the country during the life of the tariff of 1857 and the administration of President Buchanan, and have felt a personal obligation to examine this point, because it involves the accuracy of a statement in a historical work prepared by me in 1864. I give to you, as one of the disputants, the result of the earliest examination of official records which it has been in my power to make.

The tariff act of 1857 was substantially coincident with the administration of President Buchanan which began March 4, 1857, and closed March 3, 1861. The act of 1857 was approved March 3, 1857, and was repealed August 5, 1861. As it and the administration came and went together they can be treated together. The tariff of 1857 became operative July 1, 1857. Within six weeks thereafter came a disastrous revulsion, which in all sections of the country prostrated business, paralyzed enterprise, and caused bankruptcy. Its relentless grip remained for three years scarcely shaken, and was finally loosened and lost in the superhuman energy excited, on both sides of the line, by the outbreak of the rebellion.

See how it affected the Government itself. In the fiscal year ended June 30, 1857, the last quarter of which only was in Mr. Buchanan's term, there was an excess of revenues over ordinary expenditures of $1,169,604.91. On the next day after the close of that fiscal year the tariff act of 1857 took effect. In each of the next three fiscal years—those ended June 30, 1858, 1859, and 1860—there was an excess of ordinary expenditures over revenues in the sum of $50,180,406.09. In the fiscal year ended June 30, 1861, three-fourths of which were covered by the Buchanan and only one-fourth by the Lincoln administration, the deficit was $25,035,714.50. These regularly-recurring deficits were endured with admirable fortitude by the Buchanan administration, which found relief from the inconvenience in regularly-recurring issues of interest-bearing Treasury notes and bonds.

These pregnant facts summarize the net results. When Mr. Buchanan took office the actual debt of the United States was about $12,000,000. The funded debt was a trifle over $30,000,000, but there was in the Treasury an available surplus of about $18,000,000. In President Buchanan's first summer, that of 1857, part of this surplus ($5,567,354) was applied to the purchase in open market of United States 6 per cent. bonds not then due, for which an average premium of 14 per cent. was paid. But before he could so apply the entire surplus the panic which followed within six months the enactment of the tariff of 1857, and within six weeks the operation of the tariff of 1857, quickly claimed the remaining surplus as its own. The funded debt, which had been reduced by these purchases to about twenty-five millions, sprang to forty-five millions in July, 1858; to about fifty-nine millions in July, 1859, and to about sixty-five millions in July, 1860; and the Government lived from December, 1857, to March, 1861, three and a half years, more or less largely upon borrowed money.

Mr. CARLISLE in his speech in the House of Representatives, May 19, 1888, says of the disastrous revulsion of 1857, which produced these astonishing results, that it was a comparatively insignificant incident, and that the country recovered from it in a few months. This extraordinary statement can not be harmonized with the fact that Mr. Secretary Cobb in his report of December, 1858, testifies to the continuance of financial difficulties during the whole of the fiscal year ended June 30, 1858; or with the statement of the same official in his report of December, 1859, that the business of the country was then one of only "comparative prosperity;" or with the fact that the price of wheat and other cereals did not recover up to the fall of 1860 the prices at which they had ruled before the panic; or with the fact that during all this time the Government was a steady borrower of money to an extent unprecedented in time of peace; or with the general fact that not while Mr. Buchanan was President and the tariff of 1857 existed did the country return to a condition of prosperity equal to that in which they found it. It is literally the truth, therefore, to say that the tariff of 1857 brought with it both national and individual bankruptcy, and maintained both to the end of its existence. It is difficult in the light of such facts to see how this period can be regarded an ideal period of prosperity.

During the Buchanan administration the low-water mark of United States credit was reached. In September, 1860, when ten millions of twenty-year 6 per cent. gold bonds for the redemption of Treasury notes were put upon the market and bid at from par to 1.45 per cent. premium, an increasing stringency of the money market, aided by malign influences from the Treasury Department itself,* so crippled credit that but $7,022,000 were actually taken.

In the extremity of diminishing receipts and continuing demands resort was again had to the issue of Treasury notes. On the 28th of December, 1860, ten millions of one-year Treasury notes were offered at public advertisement. The rate of interest on them was fixed in the law at 6 per cent., but in anticipation of inability to float them at that rate of interest the Secretary was authorized to issue them after advertisement at the lowest rates of interest offered by responsible bidders. When those bids were opened it was found that only two and a half millions of the ten millions offered were bid for, and that the rate of interest demanded in the bids varied from 6 per cent. to 36 per cent. Such anomalous bids can not be regarded as a fair test of the credit of the Government, for when dangers were greatest and clouds darkest its credit never fell to the level of this period. Their only proper interpretation is that they were a test of confidence in the administration then existing, which had at that moment little cohesion, no courage, and held out slight hope for the continued unity of the country. All bids at 12 per cent. and less were accepted, and the notes were issued accordingly at those rates.

There was great anxiety attendant upon this loan by reason of the fact that there was not then money enough in the Treasury to pay the interest on the public debt due on the fourth day thereafter. The New York newspapers of the day record the fact that "alarmed at the prospect of a default in the payment of the interest upon the national debt, Mr. Cisco, United States treasurer in New York City, communicated with some bankers and bank managers, and laid the facts before them. Mr. Vail, cashier of the Bank of Commerce, took up the matter warmly, and finding himself seconded by other patriotic citizens, succeeded in making up a purse of a million and a half, which was tendered to the Government this morning by telegraph, at 12 per cent. per annum. This sum will suffice to pay the interest of January on the public debt. As soon as it was known that the Bank of Commerce had tendered, several other parties in Wall street sent on bids at various rates of interest from 12 to 36 per cent., thus swelling the aggregate of the bids to nearly $2,500,000."

This loan served to ward off the immediate danger, but three weeks later it became necessary to sell five millions more of the same class of notes. On the 19th of January, 1861, those bids were opened, when it was found that over twelve millions were bid for, and that the rate of interest varied from 9 to only 20 per cent. This loan was equally divided among the lowest bidders at an average of nearly 11 per cent. interest.

These remarkable transactions have faded almost entirely from public recollection, and I doubt not there are gentlemen in the House who are not aware that they ever occurred. I can find in the printed reports of the Treasury Department no record of the bids for these two loans. I have taken the pains to make copies of them from the New York Tribune and the New York Herald of that day, and will append them to this letter, marking them Exhibit A and Exhibit B. I may add that the History of the National Loans, a Treasury publication, printed in 1882, prepared by Mr. R. A. Bayley, and dramatically handled by Mr. CARLISLE during his speech in the House, contains, on page 75, a summary of the issues under these bids, not, however, naming the dates.

It is claimed by the Treasury Department that these notes were sold "at par." It is true that they were issued dollar for dollar. In that sense they were sold "at par," as claimed. But a one-year Treasury note offered at 6 per cent. interest, and refused unless the rate be changed to a higher rate, and as to about half the loan issued at double that rate of interest, is not correctly described as "sold at par." An excessive rate of interest is always proof of the credit of the borrower, and is the discount of the lender. These loans were not "par loans" as those words are used in the commercial world.

The inevitable conclusion from all these facts is that the dreariest page in the history of the United States is that of the Buchanan administration, and that the tariff act most disastrous to the country and the Treasury was that of 1857.

Very respectfully, yours, EDWD. McPHERSON.

NOTE.—The subscribers to the bid of a million and a half made by the Bank of Commerce were as follows:

Bank of Commerce, $300,000; American Exchange Bank, $250,000; City Bank, $100,000; Bank of Republic, $100,000; Bank for Savings, $100,000; Seaman's Bank for Savings, $100,000; Charles H. Russell, $100,000; William Whitewright, jr., $75,000; James Sampson, $50,000; Grant & Barton, $50,000; M. Morgan & Sons, $50,000; United States Trust Company, $50,000; William B. Astor, $30,000; Duncan, Sherman & Co., $25,000; Ward & Co., $25,000; W. S. Horriman, $20,000; Henry F. Vail, $15,000; S. S. Sands & Co., $10,000; Mechanics' Bank, $50,000.

*From the New York Herald, December 29, 1860: "This is not a time for hesitation or half-way measures. There has been quite enough blundering in the Treasury Department. The late Secretary, Mr. Howell Cobb, before he ran away to Georgia, labored efficiently to destroy the credit of the United States. Let us hope that Mr. Thomas, his successor, will not follow in his footsteps in this respect."

Tariff Reform and Pensions.

SPEECH

OF

HON. S. S. YODER,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, October 8, 1888,

On the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue.

Mr. YODER said:

Mr. CHAIRMAN: So long as there existed any reasonable hope of the passage by Congress of some measures of relief to the people from an oppressive and monstrous unjust taxation, I was content to remain silent; but now, when the last hope to accomplish any beneficial legislation in that direction in this session of Congress has expired with the majority report of a bill in the Senate of such a nature and so radically different from the House bill in the matter of revenue that it is apparent that the people and wage-workers, as well as many unprotected industries, can not expect any relief, and that the House will never consent to such a measure and that the Senate can not, nor do the Republicans expect even to attempt to pass such an unjust tariff bill, I deem it a duty I owe to my constituents to give my views on a question that is of so much interest to all.

Months ago the House passed a bill, which if it had become a law, would greatly relieve the people from burdensome taxation, and would do violence nor injustice to no interests. It is a prudent and carefully

considered measure. It was passed, not hastily, but after the fullest discussion and the most careful consideration. Every interest was carefully and most thoroughly consulted. The Mills bill, as it is called, contemplates the accomplishment of the object of relief the people had a right to expect from Congress, the reduction of the surplus accumulation in the Treasury, and relieve labor from burdens, and afford steady employment by cheapening raw material, enabling manufacturers to pay better wages, and to relieve our farmers from paying the enormous sum of 47.1 per cent. tax on everything they buy.

If the report of the Senate should be adopted, the surplus would be reduced, but instead of relief from taxation, the burdens of this class would be actually increased.

It was loudly proclaimed by orators and subsidized newspapers, while they thought they could alarm the people and thereby prevent any legislation in the interest of relief, that there was no necessity for reduction of the tariff, and that the mere fact of agitation of such a proposition was rank British free-trade heresy in the interest of England, and that many industries were actually ruined by the attempt to pass the Mills bill. Only the other night it was proclaimed by Governor Foraker that the surplus had vanished and no more necessity for its reduction existed. "Why not let it alone?" he exclaimed. Mr. Blaine protested that no reduction was necessary.

Yet when they discovered the tidal wave of revenue reform come rolling from the Western prairies, the Northwest, from the East, and from all points of the compass they have concluded to erect a temporary shelter, to erect breakers to stem the tide until after the election, by promising to reduce the surplus $15,000,000 more than is provided for in the Mills bill. This jugglery will deceive no voters. They say in their report that reduction of revenue is demanded and absolutely necessary. When was this discovery made? Did they not say the same thing in 1883? Was it not said by Grant, Arthur, Garfield, and all their leading statesmen? What have they done to redeem their pledges to the people? The commission in 1883 recommended a reduction of the tariff of 20 per cent., and thought it would reach 25 per cent., yet the result was an actual increase. So it will be again if they succeed in the election.

The Mills bill was the result of a demand by the President, the people, and the Democratic national convention, and was passed by the Representatives of the people through the House. The Senate substitute comes directly from the Republican majority in that body. Senators are not directly responsible to the people. They are elected by States and are prohibited by the Constitution from originating revenue bills. In this substitute the majority of the Senate do not represent the people. They not even represent the policy of the Republican national platform. They say in their platforms—

If there shall still remain a larger revenue than is requisite for the wants of the Government, we favor the entire repeal of internal taxes, rather than the surrender of any part of our protective system.

Now, this substitute proposes to surrender a large part of protection. Here is a Republican committee, with no party behind it, at variance with their platform. This is an exhibition of political importance quite unparalleled. They report a tariff bill, to prepare which they have kept Congress in session ten months, so complicated by changes from ad valorem to specific and the reverse that none but experts will ever be able to understand what changes will be made, just as they did in 1883, when they said they would reduce the tax 20 per cent., and the people believed it until after the law was passed.

This Republican bill cuts down revenue by increasing the taxes on many of the necessaries of life; the way in which the monopolists would be glad to cut down revenue, but it is not the way the people, who have to pay the taxes, prefer.

To make blankets and the coarser and cheaper woolen goods worn by the mass of people dearer by higher duties is a way to cut down revenue, but it cuts revenue by forcing the laboring people to pay higher rates for the necessaries and comforts of their lives and putting the added exactions into the pockets of monopolists, while keeping them out of the Treasury.

This Republican tariff bill ought to be entitled "a bill to rob the laboring masses for the profit of monopolists and to facilitate and invite the formation of trusts." If it could become a law it would increase oppression of the present tariff, and would still further impoverish the farmers, mechanics, and workingmen of the country.

The Mills bill is a step in the right direction. It makes raw material free and thus cheapens the goods used by the poorer millions and draws the teeth of monopolies. This Republican bill is a long step in the wrong direction. It aims to make the poor pay even more than the present iniquitous and monopolistic tariff, and it offers a direct encouragement to the extension of trusts and combines in the necessaries of life. That is the difference between the two bills.

As to the necessity of some change and reduction of taxation there is, in fact, no controversy, and it is only necessary to call attention to the Republican platforms and the messages of Republican Presidents, the reports of Republican secretaries, as well as the expressions of the acknowledged leaders of that party to convince the most skeptical that the Republican as well as the Democratic party favors reduction of taxation.

In proof of this statement, if it were necessary, I could occupy my time in quoting from Republican authority. I will give a few quotations:

[President Grant, annual message, December, 1875.]

Many duties now collected, and which give but an insignificant return for the cost of collection, might be remitted, and to the direct advantage of consumers at home. I would mention those articles which enter into manufactures of all sorts. All duty paid upon such articles goes directly to the cost of the article when manufactured here, and must be paid for by the consumers. These duties not only come from the consumers at home, but act as a protection to foreign manufacturers of the same completed articles in our own and distant markets.

[Arthur's second annual message, December 4, 1882.]

The present tariff system is in many respects unjust. It makes unequal distribution, both of its burdens and its benefits. This fact was practically recognized by a majority of each House of Congress in the passage of the act creating the Tariff Commission.

[James A. Garfield, April 1, 1870.]

I hold that a properly adjusted competition between home and foreign products is the best gauge by which to regulate international trade. Duties should be so high that our manufacturers can fairly compete with the foreign product, but not so high as to enable them to drive out the foreign article, enjoy a monopoly of the trade, and regulate the prices as they please. This is my doctrine of protection. If Congress pursues this line of policy steadily we shall year by year approach more nearly to the basis of free trade, because we shall be more nearly able to compete with other nations on equal terms. I am for a protection which leads to ultimate free trade.

[Henry Wilson, late Vice-President.]

Men who have looked with a hungry eye upon a Treasury overflowing with surplus millions do not wish to see the source from which these coveted millions are derived dried up. Now, as in times past, political ambition is not unwilling to sacrifice the business interests of the country in the hope to win political power. * * * I think American labor will be best protected by taxing all the necessaries of life lightly; placing the raw materials which enter into our manufactures on the free-list; raising revenue to support the Government upon articles that come in competition with our manufactures and upon the luxuries of life, which are consumed by the more wealthy classes of society.

[Oliver P. Morton, of Indiana, April 30, 1872.]

Now, I wish to say to the Senate that I am strongly convinced that we should go further, and reduce the tariff in material respects upon many other articles. * * * The country expects a large reduction, the country knows that it can be made, the country has been promised this reduction, and the dominant party here is responsible to the country for this reduction, and will be held responsible if it is not made.

[Benjamin Harrison, November 28, 1882.]

The creation of the Tariff Commission was a confession that the tariff needs revision. If the report comes in it should be promptly acted upon. My opinion is that no time should be lost after Congress assembles in bringing forward these measures, and that no time should be lost during the holidays by adjournment.

[Senator SHERMAN, of Ohio, 1867.]

In considering so complicated a subject as a tariff, nothing can be more deceptive than the application of such general phrases as a "protective tariff," "a revenue tariff," "a free-trade tariff." Every law imposing a duty on imported goods is necessarily a restraint on trade. It imposes a burden upon the purchase and sale of imported goods and tends to prevent every importation. The expression "a free-trade tariff" involves an absurdity. If you converse with intelligent men engaged in the business of manufacturing they will tell you that they are willing to compete with England, France, Germany, and all the countries of Europe, at the old rates of duty. If you reduce their products to a specie basis, and put them on the same footing they were on before the war, the present rates of duty would be too high. It would not be necessary for scarce any branch of industry to be protected to the extent of your present tariff law They do not ask protection against the pauper labor of Europe, but they ask protection against the creation of your own laws.

[James G. Blaine, Secretary of State, 1881.]

The wages of spinners and weavers in Lancashire and in Massachusetts, according to the foregoing statements, were as follows, per week:

Spinners: English, $7.20 to $8.40 (master spinners running as high as $12); American, $7.07 to $10.30.

Weavers: English $3.84 to $8.64, subject, at the date on which these rates were given, to a reduction of 10 per cent.; American, $4.82 to $8.73.

The average wages of employés in the Massachusetts mills is as follows, according to the official returns: Men, $8.30; women, $5.62; male children, $3.11; female children, $3.08. According to Consul Shaw's report, the average wages of the men employed in the Lancashire mills on the 1st of January, 1880, was about $8 per week, subject to a reduction of 10 per cent.; women, from $3.40 to $4.30, subject to a reduction of 10 per cent.

The hours of labor in the Lancashire mills are fifty-six, in the Massachusetts mills sixty per week. The hours of labor in the mills in the other New England States, where the wages are generally less than in Massachusetts, are usually sixty-six to sixty-nine per week.

Undoubtedly the inequalities in the wages of English and American operatives are more than equalized by the greater efficiency of the latter and their longer hours of labor. If this should prove to be a fact in practice, as it seems to be proven from official statistics, it would be a very important element in the establishment of our ability to compete with England for our share of the cotton-goods trade of the world.

From these returns it is seen that every American spindle consumes 66 pounds of raw cotton, while each British spindle consumes only 32 pounds, or less than one-half the American consumption per spindle.

It thus appears that each American operative works up as much raw material as two British operatives, turns out nearly $1.50 worth of manufactures to the British operative's $1 worth, and even in piece goods, where the superior quality and weight of the American goods are so marked, the American operative turned out 2.75 yards to 2.50 yards by the British operative.

[James G. Blaine on lumber—June 10, 1868.]

During the entire war, when we were seeking everything on the earth and in the skies and in the waters under the earth out of which taxation could be wrung, it never entered into the conception of Congress to tax breadstuffs—never. During the most pressing exigencies of the terrible contest in which we were engaged, neither breadstuffs nor lumber ever became the subject of one penny of taxation. * * * Now, as to the article of lumber, I again remind the House that there has never been a tax upon this article. The gentleman from Ohio may talk on this question as he pleases, but I say that wherever the Western frontiersman undertakes to make for himself a home, to till the soil, to carry on the business of life, he needs lumber for his cabin, he needs lumber for his fence, he needs lumber for his wagon or cart, he needs lumber for his plow, he needs lumber for almost every purpose in his daily life.

[Senator INGALLS, February 15, 1878.]

We can not disguise the truth that we are on the verge of an impending revo-

lution; the old issues are dead! The people are arraying themselves upon one side or the other of a portentous contest. On one side is capital, formidably intrenched in privilege, arrogant from continued triumph, conservative, tenacious to old theories, demanding new concessions, enriched by domestic levy and foreign commerce, and struggling to adjust all values to its own standard. On the other is labor, asking for employment, striving to develop domestic industries, battling with the forces of nature, and subduing the wilderness; labor, starving and sullen in cities, resolutely determined to overthrow a system under which the rich are growing richer and the poor are growing poorer; a system which gives to a Vanderbilt the possession of wealth beyond the dreams of avarice and condems the poor to a poverty which has no refuge from starvation but the prison or the grave.

[Justice Miller, of the United States Supreme Court, in Loan Association vs. Topeka. 20 Wallace.]

To lay with one hand the power of the Government on the property of the citizen, and with the other to bestow it upon favored individuals to aid private enterprises and build up private fortunes, is none the less a robbery because it is done under the forms of law and is called taxation. This is not legislation. It is a decree under legislative forms. Nor is it taxation. A "tax," says Webster's Dictionary, "is a rate or sum of money assessed on the person or property of a citizen by Government for the use of the nation or State." Taxes are burdens or charges imposed by the Legislature upon persons or property to raise money for public purposes.

We have established, we think, beyond cavil that there can be no lawful tax which is not laid for a public purpose.

If it be said that a benefit results to the local public of a town by establishing manufactures, the same may be said of any other business or pursuit which employs capital or labor. The merchant, the mechanic, the inn-keeper, the banker, the builder, the steam-boat owner, are equally promoters of the public good, and equally deserving the aid of the citizens by forced contributions. No line can be drawn in favor of the manufacturer which would not open the coffers of the public treasury to the importunities of two-thirds of the business men of the city or town.

[National Republican platform, 1868.]

It is due to the labor of the nation that taxation should be equalized and reduced as rapidly as the national faith will permit.

[National Republican platform, 1884.]

The Republican party pledges itself to correct the inequalities of the tariff, and to reduce the surplus.

[Hugh McCulloch, Secretary of the Treasury. Recommendations in report, 1884.]

First. That the existing duties upon raw materials which are to be used in manufacture should be removed. This can be done in the interest of our foreign trade.

Second. That the duties upon the articles used or consumed by those who are the least able to bear the burden of taxation should be reduced. This also can be effected without prejudice to our export trade.

[Representative NELSON, of Minnesota, March 29, 1888.]

In the face of these platform pledges; in the face of these admissions from unwilling witnesses; in the face of the large, ever-growing and threatening surplus, taken from the people by taxation and used by certain banks without any consideration therefor; and in the face of the fact that so many of the barest necessaries of life are loaded down with the highest kind of tariff taxes, it makes me sick at heart to think that there are leading men on this side of the Chamber who can find at this juncture, and under these circumstances, no other field for tariff reduction than the internal-revenue taxes on spirits and tobacco. Surely these things are not the diet on which the poor laboring man keeps his family.

Worthier, better, and juster, it seems to my mind, would it be to give our people—the toiling masses—cheaper food, cheaper fuel, cheaper clothing, and cheaper shelter—cheaper because released from the heavy and unnecessary bondage of high-tariff taxes. I will put free sugar, free coal, free salt, and free lumber against free whisky and free tobacco under all circumstances, and so will the great mass of the American people.

[Senator JOHN SHERMAN, January, 1888.]

The tariff ought to be carefully revised with a view to correct any inequalities or incongruities that have grown out of the change of values since the passage of the act of 1883; every imported article which does not compete with our domestic industry and is essential to the comfort and wants of our people should be placed on the free-list; every raw material of industry which does not compete with our own productions should be specially selected for the free-list.

[Representative FITCH, of New York, May 16, 1888.]

In the interests of the Republican party, and in the interest of common fairness, I propose to ask gentlemen on this side of the House to consider for a moment how the present tariff, which we have promised to revise, now affects the people whom I have described, and to consider what they pay taxes on in the general distribution of the customs taxes now in force.

They pay upon everything. Look for a moment at what they eat. There is a tariff duty on beef, on pork, hams and bacon, butter and lard, cheese, molasses, grapes, wheat flour, oats, corn meal, rye, barley, potatoes, raisins, vinegar, honey, rice and rice meal, sugar, extract of meat, pickles, currants, apples, salt, and condensed milk. The list is substantially an inventory of the stock of the grocery store at which they buy. There is a duty on the coal which warms them, on their cooking and household utensils, on their entire clothing from their hats to their stockings, on the medicines given them when they are sick, and on the roofs over their heads.

* * * The average reduction in rates, including that from the enlargement of the free-list and the abolition of the duties on charges and commissions, at which the Commission has aimed is not less on the average than 20 per cent., and it is the opinion of the commission that the reduction will reach 25 per cent.

[Senator P. B. PLUMB, of Kansas, January 17, 1883.]

I was talking with a farmer from Massachusetts to-day about this thing. He said he had as good a farm as there was in the Old Bay State, and yet he said that he could barely make both ends meet, and he complained to me that one of the reasons why he could not do so was because everything else that surrounded him was so much protected that it simply took the difference between profit and loss in his calling and left him a very slim chance indeed from year to year.

In 1867 JOHN SHERMAN said:

"It is, therefore, simply an absurdity to talk now about free trade tariff, and to talk about a protective tariff is unnecessary, because the wit of man could not possibly frame a tariff that would produce $140,000,000 in gold without amply protecting our domestic industry."

Surely no Republican will dispute the authorities I have given, as they are all from leading and recognized Republican statesmen. To listen to the Republican orators and read their journals, one would think that the provisions of the Mills bill were a new departure in the theory and policy of our Government, when the truth is that the very doctrine involved is as old as free government, and has been advocated and taught by all our great statesmen since the days of Washington. Andrew Jackson, one of the great sages and champions of the people's rights, said:

[Jackson's eighth annual message, December 6, 1836.]

In reducing the revenue to the wants of the Government, your particular attention is invited to those articles which constitute the necessaries of life. The duty on salt was laid as a war tax, and was no doubt continued to assist in providing for the payment of the war debt. There is no article the release of which from taxation would be felt so generally and so beneficially. To this may be added all kinds of fuel and provisions. Justice and benevolence unite in favor of releasing the poor of our cities from burdens which are not necessary to the support of our Government, and tend only to increase the wants of the destitute.

[Jackson's farewell address, March 3, 1837.]

There is perhaps no one of the powers conferred on the Federal Government so liable to abuse as the taxing power. The most productive and convenient sources of revenue were necessarily given to it, that it might be able to perform the important duties imposed upon it; and the taxes which it lays upon commerce being concealed from the real payer in the price of the article, they do not so readily attract the attention of the people as smaller sums demanded from them directly by the tax-gatherer. But the tax imposed on goods enhances so much the price of the commodity to the consumer, and as many of these duties are imposed on articles of necessity, which are daily used by the great body of the people, the money raised by these imposts is drawn from their pockets.

Congress has no right, under the Constitution, to take money from the people unless it is required to execute some one of the specific powers intrusted to the Government; and if they raise more than is necessary for such purposes it is an abuse of the power of taxation, and unjust and oppressive. It may, indeed, happen that the revenue will sometimes exceed the amount anticipated when the taxes were laid. When, however, this is ascertained, it is easy to reduce them; for in such a case it is unquestionably the duty of the Government to reduce them, for no circumstances can justify it in assuming a power not given to it by the Constitution, nor in taking away the money of the people when it is not needed for the legitimate wants of the Government. * * *

There is but one safe rule, and that is to confine the General Government rigidly within the sphere of its appropriate duties. It has no power to raise a revenue or impose taxes, except for the purposes enumerated in the Constitution, and if its income is found to exceed these wants, it should be forthwith reduced, and the burdens of the people so far lightened.

[Polk's inaugural address, March 4, 1845.]

In executing this power by levying a tariff of duties for the support of Government, the raising of revenue should be the object, and protection the incident. To reverse this principle and make protection the object and revenue the incident, would be to inflict manifest injustice upon all other than the protected interests. In levying duties for revenue, it is doubtless proper to make such discriminations within the revenue principles as will afford incidental protection to our home interests. Within the revenue limit there is a discretion to discriminate; beyond that limit the rightful exercise of the power is not conceded. The incidental protection afforded to our home interests by discriminations within the revenue range, it is believed will be ample. In making discriminations all our home interests should, as far as practicable, be equally protected.

It is an admitted fact, then, that both political parties desire the taxes reduced in order to reduce the surplus, but they differ greatly as to the reason for it and consequently as to the methods of reduction, and so strong is the feeling in both parties that no compromise is possible. The Republican party maintains that the surplus—the accumulation of money in the Treasury—is the only charge; that to get rid of this surplus is the only object. On the other hand the Democrats not only consider the surplus an evil but they consider it the cause of even a greater wrong—one that is felt by every man, woman, and child—excessive taxation.

We derive our revenue mainly from internal taxes and tariff taxes. The internal taxes are simple and easily understood. The tariff taxes are obscure, complex, and difficult to understand. Every dollar in the direct internal-revenue tax goes to the Treasury, while in the tariff taxes it is safe to state that not more than one out of every five dollars reaches the Treasury. In fact, it is a part of high protectionist policy to make this tax so high that not one cent will come to the support of the Government and thus reduce the surplus. They say in their platforms that they are in favor of abolishing the entire internal-revenue tax rather than surrender one dollar of tariff taxation; or, in other words, rather than give a laboring man a cheaper dinner-bucket, cheaper clothing, or cheaper salt, rather than give the farmer cheaper woolens, cheaper agricultural implements, cheaper pine lumber, and shingles, window-glass or hardware, they will give him free whisky, free tobacco, free beer!

The Democrats, on the other hand, believe in reducing the tax on all raw material that goes into manufactured goods, thus giving manufacturers cheaper raw material to enable them to compete with foreign manufacturers in the markets of the world, and also enable them to pay higher wages to their employés and give remunerative employment to the laborers and in reducing the tax upon the necessities of the farmer and the laboring men, which will enable them to purchase more of their necessaries with their hard earned wages and small profits on their farms. The Democratic party believes that great and threatening as are the evils of the surplus in the Treasury, that the ever increasing burdensome taxes that bear so heavily upon all consumers is a vastly greater evil—an evil tending to enrich a favored few while it impoverishes the many—creating combinations, monopolies, and trusts, the curse of our free country, and "threatening to shake the very foundation of our Union."

I take it, then, that the issue is distinctly and well understood. The Republican party desires to get rid of the surplus only, while we con-

tend that we must get rid of the unnecessary tax which creates the surplus, and which is a greater evil than the surplus itself. After all demands against the Government have been provided for there is left a surplus of $129,000,000, which represents the sum wrung from the people by excessive and unjust taxation. The Mills bill proposes to reduce this surplus by remitting taxation to the amount of $59,591,638. By reducing taxation $4.61 on the present average rate on every $100, or from 47.10 per cent. to 42.49 per cent., is called a free-trade measure.

The Republican commission, appointed by President Hayes, a Republican and protectionist, recommended a reduction of 20 per cent., instead of less than 5 per cent. as the Mills bill proposes, and yet I do not remember that it was denounced as a free-trade measure by some of the men who are now the leaders of this party. The complaint is that sugar was not reduced enough. The cut on sugar is nearly twice as much as on all other articles combined, except woolens, and far greater than on woolens. The theory of high protection for the sake of protecting special interests is a monstrous outrage, suited only to aristocratic governments, that tolerate privileged classes, pauperizing many.

Governments supremely selfish, like Germany, where Bismarck reigns supreme and where labor is degraded and illy remunerated, where William is Emperor, where military despotism and nobility is almost absolute, has been held up by Republicans as a good authority to quote on political economy. Whose opinions should be followed and whose ideas should be adopted by free Americans? Twenty years more of unnecessary taxation, high tariff, trust creating robbery in this country will bring us nearer Bismarck's idea of a government. I only wonder that "the uncrowned king and greatest statesman of America," while abroad, did not visit and embrace his crowned brother protectionist, William, and observe the degradation, starvation, and suffering of the laboring men in Germany.

There is no need of trusts there. Bismarck is to-day the biggest trust on earth. "Whether harmful or not, no public or private citizen" of Germany has any right to interfere; "He fries the fat" out of the entire people of his empire. He is the king boss of the highest protection country and the poorest paid laborers in Europe. The Republican party claims to be the friend of labor. Its votaries say that the laborer can not compete with the poorly paid laborer of foreign lands. Mr. Blaine says:

> This is a question of labor from the skin to the core and from the core back to the skin again.

That capital needs no protection; manufacturers can protect themselves. "But the poor laborer" is what troubles his soul. Oh, no! Andrew Carnegie needs no protection. He, while his employés are to-day on a strike for living wages, is perfectly contented to draw his $1,500,000 clear of profits yearly; only a little over $4,000 every day all the year round; he needs no protection. It is only his starving, striking employés whom Mr. Blaine wants protected.

Why, they are so solicitous of these poor laborers and so anxious to protect them that they even go to the expense of employing Pinkerton detectives and arm them with repeating rifles to protect and see that no harm comes to them. What more do these discontented laborers want? Are they not amply protected? But, seriously, let us see how laboring men are protected. The Republican party has lined the seacoast with custom-houses, has covered the ocean with ships, and filled our statute-books with enactments to keep out the products of foreign pauper labor. What enactments have they ever passed or what obstruction have they ever offered to keep the pauper laborers themselves from coming into this country and competing directly with our native laborer? The only protection that labor ever had is that afforded themselves by organized associations. They have no other protection against capital nor against foreign competition. What laws did the Republicans, during all the time they were in power, who love these laboring men so much and feel so solicitous after their welfare, ever passed to protect them against foreign pauper labor?

My colleague from Pennsylvania, General MAISH, very ably answered this inquiry when he said in his speech on the tariff:

> The effort of the Republicans to show that they are *par excellence* the friends of the laboring classes will always remain one of the memorable features of this debate. In their desparate endeavor to maintain monopoly, in all the insolence of its power, they have the temerity to pose before the country as the champions of labor. The position is an impossible one.
>
> But actions speak louder than words. Let us examine the conduct of the Republican party towards the workingmen of this country.
>
> In 1864 the Republican party enacted the following law:
>
> "That all contracts that shall be made by emigrants to the United States in foreign countries in conformity with the regulations that may be established by the commissioners of emigration, whereby emigrants shall pledge the wages of their labor for a term not exceeding twelve months to repay the expenses of their emigration, shall be held to be valid in law, and may be enforced in the courts of the United States or of the several States and Territories, and such advances, if so stipulated in the contract and the contract be recorded in the recorder's office in the county where the emigrant shall settle, shall operate as a lien upon any land thereafter acquired by the emigrant, whether under the homestead law where the title is consummated, or on property otherwise acquired, until liquidated by the emigrant; but nothing herein contained shall be deemed to authorize any contract contravening the Constitution of the United States, or creating in any way the relation of slavery or servitude."
>
> This remarkable statute authorized the importation of foreign pauper labor under a contract providing that the wages of the emigrant shall belong to the party with whom he made the contract for a period of twelve months, and the strong arm of the courts of the United States could be invoked to enforce its stipulations. It authorized a lien to be put upon any land that the emigrant might acquire, and having thus put the badge of servitude upon him we are coolly asked to hold that nothing in this contract shall be taken or deemed as creating "in any way the relation of slavery or servitude." The concluding paragraph of this statute betrays the guilt of its framers.

Free trade in labor and protection on everything the laborer buys, and that is called protection to American labor! You find the greater number of strikes, suffering and degradation in the high protected industries. We can not protect cotton by putting a tariff on iron. We can not protect labor by putting a tariff on manufactured goods. The attempt is made by politicians to deceive laboring men by telling them that tariff on manufactured goods will give them higher wages. Nothing can be farther from the truth. The only way you can protect labor is to put the tariff on men and not on goods. They are shipping laborers into this country now almost as cheap as goods, at the rate of 30,000 per month. Upon this subject Mr. Powderly, a leading representative of labor, recently used the following language:

> Nine million seven hundred thousand immigrants have landed since 1860—more than the combined population of New York and Pennsylvania, and as much as the total population of Arizona, Arkansas, California, Colorado, Connecticut, Dakota, Delaware, Florida, Idaho, Kansas, Louisiana, Maine, Maryland, Minnesota, Montana, Nebraska, Nevada, New Hampshire, New Mexico, Oregon, Rhode Island, Utah, Washington Territory, West Virginia, and Wyoming. The population which came previous to 1860 was civilized; that which comes to-day is, in a great proportion, semi-barbarous.
>
> So long as this tide of unrestricted immigration is permitted to sweep in they will take no steps to reform conditions at home. We must check it at once, or, instead of Americanizing those who come, they will Europeanize us.

Nine-tenths of all the laborers in New England, as testified to by a commissioner of labor, are foreigners.

Senator SHERMAN, one of the ablest Republican statesmen of the country, has said:

> The duty of Congress is to protect the industries of this country from undue competition with the laborers of Europe.

This is in direct contradiction to the assertion of Mr. Blaine, that "capital needs no protection." Mr. SHERMAN'S statement as to the object of high protection is correct. Mr. Blaine's is intended to deceive the laboring men. Let us see if the industries are sufficiently protected. Mr. FORD, of Michigan, said in his speech on the tariff:

> What profit do these men make? That is a very difficult matter to arrive at. There is no law which requires them to make a statement of their gains and losses, and so any knowledge on that subject is not easy to obtain. But occasionally something occurs which compels a disclosure. An instance of this kind is found in a suit between the stockholders of the Jackson Iron Mining Company in the Lake Superior country. The Jackson mine, in all respects, is an average of the iron mines in Michigan. In that suit, in 1883, it became necessary to know the exact dividends declared by that company for the past twenty years. The secretary of the company took the witness-stand and testified that since the organization of the company in 1863 (twenty years) they have declared a total dividend of 1,785 per cent., an average of 89½ per cent. a year. Their original capital stock was $300,000, the dividends declared had been $5,355,000, and the value of the plant in 1883 was $1,500,000. So, out of an original investment of $300,000 the stockholders had taken out over $5,000,000 in profits, and they still had a plant left valued at $1,500,000, which alone was 500 per cent. more than they had originally invested, making a total of 2,300 per cent. profit in twenty years, or an average of 215 per cent. a year. But still these men now say they can not compete against the pauper labor of Europe, and demand that the duty of 75 cents a ton on iron ore be left unmolested.
>
> Take the copper mines. The Quincy Copper Mining Company of Michigan, in the ten years ending with 1881, paid an average dividend of 50 per cent. per year. The Calumet and Hecla copper mine, with about a million dollars invested, pays over 200 per cent. every year. In 1861, when every expedient known to taxation was resorted to, to raise a revenue to carry on the war of the rebellion, among other taxes there was a duty of 2 cents a pound placed on copper pigs.
>
> Finally the war ended, and the necessity for a large revenue did not exist. But in the mean time the copper-mine owners of Michigan had had a taste of this "protection against the pauper labor of Europe," and they sent a lobby down here and got the tariff on copper increased to 4 cents a pound. Think of it! A war tariff of 2 cents, a peace tariff of 4 cents. This duty is practically prohibitory. Last year the Calumet and Hecla Mining Company paid a dividend of $2,250,000—over 200 per cent.—and the Government received in revenue from imported copper pigs the princely sum of $40. And this same company has shipped copper to England, and, after paying the transportation charges, they have sold it at a less price than it is sold in New York. And yet they have the effrontery to say that they can not compete against the pauper labor of Europe.

Let us now compare the profit of capital invested in the manufacturing of cotton, woolen, and Bessemer steel as compared with the profits of labor in the same industries. Let us inquire how much money the capitalist invests to realize in one year as much as he pays in wages to one employé for the same period. It is a simple calculation, which any one can make from the census report. You will ascertain that invested in cotton manufacturing it requires $1,075.28 to yield the manufacturer net the gross amount his operative gets for a year's labor, which is only $243.65, while $846.95 invested in woolen manufactures pays the owner as much as a laborer receives in that industry, while $675.66 invested in Bessemer-steel manufactures yields as much net as is paid a laborer gross—$452.53. It would only take $692.09 of the capital of the woolen mills to yield $243.65, the wages of the cotton-mill operatives, while $345.72 would yield to the Bessemer-steel man as much as the cotton manufacturer pays his operatives. So, $345.72 of stock in a Bessemer-steel works will produce just as much net, year by year, as the labor of an operative will gross in a cotton mill; yet we are told, and asked to believe, that this protection to industries is a matter of interest to the laborers. That "it is the labor as well as the industries that are protected," and that these laborers have a fair share of the products of their own labor.

In speaking of the increased cost of the consumers of our home manufactures resulting from a duty laid upon the imported articles of the same description, the President says:

These laws, as their primary and plain fact, raise the price to consumers of all articles imported and subject to duty to precisely the sum paid for such duties.

For this statement he has been severely criticised, and in a speech delivered in New York by Governor Foraker recently, he (Foraker) made the statement that "this was absurd and ridiculous." By inquiry we ascertained the fact that this is no new idea. President Grant, in his annual message in December, 1875, heretofore quoted, says:

All duty paid upon such articles goes directly to the cost of the article when manufactured here and must be paid for by the consumer.

Jackson, whom Governor Foraker quoted as good authority on the tariff, said, in his farewell address, March 3, 1837 (I give his exact words):

But the tax imposed on goods enhances by so much the price of the commodity to the consumer, and as many of these duties are imposed on articles of necessity which are daily used by the great body of the people, the money raised by these imposts is drawn from the pockets of the people.

Grant and Jackson say it takes just that much money out of the pockets of the consumers. Governor Foraker says, "the assertion is foolish and absurd." But it might be well to remember that great men will differ. I would also, in this connection, call the attention of Mr. Blaine on the political stump, to Mr. Blaine in the House of Representatives, June 10, 1868, and also Secretary of State Blaine, in his report, "The Cotton Market of the World;" Justice Miller, 20 Wallace, as well as many other leading Republicans whom I have quoted.

Miners and laboring men, also know their personal friends as well as those who have arraigned themselves against their interest and on the side of corporations.

[Judge Thurman, the laborers' friend and defender.]

My decision, therefore, is that the operators of the two districts can pay the advance asked (60 cents per ton) and compete with other districts. Respectfully submitted.

The men were right and the employers wrong, and Judge Thurman stood by the men. The reasoning upon which his conclusion was based was so clear that the operators could not resist it, and the miners immediately resumed work upon the terms they had demanded. The judge was the recipient of many resolutions and letters of thanks from laboring organizations throughout the United States.

On January 26, 1886, immediately after Judge Thurman's adjudication, the following preamble and resolution were adopted unanimously by the State Trades and Labor Assembly of Ohio, then in session at Columbus:

Whereas the success of the recent arbitration proceedings between the miners and operators of the Hocking Valley and Ohio Central districts is very gratifying and encouraging to all lovers of justice and fair play; and

Whereas while we congratulate the miners for their willingness to arbitrate the justness of their claims, too much credit can not be given to that sterling man of the people, Allen G. Thurman, for consenting to act as umpire, and his impartial consideration of the evidence presented—no light task for a man of his years—and which was evidently assumed to, in a measure, ameliorate the condition of labor and capital employed in the Hocking Valley and Ohio Central districts and the city of Columbus: Therefore,

Resolved, That the secretary of this assembly be instructed to forward Hon. Allen G. Thurman the above preamble, which properly conveys and expresses the sentiments of the Ohio State Trades and Labor Assembly upon this matter.

This happy settlement of a great dispute resulted in the further increase of miners' wages in the Hocking Valley districts, and the compensation as now fixed is 75 cents for winter mining and 70 cents for summer mining. We have no doubt that the ten thousand miners of Ohio and their brethren throughout the country will remember with their votes the justice done them by Allen G. Thurman, and the benefits they have since received in consequence of his just judgment.

In a similar crisis, in 1877, Benjamin Harrison drew $1,000 per week from the railroad companies, while receiving $5 per day as the pay of a captain of troops organized to contend against the unemployed laborers.

The wage-workers know that their only protection is organization against the encroachments of capital and they are not slow in discovering their interests. We have yet to receive the first petition or prayer in this House against the passage of the Mills' bill or the reduction of the tariff by organized labor associations, while these corridors and committee-rooms have been crowded with manufacturers and capitalists, who are especially favored by the unjust and unequal tariff. Our desks have been loaded down and our mails crowded with tariff protection literature, of falsehood and deception, paid for by millionaires and aristocratic mill-owners. Their money hires the best writers and subsidizes newspapers, while organized labor is crying out in thunder tones against the continuance of this tax on all they buy. This is what labor is saying:

INDORSING THE MILLS BILL—KNIGHTS OF LABOR GIVE THEIR REASON WHY IT SHOULD BECOME A LAW.

Local Assembly 3534 of the Knights of Labor in Philadelphia has passed the following preambles and resolutions:

"Whereas as textile workers we have for years felt the evil effect of a tariff tax on the raw materials of our industries upon us in lessening our opportunities for work and reducing our wages; and

"Whereas the present tariff laws impose a heavier tax upon the raw materials and the partly finished products than upon the finished commodities, thus being directly in the interest of foreign manufactures; and

"Whereas the Mills bill reverses this obvious discrimination against American labor by grading the duties upward in accord and with the amount of labor required to make the commodities: Therefore,

"*Resolved*, That we, the members of Local Assembly 3534, Knights of Labor, discarding all parties and considerations, do protest against the continuance of the present unequal and unjust system of tariff schedules and demand the passage of the Mills bill as a measure calculated to bring prosperity, steady work, and better wages for every textile worker in our country."

CONDEMNING MR. LITCHMAN.

The sanctuary of the assembly has also passed the following:

"Whereas Charles H. Litchman, ex-general secretary of our order, has gone forth in the political field, taking the side of politics in preference to labor organizations:

Resolved, That Local Assembly 3534, in session, condemns Charles H. Litchman for misrepresenting the political views of the members present and for endeavoring to use the order for political and financial considerations."

The men who represent the laboring men on this floor are, without an exception, in favor of the Mills bill.

Hon. HENRY SMITH, of Wisconsin, who is the State master workman of the Knights of Labor of his State, elected to Congress by workingmen, thus defines his position:

REDUCE THE TAXES ON LABORING MEN.

Congressman SMITH, when asked his views on tariff legislation and the Mills bill, said: "My opinions on this matter are the result of careful, conscientious, and, I hope, intelligent study of what are the needs of the country and especially of laboring men, who make up the country's strength. The tariff is a tax, and no amount of talking in Congress or in the newspapers or anywhere else can make it seem to be anything else. The people of this country can not be made happy or prosperous by taxing them, and until the last few years any one who maintained that this could be done would be laughed at. As the tariff is a tax it should be levied on luxuries, and thus the tax put on those who can best afford to pay the taxes.

"That is the true way to reform the present tariff. The Mills bill, as it is called, is a moderate effort to reduce taxes on the necessaries of life, and I shall vote, if I have a chance, to go even further, and shall support all measures to lighten the load of taxes on the shoulders of labor, which is both the producing and the consuming element of our population. I shall vote for free coal and free sugar as I have already voted for free lumber. Tariff taxation, to my way of thinking, is not a blessing, and men who work for wages and have thought about it, as I have, always reach the same conclusion.

"THE TWIN MONOPOLIES.

"Tariff taxation is not the only obstacle the producing element—by which, of course, I mean labor—has to contend against in this country. I may say, in passing, that the matter of transportation and the absorption of our public lands by aggregated capital, foreign or domestic, is of as great importance to labor as the tariff, and perhaps of greater importance."

And now let us look into the interests of the poor farmer, who is little benefited by protection. He pays the largest portion of this enormous tax, an average of $47.10 on every $100 worth of goods that he buys. Is it not true that he is gradually growing poorer every year? How many farms in Ohio are under mortgage to Eastern capitalists? Forty-eight per cent. of all the farms in Michigan are mortgaged, and the same rate holds true with regard to Indiana, Illinois, Iowa, Kansas, and Nebraska—all are in the same deplorable condition. Why is it that the price of land and the products of the farm are constantly on the decline? We find that the exports of the products of the farm are constantly growing.

In 1870 this country bought 82 per cent. of our agricultural products. In 1880 it bought but 69 per cent. of them. Observe that as protection increases, manufacturing interests grow, but the per cent. of exports of the farm products is increased. The farmer needs no more of tariff taxation under which monopolies have grown and trusts have become defined. He finds that his home market is ebbing away, and that he must go from home to sell 31 per cent. of his products. The theory of the home market is a delusion and swindle.

I here quote the report of our consul at London, Ontario, Canada, which has just been published, and which explains itself:

[Special issue No. 48. Department of State, October 6, 1888.]

UNITED STATES CONSULAR REPORTS—AMERICAN AGRICULTURAL IMPLEMENTS IN CANADA.

I find that plows of American manufacture are among the most prominent of the imports in this line. The Oliver chilled plow (made at South Bend, Ind., and the one, I am told, that has the largest sale in the United States), the Syracuse plow, and the South Bend plow seem to be most in demand and to have the largest sale. I have before me on my desk an offer from an Ontario dealer in the Oliver plows to sell same f. o. b. at his city in Canada for $10 each in quantities. The retail price here is $12, and numerous transactions take place at that figure. The same plows, I understand, are sold in quantities at the factory (not for export) at $14 each, and cost the American farmer at retail $16.

The Syracuse plow retails at $11 or $12 here, and, I am informed, sells for from $14 to $16 in the United States at retail, and the South Bend at $11 here, and $14 at home.

It is pleasing to observe how cheaply our manufacturers must be able to turn out these goods, from the fact that the Canadian duty on this class of goods is 35 per cent. ad valorem. Even admitting that the manufacturer makes no profit on his sales in Canada, these figures are of interest:

Price at which plow is sold in Canada		$10.00
Duty at 35 per cent. ad valorem and freight	$3.50	
Profit to Canadian dealer, probably	1.50	
		5.00
Leaving actual cost to manufacture plow		5.00
Retailed to American farmer at		16.00
Profit to manufacturer on all home sales, per plow		11.00

It would thus seem that the Canadian farmer has an advantage over his American neighbor in the purchase of necessary implements produced in his

own country, and the latter before purchasing his plows might well figure as follows:

Price of plow at retail in United States		$16.00
Price of same in Canada	$12.00	
Freight to return same to United States (duty is free on American goods returned)	1.00	
		13.00
Profit to American farmer by purchasing American made plow in Canada		3.00

Plows with tempered-steel mold-bands and beams, which sell in the United States for $17 and upwards, are manufactured in Canada (from Pittsburgh steel, on which duty has to be paid, and the wages of the workmen are substantially the same as in the United States), and are sold for $14 retail, thus showing excess of profit made by American manufacturer over Canadian manufacturer of $3 on each plow. When it is considered that the Canadian manufacturer has to pay a duty on his materials, and freight upon same to Canada from Pittsburgh, it will be readily seen at a glance that the excess of profits to the American over the Canadian manufacturer is much greater than the sum named, $3.

I am credibly advised by a very prominent Canadian farmer that he has just bought an American self-binding reaper (Walter A. Wood's) for $110, laid down in an American city, near the lines, while the price of same machine in the same place to an American farmer would be from $150 to $170.

In addition to the larger implements mentioned, farmers' or agricultural hardware imported from the United States consists of light shelf goods, dry paints, and agricultural hand-tools, such as spades, shovels, forks, etc., on which articles the duty varies from 35 to 70 per cent., although the printed tariff reads only from 30 to 35 per cent. This Government has, however, instructed its customs officers to advance prices on invoices in certain lines, which brings the duty up to a very high rate. On scythes, for instance, by means of a specific and ad valorem duty they have to pay from 60 to 70 per cent.

Notwithstanding these tremendous charges a careful comparison of the wholesale and retail prices of the above tools shows that in all cases American goods of this character can be bought in Canada as cheap, and, in many cases, cheaper than in the United States. It is conclusively proven by these facts that the American farmers are not receiving the full benefit of the low prices at which these goods can be produced in the United States.

These benefits are, apparently, reserved for the Canadians and other foreigners to whose markets we export goods. But existing conditions enable the American manufacturer to compel the purchase of his goods by the American farmer at exorbitant profits.

So great has been this discrimination by American manufacturers in favor of foreign purchasers that the Canadian customs authorities have come to regard with suspicion the prices on nearly all American invoices, as they can not understand why these goods should be sold to Canadians at such great reductions from the prices at which they are sold at home, at the point of manufacture. As a consequence they have during the past two years largely adopted the plan of appraising these goods for duty at the home figures in preference to the prices stated in the invoices. For instance, an American manufacturer may be willing to sell a certain article for $5 to the Canadian trade, the price for the same article at home being $8; the valuation is placed at the latter figure, and even though we sell for the former, the purchaser has to pay duty on $3 more than the goods cost him.

The result of this practice is that we are losing our export trade to this and other foreign countries—the falling off of the American export trade to this port on dutiable articles in one year having been $211,058.

LONDON, ONTARIO, *September* 15, 1888.

The short-sightedness of our manufacturers in this respect, no less than the development of manufacturing in Canada, is closing this as it does other outside markets to our goods, and is driving us back to trade only within ourselves, to the injury of our great agricultural interests, to the reduction of the wages of our workingmen, and to the lessening of the products of our factories.

WM. DE H. WASHINGTON,
Consular Agent.

The high-tariff party gets his vote and the trusts and monopolies get his money, and he places a mortgage on his farm to help to raise enough money to pay his debts. They attempt to frighten him by declaring that if the Mills bill passes, the manufacturing interests will be greatly injured, that mills and manufactories will have to shut down, and thousands of workingmen will be thrown out of employment, and that these artisans and laborers will buy farms and go into agricultural pursuits as an occupation and compete directly with the farmer. This is not possible, and will not deceive one intelligent farmer in the entire country.

A reasonable reduction of the tariff would so stimulate these industries for which our national resources have so eminently fitted us that an increased demand for labor would at once spring up, and by reason of the cheapening of the cost of raw material manufacturers would be enabled to successfully compete with foreign markets. This reduction of the tariff would result in a universal increase of production in order to supply the foreign demand, which again would increase the demand for labor to such an extent as to furnish employment for all idle men, if there should be any.

We are told that every panic that has occurred during the low tariff period is directly attributable to the tariff, while panics occurring in periods of high tariff have been due to other causes entirely, and that the prosperous times following low tariff were not due to a reduction of taxation; but an attempt is made to explain in the same inconsistent way that this is due entirely to other causes. These statements are so apparently inconsistent and untenable that no farmer will be deceived by them. Our farmers comprise one-half of our population, and it would seem that if any industry needs protection by the Government it is that of agriculture. Our opponents tell the farmers that all they need is a home market, which is created by war tariff taxation.

Let us see how he is benefited by this protection heresy. Suppose he raises 100 bushels of wheat. He pays 50 per cent. tax on his plow and harness used in raising this crop; still more on other agricultural implements; $2 per thousand feet on the pine lumber used in building his house and barn; 43 to 80 per cent. on nails and hardware; the same rates on everything that he wears or buys to furnish his house. Now, let him add this up and see what it has cost him to produce 100 bushels of wheat. He will find to his astonishment it has cost him $100. But, they say, he has paid these enormous taxes for the purpose of building up a manufacturing interest which will afford him the home market so vividly portrayed to him by the protectionists. Though it has cost him a dollar a bushel to produce his wheat he must not be alarmed, for Mr. MCKINLEY has told him that all he needs is a home market to get a high price for his farm products.

He happens to live near a large manufacturing town where they employ thousands of hands in making the very articles for which he has been taxed so heavily to protect, and of course he expects to realize $1.25 a bushel for his grain. He loads his wagon with the cereal and hauls it to this home market. He says to the proprietor of the flouring mill: "I know that you are an honest man, and will pay me a reasonable price for my grain. I have paid an enormous tax to build up this manufacturing business and protect it from competition with foreign labor. For this reason my wheat has cost me a dollar a bushel to raise. I have always voted for the protection of American industries. I am a good Republican, and I know you will appreciate my patriotism. I am opposed to a reduction of taxation, to the Mills bill, and to the Democratic free-trade party. I must have $1.25 a bushel for my wheat to realize a living profit, send my children to school, and support my family."

The proprietor of the mill replies to this reasonable demand thus: "My dear sir, I can only pay you 73 cents for your wheat. You see Mr. Smith across the way there is one of those free-trade Democrats and does not believe in high taxes. He orders his flour from Minneapolis, ships it here and sells it at a price that I can not compete with if I pay you over 73 cents a bushel." The farmer replies: "Do you mean to tell me that I must be governed by the market at Minneapolis? I have a home market." But the miller replies: "Yes, governed by Minneapolis. You see distances have been annihilated. You must accept the market that is 3,000 miles away—the price of wheat in Liverpool."

The farmer asks, "Liverpool, where is that?" He is told, "It is over in free-trade England. These free-traders are the cause of such low prices. They ship their gold over here to elect Cleveland and reduce taxes." But the farmer says, "I do not understand what that has to do with our home market." The miller replies, "I will explain. England, you see, is a great manufacturing country. There they raise very little wheat and consume a great deal. They must, therefore, to supply the consumption of an immense population, buy the surplus wheat of other countries, and thereby rule the market of the world."

The farmer in his astonishment exclaims: "Do you mean, then, to tell me that these home markets, for which I have paid such enormous taxes to create, are all a deception, and that here in Ohio my labor in raising wheat must compete with the low pauper labor of free-trade England? Do you pretend to say that I, in cultivating my farm and marketing the products, must be governed in price by the cheap labor of Europe?" The miller replies, "Yes, my dear friend, and a great deal worse, many times worse. True, they do not raise wheat in England, but some of her vast dominions do. The fact is, sir, your labor on the farm is in direct competition with the low and half-civilized laborer of East India, a country where labor is so degraded that you can not conceive how wretched its people are. Their condition is worse than that of any other people on the face of the earth. There a man works for 6 cents a day, and his suit of clothing consists of but a half a yard of cotton cloth. You know everybody buys where he can buy cheapest, and if England can buy cheaper in East India or South America than from you she will buy from them. You had better unload your wheat for 73 cents per bushel, go home, and if you feel like it, in the face of these facts, vote to tax yourself 47.1 per cent. on all you buy to protect this large manufacturing town, and build up a falsely so-called home market for all the products which you raise on your farm."

The farmers of this country are the noblest creation of the Lord. A more honorable and upright class of men do not live. They labor from morning till night. Certainly do they eat their bread in the sweat of their faces all the days of their lives. They supply the food for the millions on this great continent. They furnish nine-tenths of all our exports. They clothe the world with cotton. When the greatest civil war of modern history hung like a cloud over the destiny of this country they rallied from the East and the West and presented their bare bosoms to merciless bullets, and with their strong arms stood like a stone-wall in opposition to the foe. They would be ready again should occasion require to save this country from invasion by a foreign foe.

From their ranks come our great statesmen and great generals. The future Presidents of this great country are to-day somewhere on a farm. The nursery of great men is on a farm—the source from whence come almost all our great statesmen. Why should this great class of citizens be discriminated against? Why should they be made hewers of wood and drawers of water to the manufacturing interests of the country? They greatly outnumber any other class of laboring men, and their modesty will not always prevent them from asserting their just rights—rights to equality under the law.

The righteousness of their cause will ultimately prevail. Great as are the manufacturing industries in this country, important as they may be, and essential as they are, to the welfare of the country, the farmers should not be discriminated against, because they are of greater importance than any other class. In 1880 there was invested in our country, in manufacturing interests, a capital of $2,797,223,506, in farming interests $12,104,081,440. There were employed in manufacturing interests 2,738,903 persons, in farming 7,670,493. It will be seen from this that almost five times as much capital in farming as in manufacturing was invested, and three times as many people were employed. Now let us see which class is making the money and the profits.

The manufacturers claim that they must tax the farmers for the purpose of protecting themselves against the competition of the pauper labor of Europe. The farmers have no protection. They pay the taxes, and astonishing as it may seem, the census of 1880 tells us that the manufacturing products were $5,369,667,706, while that of the farming interests were only $2,212,540,929. The average product of a laborer in manufactories is $1,960.49, while the average product of a laborer in farming is only $288.44, and yet we are told that farmers must be taxed, not only now, but for all time to come, to benefit manufacturing interests. The farmers, constantly employed in body and in mind in a hard struggle for a living, have been slow to note the effects of combinations against them, but they are being educated very fast, and the lesson, ere long, will dawn upon us. Then they will be found moving for self-protection, for their rights, and for justice.

They have more men, more money, more homes, more moral rectitude, virtue, and common honesty in this great controversy than any other class. They are fast learning their power, and will soon assert their rights. There is a great spirit of investigation going on among them all over the country, and if they but once understand how they are being robbed and plundered by false pretenses and the misrepresentations that are made to them by demagogues, politicians, and protectionists, who are directly benefited by this unjust system of taxation, they will soon see that they are the victims of a miserable, unjust taxation, and they will vote for their own interests and to protect their homes.

THE FACTS AS TO PENSIONS.

I yield to no man in my devotion and sympathy for the soldier, and I desire to see that fullest justice is done the brave men who stood as a living wall of fire, with their bosoms bared to the bullets of the enemy—the loyal men who saved this nation. I have a right to speak for my comrades, who touched my elbow and divided their last hard-tack with me, shared the same blanket and drank from the same canteen. In 1861 our family of four brothers, full of youth and hope, with cheeks flushed with the bloom of health, enlisted for the war. One fell at the battle of Stone's River, pierced with a dozen bullets; another at Kenesaw Mountain, and the other's bones are now bleaching on the banks of Red River. Politically we were Democrats, true, loyal Democrats, and they who thus died gave their lives to save the Union.

None of my colleagues on this floor, whether they agree with me politically or not, who know how much of my time I have devoted to the interests of soldiers, and have noted my votes on all pension bills, will say I lack in sympathy for the welfare of the soldiers. I therefore claim the right to speak for my comrades. During a hotly contested campaign like the present, when there are so many political, pecuniary, and personal interests involved, partisan newspapers and political stump-speakers are very apt to mislead the soldiers by perverting facts for the purpose of securing votes. Let me appeal to you, my comrades, to vote your honest political sentiments. A soldier who wore the blue should, above all others, have judgment and good common sense enough to give the coming campaign liar a wide berth.

When a newspaper or a politician tells you that President Cleveland is an enemy to your interests, say it is false. When you are told that the Democratic party is not friendly to your interests, say it is false, and point to the record. You can easily prove that during the three full years of the present Administration the Union soldiers have received greater consideration than they ever received during the twenty years of Republican administration. Every Republican, as well as every intelligent man in the country, who has investigated the record knows this to be the fact. A simple investigation of the pension-rolls is conclusive proof.

Write to the Commissioner of Pensions for his late report, and on investigation you will find I am telling you the truth. You will see that during the three years of Democratic rule 168,233 more certificates were issued than during the same period of Republican administration, and in that same period there was disbursed to pensioners $34,000,541.01 more than during the three years of Republican rule; that in the same period there were 79,917 excess of names added to the pension-rolls. It cost $52.31 to examine a case under the Republicans, while under the Democratic Administration the same work has been done for $13.78 per case. There are 24 per cent. more Union soldiers employed in the Pension Department now than under Republican rule, and one hundred and seventy-nine more soldiers or their widows on the pay-roll. I will here take the liberty to make the following extracts from the report of the Commissioner of Pensions for the information of those who may not be able to procure the report itself:

The amount of money expended in payment of pensions was $78,775,861.92, the cost attending such disbursement being, for the pay of the officers, employés, etc., of the Bureau of Pensions, its agents, surgeons, special examiners, etc., $3,262,524.67, the cost of disbursement being a fraction less than 4 per cent. of the total expenditures of the Bureau of Pensions. The total amount expended for all purposes by the Bureau of Pensions was $82,038,386.59, being 21½ per cent. of $380,000,000, which was the total (estimated) gross income of the United States for the period aforesaid. The total expenditures of the Government for the fiscal year 1888 were $267,924,801.13. So it will be seen that the amount expended for and on account of pensions was nearly 31 per cent. of the entire outlay of the Government.

SPECIAL ACTS.

After due advisement it has seemed to me my duty to report to you publicly and in this formal manner the method which from the beginning has been pursued in regard to special acts, and also to state the results thereof. Upon the receipt at the Executive Mansion of a special act granting pension it is referred through the office of the Secretary of the Interior to the Commissioner of Pensions, whose duty it is to present for the consideration of the Executive all the facts, favorable and unfavorable, shown in the records and files of the Bureau of Pensions concerning such case. To this end the Commissioner employs the services of the chiefs of the boards of review and re-review, and under them four men from among the most highly trained and best equipped in the office, whose sole duty in connection with the cases is to present an impartial, colorless, and accurate brief of all the matter in evidence and every substantial averment of the claimant and every part of his military record. To this end calls are made upon the Adjutant-General and Surgeon-General for their reports, to complete the military history of the claimant, if such history is not already in the case; the claimant's own declaration is briefed and every statement that he has made in his own behalf is set forth. The substantial evidence in support thereof is added, as well as that which is adverse thereto.

These reports are fully examined by the chiefs of the boards of review and re-review, to the end that errors may be corrected. The briefs thus prepared are transcribed and submitted to the Commissioner of Pensions, who examines them with a view, first, to the correction of any error; next, to indicate the complexion of the case under the general law, and to state whether the action of the office on the case, if any has been taken, had been right according to the general law; next, to indicate whether in his judgment the case is one based on equitable grounds, as shown by the whole of the evidence, including the military record and history of the claimant. In this work he is aided by the counsel and presence of the chiefs, two of the oldest and most trusted employés in this branch of the civil service. The clerks who prepare the brief of facts are old and new men, selected for fidelity, capacity, and integrity. When this work is so done it is forwarded to the Secretary of the Interior, and by that official to the President.

The annexed table will show the total number of all special pension acts which have become laws since the year 1861 and the time at which they were enacted:

Years.*	Administration of—	No.
1861–1865	Lincoln	41
1865–1869	Johnson	431
1869–1877	Grant	490
1877–1881	Hayes	303
1881–1885	Garfield and Arthur	736
Total		2,001
1885–1888	Cleveland	1,369
Grand total		3,370

* The years from March to March.

I submit herewith a statement of private pension acts disapproved by the Executive from March 4, 1885, to August 15, 1888, inclusive, showing the grounds for the adverse action, and date of the original rejections in the Bureau of Pensions:

Total number of such special-pension acts vetoed	191
Number of said vetoes in the interests of the claimants and based upon the fact that the claimants would be entitled to greater amounts under the general law than they would have received under the special acts (and the amount paid to said applicants aggregated $17,249, much of which has been paid the widows and dependent children of said soldiers)	17
Number of such cases in which the disapproval was based upon or contained the charge of desertion or dishonorable discharge from the military service of the United States	12
Number of cases (dependent fathers) in which the disapproval was based upon the grounds that the fathers abandoned their sons while said sons were infants, and never resumed the care or custody of the sons, nor did they manifest any interest in them until after their death, when they became applicants for pension	2
Number of cases vetoed upon the ground that the bills were duplicates of acts already passed by Congress, being precisely the same special acts already approved by the Executive and in full force and effect. One of said original acts was passed by the Forty-ninth and one by the Fiftieth Congress	2
Number of said acts disapproved upon the grounds that the death-cause was suicide and had no connection with the military service of the United States	7
Number of acts vetoed on the ground that the soldiers' disabilities or deaths were in no wise due to the service, but arose from causes entirely distinct therefrom	121
Number of acts vetoed upon the ground that they were already pending in the Pension Bureau, that many of them involved the question of arrears, that it would be a manifest injustice to conclude the claimants' rights to arrears or to issue pension certificate until the cases were established, and that there seemed to be no disposition upon the part of the officials in charge of the Bureau of Pensions to either delay the cases or to decide them adversely and improperly	17
Number of cases vetoed for the reason that they affixed no rate, and that the claimants were now receiving pensions commensurate with the degree of disability found to exist on examination by competent boards of surgeons, and that the approval of the acts could in no wise benefit the claimants. (In four of these cases the highest rates given by the law were already being paid.)	9
Number of cases vetoed upon the ground that there was no dependence shown by the evidence on file	2
Number of cases vetoed on the ground that the bill sought to set aside the limitation fixed by the law of 1879, governing the question of arreas, and which applied to all other claimants who had filed their applications since the 1st day of July, 1880. (In this case soldier is in receipt of $50 per month under a subsequent special act which was allowed to become a law)	1
Vetoed upon the ground that the beneficiary was dead at the time of the passage of the act and hence the act was nugatory	1

By the foregoing report it is shown that 1,369 special acts granting pensions have been approved by President Cleveland. If it were true, as alleged by politicians, that Cleveland is hostile to the interest of the soldiers, would it not have been just as easy for him to have vetoed 1,369 bills and approved 191? But all reasonable men will see from the report of General Black that after all the President has but very little to do with the investigation of these cases. They are made by the chiefs of the board of review and the Commissioner of Pensions, in conjunction with two of the most trusted employés of the bureau, who, if they have any politics, it is safe to say are Republicans, and that it is upon their recommendation and judgment that the President's vetoes are based. But I can vouch from personal knowledge that politics do not enter into these cases.

I am free to say the President has never vetoed a single bill from any but the purest and most friendly motives. He acts as a patriotic, pure, and just judge in all these cases, and no falsehoods, misrepresentations, or politically selfish motives can swerve him from the performance of his honest duties. Many of these private pension bills are passed hastily and without due consideration. It is in many instances a system of log-rolling. One member says to another: "You vote for my bill and I will help you through with yours." And so it goes at the rate of forty cases every Friday night in the House, and half that many in a minute in the Senate. It was different under Grant's administration under Republican rule. It was new legislation, and every bill was more carefully scrutinized. Yet Grant vetoed all bills that came before him on the same grounds and for precisely the same reasons.

The Republicans enacted a law providing that no soldier should have a pension whose disibility or death was not due to the service. This is the plain letter of the law, and by reason of this law the President vetoed one hundred and twenty-one bills. Twelve of these were because the pensioners were deserters; seventeen, because they were entitled to greater amounts under a general law; nine, because the act fixed no rate and the soldier was receiving a pension already. By his vetoes he saved the soldiers, their widows and children, $17,249. Is there any other evidence wanting to satisfy any reasonable man that these acts are passed in a careless, reckless manner, and without due consideration?

Let Congress enact laws pensioning deserters, fathers who abandoned their sons when infants, and men whose disability has had no connection with their service in the Army, and there will be no more vetoes. We are told that the rebel brigadiers are opposed to pensioning Union soldiers. This is false. The men who fought bravely on the other side are generous and chivalrous to their conquerers. There may be exceptions. There may be a few "cranks" who would object to anything in order to get a little notoriety. But the most unreasonable objector to a certain class of special pension bills is a Republican "crank," and the only objection I ever had offered to any private bill of my own came from the Republican side of the House. But they say the President vetoed the dependent pension bill. So he did, and he gave his reasons for it. His reasons, I think, will satisfy any sensible man that it was on account of the uncertainty as to the object and consequences of the law. It was on a par with some special acts. No two men agreed as to the object of that bill.

There was great doubt as to the interpretation of the bill. It would be very easy to form a bill that would accomplish the object, about which there could be no dispute as to the meaning, but that was not the purpose. The object was political capital.

Grant vetoed the equalization bounty bill. I do not believe that Grant was an enemy of the soldiers. I am not here to apologize for or defend the President's vetoes. The soldiers themselves have done that. The Republican press and the friends of the soldiers have approved Cleveland's veto of that bill.

Let it not be forgotten by my comrades that in 1862 an able and distinguished gentleman from Indiana, Judge HOLMAN, introduced a bill which passed the House of Representatives, granting a land-warrant for 160 acres of land to every honorably discharged soldier. This was in accordance with the acts of our Government in all previous wars, yet when this just act, which had been held out by recruiting officers as an inducement for the soldiers to enlist, came to the Republican Senate, it was rejected on the ground that land-warrants would pass into the hands of speculators.

Judge HOLMAN amended his bill so as to obviate this objection, and it was rejected again by the Republican Senate on the ground that we had no public lands to give to the soldiers. Yet, in the same year, immediately upon its heels, the Republicans granted to railroad corporations and other monopolies more than 200,000,000 acres of land! They had no land to give to the soldiers, but they could find millions of acres for corporations!

Let it also be remembered by the soldiers that they were promised their pay, as we understood the contract with the Government, in gold. Instead of this the soldiers were paid off by the Republicans in depreciated currency, ranging at a discount of from 50 to 140 per cent. The soldiers were never indemnified for their losses in this instance, but after the war was over, in March, 1869, the Republican party passed a law providing for the payment of bondholders in gold. This, mind you, when the bond stipulate that they were to be paid in the currency of the country. Remember this, comrades, that while the soldier has never been remunerated for his loss on account of the depreciation of the currency, the bloated bondholders of the United States were paid more than $600,000,000 premium in gold. Yet the Republican party claims to be, par excellence, the friend of the soldiers!

Fault has been found with the law as it exists in regard to the niggardly way in which pensions are rated, and the evidence required by law, which it is often impossible to furnish without a hospital record. Let it be remembered that the Republican party is responsible for laws of this kind on the statute-books.

They were passed when a large majority of both Houses of Congress were Republicans; and if they are unjust, the Republican party is responsible for them.

Let us not forget that the Republicans held full sway for many years after the war, yet they never offered to enact a law to grant arrears, and that it was not until a distinguished and brave soldier Democrat, General A. V. Rice, of my own State, was elected to Congress and the House became Democratic that the arrears act, the greatest boon the soldier has ever received, became a law. He introduced the bill and had secured its passed through the House, but when it reached the Republican Senate it was bitterly opposed by such able and distinguished Republican Senators as JOHN SHERMAN, who not only voted against it but spoke against its passage, and, when reminded by the best friend the soldiers ever had—the ideal volunteer general, the lamented John A. Logan—that his party only a short time before that time had pledged itself in its national platform to pass the arrears act, Mr. SHERMAN replied that he preferred to follow the dictates of his own conscience rather than be dictated to by a political platform. The ground of his objection was that it would cost too much. Why was not Senator SHERMAN denounced as an enemy of the soldiers?

And, again, it is asked why, if Cleveland was in sympathy with our soldiers, did he not enlist? Let us inquire, where was the Plumed Knight during the war? If Blaine was not an enemy of the soldier, what regiment and what company did he serve in during the war? Or where was JOHN SHERMAN or a great many of our great men? It is said that Republican soldiers have been dismissed from Government service. So they have, but the record tells us there are more ex-soldiers in the public service now than there ever were under Republican rule. I can see nothing wrong in turning out Republican soldiers and putting Democratic soldiers in. Let me ask, how many Democratic soldiers were in the Government service under Republican administration? It is a well-known fact that Republican politicians have no use for Democratic soldiers except before an election, when they want their votes, and in thirty days after should they come into power (a contingency which is not likely to arise) there would not be one Democratic soldier left in the Government service.

The Republican party is a friend only of those soldiers who vote the Republican ticket. It is not sympathy for Democratic soldiers that makes them so extremely solicitous of their welfare just now. They want their votes. Do not be deceived. Vote for the men and the party you believe will subserve the best interest of all our people. Judge the future by the past and your interest will be best cared for under a Democratic administration. There are hundreds of Republican soldiers in the service now who have been kept there by this Administration.

This Administration has in a multitude of ways shown its kindly feeling towards the ex-Union soldiers, by granting pensions to those who were deserving, and appointing them to positions of honor and trust. We hear objections sometimes because there have been some Confederate soldiers appointed to office. This has always been the case under all administrations. Ex-rebels were appointed. General Longstreet and General Mahone have been special pets of the Republican party. General Mosby was especially despised and obnoxious to Union soldiers. He was a rebel brigadier who carried on his warfare after the style of the guerrilla. He would not meet our forces on the open field.

I had occasion to report a widow's claim for pension only a few days ago, whose husband had been dragged from his home in Virginia and shot by order of this rebel guerrilla. Yet he was sent as minister to represent this country at the court of the Russias by a Republican administration; and a great many others could be enumerated, but it is a well-known fact and not necessary. But this thing of having been a rebel is nothing in the eyes of some Republican partisans as compared with the fact of being a Democrat. That is the only sin they can not forgive. To hear these men talk, so long after the war is over that a new generation has grown up since, such men as Hancock and McClellan, who so nobly defended the Union and shed their blood for its perpetuation, were allies of the Confederates. The orator feels compassion and passes high-sounding resolutions at political conventions, but this is mere moonshine upon which they seek to feed you. The record is the burning monument from which there can be no appeal.

GENERAL PENSION ACTS.

Now let us see what the President has done in his official capacity for ex-Union soldiers, their widows, orphans, and dependent relatives.

He approved the act of March 19, 1886, which has increased to $12 per month the pension of 102,568 widows, minors, and dependent relatives of Union soldiers. The total annual increase in money granted to these 102,568 pensioners by reason of his signing this act of March 19, 1886, is $1,923,261.

He approved the act of August 4, 1886, which has increased the pension of 10,092 crippled and maimed Union soldiers of the late war from $24 to $30, from $30 to $36, and from $30 and $37.50 to $45 per month. The total annual increase in money granted to the 10,092 pensioners by reason of his signing this act of August 4, 1886, is $1,089,938.

He approved the act of January 29, 1887, which has placed upon the pension-rolls 21,704 survivors and widows of the Mexican war at $8 per month or $96 per year. The amount in money these 21,704 Mexican pensioners will receive annually is $2,083,584.

He approved the act of June 7, 1888, granting arrears of pensions from the death of their husbands in cases of all widows of the late war whose pensions have been or which may hereafter be granted. This law will favorably affect some ten thousand widows already on the rolls to an amount it is estimated in money of an average of $108 in each case at once, and hereafter will grant to each widow whose claim may be allowed an average of $108 in each case. The amount of money required to pay these already on the rolls it is estimated will exceed $1,080,000, and the number likely to be placed on the rolls during the present fiscal year will swell this amount to over $1,500,000.

So it will be seen that President Cleveland since his inauguration has approved general pension acts which directly and pecuniarily benefit 144,364 ex-Union and Mexican soldiers, their widows, orphans, and dependent relatives, and that the money value of this benefit is over $9,000,000 per annum.

Refund of Additional Tobacco Tax.

SPEECH

OF

HON. JOHN S. HENDERSON,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 4, 1888.

The House, as in Committee of the Whole, having under consideration the bill (H. R. 11258) for the relief of certain persons who paid additional taxes assessed against them under the act of March 3, 1875—

Mr. HENDERSON, of North Carolina, said:

Mr. CHAIRMAN: The report which has just been read makes the matter so plain that scarcely anything more need be said. I send forward to the Clerk's desk to be read, as a part of my remarks, the following official communications:

TREASURY DEPARTMENT, *August* 17, 1888.

SIR: I have the honor to forward herewith, for your information, copy of a report by the Commissioner of Internal Revenue of the 15th instant, upon (H. R. 11039) "for the relief of certain persons who paid additional taxes assessed against them under the act of March 3, 1875."

Respectfully yours,

C. S. FAIRCHILD, *Secretary.*

Hon. JOHN S. HENDERSON,
House of Representatives.

TREASURY DEPARTMENT, OFFICE OF INTERNAL REVENUE,
Washington, August 15, 1888.

SIR: I have the honor to transmit herewith H. R. 11039, a bill introduced by Hon. Mr. HENDERSON, of North Carolina, July 30, 1888, with a request to state what change should be made in the phraseology of the bill, and estimate the amount of tax required to be refunded in case it becomes a law.

I respectfully refer to the letter to you dated February 3, 1888 (copy herewith), and H. R. 4667, dated January 11, 1888.

I suggest the following change in the bill submitted to me. Strike out all after the usual heading and insert:

"That the Secretary of the Treasury is hereby authorized and directed to pay out of any money in the Treasury not otherwise appropriated, to any persons who may within two years after the passage of this act present claims therefor to the Commissioner of Internal Revenne, such sums respectively as they shall severally show to the satisfaction of the Commissioner of Internal Revenue that they, or the persons whom they legally represent, paid as an additional tax on tobacco, cigars, or cigarettes, which they sold or removed for consumption or sale on the 3d day of March, 1875."

Probably the amount of tax that will be refunded, in case such a bill becomes a law, will not exceed $100,000.

Respectfully, yours,

JOS. S. MILLER, *Commissioner.*

Hon. CHARLES S. FAIRCHILD,
Secretary of the Treasury.

TREASURY DEPARTMENT, OFFICE OF INTERNAL REVENUE,
Washington, February 3, 1888.

SIR: I have the honor to return herewith a letter of Hon. ISHAM G. HARRIS, United States Senator, addressed to you under date of January 29, 1888. Mr. HARRIS incloses Senate bills Nos. 22 and 528, only the latter of which accompanied the letter when received at this office, and asks that you give him your opinion as to the merits of the same and return the bills.

The letter, with Senate bill No. 528, is herewith returned with the following report:

The bill proposes to authorize the Secretary of the Treasury to pay out of any money in the Treasury not otherwise appropriated by law, to the persons named therein, and to any other persons who may, within two years after the passage of the act, present claims therefor to the Commissioner of Internal Revenue, such sums, respectively, as they may show to the satisfaction of the Commissioner of Internal Revenue to have been paid by them as an additional tax on tobacco, cigars, or cigarettes, sold, or removed for consumption or sale, on the 3d day of March, 1875, prior to the President's approval of the act of that date, which imposed an additional tax of 4 cents per pound on certain tobacco and $1 per 1,000 on cigars.

Prior to March 3, 1875, the tax on tobacco was 20 cents per pound, and the tax on cigars was $5 per thousand. The act of March 3, 1875, increased the tax on tobacco to 24 cents per pound and the tax on cigars to $6 per thousand.

Many manufacturers of tobacco and cigars had on March 3, 1875, stamps on hand purchased at the rates in force prior to that date, and on that, and perhaps on subsequent days, they stamped tobacco and cigars with such stamps, and sold or removed for consumption or sale the tobacco and cigars so stamped.

Commissioner Douglass ruled that the act of March 3, 1875, must be held to take effect and be in force during the whole of that day, and under this ruling parties who stamped tobacco or cigars on the 3d day of March with stamps at the rates in force previous to that date were assessed the difference between the values of the stamps at the old and the new rates of tax. If this ruling of Commissioner Douglass was "illegal," as has been strongly contended, then the taxes assessed on account of the tobacco and cigars sold or removed on March 3, 1875, were perhaps illegally assessed, so far as they apply to tobacco sold or removed before the signing of the act by the President.

The case of Burgess *vs.* Salmon (7 Otto, 381) was a case similar to those provided for in the bill, but it was decided upon an agreed statement of facts. Among other things it was agreed by the United States attorney that the duty of 20 cents per pound had been paid upon the tobacco in question, and that the tobacco "had been removed from the storehouse before the act of March 3, 1875, took effect." This agreement, of course, gave away the point the case was designed to raise on the appeal, and if this office had been aware of the nature of the agreement it would have been evident that an appeal would be useless. It was hoped and expected that the question as to the exact point of time when a statute takes effect would be settled in that case. It is a question upon which the United States Supreme Court has never passed, and upon which there has been a conflict of opinion in the inferior courts.

I agree with my predecessor in office, who, in a letter to your office dated April 10, 1884, reporting upon a bill for the relief of some of the parties named in Senate bill No. 528, said:

"Personally, I am inclined to think that the fiction of law, by which, upon the doctrine of relation, a statute is deemed to be in force during the whole of the day on which it is signed, should yield to the exact facts in cases like these where substantial rights are involved.

"Constitutionally, a legislative act can not be a law until it is signed by the President, or until the time has elapsed during which he is allowed to deliberate, and it would appear logically and necessarily that no substantial right of a citizen should be sacrificed to a mere fictional notion, however conveniently that fiction may operate as a general rule. Besides, it is probably a fact that most bills passed by Congress during a short session, if approved on the 3d day of March, are in truth signed very late on that day.

"I think the authorities will bear out the proposition that the fiction alluded to must yield to the demands of an exact justice where those demands are susceptible of intelligent ascertainment.

"If the act of March 3, 1875, took effect from the beginning of that day then the parties named in the bill have no just claims against the Government for the repayment of these taxes, and the bill should not become a law.

"If, however, the act did not take effect as to the part of the day prior to the very moment when it received the approval and signature of the President of the United States, then the parties named have equitable claims against the Government as to so much of the amount claimed as was paid on tobacco manufactured and sold or removed for consumption or use prior to that moment, and if so relief can only be given by legislation.

"This office has no definite information respecting the exact point of time when the act of March 3, 1875, was in fact signed by the President."

I am prepared to go a step further than my predecessor and to say that in view of the fact that the hour of the day when the act was approved is not known and probably can not be ascertained, and in view of the probability that it was not approved until after business hours of that day; also, in view of the difficulties to be encountered in many cases, in ascertaining the exact hour of the day of the sale or removal of tobacco or cigars, and in view of the probability that all such sales or removals were made during the business hours of the day, I think it but equitable and just, if the bill is to become a law, that it should include all tobacco and cigars sold or removed for consumption or sale on the 3d day of March, 1875, and I therefore suggest, if my views are concurred in, that the bill be amended by striking out the wurds "prior to the President's approval of the act of that date," in lines 13 and 14.

Respectfully submitted.

JOS. S. MILLER,
Commissioner.

Hon. C. S. FAIRCHILD,
Secretary of the Treasury, Washington, D. C.

The case of Burgess *vs.* Salmon (97 U. S., 381), above cited, proves beyond question that the bill under consideration should become a law. The opinion was delivered at the October term, 1878, of the Supreme Court of the United States. I quote from the opinion as follows:

Burgess was collector of internal revenue for the third collection district of Virginia, and in that capacity exacted from and received of Salmon & Hancock, and paid into the Treasury of the United States, the sum of $377.80 as an additional tax of four cents a pound on a quantity of tobacco belonging to them. It was thus exacted on the 3d day of March, 1875, under the act of that date, which provides as follows:

"That section 3368 of the Revised Statutes be amended by striking out the words '20 cents a pound,' and inserting in lieu thereof the words '24 cents a pound:' * * * *Provided*, That the increase of tax herein provided for shall not apply to tobacco on which the tax under existing laws shall have been paid when this act takes effect." (18 Stat., 339.)

The act contains also the provision following, namely:

"Every person who removes from his manufactory tobacco without the proper stamp being affixed and canceled * * * shall, for each offense, be fined not less than $1,000 and not more than $5,000, and be imprisoned not less than one year and not more than two years."

The tobacco in question was stamped, sold, and removed for consumption, or use, from the place of manufacture, and beyond the control of Salmon & Hancock in the forenoon of March 3, 1875, and the above-named act of Congress was approved in the afternoon of that day, after the stamping and removal of this tobacco, which, when removed, had been stamped at 20 cents a pound. Payment of the additional 4 cents was made under protest, and an appeal to the Commissioner of Internal Revenue regularly taken and overruled. The manufacturers brought suit to recover back the amount, and recovered judgment in the court below. The collector therefore sued out this writ of error. The case presents but a single point: Can a manufacturer be punished, criminally and civilly—civilly here—for the violation of a statute when the statute was not in force at the time the act was done?

In other words, can a person be thus punished when he did not contravene the provisions of the statute? In still other words, can one be punished for offending against the provisions of a statute from the effects of which he was expressly exempted? * * * The President approved the bill, and the time of such approval points out the earliest possible moment at which it could become a law. * * * In the present case the acts and admissions of the Government to establish the position that the duties exacted by law had been fully paid * * * before the President had approved the act of Congress imposing an increased duty. * * * To impose upon the owner of the goods a criminal punishment or a penalty of $377 for not paying an additional tax of 4 cents a pound would subject him to the operation of an *ex post facto* law.

Had the proceeding against Salmon and Hancock been taken by indictment

instead of suit for the excess of the tax, and the one was equally authorized with the other, the proceeding would certainly have fallen within the description of an *ex post facto* law. In Fletcher *vs.* Peck (6 Cranch, 87) it was decided that an act of the Legislature by which a man's estate shall be seized for a crime, which was not declared to bear offense by a previous law, was void. * * * The cases cited hold that the *ex post facto* effect of a law can not be evaded by giving a civil form to that which is essentially criminal. (Cummings *vs.* Missouri, 4 Wall., 277; Potter's Dwarris, 162, 163, note 9.)

The ruling of Commissioner Douglas was highly technical and unjust, if not altogher erroneous in law. At all events "exact justice" and perfect honesty and fairness, on the part of the United States towards the citizens thereof, require the Government to refund to the proper parties the additional taxes arbitrarily collected from them under the act of March 3, 1875. More than thirteen years have elapsed since these taxes have been wrongfully exacted by the Government, and the relief now proposed should no longer be denied or delayed.

Aid to the Industrial Christian Home Association of Utah.

SPEECH

OF

HON. ISAAC S. STRUBLE,

OF IOWA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 4, 1888.

The House having under consideration the report of the committee of conference on the bill (H. R. 10896) making appropriations to supply deficiencies in the appropriations for 1888 and prior years, and for other purposes—

Mr. STRUBLE said:

Mr. SPEAKER: I can not but regret that the questions involved in the report made by the conferees upon this bill in relation to the amendments now under discussion——

Mr. STOCKDALE. Will the gentleman permit me to interrupt him for a question before he proceeds, for my own information, as I want to hear it discussed——

Mr. STRUBLE. I would like to finish my opening sentence first. I do not know exactly where I am until I have commenced. I would first prefer to be sure I have the floor. [Laughter.]

Mr. STOCKDALE. Certainly. Excuse me for interrupting.

Mr. STRUBLE. I will yield to the gentleman with pleasure in a moment.

Mr. Speaker, I started out to express regret that this discussion in relation to the pending amendments should not have been begun and concluded without the attempt, and the successful attempt, as I am bound to believe, to make it a political and partisan question.

Mr. SPINOLA. That commenced on your side.

Mr. STRUBLE. No, sir——

Mr. RYAN. I beg pardon; it did not commence on this side.

Mr. SPINOLA. It commenced in a Republican Senate, by a Republican Senator, who arraigned a Democratic President for the performance of his duty.

Mr. RYAN. I beg to say in reply to the gentleman that there is nothing whatever in the language used by the Senator that warrants that assertion.

Mr. SPINOLA. Why, you used the language yourself this morning. [Laughter.]

Mr. RYAN. Oh, I replied to my colleague on the committee.

Mr. SPINOLA. And I was replying to you. [Renewed laughter.]

Mr. STRUBLE. I wish to say to the distinguished gentleman from New York before he gets too far away from me——

Mr. SPINOLA. No, sir; I am going to wait right here. [Laughter.]

Mr. STRUBLE. That when this subject was debated at the other end of the Capitol there was no such trouble there between the two parties; no such discussion upon partisan lines as there has been here; but, on the contrary, if I have read aright, there was a commendable sentiment of unanimity upon the question of the merit of the proposition to aid in the maintenance of this home.

Mr. SPINOLA. And to aid in any proposition to take money out of the Treasury. The other end of the Capitol is always ready for that.

Mr. STRUBLE. I beg to say to the gentleman that in my judgment, in that statement he does the Senate of the United States an absolute injustice, and that the Senate is not always ready in any such sense as he implies to take money out of the Treasury.

Mr. SPINOLA. Oh, no; there is the record that speaks for itself. They amend bills every time by adding appropriations to appropriations.

Mr. STRUBLE. They frequently do, but that is one thing, and to support any proposition to take money out of the Treasury is quite another. Now I will yield to the gentleman from Mississippi.

Mr. STOCKDALE. The question I wished to ask the gentleman from Iowa is mainly in reference to the alleged contract, as I understand it, for this building. I have not heard all the discussion here, being necessarily absent. But gentlemen have been discussing, as I understand it, a contract about this building. Can it be that we are asked to vote money to put up a building on a contract, the only evidence of the existence of which, as I understand my friend, is that he is credibly informed it exists? If it exists and is in writing, why is it or a copy of it not produced?

Mr. STRUBLE. I think it is to be regretted that the gentleman from Mississippi has not been in during the discussion. The question suggested by him has been discussed to some extent by the gentleman from Missouri [Mr. BURNES], and also and more fully by the gentleman from Kansas [Mr. RYAN].

Mr. STOCKDALE. I heard the gentleman from Missouri.

Mr. STRUBLE. I may not be able to answer his inquiry fully; but if I have time to refer to it, will take pleasure in doing so and presenting such information as I possess concerning it.

Mr. Speaker, I deem it but fair to myself and due the House to say at the outset, that until quite recently I had no thought of taking any part in this discussion. Other gentlemen, some of whom are members of the Committee on Appropriations, were, as I am advised, expected to join with the gentleman from Kansas [Mr. RYAN] in presenting the claims and merits of the Industrial Christian Home Association of Utah in case serious objection should be made to the continuance of the support accorded it heretofore without objection by this and the Forty-ninth Congress. All of these gentlemen except Mr. RYAN are now absent from the House, and this, if any were necessary to be stated, is my reason for having sought recognition in order to make some observations on the pending Senate amendments.

Mr. Speaker, I have great respect for the gentleman from Missouri who has charge of this bill. I have learned to regard him not only as a very able man, but as one possessing and exemplifying on all occasions a large degree of manly fairness and honor. But I must confess, sir, that in this discussion, in so far as these Senate amendments now under consideration are concerned, I have realized no little disappointment in the manner in which he has treated the questions before the House to-day. I know he intends always in public discussion to be fair and honorable, and, I think, to be broad and statesmanlike, but I fear he has fallen a little below that honorable standard he has heretofore and always maintained in public debate.

It is my opinion, Mr. Speaker, that an attempt has been made here to-day not only to question some of the details of operation connected with this enterprise known as the Industrial Christian Home Association of Utah, but that, whether intentionally or not, the effect of the speech of the gentleman from Missouri has been to discredit the enterprise itself. At the very outset of his remarks the plain insinuation was made by the gentleman from Missouri that the original appropriation made August 4, 1886, was not made to aid the enterprise in Utah inaugurated by the incorporators of the Industrial Christian Home Association of Utah and others interested in the cause represented by this incorporation.

After referring to the law granting the first aid, the gentleman exclaims, "Industrial Home in Utah Territory! That is not the name of the private corporation now figuring in our deliberations," thereby suggesting to the House that the "corporation now figuring in our deliberations" has possibly availed itself of an opportunity opened by the first appropriation to place itself in an attitude to thereafter claim and receive the favorable consideration of Congress.

I grant that the gentleman had no purpose to lead the thought of the House to that extent, but apprehending that some may have received such an impression, I desire thus early in my remarks to lay the facts fully before gentlemen present.

Years ago, and prior to 1886, the attention of a number of the most intelligent Christian women of the land, who were then devoting themselves to philanthropic efforts to elevate and Christianize such of their sex as were, and, in many parts of the land are, in a deplorable state, and to aid all such in attempts to ameliorate their condition, had their attention attracted to the women of Utah, and missionaries were sent to labor among them and the Mormon people of that Territory. Later, and as prosecutions were made more effective under national statutes for the suppression of polygamy, the condition of such women and the dependent children of such as might from any cause abandon polygamous relations or be compelled to discontinue in it by reason of the enforcement of the law against their husbands—became a most serious question with the ladies to whom I have referred and certain Christian gentlemen residing in and out of Utah—and they were led to consider what should be done to provide means for meeting the urgent necessities of the women and children who might, as I have said, abandon or be compelled to cease their polygamous practices.

The result was a decision to establish in Salt Lake City a home to which the classes I have named could go and receive not only shelter, food, and clothing, but also instruction in such industrial arts as would most quickly and effectually fit them to maintain themselves outside the home; and on March 15, 1886, nearly five months anterior to any appropriation by Congress, the Industrial Christian Home Association of Utah was incorporated under the laws of that Territory; and I venture to say, without fear of successful contradiction, that no more emi-

nently reputable men and women, none possessing more intelligence or of superior Christian character, were ever associated together for the inauguration and execution of a disinterested charity than those who, in Utah and out, joined in the movement resulting in the incorporation to which I alluded a moment ago, and to which reference was made by the gentleman from Kansas [Mr. RYAN] in his remarks made in reply to the gentleman from Missouri [Mr. BURNES]. If gentlemen will take the trouble to note in the RECORD the names of these ladies and gentlemen immediately connected with the incorporation of the association—which I will not stop now to give—they will, I am persuaded, justify me in the complimentary reference I have made to them. Beside those whose names appear as incorporators, several national organizations are identified with this interest, and the National Woman's Christian Temperance Union, with Miss Willard as its president; the National Woman's Home Missionary Society, Mrs. Rutherford B. Hayes, president; the Presbyterian Missionary Society, Mrs. Darwin R. James, of Brooklyn, president, and three hundred thousand women, representing the highest standard of Christian homes in this country, have by official authority memorialized this Congress in behalf of this appropriation.

In order that the House may know fully the powers and scope of the incorporation, the purposes sought to be accomplished by those joining in the movement, I present the articles of incorporation at this point, together with certain affidavits of some of the members thereof, appended to said articles, presumably in compliance with the Territorial law:

UNITED STATES OF AMERICA, *Territory of Utah:*

These articles of agreement of incorporation of the Industrial Christian Home Association of Utah witnesseth:

Whereas on this the 15th day of March, 1886, at Salt Lake City, Salt Lake County, Utah Territory, a voluntary association, under and bearing said corporate name, has been duly organized and formed, and a constitution therefor duly made and adopted, for the purposes set forth in these articles of agreement; and

Whereas it has been, by the unanimous vote of the meeting, "*Resolved*, That the association incorporate under the laws of Utah, with a board of directors, as provided in the constitution of said association, for the purpose of carrying out the objects of the association as stated in article second of the constitution," which objects are hereinafter specifically set forth as near as may be; and

Whereas in pursuance of, and to assist in carrying out, said resolution, thereafter and on the same day, at the same place, during the meeting of said association, there was elected by a majority vote of the meeting the directors hereinafter named as and for directors of said corporation and to constitute its board of directors; and

Whereas a majority of all the members of said association were and are present at said meeting and organization and election, and Jeannette H. Ferry, of Park City, Utah, and Anna Baker, of Salt Lake City, Utah, were the officers of said meeting and conducted said election:

Now, in order to carry out said resolution and to form a corporation for benevolent and other purposes under chapter 45 of the laws of the Territory of Utah of the year 1884, entitled "An act compiling and amending the laws relating to private corporations," approved March 13, 1884, the undersigned, a majority of the members of said association present at said meeting, do now associate and agree as follows:

ARTICLE I. This corporation is organized at Salt Lake City, Salt Lake County, Utah Territory; it shall exist for fifty years, unless sooner dissolved, and its corporate name shall be "Industrial Christian Home Association of Utah."

ART. II. The place of general business of this corporation shall be Salt Lake City, Utah, but corporate business offices and association branches may be established elsewhere in or without Utah Territory to aid in carrying out the objects and pursuits of the corporation.

ART. III. The officers of this corporation shall be a board of thirteen directors or trustees, and a president, eight vice-presidents, a recording secretary, a corresponding secretary, and a treasurer. Until their successors are elected and qualified the following-named persons shall be officers of this corporation: George A. Lowe, George S. Ellis, Hector M. Scott, James M. Darling, Ira E. Lyons, Henry W. Lawrence, Rebecca C. Shelton, Clara Huse, Emma L. Miller, Martha A. Locke, Margaret D. Zane, and Martha M. Campbell, each and all of Salt Lake City, Utah, and Jeanette H. Ferry, of Park City, Utah Territory, shall be directors or trustees; and Jeanette H. Ferry, of Park City, Utah, shall be president; and Emma L. Carroll, Hettie M. Critchelow, Emma L. Miller, Clara Huse, Rebecca C. Shelton, Margaret D. Zane, and Martha M. Campbell, each and all of Salt Lake City, Utah, and Angie F. Newman, of Lincoln, Nebr., shall be vice-presidents, and Martha A. Locke, of Salt Lake City, Utah, shall be treasurer, and Cornelia Paddock, of Salt Lake City, Utah, shall be corresponding secretary, and Anna Baker, of Salt Lake City, Utah, shall be recording secretary.

ART. IV. The board of directors shall exercise all the corporate powers, and a majority of the whole number of directors shall form a board for the transaction of corporate business. A majority of the board must be residents of Utah, and to entitle one to become a director or officer he or she must be a member of this association under its by-laws, and all directors and officers shall hold office until their successors are elected and qualified. Any director or officer may be removed by a two-thirds vote of the whole number of directors, and may resign by written resignation filed with the recording secretary, and any vacancy occurring in the board or any office from death, resignation, or disability may be filled until the next annual election of the association by a majority vote of the remaining members of the board.

ART. V. There shall be an annual meeting of the members of this association for the purpose of electing officers and directors, and the transaction of such other business as may be necessary, which shall be held at Salt Lake City, Utah, on the first Tuesday of October, in each and every year, the first annual meeting to be there held the first Tuesday of October, 1886; and a majority vote of the whole number of members present at said meetings shall be necessary for the election of officers and the transaction of other business. Special meetings of the members of this association may be called for the transaction of business upon resolution of the board of directors setting forth the reasons for calling the meeting, and notice of such meeting shall be published in some daily newspaper printed and issued at Salt Lake City, Utah, for the period of twenty-one days prior to the time fixed in said notice for such meeting, which notice shall be signed by the secretary of the board and specify the object of the meeting; and a majority vote of the members present at such meeting shall be necessary for the transaction of business.

ART. VI. The objects, pursuits, and businesses af this corporation, as near as may be stated generally, are as follows: To found, build, equip, provide for, maintain, and regulate, in all necessary and proper ways, industrial homes, boarding houses, schools, hospitals, and places for instruction, aid, betterment, and general benevolent and charitable purposes at Salt Lake City and other places in Utah Territory and elsewhere, and in which to promote and accomplish the fitting of persons for industrial and all other pursuits; also to teach, instruct, discipline, educate, and fit for the active duties of life all classes of people without distinction, but more especially women and children, in all pursuits and industries whereby the interests of individuals and of society may be bettered, and whereby people may be fitted to earn, each for himself or herself, an honest livelihood; to establish private schools and school systems and courses of study; to provide rewards for merit in any and all work done under the supervision, aid, or instruction of this association; to provide work and remuneration therefor for all persons who are needy or in want, and especially for women, girls, and children so situated; to provide and secure situations for such as acquire efficiency in any industrial or other pursuit under the guidance of this corporation; to relieve distress and ameliorate suffering among all classes; to aid in every proper and charitable way those who are in poverty and want; to provide for and seek to establish among the masses a better knowledge of sanitary laws and care of health; and generally to forward and aid in every lawful way all benevolent, charitable, and educational purposes and objects whatsoever; also to solicit and receive contributions, to give exhibitions and entertainments, and to adopt and exercise all other proper means to raise funds and the means to carry on the corporate business and further and accomplish the objects of the association; to provide by by-laws for increase and maintenance of memberships of and in this corporation; and lastly, to make all lawful rules, regulations, and by-laws, and to do all other proper things to aid in systematizing, providing for, and carrying on all the business, and in forwarding all the objects of the corporation, and to acquire and hold real estate and personal property sufficient to carry out the purposes of the corporation.

ART. VII. The full names and places of residence of all the members of said corporation are as follows: George A. Lowe, of Salt Lake City, Utah; Henry W. Lawrence, George S. Ellis, Hector M. Scott, Clara Huse, James M. Darling, Elizabeth S. Dickey, Cornelia Paddock, Hettie M. Critchelow, Rebecca C. Shelton, Margaret D. Zane, Leonora Page, Martha A. Locke, Fanny Stenhouse, Emma L. Miller, Rachel Wilson, Mary E. Wilcox, Etha A. Whaley, Delome Trent, Clara C. Darling, Robert G. McNiece, Martha M. Campbell, Anna Baker, Samuel J. Carroll, Emma L. Carroll, each and all of Salt Lake City, Salt Lake County, Utah Territory; and Angie F. Newman, of Lincoln, State of Nebraska; and Jeanette H. Ferry, of Park City, Summit County, Utah Territory.

In witness whereof a majority of all the members of said association, present at said meeting, do now subscribe their names and affix their seals to these articles.

Signed (with seal): James M. Darling, Elizabeth S. Dickey, Cornelia Paddock, Hettie M. Critchelow, Rebecca C. Shelton, Margaret D. Zane, Leonora Page, Martha A. Locke, Fanny Stenhouse, Emma L. Miller, Rachel Wilson, Mary E. Wilcox, Etha A. Whaley, Delome Trent, S. J. Carroll, Emma L. Carroll, Clara C. Darling, Robert C. McNiece, Angie F. Newman, Jeanette H. Ferry, Martha M. Campbell, Anna Baker.

In presence of—
WM. M. BRADLEY.

TERRITORY OF UTAH, *Salt Lake County, ss:*

Mrs. Jeanette H. Ferry and Miss Anna Baker, being each duly sworn, upon oath say: We are the persons who were present and acted as officers, to wit, the president and secretary respectively of, and presided at, the meeting, and as such officers conducted the election of directors mentioned in the preamble or recitals of the foregoing attached articles of agreement or incorporation of the "Industrial Christian Home Association of Utah;" said meeting was held at Salt Lake City, Utah, on the date and for the purposes stated in said preamble or recitals; a majority of all the members of said association were present at said meeting and election, and signed said articles of agreement thereat, and the directors and officers named as such respectively in said articles of agreement were at said meeting duly elected as and for directors and officers of said corporation by a majority vote of all the members of said association.

ANNA BAKER.
JEANETTE H. FERRY.

Subscribed and sworn to before me March 15, 1886.
[SEAL] WM. M. BRADLEY,
Notary Public, Salt Lake County, Utah.

TERRITORY OF UTAH, *Salt Lake County, ss:*

On this 17th day of March, 1886, before me, the probate judge of Salt Lake County, Utah, personally appeared Anna Baker, Martha A. Locke, Emma S. Carroll, and Angie F. Newman, personally known to me to be the identical persons named in, and who, as members of the "Industrial Christian Home Association of Utah," executed the foregoing attached articles of agreement of incorporation, and they duly acknowledged to me that they, each of them, respectively, executed the same freely and voluntarily and for the uses and purposes therein set forth.

Witness my hand at Salt Lake City, in said county, the day and year aforesaid.

ELIAS A. SMITH,
Probate Judge, Salt Lake County, Utah.

TERRITORY OF UTAH, *County of Salt Lake, ss:*

Anna Baker, Martha A. Locke, Emma S. Carroll, and Angie F. Newman, being each duly sworn, each on oath says: We are members of the "Industrial Christian Home Association of Utah," and it is our bona fide intention, and the bona fide intention of the members of said association, to commence and carry on, and we and they have commenced, the business mentioned in the foregoing attached articles of agreement of incorporation.

ANNA BAKER.
MARTHA A. LOCKE.
EMMA L. CARROLL.
ANGIE F. NEWMAN.

Subscribed and sworn to before me this 17th day of March, 1886.
ELIAS A. SMITH,
Probate Judge, Salt Lake County, Utah.

TERRITORY OF UTAH, *County of Salt Lake, ss:*

I, John C. Cutler, clerk of the probate court in and for the county of Salt Lake, in the Territory of Utah, do hereby certify that the foregoing is a full, true, and correct copy of the articles of agreement only of incorporation of the "Industrial Christian Home Association of Utah," as appears on file in my office.

In witness whereof, I have hereunto set my hand and affixed the seal of said court, this 19th day of March, A. D. 1886.

[SEAL.] JOHN C. CUTLER, *Probate Clerk.*
By H. S. CUTLER, *Deputy.*

It will be observed that here appears to be an incorporation organized deliberately, with ample formality, and which no doubt was in strict compliance with the then existing laws of Utah.

Mr. Speaker, I assert here, upon what I consider most reliable information, that on August 4, 1886, when the first appropriation was made by Congress to aid in the establishment of such a home, no other association or incorporation known as an "industrial home," or one seeking to establish such a charity, was known in Utah; and further, that to this date no such association or incorporation, except the one incorporated on March 15, 1886, and now seeking further aid from Congress, is known in Utah or has existence therein. Nor were any other person, persons, association, or incorporation on or prior to August 4, 1886, in so far as the records of Congress show, seeking to obtain an appropriation in aid of such an enterprise in Utah. Further than this, let me say that prior to the first appropriation in aid of the only "industrial home" in Utah, and with a view to secure such appropriation, the Industrial Christian Home Association of Utah presented to the Senate, by Mrs. Angie F. Newman, its agent, a memorial praying financial assistance to this association. The memorial, which was referred to the Senate Committee on Education and Labor, was as follows:

To the honorable the Senate and House of Representatives of the Forty-ninth Congress:

We, the undersigned, officers of the Industrial Christian Home Association of Utah Territory, by the authority of the board of trustees of said incorporation, beg leave to present for the consideration of your honorable body the following memorial and petition:

A great philanthropic movement for the relief of the dependent classes of Utah Territory has been in formative operation among civil and ecclesiastical authorities in Utah and the States for the past three years.

On the 15th of March, 1886, a permanent organization was formed in Salt Lake City under the name of the "Industrial Christian Home Association of Utah." The association was incorporated under chapter 45 of the laws of the Territory of Utah of the year 1884.

The officers of the association are Christian women of established character and executive ability.

The board of trustees are gentlemen of known business integrity and financial strength.

The object of the association is the establishment of an educational institution in Salt Lake City where industrial pursuits shall be taught upon a basis which shall qualify for self-support. The institution will be divided into three distinct departments.

In the first, domestic industries, such as cooking, dress-making, tailoring, cutting and fitting children's clothing, etc., will be taught.

In the second, mechanical industries, including type-writing, telegraphy, stenography, silk-reeling, etc.

In both of these departments competent instructors will be employed.

A bureau of information will be established who shall furnish information as to positions available to graduates in adjacent States.

The graduates in the mechanical department may perform remunerative labor in the institution to the extent of funds for transportation to the positions secured.

Pupils from the domestic department will find immediate employment in the gentile homes of Utah.

The third department will offer temporary shelter to the homeless women and children whose cases are accepted by the board. For this class the bureau may furnish employment in the Territory or adjacent States of such character as the capacity of the individual indicates or opportunity furnishes.

The demand for such an institution is found—

1. In the anomalous social condition of Utah Territory under Mormon régime.

2. In the fact that there is not a single benevolent institution in the Territory for the dependent classes.

Moreover, it is hopeless to expect a Mormon Legislature to appropriate funds to meet a condition of things which the Mormon leaders declare does not exist or to establish an institution which shall contribute towards the disintegration of the Mormon Church.

Hence national obligation is apparent.

The principle is fundamental in a Republican government to protect its helpless minorities, especially so when these minorities are women and children.

The question of self-support is based in the solution of the problem of the disruption of polygamous households.

It is a well-known fact that there are many who would voluntarily abandon polygamous relations if facilities for self-support were provided.

Furthermore, it is futile to legislate against existing relations and make no provision for the terrible exigencies which arise in the execution of law.

Fathers and mothers whose moral nature has survived the wreck of polygamous life will at least hesitate to impose upon their children immediate disaster by either voluntary or enforced obedience to national law.

Therefore it is with confidence in that justice which is the apotheosis of mercy that we, your petitioners, in behalf of those who can not speak for themselves, except by their silent appeal to the nation's God, ask of your honorable body the appropriation of $100,000 to the Industrial Christian Home Association for the construction and equipment of such an institution as is herein specified.

Respectfully submitted.

JEANNETTE H. FERRY, *President*,
Park City, Utah Territory.
MARGARET D. ZANE, *Vice-President*,
Salt Lake City, Utah Territory.
CORNELIA A. PADDOCK, *Secretary*,
Salt Lake City.

GEORGE A. LOWE,
IRA E. LYONS,
HECTOR M. SCOTT,
JAMES M. DARLING,
GEORGE E. ELLIS,
HENRY M. LAWRENCE,
Per ANGIE F. NEWMAN, *Vice-President at Large*,
Trustees, Salt Lake City.

As further bearing upon the authority of Mrs. Newman to thus appear and present this memorial, and as showing the fitness of this lady for the mission with which she was intrusted, I submit the following evidence of authority and testimony:

At a meeting of the board of directors of the Industrial Christian Home Association of Utah, held upon due notice at the place of business of the corporation, in Salt Lake City and County, Utah Territory, on Monday, the 22d day of March, 1886, a majority of the whole number of directors composing said board being present, it was, by the unanimous vote of the meeting, in substance and effect,

Resolved, That Mrs. Angie F. Newman, of Lincoln, Nebr., one of the vice-presidents of this corporation, be, and she is hereby, appointed and authorized to represent this corporation at Washington, D. C., and at other Eastern places, as its aid and assistant in forwarding all matters pertaining to the business of the corporation; and, among other matters, she may take measures to raise by private subscription for corporate purposes, and may for such purposes receive contributions, moneys, and funds, and may solicit and seek, and adopt and carry out measures to secure, in all proper ways, Congressional action and assistance by way of appropriation, or other measures looking to the pecuniary betterment of the affairs or other advancement of the business of the corporation.

Attest:

H. M. SCOTT,
Secretary pro tempore of the Board of Directors.

The foregoing and within is approved by the undersigned, a majority of the board of directors, said corporation having no seal.

EMMA L. MILLER,
President pro tempore.
CLARA A. HUSE.
G. S. ELLIS.
MARTHA M. CAMPBELL.
H. W. LAWRENCE.
MARTHA A. LOCKE.
MARGARET D. ZANE.

STATE OF NEBRASKA, EXECUTIVE DEPARTMENT,
Lincoln, April 16, 1886.

To the Congressional delegation of the State of Nebraska:

GENTLEMEN: Mrs. A. F. Newman, of this city, visits Washington for the purpose of securing Government aid in establishing an industrial school at Salt Lake City. I take great pleasure in commending her to your courteous consideration as well as to your kindly offices in the work in which she is engaged.

I remain, respectfully,

JAMES W. DAWES,
Governor of Nebraska.

DENVER, COLO., *April* 6, 1886.

To the Senators and Representatives of Colorado in Washington, D. C.:

I hereby commend to your thoughtful consideration the plans for an industrial home for the destitute women of Utah, presented by the bearer, Mrs. Angie F. Newman, and indorsed by the leading philanthropists of Salt Lake.

Sincerely, yours,

H. W. WARREN.
Bishop of the M. E. Church and in charge of Missions in Utah.

SALT LAKE CITY, *April*, 1886.

To whom it may concern:

Mrs. Angie F. Newman being duly elected by the directors of the Woman's Industrial Christian Home Association of Utah as their delegate to secure Congressional aid in behalf of this much-needed institution, I take pleasure in commending her to the confidence of all people as a brilliant speaker, an earnest advocate of reform, and a Christian woman whose heart has borne the burden of the cause of Christ in Utah for years.

S. J. CARROLL,
Pastor of M. E. Church and Editor of Utah Christian Advocate.
J. JAY GARVIN,
President of S. Seminary.

The Woman's Industrial Christian Home Association, in their meeting March 22 to reconsider the election of delegate to Washington in their behalf, decided to send but one delegate in place of the two first chosen.

Mrs. Angie F. Newman was elected the one delegate, and a committee was appointed to secure funds for her use and forward the same to her at Washington.

JEANNETTE H. FERRY,
President Woman's Industrial Christian Home Association,
Salt Lake, Utah.

To the House Committee on Appropriations:

The Utah Industrial Home Association is an organization whose purpose is to provide a means of self-support for the dependent classes of this Territory. The society have incorporated under the statutes. They have elected Mrs. A. G. Paddock and Mrs. Angie F. Newman as their representatives to your honorable body to ask for Congressional appropriation of $—— to aid in the purchase of lots and the erection of suitable buildings in which domestic and mechanical industries shall be taught and a shelter afforded to helpless women and children. The object is in every sense praiseworthy. There are many women now members of polygamous families who would renounce their present relations if they had any place of shelter or any means of support assured for themselves and their children. There are many more who have renounced polygamy and Mormonism together, and who have nothing but their hands to ward off starvation. The fact that there is not a single public institution in this Territory for the protection of this numerous class makes imperative such action. The ladies selected to make this appeal are trustworthy. The project has the indorsement of—

CHARLES S. ZANE.
W. H. DICKSON.
E. A. IRELAND.

The following, while addressed to the supposed chairman of the House Committee on Appropriations, was sent to the Senate committee:

OFFICE OF THE UTAH COMMISSION,
Salt Lake City, March 12, 1886.

SIR: An organization under the general incorporation laws of this Territory has been perfected by Christian women of Utah for the establishment of an industrial home for the helpless and dependent of their own sex and their children at or near the city of Salt Lake.

The trustees of the association are prominent business men of known ability, integrity, and good financial standing, resident of this city. The executive officers are representative Christian women, also residing here. We vouch for their high character and cordially indorse and commend the philanthropic movement they have inaugurated.

It is proposed to establish an institution upon a basis broad enough to meet the exigencies that may arise from the exceptional social conditions of this Territory.

It is contemplated not only to provide homes for the indigent and distressed, but to furnish gratuitous domestic and mechanical instruction which shall qualify those who receive it for self-support.

We believe that such a beneficence, supplemental to the enforcement of the laws for the suppression of polygamy in Utah, will effectively aid in accomplishing the result sought through Congressional legislation.

It may be reasonably hoped that this provision for the maintenance and industrial education of polygamous wives and children will induce the withdrawal of many who are now held through fear of the distress and suffering that would inevitably result to them from such separation.

Considering the undoubted usefulness of an institution of this character in aid of the effort of the Federal Government to eradicate the polygamic evil, we believe that it could properly and should receive financial assistance through liberal appropriations by Congress. We desire, therefore, to second the appeal of the association in this behalf.

Very respectfully,

A. B. CARLTON.
J. R. PETTIGREW.
A. S. PADDOCK.
G. R. GODFREY.

Hon. W. S. HOLMAN,
Chairman Appropriations Committee,
House of Representatives, Washington, D. C.

Upon the memorial to which I have alluded, formal hearing was had by the Senate committee on May 7, 1886—Mrs. Newman appearing for the Industrial Christian Home Association, making argument and being subjected to thorough cross-examination by members of the committee.

The committee made a favorable report on the memorial—to which I will presently allude. And I should say, from the slight examination I have given to this report, the Committee on Education and Labor of the Senate gave to this question most careful and earnest attention before making it to the Senate. I will now read a few sentences from that report. After the preliminary statement in reference to the question submitted, it goes on to say:

The disorganization of the existing form of society in the Territory of Utah growing out of the enforcement of the laws against polygamy, and which must become continually greater until that practice is totally suppressed, has developed the necessity of some great local agency of a humane and charitable nature to co-operate with the forces of the law as administered through the courts and the executive power.

Great numbers of persons now entangled and fettered in the structure of Mormon society have indicated a desire to sever their relations, but without help from some outside agency to make the transition from their present to new relations in accord with the laws of the land and the legitimate customs of American life, they find themselves completely helpless by reason of their poverty or their lack of that intellectual or industrial training indispensable to secure employment and support.

The hardships inflicted by the proper enforcement of the law upon women and children are very great, and the voluntary abandonment of existing conditions is hardly to be expected where no provision is apparent by which existence can be prolonged and the way opened to a new life.

I call the attention of the House especially to the following language of the report:

The Industrial Christian Home Association of Utah is an institution chartered by the laws of the Territory, and appears to possess the confidence of the authorities and responsible citizens of Utah.

This association proposes to undertake the work the necessity of which is above indicated. The expenses incurred must come from the public Treasury or from private charity. Fortunately, the most important thing of all, able, upright, and benevolent individuals—men and women—are ready to devote themselves to the work. It would seem to be almost compulsory upon the Government that the effort to extirpate polygamy by law should be abandoned, or the severities and sufferings incident thereto should be removed so far as possible by means of this or some like institution, to be made efficient through so much of government support as may be necessary.

Now, so much to the point of the character of the applicants to Congress for aid to this home and the proceedings in Utah and before the Senate prior to the first appropriation. It is not a case in which Congress was "captured," so to speak, by the importunities of one or more individuals who came here to represent that cause, but it is a fact that the deliberate body at the other end of the Capitol took this question into consideration, gave it careful attention, and the Committee on Education and Labor dignified the subject by reporting upon it favorably to that body, and thereafter the Senate, following the recommendations contained in the report, agreed with this body in an appropriation in aid of the work contemplated by this Industrial Christian Home Association of Utah.

Mr. Speaker, what strikes me as remarkably strange in this discussion is the attitude of my friend from Missouri [Mr. BURNES], in view of the fact that during all the time this question has been up before Congress he was a member of the Appropriations Committee of the House, and if I am not in error, was on each conference committee on the disagreeing votes of the two Houses on bills to which the Senate attached the two appropriations for this home, and if he did not concur in these appropriations for the purpose for which that home was inaugurated and the objects sought to be accomplished by and through the agency established, I do not remember ever hearing a word of protest from him at any time previous to this. I am well aware, and I will not do him the injustice not to state, that he expresses himself as willing to make appropriations in aid of the purposes of this home on certain conditions, but nevertheless he goes on and raises so many objections to the Senate amendments that I am led to question whether he is much in favor of the project. Certainly he is not enthusiastically interested in favor of granting further aid to the home, and I presume he will not claim any such feeling.

Now, why is it that my friend from Missouri, after favoring these appropriations in the Forty-ninth Congress and the first session of this Congress and after having been present in the conference with the Senate conferees on former bills making appropriation in aid of this home, as I think he was, should come in here and make this strong and vigorous fight, as I regard it, against the further continuance of the home and the work of those engaged in it? He asks the question, and seriously, too, why these ladies managing this home have not been satisfied to let the power of controlling the disposition of the money rest with the governor of Utah, the judges of the courts of that Territory, and the district attorney.

He says the law reposes this authority in the governor and that the ladies or persons interested in the management of the home have from time to time been seeking to have a change in the law in respect to handling and disposing of the funds appropriated to aid it.

In the first place, Mr. Speaker, I wish to say that it would appear from what the governor of Utah said in his last report to the Secretary of the Interior, neither he nor the judges of the courts of Utah have had time to devote to this project, nor have had time to consider the bills, to audit the accounts, or to give attention to the many things pertaining to the work of the home. He became so impressed upon this subject that in his last report to the Secretary of the Interior he used the following language in respect of the present board of control, meaning himself, the judges of the supreme court of the Territory, and the district attorney:

The board of control unanimously hold that some other and better agency than the board can and ought to be selected as disbursing agent of the fund. The chief-justice and district attorney residing at the capital have their time fully occupied with the duties of their respective offices.

The other judges hold their courts away from here, and are compelled either to absent themselves from and close their courts or fail in attendance at the board meetings. The board of control recommend that the executive committee of the Woman's Christian Industrial Home Association of Utah be constituted a board for the purpose.

I wish to emphasize to members this recommendation of the board of control, and ask that each one present will remember it: "The board of control recommend that the executive committee of the Woman's Christian Industrial Association of Utah be constituted a board for the purpose," namely, to receive and disburse funds, etc. There is a slight technical error in the description of the incorporation, but we are now beyond the point of question as to what corporation is meant. It appears, then, that the governor and the other members of the board of control—the judges of the supreme court and the district attorney—after more than a year's acquaintance with the enterprise, and presumably with those who have under their supervision had charge of it, solemnly concluded, and unanimously, "that some other and better agency than the board (meaning the board of control, themselves) can and ought to be selected as disbursing agent of *the fund,*" and it follows from the recommendation made immediately thereafter that the executive committee of the Home Association was deemed to be that better agency.

In the face of such a recommendation, how weak become the insinuations and allegations of incompetency against the capacity of the home management to receive and disburse these funds which Congress has and will in the future appropriate to this commendable and humane charity!

But, sir, what is the position of the friends of these amendments? First, however, I want to answer the query of the gentleman from Missouri as to why these ladies have, from time to time, come here seeking a change in the law with respect to the custody and management of these funds. It was for the very reason that the governor, the judges, and the district attorney have never had sufficient time to devote to the duties devolved upon them by the law; and in support of this statement I wish now to call attention to a part of the record of the joint meetings of the Industrial Christian Home Association, its executive board, and the board of control. It seems a record is kept of all action had by the association, of its board of directors, and of the joint meetings of such board of control and the executive board of the home.

I think gentlemen who will give attention to this record will see that the statement of the governor and the recommendation of this board of control that there should be a change are fully justified. The fact is these officials have been so engaged in other affairs connected with their official positions that they could not meet the representatives of the association on many occasions, and during the first year their joint meetings were almost total failures, even when those meetings were called with reference to most important questions in connection with the work of the home. But here is the record:

RECORDS OF THE JOINT MEETINGS OF THE INDUSTRIAL CHRISTIAN HOME ASSOCIATION AND THE BOARD OF CONTROL.

At a meeting of the executive committee of the Industrial Christian Home Association, held November 30, 1886, the following resolutions were presented and passed by unanimous vote:

1. *Resolved*, That a committee from the Industrial Christian Home Association be appointed to take steps toward a formal opening of the home January 19, 1887.

2. That the board of control be asked to sanction the opening of two departments, namely, a cooking school and sewing department—the latter to include appliances for everything pertaining to family or household needs.

Adjourned to meet board of control, 5 p. m.

5 p. m.—Executive committee met board of control at Continental Hotel. Present of board of control: Governor West, United States Attorney Dickson, Judges Zane, Boreman, and Henderson.

Resolutions presented by executive committee to board of control.
No. 1. Laid on the table.
No. 2. Laid on the table.

On February 27, 1887, the following was submitted to the board of control by the director of the home:

"GENTLEMEN OF THE BOARD: In consideration of the number of inmates of the home (17), and their urgent need of a person who shall be competent to teach and direct the labors whereby these women shall be better able to fulfill the design of Congress in establishing the home, namely, 'to provide employment and means of self-support,' I ask that such person be employed, and that a department of cooking be opened at once.

"These women have been helped in a great degree; but that the spirit of the institution be met, departments are necessary.

"RUTH M. WOOD."

At a semi-annual meeting of the executive committee of the Industrial Christian Home Association on March 15, 1887, the following resolution was unanimously accepted and presented to the board of control:

Resolved, That the association take such steps as they, with the co-operation of the board of control, may deem wise to open two departments of labor in the Industrial Home at 44 South Fifth East street, namely, a cooking and sewing department, with qualified teacher in each.

The board of control made no response to either of the foregoing propositions.

JUNE 6, 1887.

The executive committee met at the Industrial Home at 2.30 p. m.

The following resolutions were adopted by the committee:

1. *Resolved*, That the executive committee be instructed to confer with the board of control in reference to the opening of new departments of industry in the home.

2. *Resolved*, That the executive committee be instructed to confer with the board of control on the importance of proceeding at once to purchase property for a permanent home with a view of beginning immediately the erection of a much-needed building.

3. *Resolved*, That these instructions be presented by the committee to the board of control at their joint meeting at 8 o'clock p. m.

Adjourned to meet at 8 p. m. at the governor's rooms.

JUNE 6, 1887.

The meeting of board of control and executive committee was held at the governor's rooms at 8 o'clock p. m.

The committee presented, through their chairman, the view of the association on the importance of proceeding at once to purchase property for a permanent home, of beginning immediately the erection of necessary buildings; also urging the necessity of more ample accommodations, making possible the successful opening of new departments of industry in the home. A majority of the board favored the proposition of the committee to purchase property and erect suitable buildings with a view to a permanent home. Governor West urged the necessity of inmates to sanction such outlay. This was met by the committee and some of the board that such outlay was necessary to insure the inmates, and this proposition was ably argued.

(At this time the temporary home was crowded to excess with inmates from the menial classes. No facilities for self-support having been provided, the more intelligent classes were not reached.)

The meeting adjourned to July 11.

JULY 11.

The executive committee met at the Industrial Home at 2.30 p. m.

The architect employed by the chairman of the executive committee presented a plan for an addition to the building now occupied, embracing rooms for a laundry and cooking departments, also a room for the children with bath-room and dining-room for same. Rooms convenient for mo thers and children. These were examined and approved by committee.

The home was visited throughout by the committee and found to be in good order, evidencing excellent management and law.

Adjourned to 8 p. m.

JULY 11—8 P. M.

The board of control and the executive committee met according to appointment at the governor's rooms.

There being no quorum of the board of control, no business could be done. Mr. Lawrence submitted the plans of the architect to those present.

Adjourned to meet August 1.

AUGUST 1.

The executive committee met at the Industrial Home 2 p. m.

The report of the director came before the committee and was approved. The home was visited and the comfort of the inmates looked into by the committee. The management of the home was heartily approved by the same.

Adjourned to meet at the governor's rooms at 8 p. m.

AUGUST 1.

The board of control and executive committee met at 8 p. m.

As there was not a quorum of the board of control no business could be transacted.

Adjourned to meet first Monday in September.

SEPTEMBER 5.

The executive committee met at the Industrial Home 2.30.

The attorney employed to ascertain title for the place occupied by the home, requested the original lease made of the premises. Upon inquiry the director of the home, stated that she had delivered the original lease to Governor West, chairman of the board of control, at his request.

SEPTEMBER 5.

Meeting of board of control and executive committee, at the governor's rooms 8 p. m. Present of the board, Governor West; absent, Judge Zane, Judge Henderson, Judge Boreman, and Attorney Peters.

As there was no quorum of the board of control no business could be transacted. Governor West failed to find the original lease.

Adjourned to October 3.

OCTOBER 3.

The executive committee met at the Industrial Home at 2.30 p. m. The secretary's minutes from June until September 5 were read and approved. A conference was had relating to the interests of the home, Mrs. Newman presenting important facts.

Adjourned to meet the board of control at 8 p. m.

There was no meeting of the board of control with the executive committee as appointed, the governor stating to the committee that he was too busy to attend to it.

At the second annual meeting of the association held October 4, 1887, the association decided to again ask the board of control to purchase property for a permanent home out of the funds held by the said board of control. The matter was put into the hands of a committee of five elected by the association, said committee to select site and ask the board of control to at once purchase.

The committee handed to the board of control the following (as the books of the secretary of the board of control will show):

We, the undersigned, a committee appointed by the Christian Industrial Home of Utah to select a site for a permanent home, do most respectfully report: We, the committee, have considered all the real estate firms in the city, looked constantly for two days at all properties for sale offered by them and others, and unanimously ask that the home may be located at and the property purchased known as the "Clayton Farm." It consists of 10 acres of beautifully lying land, a large red-brick cottage, brick barn, out houses, sheds, etc., all new, three artesian wells, furnishing plenty of water, also being carried into the house. Possession can be given at once and the home moved immediately, thereby saving rent. The property is in the best of repair, and has ample room for the present number of inmates now at the Home.

The property is situated on the Boulevard, the fashionable drive, 1 mile or less south of Liberty Park. The price asked is $6,000.

H. W. LAWRENCE, *Chairman*,
M. B. SOULES,
C. H. PARSONS,
MRS. ARTHUR BROWN,
MRS. JACOB BOREMAN,
Committee on Site.

The board of control not being prepared to vote, or at least did not vote, upon this request, the meeting was adjourned until the following Saturday, the board of control adding to the committee on "site" two of their own members, Judge Charles Zane and District Attorney Peters, that more time might be given the committee on site and also the board of control to look more thoroughly into properties for sale.

At the meeting held Saturday evening the committee on "site" reappeared before the board of control and submitted the following:

"We, the undersigned committee on 'site,' appointed by the Christian Industrial Home of Utah, most respectfully ask that you, the board of control, purchase for the Christian Industrial Home of Utah, out of the funds appropriated by Congress for this object and held by the board of control, the following property:

"Twenty acres of land adjoining and lying south of the La Grand Young farm and north of Liberty Park. The price asked is $10,000. We also ask the sum of $15,000 for the erection of suitable buildings to carry out the work of the association.

"The street-car track, we are informed, will run to the gate if the home is located upon this piece of ground."

H. W. LAWRENCE,
M. B. SOULES,
C. H. PARSONS,
MRS. ARTHUR BROWN,
MRS. JACOB BOREMAN,
Committee on Site.

The committee called the attention of the board of control to the fact that this piece of land lies only about 40 rods south of and on the same street on which is located the Goddard farm, consisting of 47 acres, which the association was anxious to purchase one year ago and which was offered them for $5,500, and the board of control did not think it advisable to buy or to purchase property at all at that time.

The committee stated that within sixty days the Goddard farm had been purchased for $15,000, and was at that date held at $25,000.

The committee stated these things that the board of control should know how real estate was increasing in value in that part of the city.

On this communication of the committee on "site," the following action was had by the board of control:

"*Resolved*, That said communication be received and filed and that action thereon as to the purchase of property and employment of an architect for the present be deferred and that this board at this time decline to take any action for the purchase of property."

The following was received by the association and handed by the president to the board of control, to which no answer was ever received by the association:

"SALT LAKE CITY, *November* 1, 1887.

"*To the Christian Industrial Home Association of Utah:*

"I will give to the Christian Industrial Home of Utah 20 acres of land, platted, about half a mile from the 'White Bridge,' provided the association expend $10,000 within the next two years upon the same in the erection of buildings or improving the land, etc. Artesian water procurable.

"The offer to hold open until January 1, 1888.

"E. B. CRITCHELOW."

At the last meeting of the board of control in October, 1887, on motion of Judge Boreman, seconded by Mr. Peters, it was resolved that the Industrial Christian Home Association be requested to inform the board as to what departments of industry they desire to open in the present home, and the number of employés to be employed, and what salaries and the expense of opening and running said departments. To this the following answer was returned by the association:

"REPORT OF THE COMMITTEE ON ESTABLISHING DEPARTMENTS AND TRADES AT THE INDUSTRIAL HOME.

"We, the undersigned, most respectfully report the departments to be opened at once as follows:

"First. A school for the children with all the modern conveniences and appliances and so situated and managed that a night school could be maintained for women desirous of learning to read and write.

"Second. A sewing department, where all kinds of sewing, dressmaking, tailoring, mending, etc., might be conducted so that the inmates might become proficient in these arts.

"Third. A cooking department, where instruction could be given in all kinds of cooking, also where kitchen gardening could be taught.

"We, the undersigned committee, most respectfully report that we have examined the premises now occupied by the home and, in our judgment, find it totally inadequate and deficient in room for the successful or otherwise opening and conducting any one of these departments.

"These three named departments we, your committee, think it of vital importance for the good of the inmates of the Industrial Home to be at once opened, and that the association enlarge their quarters.

"We find the house the association is now renting very old and inconvenient for such an institution, a cellar of two rooms, all under-ground.

"The first floor contains four rooms, not any of them large; the second floor the same number and size; above is a garret where, for want of room, a number of children are now sleeping.

"We find the inmates crowded and the home most uncomfortable for want of room, and we recommend the obtaining of larger quarters.

"J. CAMERON BROWN, *Chairman.*
"MRS. H. W. LAWRENCE.
"MRS. JAMES DARLING.
"MRS. ILIFF."

No changes were inaugurated at the home by the board of control, no departments opened, no property purchased.

Thus it appears that at every meeting of the association from November 30, 1886, to October 3, 1887, resolutions were passed urging the board of control to open departments in the home that the intent of the law might be fulfilled, also to purchase lots and erect buildings. The resolutions of November 30 were by the board of control laid on the table. Those of February 27 and March 15 were unanswered. For the next four months no quorum was present at any meeting of the board of control. It appears from the record that the ladies representing the home were unable to secure the consent of the board of control during the time covered by this record to the opening of two very important departments, namely, cooking and sewing, that the board of control would not or could not, at a most favorable period in the history of real-estate prices in and near Salt Lake City, co-operate with the board of directors of the home in selecting and purchasing property on which to establish the home permanently, nor permit the home's board of directors to take any steps to secure property.

It appears, also, that the offer of E. B. Chritchelow, made on November 1, 1887, to donate 20 acres in aid of the cause, upon the very reasonable condition that $10,000 should be expended by the association within two years thereafter, could not or was not considered by the board of control, and that opportunity to secure a valuable donation of land was lost, and, presumably, because the gentlemen composing the board had not time to meet and deliberate on the proposition.

The properties offered the association at prices ranging, namely, $5,500 in one case, $6,000 in another, and $10,000 in another (the latter being for 20 acres), have since then greatly increased in value, being now held at figures largely in excess of the sums at which they could have been purchased had the board of control thought and acted differently.

Now, sir, I am disposed to take a charitable view of this matter, and to assume that the members of this board of control have had too much to do in their official positions to be able to give any considerable time to this important work. But is it not time, I ask the gentleman from Missouri [Mr. BURNES], upon this record of the failure of the board of control to meet and act with the executive committee of the association, that there should be a change in the management and control of the funds of the institution? The first appropriation in aid of this home was made August 4, 1886, as I have said, and was in language following, being part of the general deficiency bill of last August:

To aid in the establishment of an industrial home in the Territory of Utah, to provide employment and means of self-support for the dependent women who renounce polygamy, and the children of such women of tender age, in said Territory, with a view to aid in the suppression of polygamy therein, $40,000; said sum to be expended upon requisition of and under the management of a board of control to consist of the governor and justices of the supreme court and the district attorney of said Territory; and said board shall duly and properly expend said sum, or so much thereof as may be necessary, for the purposes herein indicated, and shall, from time to time, report to the President their acts and doings and expenditures hereunder, for transmission to Congress.

Those friends of the home who advocated this first appropriation supposed that the duly authorized treasurer of the corporation, after giving bonds to the satisfaction of the Treasury Department, would be paid the money from time to time as needed; but it was but a short time after the law was passed until Governor West, of Utah, construed the law as authorizing him to receive the money, and every dollar up to this date has been paid to him. The second appropriation, made by the present Congress on February 1, 1888, being a part of the first deficiency bill passed by the Fiftieth Congress, is in language following:

To aid the Industrial Christian Home Association of Utah in carrying on, under its articles of incorporation, the work of providing employment and means of self-support for the dependent women who shall have renounced polygamy, and their children of tender age, $40,000; and the unexpended balance of the appropriation for aiding in the establishment of an industrial home in the Territory of Utah contained in the act of Congress approved August 4, 1886, entitled "An act making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1887, and for other purposes," shall be deemed a part of this appropriation; and the board of control mentioned in said former appropriation shall audit the expenditures under this appropriation and report yearly to the Secretary of the Interior.

It will be observed that the language of this law is quite different from that of the first one, and indicates clearly that thereafter it was the purpose of Congress to have the money go into the hands of the treasurer of the home under suitable bond.

This law only gives power to the board of control to "audit the expenditures under this appropriation and report yearly to the Secretary of the Interior." To "audit" means "to examine and adjust accounts," not to audit and pay accounts.

As to the money paid over to the governor under the above act, I think the association by some action consented to his drawing it, and no complaint is made because he did so.

Now, what is it the second amendment of the Senate proposes? It proposes that instead of the governor or this board of control having charge of the money which may be appropriated for the use of the home, it may be paid over to a treasurer of the institution, but that all accounts of expenditures under this appropriation shall be audited by the Utah Commission, which shall hereafter act as the board of control for the institution, and shall make an annual report to Congress covering the work of the institution and its expenditures. In other words, it undertakes to make plain beyond doubt the intention of Congress quite clearly expressed in the first law, and which is essential to the efficient management of this home.

My friend from Missouri seems to think that the idea can not be entertained of placing public funds in the hands of the treasurer of this corporation, composed, though it may be, of eminently intelligent and respectable ladies and gentlemen.

He designates it "a private corporation." It is only in a limited sense "private." It is organized to subserve national as well as charitable ends; not for private interests. It is organized to make provision for the innocent victims of national law—in other words, it is the humane side of law. The law says: "You must abandon polygamy whatever the consequences." The home says: "We will give you shelter, food, clothing, education, and industrial training to prepare you for future self-support."

As I am informed, those managing the home do not ask any one to give up polygamy; they are not engaged in such labor; but those who voluntarily abandon it may apply to the home if they desire, and in such case will be received and assisted.

Mr. Speaker, another objection to the amendments expressed by some of the gentlemen who have spoken deserves notice. It is based somewhat, if not entirely, on the following words in the first amendment, namely, "who desire to sever their allegiance to the Mormon Church." Undoubtedly those words were inserted more as a rule of identification, to indicate for whom the charity is intended and not that the association is to enter upon a work of proselyting. I think, however, they might well be stricken out, and I would so move were it in order. At the same time, I maintain that on fair construction the words do not indicate a purpose to have those charged with the duty of conducting the home authorized or encouraged to enter on what may be strictly termed "missionary work"—the conversion of Mormon women and children to another faith. These words may well be stricken out for another reason. Nothing answering to them appears in that section of the articles of incorporation defining the purposes of its organization; nothing like them appears in the memorial of the association to Congress; without these words the amendment containing them has sufficient in these words, "for the benefit of the dependent women and children in Utah," and in my opinion any such, no matter about their prior church affiliations, should be admitted to the home and all its benefits equally with those who may have come from a polygamous state.

Sir, there never has been a question raised, so far as I know, against the competency or the disinterestedness of the men and women associated under the laws of Utah for the management of this Christian home until to-day. My friend from Missouri, however, is absolutely shocked at the idea of one of their number being allowed to receive this money from the Government upon the execution of a bond which will secure the Government from loss; and hence he objects most strenuously to the propositions contained in the Senate amendments.

Mr. BURNES. The gentleman seems determined that I shall give him information which I have purposely withheld, out of compassion for parties involved in this mater.

Mr. STRUBLE. I do not yield for that; I will yield for a question.

Mr. BURNES. I only desired permission to give the gentleman information.

Mr. STRUBLE. I would cheerfully yield for a question, or any number of them, because the gentleman was very courteous to me; but my time is too limited to yield for what the gentleman terms information, which might require considerable time to impart. From what I have heard said elsewhere, I readily infer the gentleman proposes answering my observations in reference to his objections to a duly elected treasurer of the association, under bonds, to be approved by the Treasury Department, by referring me and the House to an informal and wholly unofficial financial statement put forth by Mrs. Newman concerning the condition of the appropriations heretofore made by Congress to aid this association. He may venture on an attempt to show that a certain discrepancy exists between her statements and facts obtained from Governor West or the Treasury Department, and he may seek to draw the conclusion that Mrs. Newman is placed in a position that reflects upon her financial or business ability.

Anticipating such an attempt on the part of the gentleman, I desire, in order that the House may be prepared properly to judge on this point, to remind it again, and also the gentleman in charge of this bill [Mr. BURNES], of some facts material to his "information."

First. Mrs. Newman left Utah for Washington the last of March, this year, at which time $10,000 had been drawn from the United States Treasury. Mrs. Newman filed this so-called "financial statement" with the Senate committee the first week in June, on this basis: The financial exhibit of expenditure of $13,500 was made the last of September, on an approximate estimate pro rata with expenses in the past, not hav-

ing later official data at hand, hence no discrepancy appears along the line of expenditures.

Second. As to the full amount drawn from the Treasury to date, on which the apparent "discrepancy" is based, the gentleman from Missouri [Mr. BURNES] may give, if he chooses, but in his own time, the information "purposely withheld" by the gentleman "out of compassion for parties involved." The facts are as follows:

The law of February, 1888, failed to specify in terms by whom the funds should be drawn from the Treasury. Governor West was about to leave for Washington, and the corporation delegated to him the mission of inquiry at the Treasury Department as to the proper agency through whom the funds should be drawn. The governor returned to Utah without executing the commission. The association desired to draw the funds in order to proceed with the erection of buildings, etc. Hence, on the 8th of June, Senator MANDERSON, of Nebraska, accompanied Mrs. Newman to the Treasury Department, and was informed the association could authorize the governor to draw the funds until such time as a law should be passed defining the proper agency.

This information was communicated by Mrs. Newman to the association in Utah. Governor West was so appointed. Through this delay, the association fearing the money would revert to the Treasury on the 1st of July, the chairman of the board of directors, Henry W. Lawrence, sent to Mrs. Newman, on June 25, 1888, the following telegram:

Requisition mailed this evening for balance of appropriation. See that it is honored before June 30.

The governor never communicated with Mrs. Newman as to the receipt of the funds or the amount drawn. Mrs. Newman first learned from the speech of the gentleman from Missouri that $48,000 was the amount drawn, There was some doubt on the part of the association as to the interpretation of the law of February, 1888—whether it appropriated $40,000 plus the expenditures, or otherwise. Mrs. Newman's estimates were made on the basis of the original appropriation of $40,000, having received no notification that the Treasury Department had construed the law as inclusive of the expenditures; hence any "compassion" or "information" of the distinguished member from Missouri, if he shall make such, is a gratuity, which, if applied at all, should be expended upon the governor for failing to notify Mrs. Newman of the facts.

Thus it appears to this hour not a dollar of the Congressional fund has been handled by the corporation, the governor of the Territory having been authorized by the association to draw the funds appropriated under the last law until a disbursing agent should be recognized by the Government. Even the treasurer of the association was not held to be such agent until the law should so specify.

Referring, again, to the matter of a treasurer of this corporation and the funds he may receive from time to time, and the objection raised by the gentleman from Missouri to this plan, I beg again that the House will bear in mind that the amendments we are now considering propose there shall be supervision over the financial transactions of the association by the Utah Commission, a body of men already having much to do with one phase of the Utah situation—all able and respectable men, a majority being Democrats, of course—and this plan maintains Federal supervision over the funds and their disposition to an extent compatible with prudent business management of such a charity.

I wish also to remind the House that the secretary of this Utah Commission is the secretary of the Territory, and is, as I understand, a disbursing officer under bond, disbursing now a considerable sum of money annually. If money should not be paid the association treasurer, why may it not be intrusted to him. Of course the proposition is that one of the members of the corporation shall be the treasurer. But it seems to me my friend's objection might well be obviated (if he is willing to co-operate in aiding this enterprise) by bringing together the two bodies who shall carefully and in a patriotic way administer the charities which are intended to be administered under this legislation.

Mr. BURNES. There is no need of more than one.

Mr. RYAN. I do not know that there would be very much difficulty on that point; but I understand that the proposition in the amendment was put in at the suggestion of the Treasury Department.

Mr. STRUBLE. Does the gentleman refer to the proposition with regard to paying money over to the treasurer of the association?

Mr. RYAN. Yes, sir.

Mr. STRUBLE. I am very glad to have that information. I am gratified to be advised that a Department of the Government having charge of its financial affairs, has, in considering this question, suggested that in this case, as in many similar ones, I presume, of charities in which the Government is aiding, it would not be a great violation of business principles if a treasurer elected by the corporation be permitted, upon proper bond, to receive and disburse the moneys which may be allowed it from the public Treasury.

I wish to state to this House a further fact, as indicating the views of the Treasury Department in regard to the proper custodian of the funds of the association—not stronger, perhaps, than the one given by my friend from Kansas [Mr. RYAN], but in harmony with it.

The fact relates to this question of treasurership. When Mrs. Newman, in company with a Senator from Nebraska, visited the Treasury Department at the time mentioned and had the conference about the proper agent to draw the funds, conversation was also had in reference to giving bond by the association, and the Treasury official (who he was I am unable now to state) gave the opinion that if the gentleman appointed treasurer of the association were a resident of Utah and had sufficient standing as to character and means, and would give proper bond, he saw no objection to the money being paid over into his hands as treasurer of the corporation. My information is further that since that time steps have been taken by this corporation to elect from its members a gentleman to be its treasurer who will in every way, I think, prove acceptable to the Department when he shall have presented to it a proper bond.

If these things are true, as I have no doubt they are, what need be said about the disqualification of a woman to give bond since it is not intended that a woman should hold the office? The treasurer of the association, a lady who has held moneys in the past, has only been treasurer of the membership dues, private donations, and other incidental funds of the association. The national funds have always been disbursed by the board of control. In the event of an appropriation being made by the pending bill, the treasurer, a qualified male resident, will be elected, and will give suitable bond and receive and disburse funds.

But, Mr. Speaker, why should this proposition to aid this industrial home be looked upon with so much suspicion when the Government is annually aiding institutions of charity, when it is annually here in this District aiding enterprises which seek to relieve want and suffering among people who find themselves in distressed and dependent circumstances and unable to provide for their own wants?

This is a Territory, and like the District of Columbia, is under the control of Congress, and its expenses are largely paid out of the national Treasury. For years the Government has been appropriating for charities in the District. I have not had time to ascertain how much money has been expended for charities aside from cost of buildings, but the following table shows some, and perhaps all, the moneys appropriated to construct or repair buildings used for such purposes:

Appropriations for buildings for charitable institutions in the District of Columbia.

Fiscal years.	Name.	Amount.
1882	Industrial Home School building, District of Columbia	$5,000
1884	do	5,000
1887	do	3,500
1881	Washington Asylum, south wing of work-house	10,000
1881	Little Sisters of the Poor building	5,000
1884	do	25,000
1881	German Orphan Asylum building	10,000
1886	Homeopathic Hospital Association (District of Columbia) building.	15,000
1887, 1888, 1889	Washington Hospital for Foundlings, $5,000 each year for building.	15,000
1887–'88	House of the Good Shepherd building	8,000
1887, 1888, 1889	St. Rose Industrial School building	15,000
1887	Church Orphanage of District of Columbia building	6,000
1889	do	4,000

In this connection it may not be out of place to call attention to a bill passed by this House September 24, 1888, and now pending in the Senate, to appropriate quite a sum to aid one of the deserving charities in the District. It does not seem to be very specific on the subject of how, when, and to whom the funds shall be paid out, and yet I remember of no objection to it being made.

Be it enacted, etc., That the sum of $30,000 be, and the same is hereby, appropriated out of any money in the Treasury not otherwise appropriated, for the benefit of the Girls' Reform School of the District of Columbia, a corporation incorporated by act of Congress of July 9, 1888.

SEC. 2. That the sum herein appropriated, or so much thereof as may be necessary, shall be used for the purchase of a site and purchase or erection of a suitable building for the Girls Reform School of the District of Columbia.

One reply to my query, and one most apt to suggest itself, is that this is not only the District of Columbia, but that here are more than 200,000 people, and as a matter of course demands for charity are numerous and imperative.

There is force in this, but alongside of it I can not forbear placing the 200,000 Mormon people of Utah, fostering and practicing a most disgusting and immoral form of social vice, against which the Government has enacted severe laws with a view to its extermination. If any substantial progress is made it involves the separation of the head of a family in which polygamy is practiced, from two, four, six, or more wives, and in many cases numerous dependent children, and while the Mormon Church may be ready to aid such while they remain true to their allegiance to the church, it is hoped that many others than those now anxious to escape from their unhappy condition when deprived of their dependence on their husbands—such as it may be—may, of their own volition, and induced by their own aided or unaided reflections, determine to quit that manner of life. So quitting, it is unreasonable to presume any help would be accorded such by Mormon authority, unless the case were one appealing most strongly to humanity, and

doubtless not then. Without some sheltering roof, some kindly hearts near to afford assistance, what would, what could such do unless to "repent and return."

The policy of this Government is settled in hostility to polygamy. The war upon that vile system should be carried on with relentless vigor and determination until success is attained, or by years of failure under more effective laws it is demonstrated to be of the impossible things attainable by government.

According to the last annual report of the Attorney-General, the expenses of the courts in Utah in the fiscal year of 1887, and paid that year, were over $63,000, a large increase over former years, occasioned, it may be supposed, by reason of further attempts to enforce the laws against illegal cohabitation and polygamy. Let many thousands more be expended, if necessary, in honest economical efforts to compel obedience to the laws of the land; but let it not be said that dependent women and children are left to nakedness and hunger when they would flee from the barbarity of polygamy, if they could do so knowing they would receive needed assistance.

The necessity for such a home as this has already been sufficiently presented by my friend from Kansas [Mr. RYAN], but it may not be improper for me to make some further observations in addition to what I have already said on the same line, and therefore I shall proceed to do so.

Mr. Speaker, although I repeat utterances made but a moment ago, let me say that I think any thoughtful person who would stop a brief time to consider the attitude of the United States Government toward the question of polygamy; any one who will remember the stringent laws passed by Congress looking to its extermination; any one who has read the papers with regard to the enforcement of those laws, the condemnations, and sentences resulting from prosecutions, must be convinced that in prosecuting offenders under such a system as polygamy, where not only the head of a family is concerned, but several wives of that head in many cases, great hardship and great suffering must result to the unfortunate women and children who by these prosecutions, by the enforcement of the laws, or by their own choice, are compelled to abandon their former relations with the head of the family. He can not fail to realize that any considerable success at enforcement of law must necessarily bring upon the women and children of those husbands who are imprisoned for long periods more or less suffering and distress. In addition to this view, however, is another, and one having a closer relation to the aim and purpose of this association. It is undoubtedly true that many women in polygamous relation in Utah must feel the disgrace and shame of such a relation and would gladly escape from the bondage by which they are held to that condition. It was for the purpose of alleviating distress and opening a place to which those wishing to abandon the unholy alliance in which they were participants—a place to which mothers and children might go and be cared for and taught in education and simple but practical arts that would enable them in a short time to go out and earn a livelihood for themselves, that this industrial home was conceived and established.

No one, it seems to me, can question the disinterestedness of the ladies and gentlemen who are actively supporting this enterprise, and who have, with the assistance of the Government, carried it along to the extent of its present development. Shall we stop here now after the Government in harmony with the petitions presented has recognized the excellent character of this enterprise, made contributions to it, said it was in the right direction, said this work was to be commended, said something of this kind was demanded by considerations of humanity? Shall the Congress of the United States now turn its back, as it seems to be the effort of some to have it do, and say we have gone thus far, but we will go no farther?

"Shall we appropriate money," says my friend from Missouri [Mr. BURNES], "to keep one woman and five children?" To this I invite the attention of the House for a little while. If the question involved here were only the care of one woman and five children, I would say no, at least not in this manner.

But the fact is we are not asked to appropriate money for seven persons alone. We are solicited to continue aid to a work which Congress has already and heretofore indorsed, and a work the necessities for which are more apparent to the promoters of this charity than to us who live remote from the place of its location—necessities that unavoidably grow out of this most unfortunate social condition in Utah, and which call loudly and imploringly for aid.

If the number now at the home is small, there are sufficient reasons not condemnatory of the enterprise or those managing it why it is so.

From the beginning the governor of the Territory assumed to decide in respect of an important feature connected with the work, namely, what class should be admitted to it, and while it is probable his decisions may have been technically correct, yet a glance at the cases rejected and the condition and history of each, so far as given, will convince those favorable to a liberal construction of the statute, with a view to its usefulness, that the construction should have been broadened or the law made more comprehensive.

I give the rejected cases:

Cases rejected by Governor West on the ruling of the law that only plural wives were included in its provisions:

First case.—Dolly Mitchell, fifty-third child of Bishop Mitchell; daughter of his seventh wife; mother had died; Dolly living in a polygamous family; was twelve years of age; on being rejected was employed as doorkeeper by the matron.

Second case.—Application made by Judge Henderson, Democratic judge of the Federal court, by letter, in substance as follows:

Mrs. David May; five children; Mr. May was employed in the silk factories of Glasgow, Scotland; was induced by missionaries of the Latter Day to come to Zion; arriving in Salt Lake found things at variance with the representations which had been made by the missionaries; was urged to go into polygamy; then resolved to leave the Territory.

The wife secured employment at the Continental Hotel, Salt Lake City; husband started East on foot by the Denver and Rio Grande Railway. The wife's health failed; took her five children and went to Provo for lighter work; found none; applied to the Mormon Church for help; was refused; appealed to Judge Henderson, exclaiming: "Must I starve, and my little ones, in this land of liberty?" Judge Henderson attempted to find the Bishop of Provo. The bishop took the under-ground, lest the woman had given information concerning his plural relations. Judge Henderson then made application to the Industrial Home for the woman and her five children; case rejected by Governor West.

Third case.—Mount Pleasant. Application made by Grace Murphy, Presbyterian school-teacher. Girl fourteen years old, whom I wish to get into the home, and also a younger sister; have kept them both in my home three months. I sent Emma away with the weight of her soul resting upon me, but I could not keep her longer; I still have the sister. The mother of these girls was left an orphan in her infancy; was brought up by the bishop, a polygamist, who made her marry a sixty-year-old polygamist when she was twelve years old. She now has four husbands.

Fourth case.—Springville. Application made by Hannah Breckinridge. Case: Second wife, sixty-three years of age, helpless in bed; no one to bring her a drink of water. No liberal has dared to help her but me, for they dread the attacks of the Mormons.

I am a widow, living alone with two daughters, and I am seriously threatened for the service I have rendered her. The Mormons have cut down my wood and drawn it away; they have fenced out the public road so I could not go to town to get supplies—all because I have given help to this Mormon woman. I know three or four other Mormon women for whom my heart is weeping. I wish the governor would send a detachment of soldiers to help them away. My home should shelter them. Ask the governor to assist me now and send commissioners to open the road.

This letter was taken to the governor and he declined to have anything to do about it, and rejected the cases.

Fifth case.—Pleasant Grove. Application made by the postmistress. Case: Old lady eighty-three years of age; came to Utah three years ago by request of Mormon relatives; has been abused and persecuted because she would not adopt Mormon practices. She was refused as not a legal applicant, but the old lady came to the home; said she was so unhappy she had to come, and they must take her. She is aunt to Bishop Brown's third wife. The matron wrote to Bishop Brown and asked what should be done with her. Answer by Mrs. Brown: "The bishop is in exile for polygamy. I don't want the old lady returned to me. The late law has thrown me on my own resources with five children. I can not take the burden." The governor said she could not stay over night in the home. The matron kept her five days; and now the Methodist Church are paying her board elsewhere.

It may be interesting at this point, in order to give an idea of the classes received into the home, to submit a statement of ten cases accepted and admitted:

ACCEPTED CASES—INDUSTRIAL HOME, UTAH TERRITORY.

First case.—Amelia Chatterton is the daugher of Bishop Mitchell, who was missionary to England in 1854. Mitchell had seven wives and fifty-three children. Amelia was married at fifteen years of age, by command of her father, to Jonathan Chatterton, as his second plural wife. Chatterton was living with his third wife, to whom he had never been married until after the passage of the Edmunds law; he was then married in order to evade arrest for adultery. Amelia, the second wife, was many times whipped by both Chatterton and the first wife. Chatterton struck her in the face so she bore blackened eyes for days. Just before Lossie's birth Chatterton stood over her with a pick-ax and threatened her life.

Second case.—Mrs. Bross, second wife of William Bross. Had eight children, three living; first wife living; brought three children to the home.

Third case.—Mrs. Lorrenson, first wife, lived two months with Lorrenson after he went into plurality, then left with her four children. During the years she lived with Lorrenson she had to wash, beg, herself and her children go barefooted in cold weather, while he paid the most he could earn to the church. When he took his second wife he mortgaged the home to her because the first wife rebelled against his going into polygamy.

After leaving Lorrenson she lived for weeks on one meal a day—herself and children—and often put her three boys to bed crying for food. And then she sobbed all night because another wife had her home.

Fourth case.—Helen Larsen; twenty-four years of age; plural wife. George Q. Cannon performed the marriage ceremony. Mrs. Larsen earned her own living for nine years, and Larsen appropriated to himself a large portion of her earnings. When Mrs. Larsen was sick in bed Larsen left her alone in the house for days.

Fifth case.—Mrs. Neilson; three children; married in the endowment-house by Brigham Young. Can neither read nor write. Never been in a house of more than one room; oldest child fourteen; never been out of the town in which he was born.

Sixth case.—Lizzie Littgon; third wife; was married by Daniel H. Wells in the endowment-house after the passage of the Edmunds bill. Brought three children to the home, one nineteen months old. Lived with Littgon until the second day before she left. Gave birth to two children in celestial marriage before the legal marriage.

Seventh case.—Mary K. Peterson; came to Utah in 1885 from Sweden with a band of one hundred and fifty. Married in plurality January 1, 1886. Second wife entered the home June 6; daughter born in the home August 14. Later was sent to friends in Wisconsin.

Eighth and ninth cases.—Elizabeth Clawson and Anna Bell, both second wives, were assisted with money and sent to friends in Chicago and Denver.

Tenth case.—Mrs. Jennie Hitches; converted to Mormonism in St. Louis in 1883. Came to Utah and was entertained in the homes of President Taylor and Apostle Woodruff; here the only conversation heard was, in substance: "Marry, marry in plural marriage, and become a high priestess." Was taken in plurality by Hudson. He made application for her admit to the home, and, on being questioned, said he had never married her; he was living with her from a purely medical standpoint by order of the priesthood. She had no children by the husband she left in St. Louis. Hudson had taken her simply to break down physical barriers.

It would certainly seem, if such is a fair indication of the work opening up in Salt Lake City under the auspices of this association, the people of these United States, in some way through their Representa-

tives in Congress, or by personal contributions, should aid its continuance. But let me present a little more concerning the history of this association.

The governor, acting either on his own motion or by direction of the board of control, but, as I infer, without consulting the ladies who were to go in and do the work, rented a moderate-sized house, furnished it, and provided limited facilities for its operation. It was not such a place, I think I am justified in saying, as should have been provided, but the lady selected as matron went in under his management and did the best she could in caring for such as came to the home. And while it may be true that the number now is small, during the first year the number was from twenty-two to twenty-seven, and a statement is made of the expenditures in their behalf. It is shown that but for a technical ruling of the governor of Utah more would have been admitted.

The labors of those assigned or employed by the association were continued and probably the best was done under the circumstances that could be done to make a fairly successful beginning.

Now, it is asserted and emphasized that at present there are only one woman and five children at the home. This may be true, but there are good reasons why this is so.

First, as I am informed by Mrs. Newman, is this: When the association received authority by the law of February 1, 1888, to manage its affairs, and, as it claims, to purchase real estate on which to build, they decided not to continue the existing home as a charity refuge or temporary shelter, but to conserve the funds for the new building then, and from the beginning, contemplated, in which industrial education should be taught, this training being, in the opinion of the board of directors, of far greater importance to the poor and dependent ones than mere temporary charity. The idea seems to be that when these dependent women and children come into the home they should, as soon as possible, be taught, and among other things special importance is laid on industrial education; so that, since February last, efforts to ascertain cases of charity and encouragement to those who came to consult about entering the home have been relaxed.

Second. The ladies and gentlemen connected with this work have constantly realized that under the conditions surrounding the home, the insufficiency of accommodations, their failure to bring the board of control to see as they did on the subject of opening the two departments, cooking and sewing, the apparent lack of active interest on the part of the board of control, but more especially the prospect of having a new building constructed on plans adapted to the uses for which it would be intended, led the board of directors to conclude the most important thing first to be done was to have premises of their own, with building and conveniences required for so important an undertaking.

If the association, prior to February last, was not as successful as its critics think it should have been, another reason exists, and will doubtless always stand as a powerful obstacle in the way of the largest measure of success under the most favorable circumstances, and that is the attitude of the Mormon press and priests toward any movement having in view assistance to dissentient female communicants and their children. But of this I will speak more fully presently.

I desire now to refer to what has been done since the last appropriation was made, and to do so briefly. Lots suitable for the purposes of the association, at a cost of $10,500, have been purchased, and a contract for the main part of a brick building, now in process of construction, let to one of the well-known contractors in the city; cost $18,000. This main building, with such internal conveniences as were deemed best, is to be completed for the sum, as I have said, of $18,000; but the contract provides, subject to further appropriations by Congress, that this main building shall be raised to a fourth story, and two wings, three stories high, constructed, the whole to cost about $50,000. Work is now progressing under this contract.

The main building is to be 37 by 52 feet, three stories certainly, and four if the pending amendment pass, the wings to be 31 by 46 feet, three stories conditional, as I have said, on the appropriation.

There are to be attics, also basement under all the buildings. Besides these a rear addition 21 by 27 feet, two stories with basement. Laundry in rear detached, 20 by 26 feet, one story. Full and complete plans and specifications for these buildings are on file with the Senate Committee on Appropriations.

But, Mr. Speaker, before passing to my concluding point, I wish to refer to a third reason why this enterprise may not have been as successful as its friends had hoped, and I make bold to affirm that this reason will remain a continuing hindrance to the fullest success until the power of Mormonism is in fact broken and shattered. As I am advised, and as is natural to suppose, the Mormon press in Salt Lake City, and no doubt throughout the Territory, has from the beginning, ay, from the time the friends of this charity in Utah began to discuss the feasibility of establishing such a home, strongly opposed the movement and did what it could to pervent its establishment and to impede its progress. It has attempted to bring the home into disgrace and have it regarded among Mormon people as a place to be avoided under any and all circumstances.

It has villified and slandered those who have been most active supporters of the home, and particularly the most active in instituting it. It has made this place as unpopular as possible, so that those who might make application, or would, if a respectable building were erected and under such management as the friends of the home contemplated, have no doubt to a considerable extent been deterred from doing so. And the result is the management, as I understand and have already said, realizing this state of facts, concluded it was unwise to make further effort to have people go there and enter the home and receive its benefits; and while they have not opposed any coming to it, they have preferred to wait for the erection and completion of the new building before undertaking to extend their efforts or to look after cases of this class, which doubtless on slight inquiry could readily be found.

Now, sir, if it is true that this building was of somewhat an inferior character, and if it be also true that the Mormon press brought its power to bear upon the people to influence a prejudice against it and its projectors—I say if it is true that they thus made war upon it, as I believe has been done from the day that this building was leased until the present time, can it reasonably be expected that such a fact would not have influence upon the minds of very many women who feel a sensitiveness about going to such a place, but who would go somewhere away from polygamy, from this terrible crime against law and common decency, if they could go to such a place as the new home will be. Is it therefore to be doubted that such conditions deterred many from going to the home during the time referred to who otherwise might or could have gone, taking this means to escape from an unnatural and loathsome relationship and practice? As early as 1886 the Mormon press opened out on Mrs. Newman and the then projected home in the following style:

[Deseret News, official organ of the Mormon Church, June 11, 1886. Editorial.]

A HUGE ANTI-MORMON SHAM—WHAT AN AGE THIS IS FOR HUMBUG!

Here is a proposition before Congress to give a little knot of schemers in Utah $100,000 to establish a home for "escaped" polygamous wives. It will not be surprising if it is given to the plotters to spend as they please. * * * The committee, of which Senator Blair is chairman, which made the report recommending the appropriation, were led away by the stories told by an experienced religious subscription circulator. Her name is Angie F. Newman. Her home is in Nebraska; she is an adept in gathering in dollars and dimes for sectarian purposes, and she claims to speak on this subject from knowledge as a resident of Utah. * * *

We have no objection to the expenditure of such portion of the funds as would be used for the proposed purpose in buildings and their fittings in this Territory. It would be that much money put in circulation. * * * But it would be much more of a profit to certain impecunious persons who have been figuring to finger a portion of it, and to others who lend their aid to the schemes. And we object to the falsehoods by which its appropriation has been rendered possible and to the deception which has been practiced upon the committee, and through them upon the country, that this project of a few cunning people in Utah, indorsed by some estimable but misinformed persons, and a coterie of pious but hoodwinked women in Ohio, might receive Congressional support and national money, while all the time it is a national and gigantic humbug.

Later, and on June 17, 1886, the Deseret News published a communication from an influential Mormon woman reflecting on Mrs. Newman and the efforts she was then making to secure an appropriation. It shows the natural animus that might be supposed to exist in a mind wrought up to an intense pitch of opposition not only against the agent, but also the cause.

Here it is:

THE ASYLUM-FOR-WOMEN SUBTERFUGE—OBTAINING MONEY UNDER FALSE PRETENSES—DR. FERGUSON SHOWS UP THE SCHEME.

SALT LAKE CITY, *June* 17, 1886.

Editor Deseret News:

The recent report of the Senate Committee on Education and Labor, and the recommendation of the chairman, Mr. BLAIR, that Congress should appropriate $100,000 for the establishment in Utah of an asylum for women escaping from polygamy, justly excites feelings of profound contempt, as well as indignation, amongst the Latter-Day Saints. During my recent mission to Washington I had several opportunities for conversing with Mr. BLAIR, and had one interview with him especially on the subject of Mrs. Newman's application to the committee. The most forcible statements were made to him of the feelings and views of "Mormon" women about such an institution, and a most positive denial of the falsehoods which she urged as a pretext for such an appropriation.

It is not, therefore, through ignorance that Mr. BLAIR has presented such a report and amendment, but from a desire to pander to popular prejudice, which is strangely inconsistent with his verbal expression of a wish to do justly in this matter. The subjoined letter was sent to the Washington Evening Star in reply to statements published in that paper in regard to Mrs. Newman's plea before the committee, but, though falsehood found a ready circulation, truth was not permitted to put in an appearance.

The substance of this same letter was also sent to Mr. BLAIR and the committee by the delegation of "Mormon" ladies in Washington, and since my return I have been requested to send it to you for publication.

"*Editor Evening Star:*

"In your issue of May 5 I read the statement made by Mrs. Newman before the Senate Committee on Education and Labor in behalf of an appropriation for some charitable institution in Salt Lake City, which she professes to represent. The principal ground on which she makes this application appears to be the benefits thus offered to 'Mormon' women who wish to escape from polygamy. * * * I most emphatically protest, in their name, against any such reason being urged as a pretext for obtaining a share of the public funds. There is, I believe, a severe penalty enforced against persons in private life who obtain money under false pretenses, and it seems to me but a matter of justice that any individual who so shamelessly demands a Congressional appropriation on grounds that have no existence in fact, and for a purpose to which such moneys will never be applied, ought to be similarly dealt with. It is high time that the practice of begging for the 'Mormons' should cease, and the benevolent and charitable people in the Eastern States be no longer imposed upon by such flimsy and unreliable stories as those that are the stock in trade of these professional beggars and clap-trap lecturers.

"Yours, for truth and right,

"ELLEN B. FERGUSON."

On October 14, 1886, in an editorial entitled "Beginning at the wrong end," the editor of the Deseret News, after referring to the home, Mrs. Newman, and a certain public meeting at which Governor

West and others spoke, among other things less indicative of feeling in alluding to the home, said:

Is there a genuine philanthropist who takes in the situation of affairs here, and appreciates the amount of suffering entailed upon women and children by the crusade against the Saints? Does he desire to alleviate the afflictions of the distressed? If there is, it appears to us that his efforts will be directed towards checking the manufacture of misery rather than wasting energy in attempts to alleviate it after it is evolved. It is a shame that this great Government should, through a few of its officers, be transformed into a factory for the production of human distress. Genuine and intellectually directed effort would endeavor, so far as practicable, to dispense with such institutions as the Industrial Home. Those who seek to alleviate suffering by such institutions without attempting to stem the tide of its production are in the position of a physician who allows disease to make ghastly inroads upon the physique of his patient, and then applies nostrums in the form of a cure almost as disastrous as the complaint. Proper and intelligent endeavor would be to give such an institution as the alleged home as little necessity for existence as possible.

But I present now a communication which evidently was penned by some one who wrote *ex cathedra* on this subject. It is calculated, I feel justified in saying, to greatly discourage Mormon women from making application to the home.

THE INDUSTRIAL HOME—A VIGOROUS WRITER MAKES IT BETTER KNOWN.

NOVEMBER 8, 1886.

Editor Deseret News:

The devil does not always show an iron fist; sometimes he holds out a velvet glove. The Latter-Day Saints must learn not only to bid defiance to the former but to detect the hand giving shape to the latter.

In a letter to the News of the 15th ultimo, descriptive of the aim and object of the proposed Industrial Home, there are certain suspicious forms and lineaments partly hidden under such a glove which we wish to make bare.

For instance, here is the glove:

"In the outset, such industries will be started as will enable people to enter the home with perfect self-respect."

Here is the hand beneath:

"SEC. 221. * * * To aid in the establishment of an Industrial Home in the Territory of Utah, to provide employment and means of self support for the dependent women who renounce polygamy * * * and to aid in the suppression of polygamy therein, $40,000."

"It is something to emancipate a soul from civil bondage. It is more to emancipate a soul from the deathless bondage of a false faith."—*Mrs. Angie F. Newman.*

Is it possible that among the Latter-Day Saints are women so blind as not to see the barb beneath the bait in the foregoing? Suppose this immaculate board of control should ever formulate an oath of renunciation not trenching upon belief—which, in view of their record in the courts, would require the charity that believeth all things—what will be the character of the influence to be brought to bear upon them when once they are safely within this so-called home?

Mrs. Newman foreshadows not only the nature of this influence but the spirit in which it will be used, namely, "to emancipate their souls from the deathless bondage of a false faith."

Can any Latter-Day Saint who has made sacred covenants with God enter such a home (?) with perfect self-respect?

"Come into my parlor,
Said the spider to the fly."

The fact is "Mormons" have no more need of this Industrial Home with the mission assigned to it than they have of the Edmunds law. Both are equally reprehensible; one is the iron fist, the other the velvet glove, but both are the limbs of the adversary of truth.

The home may now rest under the shadow of being unknown or misknown, but it gains nothing by being better known. Latter-Day Saints should hold their noses when they pass it by, for these reasons:

First. It was conceived in falsehood.
Second. It was born of prejudice.
Third. It is being reared and fondled by their bitterest enemies.
Fourth. The devil's benediction rests upon it.

N. L. N.

These are a few clippings, and only a few, that happen to be at hand from Mormon papers. I am informed that many similar attacks on Mrs. Newman and the enterprise she is attempting with so much loyalty and ability to serve have been from time to time made, and it is to be presumed they will continue to be made until the cause represented by the association, supplemented and aided by the supremacy of the laws of the land at some not very remote day, we trust, to be established in Utah, shall triumph, and polygamy, that certain "twin relic of barbarism," shall have been driven beyond the limits of the Republic.

The gentleman from Missouri [Mr. BURNES] in his remarks has gone so far as to say, in speaking for the committee of conference on his side of the House, that "they" are willing to make provision for Mrs. Newman's services—meaning, I suppose, her services here from time to time in presenting the cause of this Home Association to Congress. Mr. Speaker, I am authorized by this lady to say that under no circumstances would she consent to any appropriation being made which contemplates payment of any sum, however large or small, to her, and the gentleman's generous proffer is most respectfully declined. Whatever may be done to reimburse her for expenses paid by her on behalf of this charity must, if received at all, come through the proper channels of honorable financial management of such funds, if any, as may lawfully be used for such purpose. She is not here now as a paid lobbyist and never has been, and while grateful for the suggestion of the gentleman from Missouri, she will receive nothing by way of an appropriation for her benefit.

Something has been said about the progress made in suppressing polygamy under this and under Republican administrations, and an effort has been made to show that the Democratic party has already suppressed this crime. It is not yet time to divide "honors." The vile practice is not yet extirpated; it still lives in the teaching and lives of many of the church, if other than Mormon testimony can be received as reliable. It is asking too hasty a surrender of opinion on this subject to be requested to accept the statement made by some that polygamy, a primal tenet of their so-called Christian polity, has now been extirpated or solemnly and forever discarded, and only within a little more than one year past, and when a well-planned attempt was being made by the Mormons to secure admission into the Union as a State. Deep-seated religious convictions pervading the general mind and influencing the actions of thousands of people bound together by such ties as bind these Mormons are not so easily and conveniently surrendered forever.

I am free to say I believe as the younger generations come on and realize that this primal tenet and practice are widely at variance with the standard of accepted morals in the most intelligent parts of the civilized world, and if accompanying this the severe penalties of the law are steadily and unrelentingly administered, polygamy will give way and Mormonism as a religious faith disconnected from polygamy may continue to exist as one of the religions of the world. That time has not yet come, however. The present generation must give way first to another, and I trust one more law-abiding.

Mr. Speaker, the history of the Democratic party toward this evil, which is now contending so stubbornly against Federal authority, is this: No Democratic platform from the institution of the Mormon Church in 1831 has ever uttered a word of condemnation of polygamy, and unless I am in error, no Democratic President, except Mr. Cleveland, has ever pronounced against it and recommended Congressional action looking to its overthrow. In his inaugural address Mr. Cleveland did refer to it in terms indicating opposition to the system, and this was followed by a reference to it at some length in his first annual message to Congress. Since then not a word from the President or Democratic conventions, State or national, has been heard.

I give President Cleveland the credit for what he said in condemnation of this institution of polygamy. I am willing to give such credit as is rightfully due to any Democrat, be he a member of Congress or be he a citizen, who takes a position, as many of them have squarely and fairly taken, against the continuance of this evil practice.

But, sir, when it comes to claiming for the Democratic party the larger share of honors that may be due any person or party for the recent prosecutions in Utah and the progress which has been made there in attempts to suppress and extirpate polygamy, I think gentlemen on the other side are going entirely too far in thus arrogating to themselves and their party unusual credit for the condition of things now existing by reason of prosecutions under laws passed by Republican Congresses or framed and first passed by a Republican Senate.

What is the fact in regard to convictions under these laws? I am advised by a gentleman who is well acquainted with the history of judicial proceedings in Utah that three-fourths of the convictions for violations of any laws that have been enacted by Congress against polygamy were convictions resulting under Judge Zane, a Republican appointed by President Arthur, and until recently chief-justice of the Territory.

He has lately been superseded.

Mr. CAINE. His term expired.

Mr. STRUBLE. As the gentleman from Utah has said, his term expired, and Mr. Cleveland, as was right and proper from his standpoint, appointed his successor. I have no question to raise upon the appointment of a Democratic chief-justice for the courts of Utah; but I have noticed since the appointment of one of the judges there—Judge Sanford—distinguished Mormons, long under indictment and in hiding, are coming out and submitting themselves to the jurisdiction of the courts.

It appears from the public prints that very soon after the appointment of Judge Sanford the leading violator of the Federal statutes, George Q. Cannon, one of the most noted leaders and violators of law, issued from his place of hiding, came into court, and pleaded guilty on two indictments.

Mr. CAINE. Excuse me——

Mr. STRUBLE. A small fine——

Mr. CAINE. Having been convicted, he is now in the penitentiary under sentence of one hundred and seventy-five days' imprisonment and $450 fine.

Mr. STRUBLE. I was about to add when interrupted by the gentleman that a small fine and sentence of imprisonment for less than three months in each case were imposed on him. The press also informed us that a certain bond for quite a large sum had been forfeited. But the point I wish to make is this: On the appearance of a Democratic chief-justice George Q. Cannon came to the surface and submitted himself to the jurisdiction of the court, whereas he had theretofore succeeded in evading the officers of the law.

It may be the sentences and fines imposed were reasonable under the indictments. I do not know as to that, but I do know that this noted violator of the law appeared willing to trust this Democratic judge in making disposition of the indictments against him. But, Mr. Speaker, whatever may be the fact as between the two parties in Congress or out, it is true that up to this time the Democratic and Republican residents of Utah have been working together earnestly in opposition to Mormon rule and polygamy. These people are "on the ground," so to speak; they have for years resided in that Territory; they know better than we the facts concerning the defiance of law by that people and the practices obtaining among them; and while they are thus agreed it appears to me we should follow their example until polygamy is indeed driven from all the Territories in which it now exists and over which it has seemed for years to have been rapidly spreading.

Estimates and Appropriations.

It is not the amount of appropriations that creates anxiety in the minds of the people, but it is the integrity and wisdom with which such appropriations are disbursed and the honest value received therefor which give them confidence and contentment.

SPEECH

OF

HON. JAMES N. BURNES,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, September 18, 1888.

The House having under consideration the report of the committee of conference on the disagreeing votes of the two Houses on the bill (H. R. 10540) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1889, and for other purposes—

Mr. BURNES said:

Mr. SPEAKER: It is not my purpose at this particular time to fully reply to the political speech of my colleague of the Committee on Appropriations, the distinguished gentleman from Illinois [Mr. CANNON], nor to make extended comment upon his statement of figures and his varied and unsupported deductions therefrom touching the general subject of estimates, appropriations, and expenditures on the part of the General Government pending the administration of President Cleveland.

When the general deficiency appropriation bill is returned here from the Senate (if, indeed, in the dire necessity of the Republican majority of that body to cover the nakedness of its pretenses respecting revenue questions, that bill shall ever find its way back to this end of the Capitol) I shall then endeavor to give the House, in the light of known and ascertained facts and in a business form and manner, a true, impartial, and non-partisan statement of estimates and appropriations, regardless of political advantage of any nature.

But should I transcend somewhat this self-imposed limit, I must plead in extenuation the possible necessity for immediate and positive refutation of the erroneous statements and indefensible inferences and conclusions which characterize the remarkable and studied effort of my friend from Illinois.

I can not, however, permit this occasion to pass without submitting some few observations that may serve to operate as an antidote, *pro tanto*, for the cunningly-distilled poison which, even now, is dripping from consolidated telegraph wires in every quarter of the land. The ability and learning of the gentleman from Illinois, fully recognized and conceded by us all, have not enabled him to interpose a barrier against instantaneous perception of his erroneous assumptions, his injustice in conclusions and craftiness of insinuation. Many of these are so patent and undisguised they almost fail to demand the dignity of challenge.

The gentleman from Illinois gravely calls attention to the estimates of appropriations transmitted annually and from time to time to Congress through the Secretary of the Treasury, and because they aggregate an amount in excess of the appropriations, he makes them the basis of a charge of extravagance against the executive departments of the Government under Democratic administration. It will need but a brief statement of facts to demonstrate the utter baselessness of this accusation.

What are estimates of appropriations and how are they made? They are the mere opinions of perhaps a thousand officials in the Executive Departments expressed as to the amount or amounts of money they desire to have appropriated. Each estimates for his own Department, bureau, division or office, and is probably not inclined to yield the benefit of a doubt against himself. But the Secretary of the Treasury, who *pro forma* transmits these opinions to Congress for its consideration, can not reasonably be expected to have immediate personal or official knowledge of their correctness in respect to extravagance or otherwise. He forwards these estimates to the House, where in committee their authors are examined, cross-examined, and frequently re-examined by subcommittees as to each item. Even the heads of Departments do not escape rigid examination by the subcommittee in order to reach the correct basis for appropriation.

Here permit me to advance the proposition that while Congress is responsible for appropriations, the Administration is responsible for the expenditures. Estimates are but the means to secure an end—a tool used upon a work, an aid, instrument or agency employed in perfecting and completing the object desired. The gentleman from Illinois might with equal propriety criticise and condemn the architecture of a building because of the crudity of its scaffolding, as to charge extravagance upon the Administration, not because of its expenditures, but on account of the mere preliminary recommendations and opinions vouchsafed by departmental officials regarding amounts thus estimated.

I disavow all reflection upon any official of the Executive Departments, either those now incumbent or of previous administrations, when I state that, for many years past, a pernicious custom has obtained to inflate rather than diminish, or even restrict within reasonable bounds, the sums total of many items estimated for. Possibly apprehensive that the Appropriations Committee, being charged with the duty and responsibility of closely scrutinizing the outlays and liabilities of the Government, might and doubtless would be disposed to exercise prudential economy, these officials are prone to frequently leave a wide margin to compensate for the probability of reduction in amounts. This is particularly the case in estimating for expenses of a contingent nature. In this way they seek to strike the happy medium and take all the chances incident to profit and loss. Although this practice of overestimate is rarely, if ever disguised, and stands out embossed and self-confessed, it is no less mischievous and misleading.

The gentleman accuses the Democratic party of extravagance, because, as he alleges, the appropriations made by Congress for the four years of the administration of President Cleveland are $96,000,000 in excess of the amount appropriated for the four years immediately preceding. The figures showing the totals of appropriations are open and of easy access to all, but the justice or injustice of deductions or inferences to be drawn therefrom is not so plain nor of such easy determination, especially to the uninitiated. For the four years from 1885 to 1889, Congress may have appropriated $96,000,000 more than it appropriated for the four years from 1881 to 1885, without being properly amenable to charges of prodigality or extravagance.

A careful analysis of the nature and character of the individual items of appropriations during the two periods to be contrasted, can alone determine whether economy and frugality are upon the side of the greater or the smaller aggregate of appropriations. Before such charge of extravagance can be justly preferred, it must be ascertained what proportion of total appropriations was disbursed to meet the usual and ordinary expenses of government, and what proportion was provided for extraordinary obligations or liabilities originating prior to the period for which the appropriations were made.

The gentleman from Illinois does not claim to have made such an analysis. For all he has told us, 95 per cent. of the total appropriations made from 1881 to 1885 may have been expended in paying for the ordinary service of Federal administration, and only 75 per cent. of those made from 1885 to 1889 may have been so consumed. So we can concede the increase of $96,000,000, as stated, and yet safely deny the deductions and inferences in which the gentleman has been so swift to indulge. An increased aggregate of appropriation is therefore no evidence of extravagance; but even if it were, in what condition are the gentleman from Illinois and his party associates at the other end of the Capitol, that they should complain of the representatives of the Democratic party on account of such increase?

Speaking more particularly for the appropriation bills which originate in the House Committee on Appropriations, I submit to the gentleman what increase in any one of them did he ever oppose? What proposed increase in any one of them, after it had been reported to the House and was under consideration in Committee of the Whole, did the gentleman ever fail to support?

Will not the gentleman admit that, if all the appropriation bills had passed both Houses as they were made up and reported by the House Committee on Appropriations, the aggregate would have been a less percentage of increase than that which marked the growth and increase of the country in population, public improvement and diversified industries?

The charge of extravagance in appropriations for increases made through amendments added by a Republican Senate, comes with a bad grace from representatives of that party. Surely the wolf was not more unreasonable with the lamb for disturbing the water below him. Increased appropriations have been forced by Republican influences upon bills prepared by Democratic committees, and now, with complacency and self-satisfied air of triumph, those identical Republican influences, at the closing hours of the session, sneer at us for results of which they were the sole and only cause.

I can not forbear commending the speech of the gentleman to the consideration of certain of my party friends on this the Democratic side of the House, who have sometimes followed the lead of my friend from Illinois and others of his party in their efforts to override the carefully-considered work of the Appropriations Committee. They can now perceive, and but too clearly, that partisan advantage is the essential life-essence of the politicians who constitute the minority of this body. Partisanship is their cloud by day and pillar of fire by night. Between the Republican Senate and the active, zealous and able efforts of my excellent friend from Illinois and his party associates here, the judgment of the House committees has been too frequently reversed and set at naught.

Mr. CANNON. Allow me one moment. I do not think I am responsible for the increase of these appropriations. The gentleman and I have worked upon the Committee on Appropriations together, and I would be glad if he would point out any instance of that kind for which I am justly responsible.

Mr. BURNES. I can not go into that matter at this time, but I will say that if my distinguished friend will point to a single proposition of

appropriation with reference to which he failed to support the largest amount, I will suspend my remarks until the general deficiency bill shall be returned by the Senate.

Mr. CANNON. That, my friend will allow me to say, is not a fair statement. The gentleman has acted with me upon the Committee on Appropriations for a number of years, and he knows as well as I do that politics very rarely enter that committee-room. If he will look back over my record, he will understand that I have not been in the attitude of increasing appropriations. Where I have asked further or additional appropriation, it has been for reasons assigned at the time and, in my judgment, proper.

Mr. BURNES. Let me say—indeed, I feel it my duty to say—that the gentleman is correct in his statement that politics very rarely enters the room of the House Committee on Appropriations. Business methods and principles are applied to business propositions, and none of the members are more able, conservative, or clean-handed than the distinguished gentleman from Illinois [Mr. CANNON].

It is not of his work in committee that any one has a right to complain. Here, on the floor of the House of Representatives, in the broad view of his countrymen, with the inspiration of political combat illumining his soul, he is sometimes, I am sorry to say, suspected of entertaining a slight partisan bias in favor of the Republican party. [Laughter.] Indorsing his integrity as equal to that of any gentleman on either side of the House, he will pardon me for adding that, whenever party questions are under consideration, he is at least as honest politically as he can afford to be. [Laughter on the Democratic side.]

Mr. CANNON. I want to return the compliment of the gentleman from Missouri [Mr. BURNES] so far as I can. I have thought sometimes, when he has had the control of appropriations in this House, and when under his lead appropriations have not been made, even where judgments had been rendered and where in one notable instance $100,000 had accrued as interest upon a judgment of the Court of Claims because the gentleman opposed an appropriation for it—I refer to the Choctaw claim—I have thought at times that the gentleman was not as honest politically as he could afford to be. [Laughter on the Republican side.]

Mr. BURNES. Ah, the gentleman bears witness against himself. Here are nearly $3,000,000 appropriated and paid this year for the Choctaw claim with the approval of the gentleman from Illinois, and it constitutes a part of the alleged $96,000,000 increase of appropriations, when, as all know, the claim originated more than half a century ago here in this city and received continuous and tender nurture during all those years.

I did oppose the appropriation for this claim. It was a claim founded in doubt, prosecuted in uncertainty, and ended in exposure and disgrace. In my opinion, it was without merit and void of every element of justice. The form and covering with which fifty years of effort on the part of a patient or impatient lobby had dignified it, did not change its nature nor give it a character before this high tribunal, in which is vested an independent part of the sovereignty of the people.

I am proud of my vote and action in opposition to the payment of this claim, and commend to the consideration of the gentleman the disgraceful result of the appropriation. When it was too late to remedy the mistake, claims for a "fair divide" carried into the courts of the District of Columbia, by bills of injunction and otherwise, one against another, developed the fact that over $1,000,000 of the appropriation had been retained by parties in this city for services and expenses of the patient nurses of the now famous or infamous Choctaw claim. Is the gentleman still satisfied with his vote to pay it? But I should not be led away from the general subject of appropriations.

It is not, Mr. Speaker, the amount of money appropriated that causes anxiety upon the part of the people, because, unless they have carefully studied the vast machinery of this Government, with its almost innumerable agents and servants, they can not determine what the aggregate of appropriations should be; yet they reach substantially correct conclusions as regards the economy or extravagance of every administration. I took it for granted that I was a fair sample of the average intelligent American citizen until I came to this House and was buried in yonder committee-room. [Laughter.] But even if I were not mistaken in this regard, I admit that I had no adequate conception at the outset of my Congressional career, either of the details or of the aggregates of necessary appropriations. The little I may know now of this subject I have literally dug out of the committee-grave by constant study and unremitting labor.

So it is and must be with others besides myself. True, we have the examples and opinions of our predecessors, but each new object of appropriation is made to assume a special and particular form, when, as is often—too often—the case, the best legal talent of the country is employed to divert it from the safe paths of precedent and opinion by specious arguments and moving sentimentalities.

The work on appropriation bills of the distinguished gentleman from Indiana [Mr. HOLMAN], his examples and his teachings, together with those of the equally distinguished gentleman from Pennsylvania [Mr. RANDALL], establish landmarks and rules of action which future generations may safely observe. Avoiding parsimoniousness, these gentlemen have ever sought by strict, rigid, and definite appropriations to give every dollar necessary for respectable, honest, and economical administration and no more. But from 1875 to this hour, their well-directed efforts on behalf of proper economy have been stigmatized as "cheese-paring" by a certain class of statesmen, who now charge in effect that these stalwart economists have suddenly become prodigal and extravagant in the matter of appropriations. Such men do not change so swiftly and radically.

Sir, it is not the amount of money that may be appropriated that causes anxiety or alarm to the people, but rather the character of the objects for which it is appropriated and the spirit of honesty and fidelity with which it is disbursed. The gentleman from Illinois says that for the four years' incumbency of President Cleveland, Congress has appropriated $96,000,000 more than was appropriated for the four years of the Garfield-Arthur administration. Bear in mind that he is charging responsibility upon the party of which I am an humble member for this alleged increase of appropriations. Let us see. If the charge is true in form, it certainly is not true in substance.

I assume that the aggregate of appropriations for the four years ending June 30, 1889, over the aggregate of the previous four years will amount to, say, $96,000,000, but the exact amount can not be stated until all the appropriation bills are finally passed. What objects of appropriation caused this increase?

First, unusual obligations originating under former administrations, the Choctaw claims, and the Alabama claims awards	$3,627,813.90
Second, the general postal service	45,490,485.14
Third, the Navy	17,010,562.12
Fourth, pensions	12,819,093.32
Fifth, increase on account of fortifications and armament of the same	2,320,000.00
Total	86,267,954.48

Are not these objects of appropriations approved by the gentleman from Illinois? He tells us he favored the payment of the Choctaw claim, and he does not object to the payment of the Alabama awards. Did he not approve the payment of the Fox and Wisconsin River claims? And were they not all legacies of indebtedness originating long before the advent of the present Administration, and were they not handed down to it for no purpose except for payment? The gentleman, in fairness of calculation and speech, should then eliminate these sums from the alleged increase of appropriations—not only these sums, but also numerous others of like nature which at this moment I can not attempt to state. What else should he eliminate?

During the four years' appropriations pending Mr. Cleveland's administration, the House of Representatives originated and passed appropriation bills sufficient for a wise and economical administration of every branch of the public service. To these bills the Republican Senate added amendments aggregating $81,777,447.24; so that, if the Democratic House had acquiesced in the bills just as they passed the Republican Senate, the aggregate increase of appropriations for the four years would be $58,547,632.91 more than it is, or $154,932,946.70, instead of the $96,000,000 indicated by the gentleman from Illinois.

Again I ask the gentleman from Illinois, should he not in like fairness of calculation and speech give credit to the Democratic House for this sum of $81,777,447.24 which his brethren and colleagues of the Senate by solemn enactment declared to be an administrative necessity?

The same fairness in calculation and speech requires the elimination of another important item from the $96,000,000. During the four years of the present Administration the Republican Senate, by stubborn resistance to the conferees on the part of the House, succeeded in forcing increased appropriations on the several House bills aggregating $23,229,814.33. The gentleman now includes this sum in his calculation and makes it a part of the $96,000,000 of alleged increase in appropriations on which to charge the Democratic party with extravagance. If this be not rank partisan injustice, I challenge any one to point to a single more pronounced instance of that character.

Now, with these amounts subtracted from the $96,000,000—to say nothing of others of like character not now occurring to me—there may yet be a seeming rather than an actual increase in appropriations for which the Democratic party can justly be held responsible; but even then, there is not balance enough of the $96,000,000 left to represent the current increase in population or the progress and advancement of public works.

Here, Mr. Speaker, I might close my remarks with a just claim that the charges, deductions and inferences of the gentleman from Illinois concerning increase of appropriations for the past four years, were fully met and repelled; but I have another and more pleasing answer.

As I have previously averred, it is not the amount of money that is appropriated or expended which causes anxiety in the minds of the sovereign people, but it is the integrity with which such appropriations are disbursed and the honest "value received" which inspires the country with confidence and contentment.

One of the items of increase constituting a part of the $96,000,000 relates to the Navy, under the wise, able and honest administration of that Department by the present distinguished and honored Secretary. The amount of this item is $17,010,562.12.

On the 4th of March, 1885, the present Administration, looking back over a period of twenty preceding years, was confronted with an aggregate expenditure of $365,000,000, disbursed in behalf of an alleged

American Navy. When the integrity of the administration of the Department during that period was considered, and when the "value received" for that vast expenditure was examined and inventoried, shameful marks of maladministration and empty shells of worthlessness constituted the Department's inheritance. Chaos or disorder marked every bureau of the service; there were expenditures, but no battleships; expenditures, but no Navy. The $365,000,000 were gone, but the Navy which ought to have been created was invisible. Even this extraordinary sum of money, if it had been honestly and intelligently expended in ship-building and armament, would have been justified by the people at large, who look mainly to the integrity and wisdom of disbursements and not so much to the amount of appropriations.

How is it during the past four years? Not a dollar has been wasted, nor a dollar misplaced. Integrity, vigor, wisdom, economy, and "value received" are conceded, even by all of the Secretary's political adversaries, to have been the distinguishing characteristics of his superb administration. Sir, we have appropriated this excess of $17,010,562.12 for a tangible and existent American Navy, and we are proud of it—proud of the Navy and proud of the appropriations! Four more years of like administration and our naval standing and power upon the high seas will have been regained. In the progress of this great reform inaugurated by Secretary Whitney, in the contracts made, in the work accomplished, in the disbursement of appropriated millions, not a whisper either of fraud, accident, or mistake has been heard. Even in this era of indiscriminate defamation, no speck of calumny tarnishes the fair record of his clean administration. The President and the Secretary are above the possibility of reproach, and their subordinates in the Department bureaus, and in every branch of the naval service, are respected and honored for their successful and faithful labors. [Applause on the Democratic side.]

"Look here upon this picture, and on this," which preceded it. With $365,000,000 worse than wasted in twenty years, with remembrances of maladministration by Robeson, and of questionabl contracts and construction by Roach, I venture to draw the veil of forgetfulness over evils of the past, and repeat that it is not the amount of money appropriated or expended which causes anxiety to the sovereign people, but it is the integrity with which appropriations are disbursed and the honest "value received" which give the country contentment and confidence. [Renewed applause.]

Another item of increase constituting the $96,000,000 relates to the postal service. This amount aggregates $45,490,485.14. As the Committee on Appropriations have not had control of the bill for this service since the Forty-eighth Congress, I hesitate to speak of appropriations reported by the Committee on Post-Offices and Post-Roads in the presence of the eminent gentlemen of that committee, who are much more able than myself to do justice to the subject. But whence comes that augmentation, and what have we to show for it?

It arises from an immense increase in the weight of the mails, stimulated and encouraged by the reduction of rates of postage, near the close of Mr. Arthur's administration, on all classes of matter; from the immense increase of mileage in the railway mail service, the extent of which will be better understood when I state that in the past year alone new postal service has been placed upon 12,000 miles of additional railway; from the rapid increase of population and the growth and development and the spread of settlement and habitation all over our vast country; from the great extension of the free-delivery service to one hundred and twenty-one additional cities, and finally from an extended star route service, by which the mails are carried almost to every citizen's door.

These are some of the beneficent works of progress in the interest of all the people and the direct cause of increased appropriations for the postal service. But let us remember that among these appropriations, we do not find a single dollar of private subsidy or tribute, large amounts for which purpose a Republican Senate fiercely and repeatedly sought to force upon a Democratic House. Nor do we find that a dollar has been wasted or misspent; nor has a breath of scandal touched the fair name or fame of either of the honored gentlemen who have administered the Post-Office Department, nor of any of their subordinates.

Over the darkened past of former administrations of this great branch of the Government; over millions wasted and given in subsidies, and other millions stolen; over prosecutions and trials without convictions or recoveries, and over opulent malefactors who unblushingly walk the streets unwhipt of justice, I again draw the veil of forgetfulness, if not forgiveness, and repeat the shibboleth: It is not the amount of appropriation which disturbs the people, but rather the lack of integrity in its disbursement, for such shortcoming brings condemnation to any party. [Applause on the Democratic side.]

Still another item of increase constituting the $96,000,000! This amount is $12,819,093.32, and was appropriated to pay pensions to worthy soldiers of the Union.

Sir, I have myself seen poor, ignorant, and deluded colored men shed honest tears of anguish over the election of a Democrat to the Presidential office. They had been cruelly deceived. They had been made to believe that, with the advent of this administration, they would be remitted to a condition of slavery; and I have seen not a few applicants for pensions deeply grieving because they had been led by Republican partisans to apprehend that the same event would deprive Union soldiers of their pensions, or at least prevent the granting of any more. After four years of results under Democratic administration, we can point with pride to the fact that individual, personal liberty was never before so secure, and that the increase of pensions to the soldiers of the Republic has so frightened the jealous souls of Republican politicians, that they openly criticise the increase of appropriations, under Democratic auspices, to pay them. The gentleman from Illinois who arraigns us for an augmentation of appropriations to the amount of $96,000,000, takes no account of the fact that part of such increase is the sum of $12,819,093.32 for payment of pensions. Does he object to that increase? If not, why does he include it as a part of the $96,000,000 for the appropriation of which he has dared to charge us with extravagance? [Applause on the Democratic side.]

We had supposed, Mr. Speaker, that the gentleman from Illinois and his party associates had not ceased to pose as the champions and friends *par excellence* of the late soldiers of the United States, but with all their great capacity for political maneuver, we certainly had no expectation that they would advertise themselves as having no sympathy with objects of legislation and appropriation intended to increase pension facilities and to pay to the utmost farthing the sums due to our maimed, wrecked, destitute, or suffering heroes, their widows and their orphans. Have they not thrown off their disguise? Will they not now acknowledge that the Democratic party is the true friend of our veterans, and their most liberal defender and supporter? We have increased the rate of pension to the widows, the rate of pension to nearly every class of serious disability, added during the fiscal years 1886, 1887, and 1888, under the administration of Mr. Cleveland, 156,303 honored names to the pension-rolls, and appropriated from the Federal Treasury a sufficient amount to pay all, and yet at the close of our patriotic work we find ourselves criticised and our appropriations questioned by the gentleman from Illinois and the Senator from Iowa, chairman of the Senate Committee on Appropriations.

To the late soldiers of the Union in my district, and in the whole State of Missouri; to the late soldiers of the Union in the States of Illinois and Iowa, and to those of the whole country, I submit the issue which the gentlemen in political desperation have precipitated, without the slightest apprehension as to the justifying verdict of an intelligent and discriminating constituency. Again I say the $12,819,093.32 increase of appropriations for pensions is, to that amount, a part of the $96,000,000 for the giving of which our party is called upon to bear the burden of the gentlemen's denunciations or criticisms, and to suffer vicariously from their eloquent lips for maintaining the rights of our worthy pensioners. [Applause on the Democratic side.]

Mr. CANNON. Would it interrupt the gentleman from Missouri to place a statement of fact on file in that connection? I hold in my hand a statement of the appropriations for pensions for the four years of Cleveland's administration and the four years of Arthur's, and that statement shows that the appropriations for pensions were as much under Arthur as under Cleveland.

Mr. DOCKERY. That is not correct.

Mr. BURNES. If the gentleman asserts that, then I need only say that it involves a dispute between us in regard to figures which can be verified and settled in a moment. I have mine, and after careful investigation of the record I am perfectly certain they are accurate. The gentleman has his figures also, and, no doubt, believes them to be correct. It will be an easy matter for any one who has a doubt as to the correctness of my figures to make the examination for himself of the record of appropriations; but I regard it as almost impossible that my calculation can be incorrect, or that my friend's statement can be sustained.

Mr. CANNON. Let me state further, in exact justice to the gentleman and claiming it for myself, that under both the administrations every dollar has been appropriated for the payment of pensions the law called for promptly and in full, and I do not understand the gentleman from Missouri to criticise former administrations for the appropriations. But when he seeks to make me occupy the position of criticising the pension appropriations, he is not worthy of himself.

Mr. BURNES. I will ask the gentleman (whose temper gets the better of him at times, while mine, thank God, I can restrain) to state if he did not say in his speech just made, that the total of appropriations for the four years of Cleveland's administration exceeded the appropriations for the four years preceding by ninety-odd million dollars?

Mr. CANNON. I did.

Mr. BURNES. Then another question. Did you not further take into account in the making up of that sum, $12,819,000 for the increased pension-list?

Mr. CANNON. If such be the increase, I did. [Derisive laughter on the Democratic side.] And now——

Mr. BURNES. And now let us leave it there. I did not interrupt the gentleman in the whole course of his speech.

Mr. CANNON. If the gentleman wants to be so unfair as to leave it there, he has the power, of course.

Mr. BURNES. I do not wish to be unfair, and the gentleman knows it, but he has been a little ferocious in some of his remarks. [Laughter and applause on the Democratic side.]

Mr. CANNON. I accused you of increasing the salaries of your Democratic officials who were not soldiers. Answer that.

Mr. BURNES. Now, I am sorry that my friend from Illinois does not seem to like it. [Laughter.] But I will say if he gets angry at this he ought to be here when the general deficiency bill comes in. [Renewed laughter.] But I can not change the issue as suggested by my friend. If any salaries have been increased, I am quite sure my friend and his associates are primarily responsible for it.

The gentleman from Illinois alludes to President Cleveland in terms of great disrespect and with marked injustice; but, like all others who have observed and studied the President's official career only to interpose criticisms or objections, he is compelled to confine himself to the form of insinuation, or enter the field, as some others have done, of wordy billingsgate. That field is never congenial to the gentleman from Illinois; but, I submit to him that it is less harmful and no more offensive than the method of insinuation by which he has covertly made his attack.

As I now recall his language, the gentleman refers to the President as being in harmony with and giving active support to the interests of certain citizens of the United States who center and congregate about Wall Street, and have fixed incomes, large blocks of wealth, and are interested in having the purchasing power of their money appreciated. If the gentleman had been a disinterested and unprejudiced judge, he would have told us that the President was in harmony with and was ever giving active support to the interests and equal rights of all the people of the United States, without discrimination of class or locality; that his active support was equally the safeguard and dependence of the poor and the rich, of the humble "squatter" on the public land and the opulent merchant or banker in the great cities; and that, in his official life, strict and absolute impartiality has been the distinguishing rule of his action.

Has the gentleman banished from his mental vision the picture of this great, strong man, lifting up from despondency and oppression the class of citizens to which Guilford Miller belongs, and making them secure in their homes as against wealthy, powerful, and influential oppressors? Has the gentleman so soon forgotten the reply of the President to the great cattle combinations, whose representatives, accompanied by men of the highest official station, appeared before him to protest against his order requiring them to release their grasp upon millions of acres of the public domain? Will the gentleman attempt to present a single instance in the career of Grover Cleveland wherein any official partiality has been shown in favor of one class of the people and against another? If in any of the offices he has held such a record has been made, the gentleman from Illinois would have known it long since. But there is no such record. No instance even tending to imply such a record can be produced; and the innuendo of the gentleman establishes nothing but his own partisan bitterness and injustice.

This mild attack on the President by the gentleman from Illinois we can afford to forgive, since a patient and long-suffering people four short years ago drove out of the temple of the Republic the despoilers, for corporation aggrandizement, of their public domain, the bond and money kings, the land barons, the cattle syndicates, and the troop of knightly adventurers, whose habit was to claim everything and use everything, regardless of the rights and interests of the people. Before leaving this subject I would earnestly ask my friend from Illinois if he objects to "having the purchasing power of money appreciated?" His recent opposition to a reduction of tariff duties and the consequent increase of the purchasing power of our money I was constrained to regard as the result of a mere desperate party necessity, but the serious manner in which he has arraigned the President for having appreciated the purchasing power of the money of the people, demands a review of my estimate of his position.

The Treasury Department and its administration have been alluded to and to some extent criticised by the gentleman from Illinois. I will not enter a field reserved to other members of this House, nor attempt a defense of the Secretary of the Treasury, which, in fact, he does not need. But it is within the limit I have prescribed for myself to suggest that, whether or not the policy of the Secretary is the best that could have been devised, it has, nevertheless, been conscientiously taken and honestly pursued. That policy has been carried out safely without financial panic or convulsion during a period replete with peril and through an ordeal requiring the highest and best attributes of firmness, courage, and patriotism. The Secretary has been equal to every emergency, although hedged about with imperfect statutes, dangerous precedents and questionable methods of former administrations. There is neither imputation nor suspicion of dishonor against his administration, a fact more than gratifying to the people, who doubtless remember with horror to this very day how our silver coin was demonetized by legislative assassination; how the 4 per cent. bonds were sold to a banking institution for a mere credit balance therein without interest; how bonds redeemable in currency were made payable in gold; how whisky-ring frauds rioted throughout the land, marking with infamy here and there certain dealers and distillers and smirching various departmental officials and others, and how political assessments were shamefully levied upon these violators of the internal-revenue laws, as well as upon every poor and dependent employé in Government service.

But, here again let us draw the veil over stolen, extorted, and wasted millions, over records of confessed guilt, over fines and imprisonments imposed by judicial tribunals, as the sequel to indictments and convictions by grand and petit juries, with the simple observation that the sovereign people of this Republic are not likely to commit the power of the Government into the hands of a political party that either would not or could not timely see and repress these heinous crimes.

Mr. Speaker, we have under consideration the sundry civil bill, and upon that bill the gentleman has made his speech. I desire to call the attention of this House, and likewise the attention of another House not far away—and I would not object if the country would take notice of it—that upon this important general appropriation bill the Republican Senate has annually forced additional appropriations over and above the amounts approved and passed, in the first instance, by the House, year by year, as follows:

In 1885, the Senate increased the House bill $4,036,990.69. In 1886, it increased the House bill $5,486,739.45. In 1887, it increased the House bill $3,106,850.08. In 1888, it increased the House bill $4,038,647.74; and in the House bill for the current year, now under consideration, it has increased the amount appropriated $5,174,593.24. And yet the gentleman from Illinois, and the chairman of the Committee on Appropriations in another legislative body not far removed from us, have made speeches, after deliberate preparation, in which each has called the attention of the country to an alleged increase of appropriations during the past four years of Democratic administration of $96,000,000, notwithstanding they both knew that the Republican Senate had passed amendments which committed that body to an increase for the four years of $154,932,946.70 instead of $96,000,000!

In like manner both of the gentlemen indicated have included in their calculations of the $96,000,000, and made part of it, the sum of $12,819,093.32 increase for pensions. If they did not mean to object to this appropriation for pensions, they were, at least, willing to arraign the Democratic party and punish it for making such appropriations. I am glad to add in amelioration of this partisan injustice by the two gentlemen, that they are not habitually unfair, and may be reasonably expected to review their figures and their inferences at an early day.

Mr. Speaker, I submit here a concise statement of certain figures to which I have made reference, and assure the House they are reliable.

The increase of appropriations by the direct action of the Senate for the four years from 1886 to 1889, over the amounts proposed by the House was as follows:

1886	$4,426,147.69
1887	2,934,648.86
1888	3,934,419.58
1889	11,934,598.20
Total	23,229,814.33

The following shows the increase proposed by the Senate on appropriations as they passed the House during the four years, 1886 to 1889:

1886	$10,801,807.16
1887	13,392,795.82
1888	35,046,210.61
1889	22,536,633.65
Total	81,777,447.24

The amount stated for 1886 does not include the river and harbor bill as it passed the House and failed in the Senate for want of time to consider it.

It is insisted that the appropriations as made by the House of Representatives are sufficient for a wise and economical administration of the Government. As shown by the preceding statements, the Senate each year proposes large increases of the appropriations as passed by the House, and by persistency in conference always succeeds in fastening upon the House bills a great many amendments of more or less doubtful necessity.

The sundry civil bill, of which the chairman of the Senate committee has had personal control during the last six years, has been the favorite field upon which the Senate practices its fine art of increase, as will be demonstrated by the following statement:

INCREASE OF SUNDRY CIVIL BILLS BY THE SENATE OVER THE HOUSE DURING THE PAST SIX YEARS.

1889	$5,174,593.24
1888	4,038,647.74
1887	3,106,850.08
1886	5,486,739.45
1885	4,036,990.69
1884	2,570,724.72
Total	24,414,545.92

Of the $96,000,000 alleged increase of appropriations for the four years including 1889, over the previous four years, more than $90,000,000 of it can be accounted for, as follows:

Increase in appropriations during Cleveland's administration for pensions	$12,819,093.32
Increase in appropriations during Cleveland's administration on account of the Navy	17,010,562.12
Increase in appropriations during Cleveland's administration on account of the postal service	45,490,485.14
Unusual appropriations during Cleveland's administration—Alabama claims awards and Choctaw Indian claim	8,627,813.90
Increases made by the Senate on appropriation bills at this session other than Army, fortification, pension, Navy, and Post-Office, as shown by Senator ALLISON'S statement	6,264,489.44
Total	90,212,443.92

During the last three years of Mr. Arthur's administration, the ordinary expenses of the Government aggregated $769,761,316.98, or a per capita expenditure for the three years of $13.85, or an average of $4.61 per annum.

During the three fiscal years, including 1888, under Cleveland's administration, the total net ordinary expenses have been $778,340,119.60, or a per capita expenditure for the three years of $12.94, and an average per annum of $4.31.

AMOUNTS OF INCREASE PROPOSED BY AND PASSED THROUGH THE SENATE ON APPROPRIATION BILLS IN EXCESS OF THE BILLS AS THEY PASSED THE HOUSE AT THIS SESSION.

Agricultural bill	$119,200.00
Army bill	6,892,500.00
Diplomatic and consular bill	39,600.00
District of Columbia bill	855,628.65
Fortification bill	897,000.00
Legislative, executive, and judicial bill	203,865.47
Navy bill	190,217.78
Pension bill	1,476,000.00
Post-Office bill	1,549,393.00
River and harbor bill	2,523,000.64
Sundry civil bill	5,174,593.24
Deficiency bill, 1887 and prior years	64,594.11
Deficiency bill, 1888, urgent	724,588.29
Deficiency bill, customs and pensions	25,445.37
General deficiency bill	1,937,530.33
Total	22,673,156.88

The Indian bill alone as it passed the House was reduced by the Senate $136,523.23, making the net increase proposed by the Senate on all of the bills, including those for deficiencies, $22,536,633.65.

Against all these Senate amendments the House conferees earnestly and determinedly protested, but the other side yielded but little, and manifested a stubborn courage worthy of a better cause.

The House conferees were not on their part destitute of courage. You who so well know the firmness of my distinguished colleague [Mr. FORNEY] and the unyielding courage of the honored chairman of the committee [Mr. RANDALL], will not believe that the House conferees yielded or receded a moment too soon.

Mr. O'NEILL, of Pennsylvania. Right here let me state to the gentleman from Missouri what I am sure he will be glad to hear, as well as other gentlemen on that side of the House, that Mr. RANDALL, in a week from to-morrow, will be renominated by the Democratic convention, every shade of Democrat being for his nomination, irrespective of his vote upon the tariff bill. [Loud applause on the Democratic side.]

Mr. BURNES. And I ask my friend——

Mr. O'NEILL, of Missouri. Every intelligent voter in his district will vote for him.

Mr. O'NEILL, of Pennsylvania. I do not know whether there will be any Republican nominated; but the nomination of Mr. RANDALL will be largely due to his fearlessness in expressing his opinion upon all subjects.

Mr. BURNES. I had not entertained a doubt as to what the Democracy would do in support of Mr. RANDALL, and am surprised that my friend from Pennsylvania [Mr. O'NEILL] could imagine that the great Democratic party of this country would sacrifice so good a man and so good a Democrat simply because he was not quite in line on a single question, however important that one question might be. The era of good feeling is at hand, and for Cleveland and Thurman the Democracy are in line from the Atlantic to the Pacific and from the Lakes to the Gulf [applause on the Democratic side], and victory, victory is everywhere in the air. [Continued applause.]

Mr. O'NEILL, of Pennsylvania. I make this statement because it has been said that there would be some effort made to push him out of the Democratic party. But the people will take care of him. [Applause and cries of "He is all right" on the Democratic side.]

Mr. BURNES. The Democratic party does not push any man out of it; on the contrary, it calls upon all, as a true evangelist, to "come and join with us;" and the kind and fraternal invitation is being accepted by numerous thousands with great joy, who for the first time in their lives join in swelling, loud and long, the Democratic shouts of victory.

Mr. HENDERSON, of Iowa. I would like to know from my friend from Missouri whence are coming the sounds of victory of which he has spoken.

Mr. BURNES. Even Iowa, not loud but deep. Iowa, my good friend, is trembling in the balance for Cleveland. Look out for your "homes and your firesides."

Mr. HENDERSON, of Iowa. Does my distinguished friend trace the signs of victory from the late elections that have been held?

Mr. BURNES. The Democracy of Maine reduced your majority in that State 1,250 votes without assistance from any quarter outside the State.

Mr. HENDERSON, of Iowa. When you hear from Iowa you will have a peroration for your oration which will not gratify the Democracy.

Mr. BURNES. I know my friend believes it thoroughly, and it is sad to see so good a man under such an hallucination.

Mr. HENDERSON, of Iowa. I know it.

Mr. BURNES. Worse and worse, my poor, dear friend.

Mr. HENDERSON, of Iowa. I ask you about the breezes of victory that you speak of.

Mr. BURNES. When defeat settles upon the national standard of my friend and the disheartened remnant of his divided party in Iowa are in full retreat, I will carry with me to his hospitable home those victorious breezes with which, cooling his fevered brow, I will tenderly and fraternally nurse him back to a happy convalescence. [Loud applause on the Democratic side.]

Mr. HENDERSON, of Iowa, and others on the Republican side. "Oh! Oh!"

Mr. HENDERSON, of Iowa. My friend from Missouri is an encyclopedia of information on every question, and I hold him always in the highest respect; but this is one time he is in error. I can say to him as one who was almost born in Iowa, and who has been pretty close to the hearts of her people, that I can instruct him that his miss is a great deal more than a mile; and now I rise again and ask him if he will not give me a suitable answer to the question I asked him, as to where the breezes come from that have "victory in the air" for the Democratic party?

Mr. BURNES. Have you not heard from Maine?

Mr. HENDERSON, of Iowa. They did not come from Oregon, from Vermont, or from Maine. Where do they come from? Arkansas?

Mr. BURNES. Oregon voted before our forces were in the field or our horses were upon the track. But that Chinese vote in Oregon will always beat us until we restrain and prohibit their importation. They increase there faster than Democrats do.

Mr. HENDERSON, of Iowa. You had some other things than horses there. You had some fellows who carried purses in their hands.

Mr. BURNES. This is mere trifling, but you and I understand each other.

Mr. HENDERSON, of Iowa. Oh, we love each other; but I could not help referring to the "breezes."

Mr. BURNES. Mr. Speaker, I beg the pardon of the House for consuming so much time, and sincerely thank every member present for an indulgent and respectful hearing.

A carefully prepared but simply stated table will be appended to my remarks and printed. This table will show how and to what amounts the Senate has increased House bills of appropriation, and what amounts the Senate deliberately passed, by way of amendments, as increases on House bills.

From the Forty-fourth to the Fiftieth Congress, both inclusive, it will be observed that above the amounts contained in the House bills as they were passed and sent to the Senate, the latter body added the immense increase of $180,448,311.67; and that the House, resisting augmentation from year to year, succeeded in reducing this increase to $70,469,768.64, being a net decrease and saving by the House as against the Senate of $109,978,543.03. This table also shows the political complexion of both House and Senate during each year, so that the proper distinction of party domination may appear in connection with the appropriations.

Appended hereto are tables, figures, and explanations bearing upon regular annual appropriations which have been made and including miscellaneous appropriations down to the 5th of October, 1888, and including also a contrast of expenditures of the administrations for two full years of Arthur and Cleveland.

In these tables is exemplified the splendid record of Democratic economy now and for a period of fourteen years past, and they exhibit the undeniable record of Republican prodigality in appropriations. But at last, the tranquility of the people is not disturbed by the amount of appropriations, but is secured by the honesty and integrity with which such appropriations are disbursed.

Session of Congress.	Year.	Increases proposed on appropriation bills by the Senate.	Excess of appropriation laws over amount passed by the House.
Forty-fourth Congress (Democratic House, Republican Senate)	1877	$19,508,235.21	$8,966,731.43
	1878	19,832,631.09	10,198,370.75
Forty-fifth Congress (Democratic House, Republican Senate)	1879	14,164,529.47	9,513,093.83
	1880*	.....	.....
Forty-sixth Congress (Democratic House, Democratic Senate)	1881	4,832,412.21	2,564,509.30
	1882†	7,731,977.25	5,820,112.92
Forty-seventh Congress (Republican House, Republican Senate)	1883	8,933,082.02	4,798,683.34
	1884	4,238,333.36	2,604,165.49
Forty-eighth Congress (Democratic House, Republican Senate)	1885	20,139,643.82	2,754,287.25
	1886	10,091,807.16	4,426,147.69
Forty-ninth Congress (Democratic House, Republican Senate)	1887	13,392,795.82	2,934,4 9.58
	1888	35,046,210.61	3,934,419.58
Fiftieth Congress (Democratic House, Republican Senate)	1889	22,536,633.65	11,934,598.20
Total		180,448,311.67	70,469,768.64

*No record for 1880.

†Does not include $18,282,306.68 deficiency on account of pensions growing out of the passage of the arrears act, placed by the Senate on the pension bill for 1882.

The following statement exhibits, by titles of appropriation bills, the estimates submitted for the fiscal year 1889, the amount of the bills as reported to the House from the committees, the amounts as passed the House, the amounts as reported to the Senate from committees, the amounts as passed the Senate, and the amounts as they became laws, appropriations made by miscellaneous acts approved up to September 22, and the permanent annual appropriations, together with the appropriations for 1888:

History of appropriations first session, Fiftieth Congress; estimates and appropriations for fiscal year 1888–'89, *and appropriations for fiscal year* 1887–'88.

a Fifty per cent. of the amounts appropriated for the District of Columbia is paid by the United States. The amount for the water department (estimated for 1889 at $266,947.35) is paid out of the revenues of that department.

b No appropriations were made for fortifications for the fiscal years of 1887 and 1888.

c This amount includes $2,858,798.62 for payment of judgment of the Court of Claims in favor of the Choctaw Nation.

d Includes amounts for navy-yards and stations.

e This amount includes $6,900,000 for Mexican war pensions appropriated by separate act.

f The appropriations for the postal service are paid out of the postal revenues (estimated for 1889 at $57,563,734.32), and any deficiency in the revenue is provided for out of the Treasury of the United States.

g This is the estimate submitted for rivers and harbors for 1889. "The amount that can be profitably expended," as reported by the Chief of Engineers, is $40,041,998.77. [Book of Estimates, page 183.]

h The river and harbor bill became a law without the President's signature.

i No appropriations were made for rivers and harbors for the fiscal year 1888.

j This sum is approximated.

k This sum represents the amount of the general deficiency bill as agreed upon in the conference report submitted October 3. Items appropriating $91,245 in this bill remained to be settled.

l This amount includes acts approved and printed up to September 22.

The thirteen regular appropriation bills as they passed the House, it will be seen, appropriated $268,833,802.01. As passed by the Senate, these bills appropriated $288,618,277.56, being an increase proposed by the Senate of $19,784,475.55.

The bills as they became laws appropriated $277,263,051.74, the Senate having receded from $8,429,249.73 of its proposed increases.

Compared with the regular appropriations made for 1888, which are also shown in the statement, there is an apparent increase in the appropriations for the ordinary current expenses of the Government for 1889 of $33,402,172.39. This sum is more than accounted for on four bills, namely:

The fortification bill appropriates $3,972,000. No bill for this object was passed during the last session of Congress for the fiscal year 1888.

The Indian bill includes $2,858,798.62 to pay a judgment in favor of the Choctaw Indians. Otherwise the bill appropriates but a trifle more than it carried last session.

The post-office bill is increased $5,165,583.59, $1,000,000 of which sum is due to the passage at this session of the law limiting to eight hours a day the labor of letter-carriers. The balance of the increase is owing to the enlargement of the service incident to the growth of the country.

The river and harbor bill appropriates $22,397,616.90. No bill for the improvement of the harbors and water-ways of the country became a law during the last session of Congress.

These sums aggregate $34,393,999.11, and when eliminated from the sum total of the thirteen regular bills, make the amount actually appropriated for the current and ordinary expenses of the Government during the fiscal year 1889 nearly $1,000,000 less than was appropriated for the fiscal year 1888.

The aggregate amount appropriated by the five deficiency appropriation bills passed during the session, each of which is shown in the statement, is $19,621,472.77. No deficiency bill was passed during the last session of Congress, and the first one enumerated in the statement as for 1887 and prior years, appropriating $3,127,579.45, was passed to supply the general deficiency bill, which failed of passage during the last session of Congress.

Of the whole sum represented by these deficiency bills, namely, $19,621,472.77, more than one-half is to provide for the payment of judgments of the Court of Claims; judgments for damages caused by the improvement of the Fox and Wisconsin Rivers, allowed under a law passed in 1875, when both houses were Republican; for claims certified to be due to soldiers and sailors for back pay and bounty; for horses and equipments lost in the military service and for commutation of rations while confined in Confederate prisons; for refunding to the States expenses incurred in suppressing the rebellion and Indian hostilities; for the payment of claims of postmasters under a readjustment of their salaries provided for by an act of Congress passed in 1883, and to cover a deficiency of $3,500,000 on account of pensions for 1888.

The items thus enumerated, together with many others of lesser magnitude, covered by these deficiency bills, grow out of obligations in-

curred by the Government many years ago, and, therefore, are not an element of the current and ordinary expenditures.

The amount stated for miscellaneous appropriations, $9,091,715.40, covers sums of money appropriated by miscellaneous acts of Congress passed for the construction of public buildings and for other objects. Of this sum $2,650,000 is for the erection of a public building for the accommodation of the appraiser's stores in the city of New York, and $1,018,000 is appropriated by an act of Congress passed for the purpose of securing from the Sioux Indians a portion of their large reservation, to be made a part of the public domain.

The amount stated for permanent annual appropriations, $115,640,798.90, is the amount estimated by the Treasury to be expended during the year under certain indefinite and specific permanent appropriations, to meet the interest on the public debt, the requirements of the sinking-fund, the expenses of collecting the revenue from customs, and for other purposes.

A comparison of the expenditures of the Government under the administration of President Arthur, for the years 1883–'84, *and of President Cleveland, for years* 1886–'87, *taken from statistical abstracts for* 1887, *No.* 10, *page* 3:

Arthur—net ordinary:		
1883		$206,248,006.29
1884		189,547,865.85
		395,795,872.14
Cleveland—net ordinary:		
1886	$191,902,992.53	
1887	220,190,602.72	
		412,093,593.25
Excess of Cleveland		16,297,723.11
Arthur—pensions:		
1883		66,012,573.64
1884		55,429,228.06
		121,441,801.70
Cleveland—Pensions:		
1886	$63,404,864.03	
1887	75,029,101.79	
		138,433,965.82
Excess of Cleveland		16,992,164.12

Thus showing that the apparent excess in net ordinary expenditures made by Cleveland's administration is more than accounted for in the payment of pensions by the sum of $604,436.01.

The Mills Bill.

Every change of conditions which widens the chasm and impairs the sympathy between rich and poor can not fail, however beneficial its effects, to bring with it grave dangers to the state.—*Lecky.*

SPEECH

OF

HON. HILARY A. HERBERT,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, October 12, 1888.

On the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue.

Mr. HERBERT said:

Mr. SPEAKER: The Canadian problem the President has given to the Senate of the United States seems to worry the Republicans of that body about as much as that other puzzle the House has sent them, the Mills bill. The trouble in the Republican camp all this long session of ten months and over has been and is now that their leaders could not and can not agree. That is why this Congress has broken the record. The session is already longer than ever was known before, and nothing is done. The Republican members of this House have, while confessing the necessity of reducing revenues, contented themselves with opposing the Democratic measure, and offered nothing of their own.

It was given out that their brethren in the Senate would deal with the question. The Democratic House might pass its bill if it could—well, we did. The Senate would pass a substitute—but it has not done it. It does not intend to do it. The majority party there has spent all this session in a determined effort not to do it. Let us look at the record.

RECORD OF THE DEMOCRATIC HOUSE ON REDUCTION OF TAXATION.

The Ways and Means Committee was appointed in this House to consider questions of taxation on January 5, 1888. March the 1st, the Mills bill was reported, ordered printed, and referred. April the 2d, having been slightly amended, it was finally reported to the House. The Republican members of the committee simply dissented; they reported no substitute. The discussion in the House began April the 17th; it was exhaustive almost beyond precedent; the Republicans insisted on a long debate; one hundred and fifty-one speeches were made in general debate, and the bill was discussed at great length under the five-minute rule.

It finally passed the House July 21; no substitute was offered. If the Republicans have any method by which they really intend to reduce taxation they ought to have formulated it here. To this House, and to this House only, the Constitution confides the power of originating revenue bills. But the Republican members in this House were divided, and so were incapable of dealing with the question of taxation. Time was when that charge was made against the Democratic party, and the time was when, perhaps, in part it was true. But the time never was when the great body of the party was not willing to make an effort, at least, to reduce taxation. We tried in the Forty-fifth Congress, in the Forty-sixth, Forty-eighth, and Forty-ninth Congresses, to pass bills reducing tariff taxation, and each time, though in the majority, we failed. There were enough Democrats in the House uniting with the Republicans to defeat us; but we had no leader then; Grover Cleveland had not come to the front. We had for years simply been a party of opposition, and though we had able men in our ranks, we needed an administration to fuse us together and give us solidarity.

June 5, 1878, Fernando Wood, a Democrat, moved in the House a tariff-reduction bill. The enacting clause was stricken out by a majority of 14. One hundred and nineteen Democrats voted against the motion and for the bill, only one Republican standing with them. The Republicans voting to strike out were 115, and they were aided by 19 Democrats.

May 12, 1879, Mr. Dibrell, of Tennessee, moved to suspend the rules and pass a bill imposing an income tax. This would place some of the burdens of the Government where they ought to be, on the shoulders of the rich, and to that extent relieve the laboring man. A two-thirds vote was required to pass it. The yeas were 111, the nays 94. Voting for it were 101 Democrats, aided by 10 Republicans and Greenbackers; voting against it were only 9 Democrats and 83 Republicans. This was not a tariff question, but I cite it to show how parties stood on taxation.

On the 30th of June, 1880, Mr. McKenzie, of Kentucky, moved to suspend the rules and place quinine on the free-list. This motion was carried. It appealed so strongly and so directly to the popular sympathy in favor of the poor and the sick that this time 22 Republicans were found in the House ready to vote with the Democrats. These, added to the 106 Democrats who voted for it, were sufficient to carry it. Only 2 Democrats in the House were found to vote against this bill.

January 12, 1880, a motion was made by Mr. HATCH, a Democrat, to make all salt free; 100 Democrats voted for it and only 12 against it. But it failed, for of all the Republicans in the House, aided by the Greenbackers, only 15 were found to vote for it, and 104 Republicans voted squarely against it.

THE REPUBLICAN TARIFF OF 1883.

In the Forty-seventh Congress the Republicans were in power again in both branches of Congress. March 3, 1883, they passed their tariff bill, pretending to reduce tariff taxation. They made an actual reduction on some articles, an increase on others, and on others still fixed specific instead of ad valorem duties, thus cunningly revising the law so as to impose higher average duties than before. The average ad valorem duty upon all dutiable articles for the year ending June 30, 1883, before that law took effect, was 42.45 per cent.; under the operation of the law as our Republican friends revised it this duty has been gradually climbing up, so that on the 30th day of June, 1887, it had reached 47.10 per cent.

HOUSE AGAIN DEMOCRATIC—FORTY-EIGHTH AND FORTY-NINTH CONGRESSES.

On the 6th of May, 1884, the Democrats were again in possession of the House. On that day a motion was made to strike out the enacting clause of Mr. Morrison's bill reducing tariff taxation, and the bill was defeated by a majority of 4; 118 Republicans voted against this bill; they were aided by 41 Democrats; voting for the bill were 4 Republicans and 151 Democrats. On the 17th day of June, 1886, Mr. Morrison moved another bill to reduce tariff taxation. This was defeated by the votes of 107 Republicans aided by 33 Democrats; for the bill were 3 Republicans and 137 Democrats. The Democratic majority were unable to pass a bill through the House of Representatives. Cleveland had not yet gotten full control. In the present, the Fiftieth Congress, the Democratic majority is but 15. When we assembled in December, 1887, President Cleveland had been at the head of the Government for two years and a half; he had had time to take in the situation, and he determined to throw his influence in favor of a reduction of tariff taxation.

The course he decided upon many of his best friends thought was unwise; his administration had been so clean; the motives by which he had been influenced so pure; every act, it was so apparent to the people, had been upright and patriotic, that it was now perfectly clear that

if no new issue was made and he could go to the country solely upon his administration up to that time, there could be practically no opposition to his re-election. But when he had made up his mind, as he had, that the system of taxation imposed by the Republican party upon the masses of the people for the benefit of the classes was outrageous and oppressive, he would have been untrue to himself if he had hesitated. He did not hesitate. He boldly declared in favor of a reduction of tariff taxation. He knew his motives would be misrepresented. He knew he would array against him in fierce opposition the power of these monied monopolies which had so long dominated the land, but he halted not for a moment. In order to center and localize public attention, he addressed himself, in his message, to the question of taxation alone. The people were overtaxed. He was the people's representative, and for the rights of the people he flung down the gage of battle. Here at least is one man who proves by his action that he had rather be right than be President.

A bill for the relief of tariff taxation, with the President behind it, passed the House and went over to the Senate.

INTENTIONAL DELAY IN THE SENATE.

We have seen that the Republicans in the House did nothing but oppose—proposed nothing. The Senate Republicans seeing this, lost confidence in their brethren, and determined even before the House bill went over to act for themselves.

Their Committee on Finance appointed a subcommittee on the tariff May 22. The subcommittee began their hearing May 26. They have heard everybody but the consumer—all the manufacturers and all the people who wanted still higher taxes, that they might be manufacturers. Senators probably thought when they appointed their committee they would do something. They no doubt then supposed they could agree, and it was said their substitute would be ready when the Mills bill got over to them, but it was not.

The summer passed; autumn came. The public was in doubt. The Senators looked wise but made no report. Finally one of them made a lot of figures, endeavored to show that Democratic government was so expensive that no reduction of taxation would be necessary; that expenditures would equal income, but when the figures were examined the excuse was too flimsy; it was abandoned, and now, at last, they have reported, October 2, a tariff bill which is said to make a reduction of seventy-three millions from revenues which a few weeks ago they claimed would stand no reduction. The bill was reported by the same gentleman [Mr. ALLISON], who laid himself out on the figures.

If there be, Mr. Speaker, any one thing apparent it is the baldness, the hollowness of the pretense that the Republican Senate intends to pass a bill reducing taxation. If they had really intended to do anything of the kind we should not have had this long delay since May the 22d. Look back for a moment at the history of tariff bills.

The celebrated tariff bill of 1846 was passed by the House July the 7th; in twenty-two days afterwards, July 28, it passed the Senate. Senator ALLISON, of Iowa, said, on the 24th day of March, 1870, that this—

> was, so far as regards all the great interests of the country, as perfect a tariff as any that we ever had.

The tariff bill of 1857 passed the Senate six days after it passed the House. I do not cite, because it would not be fair, the rapidity with which such bills rushed through the Senate during the war. I point only to what was done in time of peace. The tariff bill of 1867 was in the Senate committee fifty-four days—longer than any other I have been able to find. The tariff bill of 1870 passed the House June 6; twenty-nine days thereafter, July 5, it passed the Senate.

Now we come to the last tariff bill that was passed, the bill of 1883. December 8, 1882, the Senate took from the Calendar a little internal-revenue bill, recommitted it to the Senate Committee on Finance, and January 4, 1883, that committee reported to the Senate a complete tariff bill tacked onto an internal-revenue bill—a thing never done before in the history of our legislation. I do not cite the novelty of this performance for the purpose or showing that Republican Senators are brighter than any other statesmen in the world; I do not allude to it to draw the conclusion that they stand less upon precedents or that they care less for constitutions than any other legislators that ever assembled in this Capitol, but I call attention to it to prove, and it undoubtedly does prove, that when they want to do a thing they can find a way to do it, and they are not always about it, either. They framed that bill, root and branch; they reported it to the Senate, perfect and complete, in twenty-seven days; and on the 20th of February they passed it.

Sir, since the Senate committee began to work upon their present bill national conventions have been held, candidates have been nominated, the summer has waxed and waned and gone; all through the dog-days the House has been here waiting on the Senate to send us some measure of relief to the people; money is still piling into the Treasury, hundreds of thousands of dollars every day more than the Government needs; the people need relief from taxation, and they need it now; and yet it is rumored in the air that the Senate having reported a bill is ready to adjourn if the House will only send them a resolution. This has been their purpose for weeks and months, to report a bill and adjourn, to wear out the patience of the House and get away to their constituents without coming to a vote, for a vote will only show that they are hopelessly divided.

The same committee that framed the bill of 1883 in twenty-seven days is in the Senate now, and was at work in committee, or pretended to be, on this bill for one hundred and thirty days. The Republican members of that committee were in 1883, Messrs. MORRILL, SHERMAN, Ferry, JONES of Nevada, ALLISON, and ALDRICH. Only one Senator has gone—Ferry. The other five have been there all the time since. They have had five years more of experience, five years more of service on that committee than they had had in 1883; five years more within which to familiarize themselves with the details of taxation; and losing Senator Ferry they have gained HISCOCK, at least Ferry's equal in ability and far his superior in knowledge of the subject, for Senator HISCOCK has had many years' experience as a member of the Ways and Means Committee in fighting and killing in the House bills for the relief of the people that never lived to be considered in the Senate. What is the matter with them? What has this committee to gain by taking one hundred and thirty days in which to frame a bill, when five years ago they could make one in twenty-seven days?

The answer can be made but in one way, delay—delay that would excuse them from voting. They have not intended to vote, they dare not vote upon their bill, for a vote would show their division. They prefer the bill should stand subject to amendment. In that shape it is pliable as any political platform that ever was built. In Kansas and on the Pacific coast they can promise to amend it in one particular. Senator INGALLS is already out in a letter to one of his constituents, in which he says that farmers ought to be protected, but there is no time to consider a bill this session.

That means that the high tariff on sugar which the Kansas farmers want protected can be put back next session. All the Republican members from Kansas and the Pacific coast voted in the House against the reduction on sugar made by the Mills bill. The Senators from those States can promise to vote against the reduction on sugar in the Senate bill. Senators from the Northwest can promise to amend it in other particulars, and those from Pennsylvania and New England can promise still other amendments. The advantage, then, they think they have is that the Mills bill is the action of a Democratic House. If there are any defects in that bill Republicans can assail it—a Democratic House passed it. But if the Senate bill is defective, why, Republicans can promise that the Senate will amend it. The Senate has not indorsed it. It is only the bill of a committee. That, Mr. Speaker, is the game they are playing; but it is so different from the bold and brave utterances of their platform at Chicago that nobody can be deceived. Sir, it is no wonder that when that platform was read at Chicago it was received with such wild enthusiasm. It struck the great heart of Republican representatives there assembled; it spoke out in manly language. When the news of it had come to Washington the great protection leader of the House, Mr. KELLEY, said with pious unction:

> Now Lord, lettest Thou Thy servant depart in peace, for mine eyes have seen the glories of Israel.

There were many of us on the Democratic side, Mr. Speaker, who were as much rejoiced as the Republicans were, for we had longed to see the day when the Republican party would speak out boldly as their platform does. There is not in it a single substantial promise to the consumers of manufactured articles. It is everything for the favored few—not a ray of hope for the millions of workers who are not and can not be protected by law, whose lines in life lie outside of those which circumscribe the chosen pets of the Republican party. Never before did a political party declare in favor of such a "revision of our tariff laws as will tend to check imports," etc.—that is, such a revision as will tend towards the destruction of foreign commerce. But the Republican party has for years been drifting in that direction, and now and then I have heard a candid gentleman openly avow such sentiments.

One of these was Mr. Columbus Delano, who was examined February 20, 1884, by the Ways and Means Committee of the House, when the following colloquy between him and myself took place, after much cross-examining upon my part:

> Mr. HERBERT. Can you answer that question, yes or no; whether the measure of protection which you think is right for each industry is that which gives it control of the American market?
>
> Mr. DELANO. Substantial control; yes.
>
> Mr. HERBERT. That means substantially to prohibit the introduction of foreign goods?
>
> Mr. DELANO. I have answered that question several times.
>
> Mr. HERBERT. Please to say yes or no.
>
> Mr. DELANO. Well, yes; if that will end it.

REPUBLICAN REPUDIATION OF HENRY CLAY'S DOCTRINES.

The reasonable doctrine of protection as held by Henry Clay was, that infant industries were to be protected in order that in the end they might be able to compete with foreign markets.

June 2, 1864, Senator MORRILL, now chairman of the Senate committee that reports the Senate bill, said: "Protection was never defended on any other ground than that; in the end the consumer obtained his supplies more cheaply." But now the doctrines of Henry Clay have been thrown to the winds; now the theories held by Republican leaders twenty years ago have been abandoned, for the Re-

publican party has marched up and taken the position avowed by Mr. Delano four years ago, that Congress must "prohibit the introduction of foreign goods" in order to give to each American industry "control of the American market"—in the words of the platform, revise the laws so as to "check imports." To give any industry "control of the American market," which is to put duties so high as to take away all danger of foreign competition, is to place the consumer at the mercy—not of the workers, the laborers in that industry, but in the power of the capitalists, who control its products.

If this control be given to one man or one corporation a monopoly is at once established. If there be several corporations engaged in the manufacture they have all the benefits of a monopoly if only, as the law invites them to do, they will combine and form a trust. The public is at their mercy, for they can raise prices at will, as the bagging trust has done. The laborer is at their mercy, for they can limit production and turn their hands out of employment, all the time increasing their own profits. This is what the American Steel Association, the great exemplar of trusts, did away back some sixteen years ago. It paid the Vulcan Works of St. Louis at the rate of $70,000 per annum to shut down and turn its hands out of employment.

This is what the sugar trust did not ten days ago. It shut down its works at Boston and turned out its operatives. No one man in America can tell the extent of these combinations among capitalists, because most of them are kept secret. A friend of mine, himself a tariff reformer, told me not two years ago that he was interested in four different sorts of manufactures. In one of these he had no fear of competition, but in each of the other three there was an agreement as to prices with other manufacturers of the product. It can not be otherwise. Can gentlemen give to manufacturers absolute control of our market and then expect them not to control prices? And how can they control prices without combinations? Do you take them to be weak enough to deprive themselves by competition of all benefit of the market you have handed over to them?

Sometimes they are. When profits are so great that "fortunes are to made in a year," then competition is often for a time very sharp; then comes over production, then bankruptcy, then operatives go tramping over the country, for our high tariff is the parent of the trust and the tramp. Everybody condemns trusts, which are combinations to raise prices, almost always, too, on the necessaries of life—conspiracies of a few rich men to rob the poor. Everybody knows, too, that these combinations, facilitated by railroads and telegraphs, are becoming more common day by day.

How is it then, sir, that at such a time as this the Republican party should put behind it all the old theories of protection which was defended on the ground that "in the end the consumer obtained his supplies more cheaply" and openly avow in its platform an intention never to reduce tariff taxation on any article on which capital can make a profit by manufacturing it in the United States; and how dare it declare further that, if need be, to prevent revenue the tariff must be raised higher and higher?

The answer can be but one thing. The monopolists, by their money and their influence, have obtained complete possession of the Republican party.

It is equally remarkable, sir, that the Republican members of the Senate committee in reporting a bill reducing revenues, as they say, by more than seventy-three and a half millions of dollars, a bill in which it is reasonable to suppose all the people of the United States feel some interest, should in enumerating at the beginning of the report the reasons which induce them to bring in the bill entirely forget that there were any other people in America except those engaged in manufacturing and importing. That is just what they do. Other people may be mentioned incidentally later on in the report, but their interests were not controlling. Here are the reasons considered as set forth in the words of the committee:

Mr. ALDRICH, from the Committee on Finance, submitted the following report (to accompany bill H. R. 9051):

The Committee on Finance, to whom was referred the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue, respectfully report:

The demand for a careful and thorough revision of our revenue laws is imperative. This revision is necessary:

1. To reduce the national revenues, which are now excessive. * * *

2. To protect honest importers and domestic producers from the disastrous consequences resulting from fraudulent undervaluations of imported merchandise on which ad valorem rates of duty are levied. * * *

3. To remedy the defects, anomalies, and incongruities which have been from time to time discovered in the tariff schedules, or which have been created by erroneous decisions of the Treasury Department. * * *

4. To secure the proper readjustment and equalization of tariff rates rendered necessary by modified business conditions, improvements in methods of production, radical changes in prices, or by new elements or sources of competition.

5. To give relief and protection to many industries which are now suffering on account of the inadequate rates levied on competing products.

Now, sir, we see why it is that the monopolists have contributed, as it is said they have, more than a million of dollars to the national executive committee of the Republican party for this campaign. But, sir, the record has been the same thing for twenty-two years. Banks, railroads, capitalists—these, and not the masses, have been the beneficiaries. Capital seems never to have made a demand when a Republican Congress did not respond.

Here is the boast of the minority of the Ways and Means Committee of this House when giving their reasons for refusing to support the Mills bill, and I want to give them the full benefit of it. The McKinley report says:

Of internal taxes the following have been the reductions made by the party now in the minority since the conclusion of the war:

By the acts of July 13, 1866, and March 2, 1867	$103,381,199
By the acts of March 31, 1868, and February 3, 1868	54,802,578
By the act of July 14, 1870	55,315,321
By the act of December 21, 1871	14,436,862
By the act of June 6, 1872	15,807,618
By the act of March 3, 1883	40,677,682
Total	284,421,260

What they say is true. More than $284,000,000 of internal-revenue taxes have been removed since the war; but what classes did our Republican friends select as beneficiaries when taxation was to be lightened? Some of these taxes gentlemen boast of removing were taken from spirits, beer, tobacco, etc., some from stamp duties, and a small amount, $1,219,571, from "slaughtered animals." These could not but affect some of them at least, both the rich and the poor. But what I call attention to is that taxes were allowed to remain all the time on the necessaries of life used by the poor, and that when there was a chance to take off a burden that rested exclusively on the shoulders of the rich man, the man best able to bear the burdens of state, his Republican friends lifted it every time. Look at this list:

CAPITAL RELIEVED OF TAXATION—THE BURDENS OF STATE LEFT ON THE CONSUMER AND THE LABORER.

First, and most munificently, the manufacturers were relieved by laws passed in 1866, 1867, and 1868 of $127,230,000 annually. These were war taxes placed on the articles they produced. When these internal-revenue taxes were imposed on manufactured products, additional tariff taxes were at the same time put on imported articles as an equivalent burden to protect the manufacturers against foreign competitors. That was fair enough then, but here manufacturers were relieved and the war tax remained on the imported article.

Second. Taxes amounting to over $11,000,000 were taken off from the "gross receipts" from stock in railroad and steam-boat, express, and insurance companies, etc.

Third. From "sales" of stocks, bonds, gold and silver bullion, etc., taxes amounting to nearly $9,000,000.

Fourth. The income tax was very odious to the rich man. He complained of it. It was inquisitorial, and it was very hard to tax him on what he made annually over $600, or even over $1,200, so his Republican friends let it all go, amounting in one year to $72,982,156.

Sixth. Legacies and successions, $3,091,825.

Seventh. It was a great hardship to pay tax on "articles of luxury kept for use," so this tax went, amounting to over $2,000,000 annually.

Five million two hundred and forty-nine thousand and one hundred and seventy-three dollars annual taxes on State and private bank capital and deposits and $5,959,702 on national-bank capital and deposits have been swept away. This is the work of the party that has spun out this session till it is now more than ten months long, in the vain effort to find some excuse for keeping high taxes on the necessaries of life. Can the laboring man be made to believe that such a party is his friend?

The Senate bill is intended to "check imports" and strengthen the

POWER OF MONOPOLY OVER LABOR.

Many things are taken from the free-list and duties imposed upon them. Animals for breeding purposes are now free. More than two and one-half million of dollars' worth of animals were imported last year for the purpose of improving our stock. Under the Senate bill a tax of over $300,000 is imposed upon them. Altogether they take from the free-list and impose duties on provisions worth $3,265,091; sundries, $2,984; chemicals, $8,773.

It is said no single farmer appeared before the committee, but the capitalists were there in force.

Ties for baling cotton and hay now pay a duty of 35 per cent. Capitalists not willing to manufacture them at the importer's price with 35 per cent. added, demanded such a duty as will enable them to "control the American market," and the Senate bill raises the duty to over 100 per cent. This would give us the benefit of a "cotton-tie trust." On woolen dress-goods costing abroad an average of 15 cents a yard, the duty now, 83 per cent., is raised to 92 per cent. These are only samples; look at whole schedules.

On the whole amount of metals imported in 1887, amounting to $55,111,922.37, the average duty paid was 40.77; under the Senate bill it would be 42.13. On cotton manufactures, amounting to $30,208,851.83, the average duty was 39.99; under the Senate bill it will be 40.74. On books, papers, etc., amounting to $5,214,635.21, the average duty has been raised. On sundries, amounting to $59,580,006.88, the average duty has been raised. On wool and woolens, amounting to $60,586,613.71, the average duty was 58.80; under the Senate bill it will be 66.12.

On sugar they make their greatest cut of 50 per cent.; but as to this, as I have said, they can not agree and do not intend to vote till after the election. But, Mr. Speaker, when we look at their bill and the situa-

tion as it is; when we remember that on the 6th day of this month of October the surplus in the Treasury, including subsidiary silver, was $114,506,513.24; when we remember, further, that in order to keep that surplus down and put the money into circulation the President has been obliged to buy at high premiums bonds amounting with interest and premiums to $100,461,196.04, and that the surplus is still coming in at the rate of ninety or one hundred millions a year; when we recollect that we were promised twenty-odd years ago that the time would come when these war taxes should be removed; when we see that the average tariff duty in 1867 was 46.47 per cent., that it is now 47.10, and that this Senate has taken four months and ten days in which to frame a bill that raises duties almost all along the line in order to check imports, and then remember how common trusts are becoming in these days, this bill really looks like a deed of trust with the Republican party as political beneficiaries.

The advocates of the Mills bill believe that a tariff is a tax; that a tax is a burden, and that government ought to relieve the people of all unnecessary taxation.

A tariff is simply a tax imposed upon goods at the custom-house when they are imported into the United States. Whoever buys and imports a hat, paying for it $1, and pays a tax upon it at the custom-house of 50 cents, has paid for the article $1.50. The importer, when he sells this article, must have his profit equally upon the money he paid for the article abroad and the money he paid for the right to introduce it. Suppose that the profits made by a wholesale dealer who has imported and paid duty on this hat amount to 10 per cent. The hat has cost him $1.50; his 10 per cent. profit is 15 cents. Adding these two together, the price the retail merchant pays for the hat is $1.65. Now, if the retail merchant makes, as he must, a profit of at least 20 per cent., his profit on the $1.65 he paid amounts to 33 cents. Adding this profit to what the hat cost him, which was $1.65, and the price of the hat to the consumer, the man who buys the hat of the retail dealer, is $1.98.

Now, how much did that tax of 50 per cent. cost the last purchaser? To find out we have only to suppose that the importer paid no tariff duty. If he paid only $1, his 10 per cent. profit would make the hat cost the country merchant $1.10. Then, if this retail dealer put on it his 20 per cent. profit, that would be 22 cents. Adding that sum to the $1.10 paid by the retail dealer, the hat would cost the purchaser who should buy it for use $1.32. The difference, then, to the consumer between what the taxed hat would cost him, $1.98, and what the untaxed hat would cost, $1.32, would be 66 cents. So it is clear that the tariff is not only a tax, but it is a burdensome tax. The 50 cents tax has cost the consumer 66 cents, because he must necessarily pay it; and he must also pay a profit on it to every merchant who handles the article he buys.

Now, if such a tax is laid for the benefit of the Government, and it the Government gets this 50 cents and needs it the consumer will not complain. He paid 66 cents, where the Government got only 50. Sixteen cents is a high price to pay for collecting 50 cents, but still the Government is entitled to and must have money to support and enable it to protect the citizen. Now, suppose the Government should raise the duty on that hat to 60 per cent. in order to protect the manufacturer, who wanted to sell it at $1.50. This would be "checking imports," because the wholesale dealer would buy the American hat at $1.50 instead of the foreign hat at $1, when he has to pay the 60 cents tax. Then the wholesale dealer demanding his 10 per cent. profit and the retail dealer his 20 per cent. on the $1.50 hat bought from the manufacturer, the hat would cost the consumer just the same as before. The difference would be that the Government would not in the last case get any revenue. The citizen would, therefore, be taxed in some other way for his share of the burdens of state.

He could have bought the hat if it had been imported free of duty at $1.32. As it is, the Government, by putting duty so high as to prohibit imports, has prevented itself from getting revenue and has compelled the person needing the hat to pay to the manufacturer $1.98 for it, thus paying 66 cents on the hat to keep the manufacturer going.

The manufacturer gets no benefit from articles which are imported. He gets no share of the taxes paid at the custom-house. It is only on the goods bought of him that he gets a profit. This is why he favors (as Mr. Columbus Delano said in the extract from his testimony which I have quoted) a tax that will practically "prohibit the importation of foreign goods." Just to the extent that a tax is prohibitory and prevents importations, to that extent precisely does it protect the manufacturer, because it compels consumers, or the merchant who sells to them, to buy of him and not abroad.

It would seem, Mr. Speaker, that those manufacturers who oppose all reduction of tariff taxes are charging to-day for their wares just the price of the European goods with the tax added, or so near to that figure as practically to amount to the same thing. If that be not true, then why is it that when an effort is made, as in the Mills bill, to effect even a moderate reduction of taxation they cry out that it is an attempt to ruin them by bringing in cheap goods, the product of what they call the pauper labor of Europe.

Before I come, however, to that question of the effect of a reduction of duties on the labor employed in manufactures, let me ask what right does the Government have to tax, say, the farmers, or any other class of people for the benefit of those engaged in other industries.

Our agricultural exports for the year ending June 30, 1888, amounted to $500,785,314. These include cotton, breadstuffs, provisions, etc. The lumber and timber we exported during the same year amounted to $17,724,370. The prices of lumber, timber, etc., in our export districts, and the prices of our cotton and our wheat, are regulated by the markets abroad. Our cotton is sold in Liverpool in sharp competition with the cotton made in India, Egypt, and other countries. The prices our farmers get for cotton depend, not upon our home manufactures, but on the demand and supply of the world.

The advocates of the present system are pleading all the time to us about a home market and telling us of its value, and yet every year we send abroad more and more cotton. We supply the greater portion of the world, and still the effort of the manufacturers is to allow us to buy our goods nowhere in the world but of them. Their system has been in full operation since 1865. Has it changed our market? Counted in bales of 400 pounds each, the cotton supply of the world in 1866–'67 was 4,408,000. In that year all other countries supplied 2,178,000; the United States 2,230,000, more than half. Ten years afterwards, in 1876–'77, the supply of the world was 6,830,000; other countries made, all told, 1,897,000; the United States furnishing 4,933,000, largely more than two-thirds. In 1886–'87 the supply of the world was 9,750,000; other countries made 2,300,000; the United States producing 7,450,000, about seven-ninths of the whole cotton supply of the world.

On what principle of right can it be that the makers of this cotton shall be prohibited by law from buying cheaply of that world which they supply so liberally with cheap cotton. These figures show that we are successfully competing in the production of raw cotton with the pauper labor of India. We shall probably continue to do so. In India, which is our principal competitor, the average product per acre, from 1879 to 1886, of raw cotton was about 50 pounds; the average product of cotton per acre during the same period in the United States was about 170 pounds. But other countries still compete. Competition with ourselves is becoming serious. Mark how we ran up in twenty years from 2,230,000 to 7,450,000 bales of 400 pounds each. There seems to be absolutely no bounds to the amount of cotton we can make.

This continued increase must continue to result in cheapening the price.

The case of the Western farmer is precisely the same. He supplies fully half the wheat imported into other countries. It is the foreign market that regulates the prices of his breadstuffs and his meats.

But the case of the cotton producer or of the producer of timber or wheat or other provisions will not be so hard if his supplies, too, are cheapened as they ought to be all along the line. The tendency of the world is in that direction. Farmers' products continue to fall; so ought manufactures, and they do. Improved machinery, improved processes of manufacture everywhere, bring down prices, in America and Europe alike. The hand-loom, the country blacksmith shop, the small private manufactories, carried on by hand, that formerly dotted our whole country, and especially New England, are things of the past. Cloth, shoes, hats, clothing, nails, agricultural implements—everything is made by machinery; everything necessarily becomes cheaper.

It is the crowning blessing of civilization that the necessaries and even the comforts of life are being brought within the reach of the laboring man. The world over, where the laws allow him a fair chance his condition is improving. He produces more than the laboring man could in past ages, and he ought to be allowed to enjoy more. By right he is entitled to a fair share of the triumphs of civilization, including the benefits resulting from the wonderful development of transportation by steam, on land and at sea, bringing so cheaply to be exchanged one for another the products of all peoples and all nations.

But our Republican friends point to the cheapening of goods among us and to the progress we are making, and attribute all to what they call our American system. If gentlemen really believe this they ought to lift up their eyes and look abroad. England has taken from us almost the last vestige of the large share that once was ours in the carrying trade of the world. Great Britain, France, Belgium, all Europe, is gridironed with railroads. London in thirty years has increased her population by a million. Berlin in forty years has more than trebled her population. New towns have sprung up all over Europe, old cities have taken on new growth, new factories have been built, new mines developed. The impulse of modern civilization is felt everywhere, even in Italy, sitting so long inert amid the crumbling ruins of the past.

The spirit of progress is there as well as here; and there, too, as well as here are witnessed the triumphs of invention. If we have developed more rapidly, it is because of our free government and because of our vast resources of field and forest and mine and waterfall, answering like magic to the touch of enterprise and energy.

It is for these reasons, sir, and because also of the fact that we come of the most enterprising of human races, that we have progressed; not by reason of but in spite of the gyves and shackles that our Republican friends have placed upon labor. If we wish to decide how much of our present prosperity is due to our tariff system, let us compare ourselves with ourselves. Look at this table, not made by a Democrat, but taken from the second volume of the census of 1880, compiled by Republican authorities. It shows, first, that from 1860 to 1870 man-

ufactures advanced more rapidly than during any previous decade. It shows, secondly, they advanced more than at any subsequent decade. The per cent. of increase in the gross value of manufactured products in the United States for the decade from 1850 to 1860, the first of these decades, was 85 per cent.; in the second, from 1860 to 1870, it was 79; and in the third, from 1870 to 1880, it was 58 only. The percentage of increase in the net values of manufactured products in the first decade was 84, in the second 63, and in the third 41 per cent. The capital invested and wages paid increased in a somewhat like proportion, though the number of hands fell off as machinery improved and increased in value. But the advance of wages during that first decade, according to this table, was greater than it was in either of the two following decades. Here are the tables, prices in 1870 reduced to gold:

Table showing increase in manufactures.

	1850-1860.	1860-1870.	1870-1880.
	Per cent.	*Per cent.*	*Per cent.*
Gross value of manufactured product	85.05	79.54	58.59
Net value of manufactured product	84.13	63.31	41.40
Capital invested	89.38	67.80	64.66
Wages paid	60.03	63.76	52.78
Hands employed	36.86	56.64	33.04

Table showing increase in wages.

Year.	Average yearly wages.	Increase.	Increase.
			Per cent.
1850	$247.11		
1860	288.86	$41.75	16.9
1870	302.07	13.21	4.5
1880	346.86	44.79	14.8

The country developed under that Walker tariff, which was passed in 1846, as it never did before and never has since that day. The development was not only in the increase of manufactures and improvement in the wages of laborers, but in every respect.

Taking the same census returns for the period between 1850 and 1860, the farm values advanced throughout the United States as follows: In the first decade, 103 per cent., and in the second decade—that is, from 1860 to 1870—only 10 per cent.

The war had its effect on the decade from 1860 to 1870, but from 1870 to 1880 we enjoyed uninterrupted peace; and yet, Mr. Speaker, the advance in the values of farms during this decade was only 39 per cent., while under the Walker tariff, from 1850 to 1860, the increase was 103 per cent.

THE WAGE QUESTION.

These figures can not be disputed, but Republicans are now trying to array on their side the vote of those who labor in the protected industries upon the pretense that wages are higher in America than in Europe because of our present tariff. Such a proposition can not be sustained. The American producers of turpentine, of timber, of cotton, of wheat, and of meats are not protected by any law. They can not be, for their products are sent abroad. The foreign markets, as everybody knows, regulate the prices of timber and turpentine and cotton and wheat, and yet the American laborers who produce these commodities get better wages than those engaged in similar employments abroad. In the current discussion of the Mills bill last summer, replying to Mr. KELLEY, of Pennsylvania, I said:

No better illustration can be found of the fallacy of the idea that wages depend upon the existence or non-existence of tariff laws than the cases of Belgium and England, alluded to by the gentleman from Pennsylvania [Mr. KELLEY] when last upon his feet. Belgium has free trade; England has free trade. They are both upon precisely the same footing so far as regards the law, and yet the Belgians, according to the gentleman from Pennsylvania, make brick and transport them all the way to London and there sell them in competition with English brick. They do this, he says, because the wages of labor are lower in Belgium than in England. Now it is perfectly certain that the difference in wages between Belgium and England does not arise from any difference in laws, for both countries are on free trade. So, on the other hand, when you come to America. Here we all live under precisely the same tariff laws. And yet we find differences in wages in the different States, East, West, North, and South. If it was free trade that made low wages you would find the same low wages in England and Belgium; if it was protection that made high wages you would find the same high wages ruling in every State in America.

Contrast other countries in Europe one with another, and you find there that the wages are higher in free-trade England than anywhere else. Why? Is it solely because of free trade? No. England has coal; she is surrounded by water, giving the benefits of cheap transportation, and, in addition to these natural advantages, she has free trade, which gives her free wool and free cotton; and being thus allowed by the wisdom of her law-makers to utilize her natural advantages, she can and does pay higher wages than are paid anywhere else in Europe.

I traveled there last summer myself, and was very much struck with the differences between things in England and in Belgium, France, and Germany. The highest wages paid anywhere in Europe are, as I have said, paid in England, and the next highest perhaps in France, where protection prevails, but not to so great an extent as in Austria and Germany. Nowhere in Europe are wages lower than in Germany. If a high tariff could make high wages we should find wages higher in Germany than in England; workingmen would remain in Germany and not go to England: and yet, sir, I was particularly struck with the almost universal complaint that cheap labor coming over from protected Germany was ruinous to labor in free-trade England.

You find the English newspapers filled with the complaint that the Germans are flocking to England and working for less wages than English workingmen receive as firemen on railroads, brakemen, conductors, barbers, waiters, and every imaginable position a hungry man can fill. I think the gentleman will not deny that that is a common complaint among the English working people, that they are being ruined by the lower-priced labor of Germany. Therefore, sir, it is clear that it is not, and can not be, in the power of the law to secure men high wages. Wages depend upon other conditions; where population does not crowd the means of subsistence; where there is work to do and money to pay for it and demand for its products, wages will be high, and they will continue to be high, and labor will find plentiful employment where law-makers are wise enough to add to their natural advantages by giving them free raw materials upon which to employ their skill, just as the Mills bill proposes to do for the workingmen of America.

The value of labor is measured by its product. The American laborer is superior to any other in the world, energized as he is by the spirit of our free institutions and with the hope always before him of bettering his condition. Statistics show that he produces more. His wages do not depend upon law; the law can not fix them. They depend much more upon himself and the properly directed efforts of trades unions and other labor organizations.

Whatever the causes may be, the wages of labor in all civilized countries have made advances during the last fifty years. Especially is this the case in America and England. I have shown that in America wages advanced more rapidly under the Walker tariff from 1850 to 1860 than since. In England they advanced more rapidly under her free-trade system than before. The improvement in the condition of the English laborer in the fifty years from 1833 to 1883 is shown by tables made by the great statistician, Sir Robert Giffen, from which I take the following as samples of weekly wages:

	1833.	1883.	Amount increase.	Per cent.
	£. s. d.	£. d. s.	s. d.	
Carpenters, Manchester	1 4 6	1 14 0	10 0	42
Bricklayers, Glasgow	15 0	1 7 10	12 0	80
Mule-spinners, Huddersfield	1 5 6	1 1 0	4 6	20
Weavers (men), Bradford	8 3	1 6 0	12 3	150

Here we see that wages all advanced, some at a greater rate than others; carpenters wages from $6 per week to $9.50, gaining 40 per cent. Men weavers at Bradford gained 150 per cent., increasing from $2.06 per week to $6.50. Seamen's wages advanced in England, from 1850 to 1883, all the way from 25 to 70 per cent., on an average, say 50 per cent. Certainly the protective tariff of America had nothing to do with this increase in England, but it had just as much influence as it has had here.

Sir, in all the history of tariff legislation in America I do not remember to have seen, and in all the discussion I have heard on this subject I do not remember to have heard, one single well-authenticated instance in which any direct connection was shown between the raising of tariff taxation and the increasing of any workingman's wage. These laws were never passed for that purpose. When high tariffs were first contended for, the contention was not placed on the ground that labor was to be benefited; it was solely the protection of capital, the nurturing of infant industries, which, at some day in the future, were to stand alone and no longer need protection. The general tendency of wages, as I have shown, has for the last fifty years, both in Europe and America, been upwards. The laborer has been getting from time to time a fairer share of that which he produced. God speed the time when he shall get still better wages than he has gotten in the past, for he is certainly entitled to them, and I believe that time is coming. But it will not be through customs laws, which hem him about and shackle him and deprive him of the material with which to work.

What labor wants is not only good wages, but steady, continuous employment, such as will come from legitimate industry.

A TARIFF HIGH ENOUGH TO GIVE CAPITAL ABSOLUTE CONTROL OF THE AMERICAN MARKET GIVES IT ABSOLUTE CONTROL OVER LABOR.

Such a tariff, by holding out to capital the temptation of large profits, must bring about one of two results—that is to say either, first, severe and sharp competition; then overproduction; and then, as raw materials are taxed and we can not produce cheaply enough for export, must come either bankruptcy to the manufacturer, or, to prevent that catastrophe, shutting down and lock-outs. The bankruptcy of his employer or a shut-down is all the same to the laborer, for in either case his occupation is gone. To prevent all this the remedy of the capitalists who oppose free raw material in these days is the

SECOND ALTERNATIVE, TRUSTS.

The natural tendency in this age is towards large combinations of capital in every industry. A manager with a slight increase of clerical force can conduct a business employing $275,000 capital as easily as if it only employed $50,000 capital. Small establishments, therefore, are passing away, large ones increasing. The census shows that we had in the United States invested in cotton manufactures in 1830, $40,000,000; in 1880 more than five times that amount, namely, $208,000,000.

The whole number of establishments, however, in 1830 was 801, while in 1880 it was but 756. The amount of capital to each estab-

lishment in 1830 was $50,000. In 1880 the amount in each was $275,000. Nobody can object to large establishments if they are more profitable to the stockholders so long as they carry on a legitimate business. I only cite these figures to show that establishments in every industry are year by year becoming fewer and combinations easier.

In 1830 combinations and trusts were never heard of. Want of communication and want of transportation rendered them impossible. Now the fewer men who control American industries are brought closer together by railroad and telegraph; experience has demonstrated how easily fortunes can be made by controlling markets; and the day of trusts has come. Our high protective tariff is their prolific parent. It shuts out competition and invites combination.

It is true that trusts are not confined to tariff-protected articles, but tariff laws render them easy of accomplishment, and human greed can not resist the temptation these laws hold out. It is easier to make a combination among a few than many. It is easier for monopolists who speak one language, live in one country, under the sheltering influence of one law, to combine than it is to effect a combination among the manufacturers of all climes and of all nations. Difference in laws, difference in habits of thought, national jealousies, national prejudices, widely divergent and multiplied interests, the vast mass of products to be handled, and the multiplicity of conflicting interests concerned render world-wide trusts almost impossible.

I have spoken of the pioneer trust, the American Steel Association, how, years ago, to keep up prices, it paid the Vulcan Works, of St. Louis, Mo., $70,000 per annum to stop work and turn its five hundred hands out of employment. The sugar trust followed. It has raised the price of sugar from 1½ to 2 cents per pound, thus robbing the consumers of sugar of millions of dollars. Not ten days ago it shut down its refinery at Boston and turned its hands out of employment. That is the way the tariff benefited the laborers. Now comes

THE BAGGING TRUST.

The tariff on bagging is 2 cents per yard. This has given the American market to a few manufacturers. Bagging was once made at Dundee, in Scotland, but the tariff was so high Dundee could not compete, and so the Dundee mills are closed. Bagging is made in Calcutta, but it would take three months to get it, even if there was enough there. So the protected American manufacturers of bagging, waiting till the cotton crop began to come in, raised the price of bagging, which was 8 cents last season, to 11 and 12 cents, thus robbing the cotton growers of over $2,000,000 in increased prices. Not only that, but this trust has shut down some of its mills and turned its hands out of employment. Ruinous to the consumer, ruinous to labor, these trusts bode good to nobody but to the conspirators, unless it be the Republicans. They claim a share of the spoils from all who are protected by the tariff, and the more highly protected they are the more the Republican leaders demand. And, Mr. Speaker, they have a right to demand their share, for their policy upholds these trusts.

FRYING THE FAT OUT OF THE MANUFACTURERS.

Listen to Mr. James P. Foster, president of the Republican League of the United States. See how he scolds because his friends had failed to make a fair division. In a confidential circular, dated at New York May 25, 1888, calling for money with which to fight this battle in favor of monopoly, he says of the manufacturers, they are the—

men who are getting practically the sole benefit, or at least the most directly important benefits, of the tariff laws.

He goes on then to speak particularly to the manufacturers of Pennsylvania—

who are—

He says—

more highly protected than anybody else, and who make large fortunes every year when times are prosperous.

And he says:

If I had my way about it I would put the manufacturers of Pennsylvania under the fire and fry all the fat out of them.

There is no doubt of the authenticity of this letter.

Well, Mr. Speaker, the circular seems to have done its work. We hear no more complaint from Foster. More than a million of dollars is said to have been dumped into the national Republican executive committee with which to fight this battle "all for the benefit of labor." Rings, monopolies, and trusts are all for Harrison and Morton. The people have a mighty contest before them.

THE MILLS BILL.

The great battle is on the Mills bill, an effort of the Democratic House to reduce taxation. This bill takes off about $28,000,000 from tobacco and about $50,000,000 from customs duties, altogether about $78,000,000. The bill, of course, is not perfect. There are some things in it I could wish were changed; but it is an honest effort in the right direction, and I support it most heartily.

It gives free salt, free tin-plate, free cotton-ties, free wool, and makes many other articles free. It reduces the duties on sugar, on rice, on glassware, crockeryware, on cotton goods, very largely on woolen goods, and, indeed, on all the necessaries of life.

It reduces the tax on cotton-bagging from 2 cents down to one-half cent. A duty of one-half cent will let in foreign competition and break up the trust. If the trust had been formed before the bill left the House, bagging would have been made free. The bill has passed the House and is pending in the Senate.

It would strike the shackles from labor and give the American workingman a fair chance at the markets of the world by giving him free raw material. Thus it would give a new impulse, not to trusts, but to legitimate manufactures. It would multiply manufactures and give increased opportunities to the wage-worker. With free raw material no factory need shut down when the American market was supplied. It could export its goods, as our leather-workers now do. Many manufacturers see this and are supporting the Mills bill. At the same time this would benefit the consumer by giving him cheaper goods.

This is the very theory the Republicans go upon when, in the interest of manufacturers, they sustain

OUR REBATE LAWS.

These laws provide that one who imports a dutiable article for the purpose of manufacturing and exporting the product, shall at the time he exports it be allowed to draw back from the Government in some cases 80 and in other cases 98 per cent. of the duty paid upon the raw material manufactured. Thus, if one imports jute and pays $100 upon it and manufactures it into cordage for exporting, the Government pays him back at the time he ships it $80 of the $100 he paid upon the importation. The theory is that the manufacturer is to have free raw material to enable him to export and sell cheaply abroad, in competition with the foreign manufacturer. The 20 per cent. is withheld by the Government simply to cover the supposed expense of the collection and repayment. Now, there is no doubt that the theory upon which this law proceeds is practicable. To have raw material even lightly taxed does enable the American manufacturer to sell cheaply to the foreigner, but the question suggests itself just here, why not allow him to have his raw material free and sell cheaply to the American? What reason is there for giving the foreigner the advantage over the American consumer?

The operation of the law is brought out very clearly in the testimony of Mr. William Marshall, of New York, who was examined on February 21, 1884, before the Ways and Means Committee of this House. The following colloquy between him and myself took place:

Mr. HERBERT. You are entitled to a rebate of 80 per cent. on the duty paid on your raw materials.

Mr. MARSHALL. Yes.

Mr. HERBERT. Then you are able to sell cordage to the foreigner cheaper than you can sell it in your own country?

Mr. MARSHALL. Yes, sir.

Mr. HERBERT. If duty were taken off the raw material, and if the tariff on the manufactured article was also reduced, would you be able to sell to your own countrymen at pretty nearly the same price as you sell to the foreigner?

Mr. MARSHALL. Yes, sir.

Mr. HERBERT. That is, you would give the American consumer a fair chance?

Mr. MARSHALL. Exactly.

Mr. HERBERT. But as it is now the foreign consumer is protected by our tariff laws at the expense of the American consumer?

Mr. MARSHALL. Yes; I said a few years ago to a gentleman (well known by reputation) who was going to deliver a speech on the commerce of the country, that if I sell 5 tons of ropes on the docks in the city of New York and export 30 tons to China, the American captain has to pay me more money for the rope which he buys at the dock in New York than the English or the German or French captain has to pay who buys the same rope in China after paying all the expense of sending it there. That is the way that the commerce of this country is benefited by the tariff.

If we wish to see what our workingmen can do when they have a fair opportunity take leather and its manufactures. Hides were made free in 1872. At that time our population was about 40,000,000, and our imports of leather and leather goods amounted to $11,879,000—our exports of hides, leather, and leather goods, $5,129,000. We failed to supply, at that time, our own wants by more than $5,000,000. Since then we have increased in population more than twenty millions. In 1887 our whole imports of leather and manufactures thereof amounted altogether to $11,199,945, which is less than we needed from abroad in 1872.

So we have actually supplied all the wants in this line of our increased population of 20,000,000. Not only that, but we exported in 1887 of cotton and leather goods $10,436,000, thus increasing our exports by more than $5,000,000—supplying the wants of the whole 60,000,000 of our people, having this $5,000,000 worth to sell to other countries. This has furnished wages to thousands of workers, and has brought down the prices of their products, cheapened to the consumer the prices of boots and shoes and saddles and harness, which are now as cheap in this country as abroad. But it has not brought down the wages of labor. On the contrary, the wages of the workers in leather have increased and the industry is flourishing.

It was predicted by the high-tariff men that the introduction of free hides would bring disaster to the farmer, just as now it is predicted that the making of wool free will be disastrous to the wool-grower, but the cattle business since the passage of that law of 1871 has flourished as never before.

FREE WOOL.

So we believe that if manufacturers are allowed to bring in all kinds of wool free to mix with our native wools, while we at the same time greatly reduce the tax on manufactures of woolen goods, the result will be a large increase of our woolen industries, a great increase in the amount of work given to our laborers, a large reduction to the consumer of the price of hats, blankets, and all kinds of woolen clothing, a steady and increasing demand for our own home-grown wools, and, as in the case of hides, no real injury to the wool-growing interest.

Some of my constituents are wool-growers, directly interested in this question, and they are entitled to the greatest consideration.

Let us discuss it fully and freely. First upon theory. Neither this country nor any other can grow all the wools necessary to make the various kinds of cloth. Wools, like the juice of grapes, to be used to the greatest advantage must be mixed, many kinds in one.

In France the highest-priced wines are made by the admixture of crops from many vineyards. For generation after generation experiment after experiment has been made, and the result has been the development of those fine brands which bring the highest price in the markets of the world, and thus has been secured a market, constant and valuable, to all these vineyards. So in the manufacture of cloth, wools from Algeria, Australia, South America, and many other countries, as well as the United States, are woven together. It is a positive injury to the American wool-grower that the manufacturer can not import freely of all kinds of wool to mix with the American. How far the free admission of every wool grown in the world into the United States, thus enabling the manufacturer to mix as he pleases with American wool, would neutralize the effect of taking off the tax, and what would be the precise effect of the removal, is a matter that can not be determined with any certainty; but it is, beyond all doubt, true that it will tend largely to uphold, if not to increase, the price.

I see, on consulting the table of exports, that 78,002 pounds of American wool were exported during the year 1887. Why was this? Can there be any answer but one? That a better market was sought abroad than could be obtained in America. This is not a large quantity, but it certainly shows that that much wool went from under this high tariff to be mixed with foreign wools in some country where wool is admitted free of duty. For in every other great manufacturing country except our own wool is free. Besides, that wool would not have chosen to go to a country where it had to pay duty. Now, certainly, if wools were admitted free into America the owners of that wool would not have sought a foreign market; they would have saved the cost of transportation abroad by finding a market at home. This is a significant fact to be considered by plain business men.

We imported into this country the same year (1887) 16,424,479 pounds of wool, but the manufacturers of finer sorts of woolen clothing have, many of them, stopped, because of the high duty on certain classes of wool. If they had been allowed their choice of the markets of the world not a single pound of American wool would have gone abroad.

The next fact for the consideration of the wool-growers is that prices under the present tariff on wool are not equal to what they were in 1860 under the low Walker revenue tariff. I insert here a table showing the prices of wool from 1860 to 1887, inclusive:

Price of fine, medium, and coarse washed clothing fleece wool in the markets of New York (1860–1887) *and Philadelphia* (1865–1887), *inclusive.*

[From Mauger & Avery's Annual Wool Circular.]

Year.	January.			July.		
	Fine.	Medium.	Coarse.	Fine.	Medium.	Coarse.
	Cents.	*Cents.*	*Cents.*	*Cents.*	*Cents.*	*Cents.*
1860	60	50	42	55	50	40
1861	45	40	37	38	30	22
1862	48	50	50	48	47	45

1875	55	56	47	52	49	46
1876	48	52	42	38	35	31
1877	46	43	36	50	44	37
1878	44	45	33	36	36	32
1879	34	35	32	37	38	34
1880	50	55	48	46	48	42
1881	47	49	43	42	44	36
1882	44	46	47	42	45	34
1883	40	43	33	39	41	43
1884	40	40	34	35	34	30
1885	34	33	29	32	31	28
1886	35	36	32	33	33	29
1887	33	38	33	34	38	35

In 1860 coarse wool was worth, in July, 40 cents; in July, 1887, it was worth 35 cents. The wool supply of the world is so short, the demand for it is so great that it seems not to be governed very largely by the prices which obtain for other articles. Like beef, it will make a market for itself. Prime beef is much higher now than it was in 1860, and that, as everybody knows, was an era of low prices. Consulting this table, we find that in 1867 the price of wool in July was 45 cents. The high tariff on wool was imposed in 1867. The next year after that law was passed, in July, 1868, the price was 43 cents. Wool went up gradually during the years 1871–'72, was high in 1875—46 cents; but in 1876, in July, it was at 31 cents; that was before the reduction of the tariff by the law of 1883. Immediately after the passage of that law of 1883, which materially reduced the tariff, it went down; but in 1887 it again rose to 35 cents. These variations under the tariff of 1867, which continued until 1883, ranged from 31 to 65 cents.

If we take the whole table and compare the price of wool in 1860 with what it was in 1887 (and these are the last figures I have at hand) the reduction from 40 cents to 35 does not compare with the reduction in wheat, in tin, or in most of the stable commodities. Tin from 1879 down to 1887 went down from 6 to 3 cents a pound. The average price of the wheat exported from the United States went down from $1.24 in 1880 to 80 cents per bushel in 1887. When prices are falling all along the line, not only in the products of agriculture but of manufactures, it can not be expected that wool should be entirely exempt from this downward tendency. The wool-grower, if there should be any depression of price, will have his compensation in the increased cheapness of the necessaries of life,

The Mills bill, while it proposes to make wool free, proposes also to reduce taxation by $78,000,000. This seventy-eight millions, of which about fifty millions are taken from imported goods, will amount to very much more than that by the time these goods reach the people. The importer, the wholesale merchant, the retail merchant, must all have their profits on the amounts they pay for tariff taxes as well as on the original price of the goods; and it is safe to say that the taking of the seventy-eight millions from the taxes will relieve the people to the amount of at least $100,000,000. The relief to the consumers of goods in Alabama would amount to two and one-half millions of dollars—a sum equal to almost twice the amount now collected for State and county taxes.

This legislation is believed to be for the good of the people at large; it is for the many instead of the few. For myself, I believe as the country grows more prosperous, as it must and will under juster and fairer laws, and as we relieve the people of unnecessary burdens, wealth will increase, the demand for wool and woolen goods, necessities to so many and a luxury to all, will increase, because more people will be able to buy, and the wool-grower in the future will prosper as he has never in the past. So I trust it may be.

Mr Speaker, I think I can not better illustrate the difference in the principles upon which the two bills proceed than by discussing briefly the manner in which they dispose of tin. It may involve some repetition, but it will make clear that the Democratic House is legislating for the masses, the Republican Senate for the classes. The Senate bill continues the tax on, and the House bill admits free, tin-plates—that is to say, the ordinary tin from which are manufactured tin cups, buckets, cans for fruit, and tinware of all kinds. We collected in 1887 on tin-plates $5,706,433.89. The Government does not need that money.

In every cabin throughout the land you will find some of the tin that has paid that duty. It is 1 cent per pound. Our population is now variously estimated from fifty-six to sixty millions. Supposing it to be 57,000,000, then the duty paid by each man, woman, and child on imported tin (supposing its use to be equally distributed among all the people) was exactly 10 cents per head. It is true every person does not pay exactly an equal share of this tax. Some use more tin cans, more tin for covering houses, more tinware than others, but everybody, rich and poor, uses some of this tinware and pays some of this tax.

Not a pound of this tin-plate is manufactured in America. The importing price is now 3 cents per pound. The tax on it at 1 cent per pound is 33⅓ per cent. ad valorem, but that is not margin enough for the monopolists, for they are unwilling to manufacture it at 4 cents a pound. To put tin on the free-list would be to take off this 1-cent tax and cheapen it just that much to the consumer. That is what the Mills bill proposes to do. The Senate bill retains the tax.

Why? Is it for the protection of any industry at present existing in America? No; but there is a ring of capitalists, organized under the name of the American Tin-Plate Association, that has been lobbying for years at the doors of Congress asking that this duty be raised from 1 cent to 2 cents. It is left to stand now, that it may be increased in the future. Their friends in the House tried to put on the additional cent. Senator SHERMAN in his speech advocated it, and the Republican party will do it whenever it gets the power. This will enable them to demand of the consumer 5 cents per pound instead of the 4 cents he is now paying, and of the 3 cents per pound which is all he would pay under the Mills bill. The plea is that this imposition of an additional tax on sixty millions of people would enable the manufacturers to employ 24,000 workmen, who with their families would constitute 120,000 people.

These ringsters see no reason why the 60,000,000 inhabitants of the United States should object to paying an additional tax to enable them to transfer 24,000 workmen from other employments to this new industry they propose to establish. It would enable them to invest their capital, to control the market for tin-plate, to reap large profits, and build more palatial residences to adorn and beautify our land. Why should the poor tax-payer object? That is the system they seek to extend—taxing the many for the benefit of the few. We have taxed the timber-getter whose products must go abroad to seek a market, the turpentine-maker whose products go abroad to seek a market, the farmer whose cotton and breadstuffs are regulated in price by foreign

markets—all these, everybody, is taxed to enable the manufacturers of glass to control the market and get a high price for glass. Everybody who uses it is taxed to enable the manufacturers to make a profit on crockery-ware; why not tax everybody also to let a few capitalists control our home market and make profits on tinware?

But we ask, is not the laborer in the field, in the forest, in the railroad shop, is not the worker of tin, the carpenter who puts it on the house-top, the tinner who fashions it into cups and buckets and cans, and who wants cheap material, is not the oysterman who cans his oysters, the fruit-grower, the vegetable-grower, the meat-packer, the dairyman, all the people who can their products, and all the millions who buy and use these goods—are not all these as worthy of consideration as the few persistent capitalists who call themselves the American Tin-Plate Association? To this they make but one reply. They said, when the bill was here, that while the increased tax might temporarily raise the price to the consumer, yet the establishment of the industry in America would create competition with the foreigner and eventually reduce prices. To that we reply by saying, look at this table showing the history for thirteen years of the importation of tin in plates, sheets, terne, and taggers' tin.

Fiscal year ending June 30—	Quantities.	Value.	Rate of duty.	Duty received.	Value per unit of quantity.
	Pounds.				
1875	81,165,646	$5,077,122.30	1.1 cts. per pound..	$1,892,822.07	$0.06
1876	196,863,621	10,163,368.87	.....	2,165,499.81	.05
1877	222,307,980	9,818,069.69	.....	2,445,387.70	.04
1878	242,646,871	9,893,639.61	.....	2,669,115.55	.04
1879	278,544,822	10,248,720.34	.....	3,063,992.93	.04
1880	369,435,844	16,524,590.19	.....	4,063,794.22	.05
1881	377,072,728	14,641,057.87	.....	4,147,799.98	.04
1882	439,746,895	16,550,834.64	.....	4,837,215.85	.04
1883	453,724,126	16,688,276.67	.....	4,990,965.32	.04
1884	527,881,321	18,931,072.70	1 cent per pound..	5,278,813.21	.04
1885	505,559,076	16,610,104.56	.....	5,055,590.76	.03
1886	574,097,405	17,719,957.12	.....	5,740,984.05	.03
1887	570,643,389	16,883,813.95	.....	5,706,433.89	.03

This table shows that without the establishment of any monopoly here we are getting the benefit of the gradual fall of prices everywhere going on. It shows that tin-plate, which, in 1875, cost the importer 6 cents, has gradually come down from 6 to 5 and then to 4 and now to 3 cents a pound. That is what it now costs the importer without the tax. Democrats propose to take off the 1-cent tax and let it come in for consumption at 3 cents. Republicans propose to let it stand at 1 cent so that they may hereafter increase it. If we raise the price by taxing it 2 cents, then we shall have to pay this tax of 2 cents a pound forever; for the Republican doctrine is never to let go any portion of their protective tax. That is what they say in their platform. Thus do they seek to establish new monopolies to help with their money and their votes the Republican party.

The Senate bill makes its greatest increase by discarding duties which are ad valorem; that is, a given per cent. on the values of imports, and

ADOPTING SPECIFIC DUTIES.

A duty is specific when the goods are taxed, not according to value, but according to measurement, as by the pound, yard, or bushel. Look at the table of tin importations again. The duty there is specific because it is so much per pound. The rate of duty does not fall as prices fall. It remains stationary. When tin is 5 cents per pound the tax at 1 cent is 20 per cent., or 20 cents on the dollar's worth. When it falls to 4 cents in value the ad valorem tax is 25 per cent., or 25 cents on the dollar, and now that tin is 3 cents per pound 1 cent is 33 per cent. ad valorem, or 33 cents on the dollar. The ad valorem tax is fair to the consumer because he gets the benefit of the gradual and continuous fall in prices that is taking place all over the world. The specific tax would give the manufacturer the advantage of this fall, the tax remaining the same while values fall. So that is the method the Senate bill adopts.

If the Senate bill should pass and prices of goods should continue to go down in the future as in the past, the amount of tax the consumer would pay on each dollar's worth of goods to which they attach specific duties would gradually rise year after year.

The one thing to be said in favor of specific duties is that it prevents frauds which are sometimes successful by undervaluations. If the specific system were only adopted in certain cases, and if these duties were adjusted from time to time, that would work no hardship. But to adopt them generally is a fraud upon consumers, the mass of the people, because it gives the manufacturers the benefit of a constantly rising duty and deprives the people of the benefit of the fall in the prices of manufactured goods.

It is a fraud, too, on the poor man because they apply the same yardstick of taxation to the coarse as to the finer qualities of cloth coming under the same denomination.

FREE QUININE.

To illustrate again how we would get the benefit of foreign competition if the Republican party would allow it: In 1880 a Democratic House, aided by public sentiment, forced a Republican Senate to agree to a law making quinine free. The price at which Powers & Weightman, of Philadelphia, sold quinine in 1880 was $2.25 per ounce; it has gradually run down to 50 cents per ounce. I do not pretend that all this took place by reason of taking off the 20 per cent. The fall has been much greater than 20 per cent. It was brought about partly by the removal of the tax and partly by the competition of foreigners among themselves, seeking to sell not only to America but to supply all the markets of the world. By making quinine free we simply allowed ourselves the benefit of that competition, and this table shows we have had it:

Price of quinine, Powers & Weightman, Philadelphia.

Date.	Lowest price.	Date.	Lowest price.
	Per ounce.		*Per ounce.*
1880	$2.25	1885	$0.75
1881	1.90	1886	.65
1882	1.80	1887	.46
1883	1.60	1888	.50
1884	.90		

But this table shows a great deal more than that. Powers & Weightman and the other manufacturers of quinine claimed when quinine was made free, as many manufacturers now claim, that if the tax upon which they relied was removed they must shut up their establishments and turn their hands out employment; but Powers & Weightman are to-day, as other firms are, still engaged in the manufacture of quinine; still making profits. The manufacture of quinine has increased till we now make 2,225,000 ounces—more employment to labor and an incalculable gain to the suffering sick.

CONCLUSION.

Mr. Speaker, I have dwelt a long time on this subject of taxation, but it is a great question. It is one on which I could talk for hours more. It is a subject I have studied for years. I believe there is no hope of any relief of taxation except through the instrumentality of the Democratic party; that that hope is brighter now than for years past. If President Cleveland is re-elected, and if we get control of both House and Senate, relief to the people is now sure to come.

I believe I have succeeded in establishing what I said on a former day and now:

First, that the Democratic party is the only party to which we can look for economy in public expenditures. The Republicans, in order to keep up high taxes on imports for the benefit of their friends, the monopolists, must and do sustain extravagant appropriations.

Second, that President Cleveland favors the people as against railroad or any other corporations. Under him we have already suspended, for the time being at least, speculation in all public lands fit for agriculture, in order that we may reserve them as homes for the people.

Third. That the Democratic party has been for all the past, the great body of it, in favor of relieving the people from onerous and unnecessary taxation; that under our great leader it is united now on this question as never before. If there ever was a time when any citizen was justified in leaving that party to seek relief in other organizations, that time certainly is not now; and, Mr. Speaker, it can never come till the Democracy shall forget its mission and turn its back on its history in the past.

During all my long term of service in this House I have all the time felt that if anywhere, either on the Judiciary Committee or the Ways and Means Committee or the Naval Committee, I could contribute by my humble efforts anything whatever to the success of the Democratic party I was aiding to that extent in the great crowning achievement of relieving my constituents from unnecessary taxation. That relief is not to come this session, because a Republican Senate stands in the way. If we achieve, as I trust we will, a great victory at the polls the Senate, yielding to public sentiment, may at the December term consent to at least a modified relief. If they do not we shall have made straight our way for the future.

I trust that the people this fall will be aroused as never before. For myself, I have been at my post during all this long session of now nearly ten months and a half. I have long known that the Senate did not intend to pass any bill, but I felt it to be the duty of Democrats to stay here and show the people that the House was ready to act on any bill that the Senate might return to us. Thus we would demonstrate to the public the hollowness of the pretense of the Senate that they intended to pass a bill. And we have done it. They now have no quorum—can not take a vote on a single provision of their bill. Thus it is and thus they intended it should be.

In the mean time the Republicans are at work all over the country. Money is to be used everywhere, wherever they can hope to capture a district. In the district I have the honor to represent there is already a candidate in the field. How much quiet work in organizing their forces has been done and how much is to be done no one can tell; but I trust, sir, that on

THE 6TH OF NOVEMBER

the people there as elsewhere will crowd to the polls, rain or shine, to vote for Cleveland and tariff reform. Let no voter anywhere be overconfident. Eternal vigilance is the price of liberty.

The Arid Lands of the United States.

SPEECH

OF

HON. MARCUS A. SMITH,

OF ARIZONA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, September 19, 1888.

The House having under consideration the report of the committee of conference on the bill (H. R. 10540) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1889, and for other purposes—

Mr. SMITH, of Arizona, said:

Mr. SPEAKER: When the present appropriation bill was before the House some days ago an amendment, known now as the one hundred and nineteenth amendment, was adopted. At that time I strenuously objected to one of the provisos of that amendment; and as this bill is to go back for further conference, as now seems evident, I deem it my duty to protest against a grievous, though unintentional, wrong which that proviso will certainly work on the present development and settlement of the arid lands.

I was confidently assured by members interested in obtaining an appropriation for a hydrographic survey of our desert land that the conferees on the part of the Senate would never agree to that proviso, the adoption of which will ultimate in an embargo on the prosperity of my constituents. Finding by the report of the conferees that the proviso complained of is now reported for adoption by both Houses, I would be untrue to those who sent me here, untrue to my convictions, and untrue to myself did I fail here and now to raise my voice against this threatened wrong.

Let us examine the consequences of the proposed legislation and see whether, even in the face of a conference report, it is not lacking in wisdom and fraught with danger.

By reference to what is known as the one hundred and nineteenth amendment it will be observed that there is a proviso which, after reservation of the desert lands from entry, empowers the President in his discretion by proclamation to open to settlement under the homestead law any portion or all of the land reserved.

This proviso was attached to the Senate amendment of the present bill, which amendment appropriated $250,000 for making a hydrographic survey of the arid lands of the United States. As is known to all of us who have time amid the thousands of demands on us to give any attention to legislation, the House adopted the Senate amendment with an amendment reducing the appropriation to $100,000, and with the further provision—

That all lands made susceptible of irrigation by such reservoirs are henceforth reserved from sale and shall not be subject, after the passage of this act, to entry, settlement, or occupation until further provided by law.

It needs no vision to discover the danger in that amendment. A blind man could feel it. It has not only a tendency to retard the development of these arid wastes, it actually prevents their development. There is not to-day within the vast Territory of Arizona 10,000 acres of land suitable for settlement under the homestead law, especially when we exclude from our calculation all those choicest lands which the Government in its mistaken munificence has seen fit to bestow on a lot of idle, vagabond, murderous Indians, to the great injury of the virtuous, peaceful, and industrious poor of our own blood and nationality.

I will resist here the strong temptation I feel to enter into a discussion of our Indian policy, reserving my observations on that question until a more appropriate occasion.

If the provision already adopted should become law it will be beyond the power of anybody to settle on the desert lands in the West with any assurance of certain title. The settler is forced to assume the risk of locating beyond and outside of the limits which may in future chance to prove itself susceptible of irrigation from reservoirs constructed by the aid of Government.

I fear the settler will be slow to assume the risk. Private enterprise will be cramped. Settlement and reclamation of the land will be delayed by hypothetical contingencies which Congress is now about to throw in the way. I implore you to pause. Is the desert not already forbidding enough? Do you propose to lay even yet another burden on my struggling people by suspending, from a hair, above their titles a sword of Damocles, weighty with impending danger? Will you insist on alloying danger with your blessing? Why can not the appropriation be made free from the difficulties and dangers which you seem determined to place upon it? We asked for bread; and while you have not exactly given us a stone, you have insisted on cooking the bread in a way to ruin digestion.

As I before observed, the land in Arizona is desert in character. It is not adapted to homestead entry, and if it is ever reclaimed, it will be reclaimed, in my opinion, only under a reasonable desert-land law, such as we now have. Then why is this "homestead" limitation placed on the President's power? If power were given the President to open these reserved lands to settlement under "existing law," then we would have far less objection to the reservation; hence, I have suggested that the word "homestead" be stricken out and the words "existing law" substituted in lieu thereof. With this change in the language of the proviso, the wholesale reservation of these lands could be avoided by showing that in this or that locality no necessity for the reservation exists, and the President by proclamation can open these reserved lands to desert as well as homestead entry.

Mr. HERBERT. The effect of this conference report, if adopted, would be, as I understand the gentleman, to prevent the President from allowing those reserved lands to be settled under the desert-land act.

Mr. SMITH, of Arizona. It would entirely prevent their settlement under the desert-land act, and inasmuch as there is none but desert land in Arizona, there will remain no inducement to its settlement; for no man can be expected to go into the desert and spend five or ten years in reclaiming 160 acres of land there, when he could elsewhere obtain the same amount of land and immediately begin raising crops and providing for his family.

If there shall be a further conference between the two Houses on this bill, I beg the gentlemen composing the committee of conference to give due attention to this matter. I am assured by conversations had with Senators serving on the conference committee that there will be no objection raised upon that quarter to the amendment I suggest, for they must see, on the mere statement of the case, the necessity for the amendment. I shall take pleasure in going before the conference committee at its meeting and urge upon it the importance of the measure which I am here attempting to explain.

Mr. Speaker, there seems a settled purpose on the part of certain able and experienced members of this House to repeal the desert-land act, the timber-culture act, and the pre-emption act. My limited time prevents me from discussing the effect of such repeal further than concerns the desert lands. The note of alarm which has so frequently been sounded in this Hall by the distinguished chairman of the Committee on Public Lands [Mr. HOLMAN] has justly attracted the attention of the country. I indorse without reservation every word uttered by him in denunciation of any policy or any law which permits land monopoly.

I know that much of the public land has been stolen. I know that adroit and conscienceless land-grabbers are still plying their unholy avocation. I will permit no man to go beyond me in earnest desire and honest effort to protect our public domain from plunder, yet I feel that the facility of its acquisition is due not so much to the law as to the manner of its execution and the perfidy which ever attends on avarice. The whole difficulty with the desert lands arises from an improper classification.

Large bodies of the public lands are classified and entered as desert land when they are not in fact desert. Such a condition attracts the cupidity of the land-grabber, and he thus acquires against the spirit and intent of the law vast tracts of agricultural land for a mere trifle. These conditions do not exist in Arizona or New Mexico. I can not speak advisedly of those Territories lying north, but it is safe to say that they contain a vast area of purely desert land.

The expense attending the reclamation of strictly desert land will always prevent the land-grabber from injuring the public. I suggest to the chairman of the Committee on Public Lands that the Territory of Arizona should not be subjected to a policy which might very wisely be applied in other sections of the country where the land, though classified as desert, is in fact agricultural land. The efforts of the Public Land Committee to prevent fraud in such localities and under such conditions should not induce it to nullify or repeal the very wise and beneficent desert-land act.

The difficulty, I repeat, is not in the law but in the manner of its execution. You permit a wrong classification of land under a just law and immediately proceed to condemn the law. It reminds me much of the boy who went to his mother complaining that his little brother cried just because he hit him on the head with a hammer. I tell you seriously this constant attack on the desert-land law is a blow of a hammer to our prosperity and to our country's development.

In order that enterprising people who have families to support may be induced to labor for five, seven, or ten years before their land becomes productive some special premium or advantage must be offered; otherwise they will settle elsewhere. This land will never be settled except by allowing liberal quantities to those who are willing to bear the hardships of the desert and spend years of labor in reclaiming it. I therefore urge on the gentleman having charge of this bill that in the coming conference he insist on incorporating the amendment I have suggested; otherwise you endanger not only the interest of people now in Arizona but of all those who shall subsequently come. It is idle to hope for settlement in a desert under the homestead law. The homesteader will inevitably go elsewhere. The question here squarely presented is, will Congress willfully retard the prosperity of its Territories? Will you knowingly throttle our struggling enterprises?

Mr. DUBOIS. Will the gentleman permit a question?

Mr. SMITH, of Arizona. Certainly.

Mr. DUBOIS. There is a conflict of opinion as to what constitutes desert land. I know you are familiar with the subject, and I would like you to give a definition of what constitutes desert land.

Mr. SMITH, of Arizona. That question has been often decided by the Department and various definitions given, some of which are simply ridiculous.

Mr. DUBOIS. I ask you as an expert.

Mr. SMITH, of Arizona. As an expert? The knowledge is not so technical as to produce an expert. It is plain, simple knowledge of a plain, physical fact. Every land is desert that will not produce something. Yet as plain as this simple proposition seems, it has been decided that land producing a mesquite bush or two to the acre is not desert land. It would be just as sensible to hold that no desert exists where a cactus grows. Land is desert land when it will not, without irrigation, produce sustenance for man or beast.

Land may produce some grass and still be desert. A great portion of our desert country will support one steer to 50 acres on the grass which springs up quickly after the summer-rain, dies, and forms a sort of hay on which stock can, if industrious, manage to subsist. All such land is essentially desert, and should be subject to desert entry, and such entry should remain at 640 acres, as now provided by law.

Now, is Congress willing to do what we ask? If it is, we have nothing more to say. We ask that it adopt this amendment by enlarging the power of the President under the proviso, so that desert as well as homestead entry may fall within the proclamation.

Mr STONE, of Missouri. Why is not the amendment adopted by the House on motion of the gentleman from Kentucky [Mr. BRECKINRIDGE] satisfactory to the gentleman from Arizona [Mr. SMITH]? Because I much prefer that the reservation should extend only to land on which reservoirs, roadways, and canals are to be built.

Mr. STONE, of Missouri. Would not the amendment as it passed the House prevent the entry of any land in your Territory that could be reclaimed by irrigation?

Mr. SMITH, of Arizona. That is the burden of my contention. If it does not absolutely prevent entry it at least forces the entryman to take up land subject to a contingency which may defeat his title. I think without my amendment this law will prevent any settlement in Arizona. This fact accounts for the very deep interest I manifest in the measure.

Mr. STONE, of Missouri. What difference does it make whether the amendment proposed by the conference committee be adopted or not? It is putting you in worse position to adopt it.

Mr. SMITH, of Arizona. I am objecting not so much to the conference amendment as I am to the amendment of Mr. BRECKINRIDGE, of Kentucky. I am trying with all my might to have the next conference correct the mistake made by the adoption of the House amendment, which mistake was partially but not fully neutralized or removed by the conference amendment. The House amendment was wrong in the extent of the reservation of land. The conferees took a step on the line of correction, but did not go far enough. My amendment will do away with the difficulty if I can be so fortunate as to secure its adoption.

Mr. HERBERT. Both amendments of which you complain dooms Arizona to a desert until further legislation is had.

Mr. SMITH, of Arizona. That is precisely the result which I fear.

Mr. STONE, of Missouri. The latter clause of the amendment of the gentleman from Kentucky [Mr. BRECKINRIDGE] ought to be stricken out.

Mr. SMITH, of Arizona. By all means.

Mr. STONE, of Missouri. So as to leave the lands still subject to entry under existing law.

Mr. SMITH, of Arizona. Undoubtedly; because otherwise they can not be entered at all. The original Senate amendment, making an appropriation for a survey of the arid lands (on which I had the honor to address the House the other day), was free from all objection. The Breckinridge amendment made absolute reservation of all desert land. This amendment was offered by Mr. BRECKINRIDGE at the suggestion of the honorable gentleman from Colorado [Mr. SYMES]. I regret that it was offered. The conference amendment modifies the House amendment by permitting a settlement of these reserved lands under homestead law.

Mr. STONE, of Missouri. When the President by proclamation throws it open.

Mr. SMITH, of Arizona. Yes, sir. But as I have shown, nobody will thus settle on it. If you are unwilling to go further, you should at least empower the President by proclamation to throw them open to settlement under existing law, so that on the proclamation the desert land can be taken up.

Mr. STONE, of Missouri. That is what ought to be done.

Mr. SMITH, of Arizona. I thank the gentleman, and if all members of this House will but exercise the clear, just judgment which always characterizes the honorable gentleman from Missouri, the apprehension which now disturbs me will be dissipated by the adoption of the measure which I have attempted with earnestness, at least, to advocate.

I see my time has expired. I thank the House for its patient attention.

[Here the hammer fell.]

Sundry Civil Appropriation Bill.

SPEECH

OF

HON. HILARY A. HERBERT,

OF ALABAMA.

IN THE HOUSE OF REPRESENTATIVES,

Monday, September 24, 1888.

The House having under consideration the report of the committee of conference on the bill (H. R. 10540) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1889, and for other purposes—

Mr. HERBERT said:

Mr. SPEAKER: I regret very much that I was absent from the House on Monday while the gentleman from Illinois [Mr. CANNON] was speaking about what he called the extravagant expenditures of this Democratic administration. A constituent of mine in the service of the Government had died here that morning, and I was looking after his funeral arrangements.

Had I been present, I should have questioned a number of the statements made by the gentleman from Illinois, who evidently had not examined with his usual care some, at least, of the topics on which he spoke. For instance, he said, as I read it in the RECORD, and emphasized the statement, that the number of offices abolished since this Democratic administration came into power was 0. On that subject I shall undertake to speak now only for the Navy Department. With the expenditures there and the appropriations I am familiar.

The powers of the Navy Department are distributed among eight bureaus.

The expenditures under the Bureau of Yards and Docks for what is called the civil establishment, for the fiscal year ending June 30, 1886, amounted to $56,374.90. The moneys appropriated for that year were carried in a bill passed in the Forty-seventh Congress, before President Cleveland came in, and the reforms subsequently inaugurated under this Democratic administration did not apply to that fiscal year. The civil establishment is made up of clerks, writers, and messengers, officials drawing higher pay than common laborers. The expenses of this civil establishment under that bureau have been reduced to $46,430.

Mr. PAYSON. A reduction of $10,000.

Mr. HERBERT. About $10,000.

Mr. PAYSON. What offices have been abolished?

Mr. HERBERT. I can not stop to enumerate each one now, seventeen of them in all. I have here a table showing the number and character of these offices in 1886, and they were all there before President Cleveland came in and the number in 1888. The exact difference is seventeen of these offices abolished and $9,944.17 saved. That of itself is an answer to the triumphant statement of the gentleman from Illinois that the number of offices abolished under this Democratic Administration was 0.

In the Bureau of Equipment and Recruiting the amount expended for the civil establishment in 1885–'86, which was the same as for previous years, was $25,551, paid to twenty-five persons; the amount appropriated in the last bill for the same purpose was $11,525, for the payment of nine persons, making a saving in round numbers of $15,000. I have here also a table showing these changes.

In the Bureau of Steam-Engineering there was paid for the fiscal year 1885–'86 the sum of $30,857.95 on account of the civil establishment, twenty-eight persons. For the same purpose the law for the present fiscal year ending June 30, 1889, appropriates $17,000 to be paid to seventeen persons.

For the expenses of the civil establishment of the Bureau of Construction and Repair there was paid in the year 1885–'86, and during previous years, the sum of $58,772.37. Great reductions have been made in this bureau in the various navy yards where this expensive civil establishment was kept up, so that the sum appropriated for the present civil establishment of this bureau, during the current year, amounts only to $19,972.50. This sum, however, does not include the work of writers, clerks, and draughtsmen, and similar employés necessarily engaged in and about the construction of new vessels begun during this Administration.

Now, it is a fact that in the Bureau of Ordnance, which is engaged in the manufacture of great guns for the many new ships that have been authorized, and in the Bureau of Construction and Repair, which is engaged not only in building new ships at Norfolk and New York, but also in supervising those let out to contract in Philadelphia, Chester, Baltimore, New York, and San Francisco, and in the Bureau of Steam-Engineering, which is engaged in supervising the construction of engines being built for these new ships, there are necessarily many new employés. This is new work which this Administration has entered upon. There is also a considerable addition to the force employed in the Bureau of Provisions and Clothing under the new order consolidating purchases and accounts. But what I complain of is that while the

gentleman seems to have found and carefully enumerated every new official whose employment had been rendered necessary by the new work undertaken by this Administration, he utterly failed to discover the fact that the Secretary of the Navy and the House Committee on Naval Affairs have cut off with unsparing hand every useless official employed in the ordinary current work of the Navy when this Administration came in. Tried by any fair test this Administration has adhered rigidly to its promises to the people and abolished all useless offices.

In one respect it has failed, and failed signally, to accomplish what it proposed, and that failure lies at the door of the Republican party.

In the Forty-ninth Congress the Committee on Naval Affairs brought into this House a bill to consolidate the bureaus of the Navy Department. A principal feature of this bill was to place under one bureau the work now done by the Bureaus of Construction and Repair, of Steam-Engineering, and of Equipment and Recruiting. The last Republican Secretary of the Navy, Mr. Chandler, had more than once recommended that this be done. The Admiral of the Navy, in his report to the Secretary for the year 1886, had also recommended it; in fact, this same distinguished officer, in his Naval History of the War, attributed much of the friction in the work of the Navy Department during the civil war to the present faulty organization of the bureaus, and now, he said in his report to Secretary Whitney, and said truly, that it was practically almost the unanimous opinion of the Navy and of persons acquainted with naval affairs that this consolidation should be made, and he added that great credit would be due to whoever might accomplish it. When the bill came into this House it was supported by this side of the House. There was, as I now remember, only one Democrat who opposed it; two of the most distinguished Republican members of the Naval Committee, Messrs. THOMAS, of Illinois, and Buck, of Connecticut, joined in the favorable report of the committee. It was estimated in the report that the civil establishments of the various bureaus in the several navy-yards in the United States might be reduced by 30 per cent. if the bill were passed. This would have been a great reduction; but the Republicans on this floor resorted to parliamentary tactics and succeeded in defeating the bill. Day after day did we attempt to pass it. It became a party measure, and the Republicans are entitled to the credit of defeating the bill. They deprived the Democracy of the glory which Admiral Porter said would crown so great an achievement, and now a gentleman who, according to my recollection, aided in that defeat, comes forward to chide the Democracy with a failure to abolish useless offices.

The audacity, Mr. Speaker, exhibited by our Republican friends in the charges of extravagance they make against this Democratic Administration fills me with amazement. As I entered the Hall a few moments ago the gentleman from Illinois [Mr. PAYSON] was remarking that there was just a grain of truth in what his colleague [Mr. SPRINGER] had said about the increases made by the Senate to the appropriation bills sent over to that body by this House.

Mr. PAYSON. I did not say that.

Mr. HERBERT. I so understood you.

Mr. PAYSON. What I said was that there was a shadow, and only a shadow, of foundation for what my colleague had stated in regard to gentlemen on my side of the House having voted for these increases of offices and pay.

Mr. HERBERT. I desire to state that during my long experience in this House—and I put the proposition squarely—I have never seen an extravagant proposition defeated by Republican votes, I care not whether it was for an increase of salary, the creation of a new office, or the initiation or furtherance of some gigantic expenditure. Never have I witnessed such a spectacle. What I mean to say is that I have never seen such a proposition defeated when there were not more Democratic votes against it than Republican. I have never seen the Republican party, as such, in this House, on any proposition, go before the Democratic party in the practice of economy. There have been individual instances of zeal by individual members for the defeat of particular propositions; the gentleman from Illinois himself, Mr. PAYSON, a few days ago signalized himself by a great speech against the proposed appropriation for carrying on the new Library building. He aided powerfully in its defeat; but, Mr. Speaker, on that very vote he was followed mostly by Democrats, not by Republicans. They are not to be led in that direction. I venture to say, without counting up the yeas and nays, that any gentleman who will take the trouble to do so will find that a majority of the gentleman's own party did not follow his lead upon that occasion. He was playing the rôle of economist, and that, I was about to say, is what the Republicans do not often profess, but I am mistaken; they do sometimes put forward such claims in their platform but on this floor they have been playing, ever since I have been here, the rôle of liberal statesmen—statesmen who are liberal with the people's money.

Now, sir, to illustrate this and show what "a shadow of foundation" there is in the charge made by my Democratic friend from Illinois, Mr. SPRINGER, that the Republicans always vote to increase appropriations made by Democrats, the charge which his colleague, Mr. PAYSON, so indignantly resented, let me just turn your attention for a moment to the appropriations for the Navy made during the last four years. I propose to illustrate the difference between the Democrats and Republicans on this question of expenditures by reference to the conduct of a Democratic House and a Republican Senate. I take no individual Democrat to compare with any individual Republican, but, to place the matter beyond cavil, I propose to contrast the conduct of the Democratic House and the Republican Senate. To the bill making appropriations for the Navy for the fiscal year ending June 30, 1886, as sent over by the House, the Senate added $2,476,500; the House consented to only $254,000 of this addition, thus striking off from the Senate bill, by the persistence of the Democratic conferees of this House and of the Democrats in the House who stood behind them, $2,137,500. In the bill for 1887 the House struck off from the additions proposed by the Senate $83,687.26. In the bill for 1888 the conferees of the House struck off from the additions proposed by the Senate the sum of $20,967,182.75.

A MEMBER. What was that for?

Mr. HERBERT. Increase of the Navy. The House had already put on a large sum for this purpose; the Senate added twenty-one millions more. Just here let me call the attention of this House to a fact which will be within the memory of many who are within the sound of my voice. When I first asked, in the Forty-ninth Congress, to set a day for the consideration of a bill for the increase of the Navy the proposition was defeated. There were some Democrats who were unwilling to vote for it; and the leader of the Republican party on this floor joined with them, so the motion to set a day failed. I made more than one ineffectual effort to fix a day to consider that bill. Our Republican friends did not openly dare to oppose an increase of the Navy; they knew the country demanded it; they believed the Democrats would fail to meet this demand, so they had no disposition to help us fix a day, although when the proposition was placed squarely before them they dared not refuse to vote for the bill. We succeeded, however, in spite of all opposition during the first session of the Forty-ninth Congress in providing for an increase of the Navy. The Republican Senate had quietly waited upon us, the Democratic House, to take in that session, the initiative. They seemed, like their Republican brethren in the House, to expect that Democrats would fail to meet this great public demand. So they made no move in that direction themselves, though, in the face of public sentiment, they could not fail to pass the bill which was sent to them. When the next session came it had been made clear that the Democrats of this day, true to the traditions of their party, were the friends of the Navy, that we would not fail in the duty the country expected of us, and now Republican tactics seem to have changed. Before the House, in this second session, had considered the appropriation bill the Senate sent over bills providing for the expenditure of more than $40,000,000 for new ships and seacoast defenses. The House did not consider these bills, but sent over on the appropriation bill a large but reasonable appropriation for a further increase of the Navy. The Senate added the sum of $21,008,382.75. Of this the House struck off $20,967,182.75.

Now, sir, to complete the four years' contrast. The House struck off of a bill sent back from the Senate, making appropriations for the Navy for the year 1889, the net sum of $244,703.08.

I have simply contrasted the action of the House and of the Senate on the bills appropriating money for one single Department for the last four years, and in each case we have seen that the Senate added largely to the House bill and that the House struck off vast sums from these additions made by the Senate. This failed in no single instance, and in four years the amount thus stricken off by the House from the Senate bills for naval appropriations foots up to $24,026,073.09. How can the gentleman from Illinois [Mr. PAYSON] stand on this floor and say, without blushing, to his colleague [Mr. SPRINGER] that there is only a "shadow of foundation" in the charge that Republicans vote, as a rule, to increase the expenditures proposed by Democrats. The instances I have given are not exceptions, they illustrate the rule, the almost, if not quite, invariable rule. I saw a table, prepared recently, in which increases proposed by the Senate to the House appropriation bills for the past four years amounted then to $73,507,916.91. I doubt whether a case can be found in which a Republican Senate has brought down a general appropriation bill to a lower figure than was proposed by a Democratic House, and I do not remember an instance in all my experience, as I said before, in which the Republican party, as a party, can claim the credit on this floor for defeating a single extravagant proposition. If these things be so—and I challenge denial—then, sir, I am justified in remarking upon the unparalleled audacity of a Republican who, with the long experience on this floor of my friend Mr. CANNON, will take upon himself the responsibility of charging extravagance upon the Democracy.

For myself, sir, I do not feel that it is a sufficient answer for Democrats to say that Republicans are more extravagant than we are. We are, and we ought to be responsible to the people, and we can not gauge our responsibility by the measure of Republican practices. We were not educated in the same school of politics. They have been taught to believe, and many of them I am sure do believe, that heavy taxation conduces to the happiness and prosperity of the people.

The difference, Mr. Speaker, between the two parties was never more broadly marked than it is to-day—one is the party of the people, the other the servant of monopolies. The Democracy holds fast to

economy in the public expenditures, in order that (in the words of Jefferson) "labor may be lightly burdened." The Republicans believe that extravagant expenditures add to the grandeur of the Government, and that heavy taxation enriches the people. There may be individual Democrats who model their views after the practices which have so long obtained in the Republican party. The glamour of what Republicans call their brilliant administration has here and there misled a Democrat into the belief that lavish expenditures will commend a party to public favor; but if there be Democrats now and then who fail to see the virtue of economy it is because the party has so long been without a leader. We have that leader now.

The Democracy placed him at our head—Grover Cleveland—and, if in this campaign he should be re-elected and can have a Democratic House and Senate to sustain him, he will give the country once more square, old-fashioned, even-handed Democratic government.

Four years ago the Republicans delighted to call him an accident, and ridiculed him as a man of no ability. We will never hear that charge again. He had not been in office twelve months before he impressed himself on the minds and the hearts of the people as no President, in time of peace, has ever done since the day of Andrew Jackson. In him the people found their friend and their great captain.

Four years ago the Republican leaders were running about among the money-changers and traders predicting business disaster, financial ruin, if this untried candidate of an untried Democracy was placed at the head of the Government. He has been President three years and a half, and everything is as prosperous as was possible under the unjust and partial laws he found in existence, and which he has been powerless, so far, to change. Nothing is now wanting to universal prosperity but to follow the course he has pointed out. His management of finances has been safe and sound. On the 30th of June, 1885, just after he came in, the aggregate circulation of all kinds of money in the country amounted to $1,567,569,489.27; on the 27th of September, 1888, it amounted to $1,719,423,615.99, an increase in a little over three years in circulation, the life blood of commerce and industry of $151,-854,126.72.

The gentleman from Illinois [Mr. CANNON] charges that the President is not a friend of silver. That from a Republican, a member of the party which demonetized silver and whose chosen President vetoed the bill passed by a Democratic Congress to remonetize it, is strange, but it is stranger still that this charge should be made in the face of the great facts of Cleveland's administration. The law under which silver is coined by the President gives a discretion, within certain limits. Under Hayes's administration, counting from March 1 to March 1, four years, there was coined $82,060,005; under Garfield and Arthur's, $112,-187,189; under Cleveland's administration to September 30, 1888, there has been coined $112,503,696. Continuing at the same rate until the close of his administration Cleveland will have coined $125,585,521; in round numbers, forty-three millions more than Hayes and $13,000,-000 more than Garfield and Arthur. Under Arthur's administration the complaint was that silver did not circulate; that it glutted the Treasury; that the people would not take it. It was this fact more than any other, and not that he was an enemy of bimetalism, for he is not, that caused Cleveland to write his celebrated letter advocating the temporary cessation of silver coinage. Since he became President silver has circulated, both silver dollars and silver certificates, more than ever before. On the 30th of June, 1885, there were in circulation, of silver dollars, $31,289,044.48; on the 30th of September, 1888, this circulation had increased to $48,620,964. But the great increase has been in silver certificates. On the 20th of September, 1885, the silver certificates in circulation, not counting the three millions in national banks, amounted to $98,391,676; on September 20, 1888, this circulation, not counting the seven millions in national banks, amounted to $193,664,803. Thus, the President has not only coined many millions of silver dollars more than did his predecessors in the same length of time, but while under them a loud complaint went up that the people would not take the money and that it was accumulating on the hands of the Government, he has actually put into circulation since June 30, 1885, $201,380.52 more of silver and silver certificates than has been coined during all the time from March 1, 1885, down to the 20th day of September, 1888.

In every message he has penned and in every act of his administration he has proven himself the friend of the people. He has allowed neither cattle syndicates nor railroad corporations to rob the citizen when he could protect him. Under Arthur's administration millions of acres of grazing lands in the West had been fenced in without authority of law by rich syndicates of cattle-dealers, many of them foreigners. Cleveland ordered and compelled these fences to be broken down. The public domain under this Administration is for the benefit of the public.

GUILFORD MILLER.

As far back as 1872, 21,000,000 acres of land under orders from a Republican administration had been withdrawn from settlement and entry for the benefit of the Atlantic and Pacific Railroad Company. This company was entitled, under an act of Congress, to select lands outside of the limits of its grant as indemnity for its failure to obtain certain other lands within those limits. The withdrawal had been made in 1872. Under Republican administrations settlers had waited for thirteen years the convenience of this railroad company. Guilford Miller had settled on a piece of this land in 1878; he had endeavored to enter it as a homestead in 1884. The case was brought to the attention of the President. He was unable under the law to validate Miller's homestead, but he did what was better; he restored to settlement the whole 21,000,000 acres; thus allowing Guilford Miller to re-enter his homestead and giving opportunity, if that much of the lands were fit for homesteads, for more than one hundred and thirty thousand other citizens to acquire homes.

HOMES FOR THE PEOPLE.

In this age, when the rich are becoming richer everywhere, syndicates of speculators have, without let or hinderance, been allowed to buy up vast tracts of land. Four years ago a Democratic House of Representatives passed a law providing that the public lands in Alabama should be withdrawn from sale and thereafter be subject only to homestead entry. That bill died in a Republican Senate. During the present session a similar bill, applying to the whole country, has passed the House of Representatives and gone to the Senate. It provides, in effect, that all the lands in the United States fitted for homesteads shall be subject to entry in no other way. The Republican Senate has at last been pricked up by public sentiment to the point of passing a bill containing a similar provision. The House and Senate bills, which are dissimilar in some respects, are now pending between the Houses, and it is to be hoped the measure will become law during the present Congress. A resolution has passed both Houses withdrawing all such lands from entry until the close of the present Congress.

This Congress has failed to forfeit over thirty-five millions of lands unearned by railroad companies because the Republican Senate refuses to pass the House bill forfeiting that number of acres. The House bill includes the unearned lands of the Mobile and Girard Railroad Company.

These lands and many others should be forfeited, so that settlers already on them, and others wanting to go on them, can acquire titles to their homes. The Senate is willing to forfeit only about 7,000,000 of acres. The two Houses disagree about the rights of the railroad companies, the Senate contending that only about seven millions are subject to forfeiture, the House insisting on thirty-five millions. But both Houses agree that the lands when forfeited shall only be subject to homestead entry and that settlers shall have preference, that is, that they may have homesteads when they have not heretofore entered under that law. If settlers have heretofore had homesteads they may still be allowed to enter their homes at $1.25 per acre.

I think it very certain that as this provision is substantially agreed on by both Senate and House it will ultimately become law.

THE FISHERIES QUESTION.

The foreign policy of the Administration has been equally open, manly, and patriotic. Disputes had arisen between American and Canadian fishermen as to the rights of Americans in Canadian waters under the treaty of 1818. American fishermen, undoubtedly, now and then, had given provocation to the Canadians, but the Canadian authorities had, beyond all dispute, been guilty of many outrages upon the rights of Americans. President Cleveland sought a remedy by treaty; an agreement was at last made by a commission, upon which the New England fishermen were represented by Mr. Putnam, one of the ablest statesmen of Maine. The treaty is believed to have been a fair and just settlement, a compromise of conflicting rights. As such it was submitted at the present session by the President to the Senate. The Republican Senators determined before the treaty was made that it should not be ratified. The Presidential election was approaching. Great Britain was a party to the treaty. There was a strong anti-British feeling among many of the voters of the United States. Any compromise of conflicting rights between the United States and the British possessions, as any treaty of course must be, necessarily afforded opportunity for arousing political prejudice, so the Senate determined, contrary to all custom, to make a party question of this treaty, to debate it with open doors, and so appeal to all the anti-British sentiment in the Democratic party. How dare Grover Cleveland make a treaty with the British on the eve of an election! As a matter of course, the treaty was defeated by a partisan majority; as a matter of course, anti-British sentiment was aroused, and the opponents of the Administration were jubilant.

Back of all this dispute between the Canadians and the New Englanders was the desire, on the part of the Canadians, to force their fish, fresh and salt, into the United States markets free of duty; and in the background, also, was a desire on the part of the New England fishermen to compel all Canadian fish to pay duty, including fresh fish, which now come in free. It was suggested to the President from interested sources that he retaliate; that he settle this great dispute, a dispute that had at last grown into international proportions, by simply proclaiming that the Canadians should bring in no more fresh fish; and a law had been made ready for the occasion. But the President could be driven to no such lame and impotent conclusion. If he was to retaliate it must be by a measure worthy the dignity of the great nation whose representative he was, by a measure which would bring the Canadians at once to a sense of their duty. By existing treaty, made by a Republican administration, Canada has the right to transport free of

duty, across American soil, her goods from abroad. The American citizen who brings goods from abroad into this territory must pay duty; the citizens of every other country in the world except Canada must pay duty. To her, under this treaty, the United States annually foregoes duties amounting to over $20,000,000.

This privilege is to Canada almost invaluable. For six months in the year transportation from the western portion of the Dominion, by way of the St. Lawrence, is impeded by ice. The President (to the astonishment of the Republicans, who were reveling in the thought that in one point, at least, they had him at the vantage) sent in a message suggesting the passage of a law which would give him the right to suspend this privilege. The House of Representatives passed it almost at once, the Republicans in that body yielding an unwilling consent; but Republican Senators were puzzled. Their friends, the northeastern railroad companies, were largely interested. It was a great question, they had said, this dispute between Canada and the United States; the honor of our country was involved; but, then, these railroad corporations would lose the profits to be made in the transporting of Canadian goods, and that gives pause to our brethren of the Senate. They are now discussing a resolution the theme of which is how the Canada question can be disposed of in an amicable manner.

A few weeks ago they were bellicose—the British lion must be humbled. Now that they see the President means business, the situation is changed. Their mood towards Canada has suddenly become so winsome that the danger now is they will annex her, fresh fish, salt fish, codfish, halibut, and all. I hope they will not do it till after the election, as it might change the result. For myself, I shall hesitate even then. I do not want to bring into the United States so much "British influence."

Industrial Christian Home.

"Thou shalt not bear false witness against thy neighbor."

SPEECH

OF

HON. JOHN T. CAINE,

OF UTAH,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, October 4, 1888.

The House having under consideration the report of the committee of conference on the bill (H. R. 10896) making appropriations to supply deficiencies in the appropriations for 1888 and prior years, and for other purposes, and the amendments of the Senate thereto, namely:

"112. Industrial Christian Home Association of Utah Territory: To further aid the Industrial Christian Home Association of Utah Territory, under its articles of incorporation, in the establishment and maintenance of an industrial and educational institution in Salt Lake City for the benefit of the dependent women and children of Utah and Idaho Territories who desire to sever their allegiance to the Mormon Church, $75,000, and for contingent expenses of the association, $5,000; in all, $80,000.

"113. The money hereby appropriated shall be disbursed by the treasurer of said association, who shall give such bonds for the faithful performance of his duties as may be deemed requisite by the Secretary of the Interior. All accounts of expenditures under this appropriation shall be audited by the Utah commission, which shall hereafter act as a board of control for said institution, and shall make an annual report to Congress covering the work of said institution and its expenditures"—

Mr. CAINE said:

Mr. SPEAKER: I did not intend to participate in this discussion. I have neither opposed nor favored the appropriation for the Industrial Christian Home Association of Utah. Naturally those who have been here since 1886 soliciting aid from Congress have not approached me on the subject, and I have not felt it to be my duty, nor have any of my constituents requested me, to oppose these appropriations. Thus far Congress, in making appropriations for the Industrial Christian Home Association of Utah, has been careful to confine the expenditure to a specific purpose, with a view to alleviating suffering which the enforcement of the laws against polygamy naturally and inevitably caused. Although I knew perfectly well that there was behind the ostensible purpose for which these appropriations were sought an entirely different one to subserve, I was content to hold my peace and let the developments be made without any effort on my part. It was inevitable that the "true inwardness" would be laid bare sooner or later. It was merely a question of time. The African in the wood-pile was sure to make his appearance.

Even now I am reluctant to do what it is clearly my duty to do. An uncalled for and wholly unjustifiable attack has been made upon the Mormon people, and it was instigated and insisted upon by those who have been persistently seeking to gain control of money given for a worthy purpose in order that they might divert it to forward their own visionary schemes. The object in instigating a general assault on the Mormons was, under cover of the popular cry of "destroying polygamy," to more surely accomplish their own objects. I can not refrain from vindicating those who are entitled to the vindication at my hands. I ought not to fail in my duty.

Nevertheless, I regret the course this discussion has taken. Surely there is no occasion for the introduction of partisan politics in a debate upon a proposition to vote money for charitable purposes. But, unhappily, it seems impossible to have considered anything relating to Utah in a calm and philosophical spirit. The religious and social problems involved in the agitation, which was doubtless inevitable upon the founding of the Mormon Church, deserved, and still deserve a dispassionate consideration. The material effects which a new social order has wrought are suggestive to the student of social questions.

The admitted general morality of a great community, which has grown up upon foundations laid by a new dispensation, is worthy of a different treatment than the one it has received by our publicists and statesmen. It will not be disputed that Mormonism has accomplished some most wonderful results, and no matter what the verdict of this day and generation may be concerning the truth or falsity of the faith professed and practiced by the Mormons, history will eventually do justice to the good wrought by them. Serenely confident that the faith they have comes of God, sustained in all the trials and tribulations, imposed upon them for some good reason, by implicit belief in God's purpose, the Mormons have ever looked and will look beyond the clouds which encompass them to the dawn of that better day which they know is coming.

They have felt the harrow which has passed over them. They are keenly aware of the sufferings which they have had to endure, and which they are enduring to-day. The bonds of fellowship which unite them are strong, and responsive chords are touched when the lot of a brother or sister is made hard. They naturally would welcome any disposition of the Government of the United States to relieve the distress and suffering which the strenuous enforcement of the so-called Edmunds laws inevitably entail. They are far from interposing obstacles in the way of charitable men and women who, individually or as associations, seek to relieve "dependent women and children" whose natural protectors and supporters have been taken from them. There have been many cases of extreme hardship, and in very many instances the sufferings have been increased by the construction which has been placed upon the law against unlawful cohabitation. This construction has made it an impossibility, in a great number of instances, for the husbands and fathers to provide maintenance without subjecting themselves to the penalties of the law.

But when a magnificent charity is proposed from the national Treasury for whom is it to be dispensed? I submit that it is a most monstrous thing that proffered charity should be coupled with the distinct and unequivocal declaration that it is only "for the benefit of the dependent women and children of Utah and Idaho Territories who desire to sever their allegiance to the Mormon Church."

Mr. Speaker, the discussion of the Mormon question here and elsewhere has developed many extraordinary propositions, and some most remarkable legislation has been enacted by the Congress of the United States to accomplish the overthrow of the Morman Church; but this proposal to found, at the expense of the national Treasury, an Industrial Christian Home Association of Utah, with the declared purpose that its beneficence shall be only for those "who desire to sever their allegiance to the Mormon Church," exceeds all that has gone before. Its nakedness, its shamelessness, must strike every reflecting mind. Think of it for a moment. The Constitution of the United States guaranties the freedom of religious belief and forbids the enactment of laws which encroach upon this priceless privilege of the citizen. And yet it is proposed to make it a prerequisite to the participation in a great charity, existing and to exist solely by appropriations from the United States Treasury, that the recipients shall first express their "desire to sever their allegiance to the Mormon Church."

Was this language inadvertently used? From the readiness with which the authors of the amendment expressed their willingness to strike out the objectionable words, and, in effect, apologize for the employment of the same, it would seem that they had still some regard for the proprieties of legislative verbiage. And still they displayed, if not a disregard for the truth, a willingness, upon wholly insufficient grounds, to bear false testimony against the Mormon people. It has been asserted here, and in the other Chamber, that the whole power of the Mormon press and of the Mormon Church was arrayed against the Industrial Christian Home Association of Utah, and that every effort was being made by the Mormons to defeat this appropriation. Nothing could be further from the truth. I know that no one in the interest of the Mormons has sought, directly or indirectly, to influence a single Senator or Representative to oppose this appropriation. So far as I am aware there has not been one utterance from the Mormon press or pulpit which can be justly claimed as opposition to this appropriation. Doubtless there have been criticisms of the methods and of the avowed purposes of the persons who seek to have vast sums of money appropriated for them to disburse as they see fit to use it. These methods and purposes are plainly indicated by the language employed to make this appropriation "for the benefit" of those "who desire to sever their allegiance to the Mormon Church."

Mr. Speaker, I am perfectly willing to concede to those who con-

ceived the purpose of establishing the Industrial Christian Home Association of Utah the most benevolent intentions. They are undoubtedly Christian philanthropists, but their zeal as humanitarians is, after all, measured by their ability to secure appropriations from the national Treasury. There are doubtless more than three hundred thousand good and noble women in the United States who, in a perfunctory way, are moved to sympathize with the "dependent women and children of Utah and Idaho;" but thus far they have confined themselves to words of encouragement to those of their number engaged in organizing a great charity which was to exist and subsist upon the public Treasury. The incorporation of the Industrial Christian Home Association of Utah was effected on the 15th day of March, 1886, and within one month a delegation was here besieging Congress for $100,000 to enable these philanthropists to carry into execution their grand conception.

It was truly a "grand conception," and doubtless the originators deemed their demand for $100,000 from Congress extremely modest. The sixth article of their articles of incorporation is as follows:

ART. VI. The objects, pursuits, and business of this corporation, as near as may be stated generally, are as follows: To found, build, equip, provide for, maintain, and regulate, in all necessary and proper ways, industrial homes, boarding houses, schools, hospitals, and places for instruction, aid, betterment, and general benevolent and charitable purposes at Salt Lake City and other places in Utah Territory and elsewhere, and in which to promote and accomplish the fitting of persons for industrial and all other pursuits; also to teach, instruct, discipline, educate, and fit for the active duties of life all classes of people without distinction, but more especially women and children, in all pursuits and industries whereby the interests of individuals and of society may be bettered, and whereby people may be fitted to earn, each for himself or herself, an honest livelihood; to establish private schools and school systems and courses of study; to provide rewards for merit in any and all work done under the supervision, aid, or instruction of this association; to provide work and remuneration therefore for all persons who are needy or in want, and especially for women, girls, and children so situated; to provide and secure situations for such as acquire efficiency in any industrial or other pursuit under the guidance of this corporation; to relieve distress and ameliorate suffering among all classes; to aid in every proper and charitable way those who are in proverty and want; to provide for and seek to establish among the masses a better knowledge of sanitary laws and care of health; and generally to forward and aid in every lawful way all benevolent, charitable, and educational purposes and objects whatsoever; also to solicit and receive contributions, to give exhibitions and entertainments, and to adopt and exercise all other proper means to raise funds and the means to carry on the corporate business and further and accomplish the objects of the association; to provide by by-laws for increase and maintenance of memberships of and in this corporation; and lastly, to make all lawful rules, regulations, and by-laws, and to do all other proper things to aid in systematizing, providing for, and carrying on all the business, and in forwarding all the objects of the corporation, and to acquire and hold real estate and personal property sufficient to carry out the purposes of the corporation.

The founding of "industrial homes, boarding-houses, schools, hospitals," and providing "for instruction, aid, betterment, and general benevolent and charitable purposes," not only at Salt Lake City and other places in Utah, but "elsewhere," showed that "no pent-up Utica" was to confine the operations of the promoters. Besides "the fitting of persons for industrial and all other pursuits," the "interests of individuals and of society" were to be bettered, and "people" generally "fitted to earn, each for himself, or herself an honest livelihood." Of course such a magnificent scheme, for the "betterment" of humanity, would necessitate the establishment of "private schools, and school systems, and courses of study," and all this would perchance fail unless "rewards for merit" were provided at the expense of the national tax-payers!

So comprehensive a scheme for general relief "for all persons who are needy or in want" might not succeed without a national employment bureau "to provide and secure situations" for those who "under the guidance of this corporation," acquire "efficiency in any industrial or other pursuit." Having done all these things, founded, built, equipped, provided for, maintained, and regulated industrial homes, boarding-houses, schools, hospitals, established private schools, school systems and courses of study, and distributed rewards of merit, obtained employment for those needy or in want, something was yet to be done, and accordingly the Industrial Christian Home Association of Utah must provide for and seek to establish "among the masses a better knowledge of sanitary laws and care of health."

It is not my purpose to ridicule the Industrial Christian Home Association of Utah, but simply to call attention to the visionary character of its projectors. No doubt the "several national organizations," which we are told are identified with and interested in the establishment of the institution, have the very best intentions. The Woman's Christian Temperance Union, the National Woman's Home Missionary Society, are without doubt worthy organizations with great and meritorious work in hand. And, as I have remarked, there is something in the undertaking to relieve the suffering in Utah caused by the rigorous enforcement of the laws against polygamy which appeals to Mormons as well as to non-Mormons. If this benevolent work was not to be made, as it has been, the cover for open as well as insidious attempts to undermine our religion, I am sure that it would be welcomed by the whole body of the Mormon people. But it has been made clear by the advocates of this appropriation that those who are the directing spirits of this so-called charity are not only intent upon making it a vehicle for proselyting, but that they are unwilling to have any control exercised over the disposition of the means provided from the national Treasury. The first appropriation was made August 4, 1886, less than five months after the incorporation of the Industrial Christian Home Association of Utah. It was made as follows:

To aid in the establishment of an industrial home in the Territory of Utah, to provide employment and means of self-support for the dependent women who renounce polygamy, and the children of such women of tender age, in said Territory, with a view to aid in the suppression of polygamy therein, $40,000; said sum to be expended upon requisition of and under the management of a board of control to consist of the governor and justices of the supreme court and the district attorney of said Territory; and said board shall duly and properly expend said sum, or so much thereof as may be necessary, for the purposes herein indicated, and shall, from time to time, report to the President their acts and doings and expenditures hereunder, for transmission to Congress.

But the safeguards thus provided did not please these philanthropists. They surely could not truthfully allege that the "board of control" was not in sympathy with the alleged objects for which Congress gave the money. The governor of the Territory, the justices of the supreme court, and the district attorney were as zealous in the work of destroying polygamy as the most rabid anti-Mormon could desire. But because the terms of the law required the $40,000 "to be expended upon the requisition of, and under the management of a board of control," and did not hand it over outright to those who had gotton up the "institution," there was immediate and continued dissatisfaction. The "philanthrophists" who had had themselves made into a corporation and constituted themselves the directors and managers of a charity on such grand proportions and with such multifarious objects did not want to be hampered by men who felt bound to regard the letter as well as the spirit of the law. How could the vast scope of their all-embracing work be comprehended by such a "board of control?" The founding of industrial homes, boarding houses, schools, hospitals, and all other sorts of institutions, including "private schools, school systems, and courses of study," and a national employment bureau, with an attachment for giving "the masses a better knowledge of sanitary laws and care of health," could never be realized if the Industrial Christian Home Association of Utah had not "free course to run and be glorified."

The evidence of the "bickerings," of the "heart-burnings," of the "unpleasantness" that followed has been spread on the pages of the CONGRESSIONAL RECORD. The trouble began just as soon as the $40,000 were available. We have the "record of the joint meetings of the Industrial Christian Home Association of Utah and the board of control" brought before us to show what?—that those responsible for a wise and legal expenditure of the money Congress provided were hampering this great charitable undertaking! I will quote the first two propositions that the executive committee of the Industrial Christian Home Association of Utah presented to the board of control November 30, 1886:

Resolved, 1. That a committee from the Industrial Christian Home Association be appointed to take steps toward a formal opening of the home January 19, 1887.

2. That the board of control be asked to sanction the opening of two departments, a cooking school and sewing department; the latter to include appliances for everything pertaining to family or household needs.

The committee was appointed and the meeting with the board of control took place, as the record shows:

Executive committee met board of control at Continental Hotel. Present of board of control: Governor West, United States Attorney Dickson, Judges Zane, Boreman, and Henderson.

Resolutions presented by executive committee to board of control.

No. 1.—Laid on the table.

No. 2.—Laid on the table.

Wherefore this summary disposition of the propositions of the Industrial Christian Home Association of Utah by the board of control? The sententious "record" is silent. Does any one who knows Governor West, United States Attorney Dickson, and Judges Zane, Boreman, and Henderson doubt that their reasons for this summary disposal of the "resolutions" were not wise and proper? They did not deem it necessary to formally open the home with two departments, a cooking school and a sewing department, until there was somebody within the terms of the law "to provide employment and means of self-support" for. They thought there ought to be "some dependent women who renounce polygamy, and the children of such women of tender age, in said Territory" available for the "cooking school and the sewing department" before they were opened.

And again, in June, 1887, when the Industrial Christian Home Association of Utah had been for several months with an establishment running and wanted to buy ground and begin the erection of a building, Governor West ventured to suggest that before such an outlay could be sanctioned the necessity therefor ought to be shown by inmates ready for it. The reply was characteristic: "The outlay was necessary to insure the inmates." There was a temporary home, but the house was "very old and inconvenient" and not in a locality with surroundings calculated to attract "the needy or those in want!" It was, forsooth, because of this that only "nine polygamous women" during the first year were in the home. And this number was secured by a systematic and persistent canvass of almost every settlement in the Territory. The Industrial Christian Home Association of Utah was nothing more nor less than a missionary establishment with its agents spread over the Territory attempting to proselyte in the interest of different Protestant religious denominations.

There can be no objection to the National Women's Home Missionary

Society and other organizations prosecuting their work in Utah and using every legitimate means to forward their undertakings, but have these religious propaganda any special claim upon the national taxpayers? At bottom the Industrial Christian Home Association of Utah is not and was not established solely for relieving "dependent women and children" of Mormon connections. Such an object was a mere pretense. The design was and is to build up an establishment which would afford a resort for an army of women and girls recruited all over the United States for purely missionary work in the Territories. It was to be the headquarters of denominational school-teachers, lecturers, and other females with a "calling," and the "reclaiming" of Mormon wives and daughters was simply to be the means of opening to the projectors the Treasury of the United States.

The trouble between the board of control and the executive committee of the Industrial Christian Home Association of Utah was inevitable, and grew out of the fact that the purpose for which the appropriation was made confined the expenditures to a specific object—"to provide employment and means of self-support for the dependent women who renounce polygamy, and the children of such women of tender age." The board of control did not feel justified in allowing this specific object to be departed from, and hence the "unpleasantness."

It is not strange that the gentlemen composing the board of control very soon desired to be relieved from the disagreeable duty imposed upon them. The capacity of the persons running the Industrial Christian Home Association of Utah to make "life a burden" for those who did not surrender their convictions of duty at their behest, can well be imagined. They had behind them a perfectly unscrupulous newspaper to daily misrepresent and vilify those who did not cringe to "the lash mercilessly wielded." The machinery for commanding public attention throughout the country was perfect and run by mendacious and malicious people.

The surprising thing is that Governor West did not sooner seek to escape the unpleasant and onerous responsibility which had been imposed upon him. He knew perfectly well that however conscientious he might be he would not escape misrepresentation. It has been charged in the Senate and in this House that "the hostility of the Mormon leaders" was sufficient to thwart the efforts of the Industrial Christian Home Association of Utah,

To have money expended in such a way as would most clearly accomplish the object stated by Congress—

And in the very next breath it is alleged that—

The new Governor of the Territory, who acted as chairman of the board of control, largely took charge of the matter, and by his rulings as to the construction of the language of the appropriation prevented the application of its provisions in very many of the cases where relief was applied for.

That this indirect effort to make it appear that Governor West was influenced by Mormon leaders in his rulings or in his "construction of the language of the appropriation" is unjust and unwarrantable, will clearly appear when the facts are stated. The board of control was composed of the governor, three justices of the supreme court, and the United States district attorney. The governor was one to four, and these four were and are intense and I believe prejudiced opponents of everything Mormon.

The insinuation that Governor West is in the leastwise amenable to Mormon influence is impudently false. On the contrary, he has been extreme in his efforts to deprive the Mormons of every vestige of their civil rights. In his recommendations, and in his exercise of personal influence in this Capitol, he has been a radical of radicals. The fact that Chief-Justice Zane, District Attorney Dickson, and Justices Boreman and Henderson constituted four out of five of the members of the board of control gives the lie most emphatically to the statement that Governor West ran that body in the interest of the Mormon leaders.

The truth is that the managing spirits of the Industrial Christian Home Association of Utah would be satisfied with nothing less than the absolute control of the money voted by Congress. They had a grand scheme to carry out, and with the national coffers freely tapped and flowing gold into their laps, they hoped to accomplish "all they had dreamed of." Their first year's experience was disappointing. In the language of their report, "the past has had its rejoicings as well as sadness; its days of bright sunshine as well as dark storms." The "sadness" and "storms" came whenever the board of control interfered with the plans of the executive committee of the Industrial Christian Home Association.

But "sunshine" was bright and effulgent when Senate committees were listening to the siren voices of the lady managers and their representatives, the distinguished philanthropist, Mrs. Newman, and the disinterested husband of the amiable president of the institution. Before a year had elapsed from the voting of the first $40,000 the Industrial Christian Home Association of Utah was here in the person of this wonderfully bright and clever woman beseeching Congress to curb the functions of the board of control. Success was almost achieved. The time, however, was too short, and the board of control remained in power for a short season. At the very beginning of this session of Congress the same indefatigable and, I regret to say it, not over-scrupulous lady made her appearance and began her work. The result was the following item in our first deficiency bill:

To aid the Industrial Christian Home Association of Utah in carrying on, under its articles of incorporation, the work of providing employment and means of self-support for the dependent women who shall have renounced polygamy, and their children of tender age, $40,000; and the unexpended balance of the appropriation for aiding in the establishment of an industrial home in the Territory of Utah contained in the act of Congress approved August 4, 1886, entitled "An act making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1887, and for other purposes," shall be deemed a part of this appropriation; and the board of control mentioned in said former appropriation shall audit the expenditures under this appropriation and report yearly to the Secretary of the Interior.

It was supposed that this would accomplish the purpose—the board of control being reduced as was thought to a mere board of audit. But, unfortunately for the schemers, the language was obscure—"the board of control mentioned in said former appropriation shall audit the expenditures under this appropriation." The Industrial Christian Home Association of Utah did not want a board of control even mentioned in the appropriation bill. It was deemed fatal to their grand scheme. What would it avail to have the national Treasury thrown open to them if a board of control was to supervise the spending of the money? Perish the thought! Their grand and general amelioration of the human race, the founding, building, equipping, and providing for so many different beneficent establishments, including a national employment bureau, and teaching "the masses a better knowledge of sanitary laws and care of health," at the expense of the whole people of the United States, would surely fail if a board of control was to insist that they should find subjects to practice upon before they began the good work!

And so another desperate effort is made to get the use of the people's money without restrictions as to the manner of using it. The Senate lends a willing ear to representations, some of which I shall presently deal with, and has put upon the deficiency bill the following amendments:

112. Industrial Christian Home Association of Utah Territory: To further aid the Industrial Christian Home Association of Utah Territory, under its articles of incorporation, in the establishment and maintenance of an industrial and educational institution in Salt Lake City for the benefit of the dependent women and children of Utah and Idaho Territories who desire to sever their allegiance to the Mormon Church, $75,000; and for contingent expenses of the association, $5,000; in all, $80,000.

113. The money hereby appropriated shall be disbursed by the treasurer of said association, who shall give such bonds for the faithful performance of his duties as may be deemed requisite by the Secretary of the Interior. All accounts of expenditures under this appropriation shall be audited by the Utah Commission, which shall hereafter act as the board of control for said institution, and shall make an annual report to Congress covering the work of said institution and its expenditures.

For the first time "bright sunshine" illumined the pathway to the national Treasury. But "dark storms" are threatening in the obdurateness of the House conferees, who insist upon some reasonable accountability in the disbursement of these vast sums of money. There are discrepancies in the accounts thus far rendered, and quite a large sum of money, I understand, is not accounted for. And why not? The good people who are so much interested in the establishment of the Industrial Christian Home Association of Utah have not been sending in contributions, and the managing spirits of the institution have been too busy contending with the board of control and organizing for its overthrow "to give exhibitions and entertainments" whereby cash might be obtained. In the mean time certain expenses have had to be met—"a great philanthropic movement" will not run itself.

Mrs. Angie F. Newman, who speaks for not only the Industrial Christian Home Association of Utah, but "as the legal representative of the loyal element of Utah Territory," presented a memorial "to the honorable Senate Committee on Appropriations," in which she asked for—

First. An additional appropriation of $75,000.

Second. An expansion of the law to the status defined in the original memorial of the association to the Senate, namely, "the dependent classes of Utah Territory."

Third. That the law shall specify through whom the funds shall be drawn from the national Treasury.

Fourth. That special provision be made in the law for "contingent" expenses of the association to the amount of $5,000, for use in the transportation of applicants to the home, to the States on leaving the home, for advertising, and such other expenditures as are necessarily incurred "in the establishment of the home."

Verily here was "the milk in the cocoanut." An indication of how "such other expenditures as are necessarily incurred 'in the establishment of the home,'" is contained in this same memorial. The memorialist says:

On the 6th of August, 1886, $40,000 was granted by Congress to "aid in the establishment of an industrial home" in Utah Territory. As the representative of the association, on the adjournment of Congress I devoted six weeks' time to visiting the institutions of the East to ascertain the cost of mechanical appliances, plans for building, to secure teachers, specialists in the various departments. I went to Utah in October, 1887, to lay these plans before the association, and assist them to proceed at once to the erection of a suitable building. At a joint meeting of the board of control and the association, I was met by the ruling of the chairman of the board of control, Governor West, that the appropriation was made to the board of control, that the work of the association ended when the appropriation was secured.

Of course this six weeks junketing tour through the East cost something. "The work of the association" in securing "the appropriations" cost something also. Ways and means have to be provided for "a great philanthropic movement" nowadays, and the 300,000 members of the National Women's Home Missionary Society and of the National Woman's Christian Temperance Union do not contribute 10 cents apiece

to keep it moving even on a "sunshine" illuminated pathway to the national Treasury.

Mr. Speaker, this same memorialist confesses that all that the Industrial Christain Home Association of Utah has been able to accomplish was "to support the pauper element," and, moreover, "the better element of Mormon society—those whom it would be of value to lift to the grade of intelligent citizenship—will not accept charity. Yet only charity has been provided." But this admission is not half the truth. "The better element of Mormon society" might welcome a charity that was not coupled with a condition that is at once an insult and a reproach—namely that the recipients must sever their allegiance to the Mormon Church.

An "industrial home" which would confine itself to instructing women and children in the arts of refined domestic pursuits, while affording them maintenance, would indeed be a great boon to any people. But when a charity is coupled with the condition that it is attainable only by abandoning their faith, "the better element of Mormon society" will indeed spurn it. So far as "the pauper element" is concerned, Mormonism eradicates rather than produces it. It is no idle boast of ours that in exclusively Mormon communities there are no alms-houses and no need for them. But we have the poor, the sick, the needy who require, and not in vain, at our hands, relief. "The poor ye always have with ye," said our Saviour. Charity no Mormon believes a thing to be spurned. They know that "to give is better than to receive," but they know, also, that "to receive" is often a necessity.

It has been represented here that "a building" for the Industrial Christian Home was in process of erection, and it is objected to the proposition to have the money voted by Congress spent under the supervision of the Government architect that great delay would inevitably result. This is of a piece with all the representations made in respect to this institution. A building is not in course of erection save on paper. And so in regard to "inmates" who await the completion of this building. The rented home is in a good locality, near one of the finest private residences in Salt Lake City. There is no lack of room because there is a solitary inmate, about whom the less said the better. There has never been a time when there was not in the rented home ample accommodations for all who within the terms of the law were entitled to relief. The home is not popular among those who have been inmates. Its popularity is confined to the salaried "inmates."

I am reluctant to deal, as the truth compels me, with some of the misrepresentations which have been made to Congress by the representative of the Industrial Christian Home Association of Utah. I entertain for the object for which this lady and her associates ostensibly labor a profound respect. I am not only loth to believe that they would intentionally make deliberate false statements, but I dislike extremely to point out such misstatements. I am charitable enough to suppose that the gross falsehoods which are to be found in the memorials presented to Congress over the name of Mrs. Angie F. Newman were not concocted by her, but were accepted "on faith" as gospel truth, or are due to a disordered imagination. She is, as so often happens, a blind believer of every silly story which comes to her ears about the Mormons from those whose trade it is to manufacture them. Here is an example. In a memorial to Congress this estimable lady declares it to be "indisputable" that one-half per cent. of the Mormon population of Utah have been convicted of polygamous crimes; and further, that "the number of indictments out is larger than the number of convictions."

Now, what are the facts as shown by the official statistics? The Attorney-General in reply to the House resolution, in relation to convictions for unlawful cohabitation and polygamy in Utah, gives the total as 500 from 1875 to June, 1888, and of these 13 were for polygamy. The Mormon population of Utah exceeds at a low estimate 160,000; one-half per cent. of that number would be 800. In the percentage of convictions the estimable lady was a long ways off. As to the number of indictments out she was still farther away. There were at the beginning of the present term of court, according to the United States district attorney, only one hundred and sixty-three indictments found upon which there had not been service. Every one knows that save where arrests have not been made there has been no delay in securing convictions.

In another memorial she declares that—

One lady missionary, in a town of 6,000 inhabitants, last year visited in four hundred polygamous families.

In her very last memorial she says the town has only 500 inhabitants. I am charitable enough to suppose this to be a misprint. It would be difficult to find four hundred families in a town where only 500 people lived. There is but one city in Utah with a population of about 6,000 inhabitants—the city of Ogden. It has not and never had four hundred polygamous families. It is an absurdity to suppose that if there were in the city of Ogden four hundred male persons defying the law by living in polygamous relations, the total convictions under the Edmunds law for the entire Territory would only be five hundred.

But, Mr. Speaker, here is a declaration which this lady makes as of her own knowledge, which is the most amazing of all. She speaks of a visit which she made to the Utah penitentiary in March last, and avers that in a—

cell were two girls, one fourteen, one sixteen, each married to her own father, both with babes.

And adds by way of climax:

And yet polygamy is a lost art.

In her last memorial to Congress, in recounting this visit, only one is spoken of—

a girl sixteen years of age, the wife of her own father.

The climax is varied this time, as follows:

Her two months' old babe had a divided upper lip and no roof to its mouth; and yet polygamy is a lost art.

Now, sir, I submit that any one who makes an assertion like this in a memorial to Congress ought to be held to a very strict accountability. If so frightful an accusation is made lightly, recklessly, to what credence is she entitled in other matters? Aside from the unfairness, the untruthfulness of the charge made that the institution of plural marriage, revealed through Joseph Smith and accepted by the Mormon Church, sanctioned so horrible a crime as incest, it is impossible that there could have been such a case as this lady, upon her responsibility, asserts existed. What were these two girls doing in prison? The intimation is that they were there for contempt of court, for refusing to testify as to who was the father of their children.

I will quote the paragraph preceding the one in which this heinous crime is laid at the door of the Mormon Church:

I found—

Says the memorialist—

in one cell, 10 by 13½, without a floor, six women, three of whom had babies under six months of age, who were incarcerated for "contempt of court" in refusing to acknowledge the paternity of their children. When I plead with them to answer the court and be released, they said, "If we do there are many wives and children to suffer the loss of a father."

Following this comes the awful calumny I have just referred to:

In another cell were two girls, one fourteen, one sixteen, each married to her own father, both with babes; and yet polygamy is a lost art.

There is no qualification in this statement. The unqualified declaration is made, as of positive personal knowledge, that these girls were "each married to her own father," and the implication intended was that this was due to the teachings of the Mormon Church. What evidence was there to satisfy this lady that a Mormon had been guilty of incest with his own daughters? Was there one scintilla of evidence warranting the statement? If there had been, would the wretch have been at liberty and the unfortunate children in prison? Was it not mere gossip upon which this well-meaning (?) lady based her charge?

Mr. Speaker, Mrs. Newman did visit the penitentiary in March last, as she states in her memorials to Congress, but she did not find confined in one cell—

Six women, three of whom had babies under six months of age, who were incarcerated for "contempt of court" in refusing to acknowledge the paternity of their children.

Neither did she find—

In another cell two girls, one fourteen, one sixteen, each married to her own father, both with babes.

There were confined in the penitentiary at that time seven women, two for contempt of court—one Sarah M. Tong, twenty-three years of age, with babe, on the charge of fornication; two for adultery; one for robbery, and one for selling liquor without license. There is not and was not a particle of evidence to show that of these women more than two were or had been a Mormon. Sarah M. Tong was acquitted of the charge of fornication and discharged.

"Two girls, one fourteen, one sixteen," were not confined in the Utah penitentiary last March. "A girl sixteen years of age" was not confined in the penitentiary at that date, or at a subsequent date, or for a period long anterior to March, 1888, if, indeed, there ever was one of that age, or approximating that age, confined there.

There was no woman, or girl, in the penetentiary at that time who was even alleged to have been guilty of incest with "her own father," and the story is "made out of whole cloth." It is a fabrication from beginning to end. Out of respect to the person who became responsible for it over her signature, and related it as of personal knowledge, I will not characterize it as it deserves to be characterized. Nor do I mean that it shall be said that these statements and the contradiction rest upon the same basis—I shall withhold my remarks till I can incorporate therein the evidence upon which my contradiction is bottomed.

The following speak for themselves:

SALT LAKE CITY, UTAH, *October* 9, 1888.

DEAR SIR: Yours of this date received, making certain inquiries about women confined in the penitentiary during the month of March last, and quoting certain statements which you claim to have found in the CONGRESSIONAL RECORD of October 3, in the report of Mrs. Angie F. Newman, etc.

With regard to their being seven women confined in the penitentiary at that time, three of whom had babes, I desire to say that it is correct. Two were being held for contempt of court in refusing to answer certain questions put to them by the court touching their polygamous marriage relation; one, Sarah M. Tong, twenty-three years of age, with babe, on the charge of fornication; another for robbery, another for selling liquor without a license, and two for adultery. The statement as to the size of the room in which these prisoners were kept is about correct, being so small as for it to be almost inhuman to keep fe-

male prisoners in such a place; but it is the only place we have for that purpose. There is a floor in it, however, which is always kept neat and clean.

The last item to which you call my attention is this: "In another cell were two girls, one fourteen, one sixteen, who were married to their own father, both with babes." This is wholly incorrect, and I can not understand how anybody could have been so misled. Somebody must have made malicious misrepresentations to Mrs. Newman on this subject, as we have never had any girls of this age confined in the penitentiary since I have been marshal.

These facts are taken from the records at the penitentiary, and I personally know them to be correct.

Respectfully submitted.

FRANK H. DYER,
United States Marshal.

H. B. CLAWSON, Esq.,
Salt Lake City.

OFFICE OF UNITED STATES MARSHAL, SALT LAKE CITY, UTAH,
Utah Penitentiary, October 12, 1888.

In reply to your question as to the accuracy of a statement over the signature of Angie F. Newman in the CONGRESSIONAL RECORD of October 3, 1888, that last March, "in another cell were two girls, one fourteen, the other sixteen, each married to her own father, both with babes, and yet polygamy is a lost art," I have to say that no such cases appear on the records of this penitentiary at any date, and that there were no such persons here last March. I was then warden, and am positive that the statement of Mrs. Newman is incorrect.

Yours, truly,

ARTHUR PRATT, *Warden.*

Hon. JOHN T. CAINE,
Washington, D. C.

UTAH PENITENTIARY, *October* 12, 1888.

We have read the statement of Warden Pratt and can say from our own knowledge that it is true, and that during the time we have been employed in this penitentiary no girls aged fourteen and sixteen, respectively, have been imprisoned here, nor have any girls been here in custody who were married to their own father.

EDGAR M. JANNEY,
F. G. HUDSON,
T. C. WRIGHT,
JAMES A. DOYLE,
WM. N. MCCURDY,
Guards at Penitentiary.

The above guards have been employed here for a long period, and were all here when Mrs. Angie F. Newman made her visit in March last.

ARTHUR PRATT, *Warden.*

In the district court for the third judicial district of Utah Territory. The United States of America *vs.* Sarah Tong. Indictment for fornication.

TERRITORY OF UTAH, *County of Salt Lake, ss:*

I, Henry G. McMillan, clerk of the district court for the third judicial district of Utah Territory, do hereby certify in relation to the above case as follows: Proceedings—

1888, February 24, indictment presented and filed charging the defendant, Sarah Tong, with the crime of fornication, committed on the 1st day of June, 1887, with one Peter Tong.

1888, March 2, plea of "not guilty" entered.

1888, April 27, indictment dismissed and defendant discharged.

In witness whereof I have hereunto set my hand and affixed the seal of said court, at my office in Salt Lake City, this 12th day of October, 1888.

[SEAL.] HENRY G. MCMILLAN, *Clerk.*

Is it possible that any unprejudiced person could believe that the Mormon Church authorities would seek to shield a man who had debauched his own daughters? Is it possible that the belief prevails that a marriage of a father to his daughter would be solemnized by the Mormon Church? Such a crime is unnatural. To any well-balanced mind it is revolting. The very thought causes a shudder. It is monstrous to impute to a people whose lives are in all respects as well-ordered as those of any community on the face of the globe the tolerance of such a heinous offense. The very fact that this statement, in a memorial to Congress, has not been noticed is, to my mind, proof that it was attributed, as I attribute it, to the fanatical zeal of an unreflecting woman.

Mr. Speaker, the spirit which pervades all the literature emanating from this faction in Utah respecting the Mormons is simply hellish. The fountain from which all these calumnies spring is the Salt Lake Tribune, which day after day proclaims that polygamous marriages are of daily occurrence. No sane man will believe that such a thing is possible if there was the purpose to disobey the law. With an army of special officers scattered over the Territory and spies encouraged everywhere, the certainty of discovery and condign punishment would make such offenses an impossibility. The fact has been certified by the Federal officials that but one well-authenticated case of polygamy has come to their notice since March, 1887, and that offender has been indicted. And yet this dishonest newspaper declares that—

Servant girls are daily leaving the homes in which they are employed, frankly acknowledging they are going to Logan to enter into polygamy.

It would be beneath me to notice such silly lies if they were not incorporated into memorials and printed in the CONGRESSIONAL RECORD. I repeat that the author of these memorials doubtless believes such improbable stories to be the gospel truth. It is her misfortune to be incapable of disbelieving anything appearing in the columns of the Salt Lake Tribune.

Certain deputy registration officers, appointed by the Utah Commission, report the names of twenty-nine men "who, in their opinion," had entered into polygamy during 1887. These officers do not give the "evidence" which induced "their opinion." If it had been "evidence" of sufficient weight to satisfy the United States district attorney that the law against polygamy had been violated by these twenty-nine men, it is perfectly certain that he would have had the offenders arrested and held for the action of the grand jury. But the arrests have not been made, and the deputy registration officers have not been before the grand jury, or, if they have, their "evidence" was not deemed sufficient to warrant indictments against the accused twenty-nine men.

The majority of the Utah Commission in their last annual report have labored hard to make out a case of insincerity against the Mormon people in relation to the abandonment of polygamy. They have endeavored also to prove that the Mormons are intolerant and unprogressive. They are compelled to admit certain facts which they could not ignore, but they have done their best to break the force thereof by "insinuations," and ingeniously constructed suggestions of doubts, as to whether the people really meant to obey the law.

In contrast with the "doubts" of the majority I will quote a few paragraphs from the report of the minority which indicate the emphatic views entertained by two members of the commission, whose ability, courage, personal character, and sterling patriotism none will question:

It is obvious that the laws of Congress and of the Territorial Legislature, the officers in charge of the execution of the Federal statutes, the people of Utah, including the Gentiles and the monogamous Mormons, with many other beneficent influences, such as railroads, telegraphs, schools, colleges, and the invincible progress of civilization, are rapidly and surely working out a reformation of the inhibited sexual offenses in Utah; and there does not now seem to be any necessity or propriety for further legislation restrictive of political rights in that Territory.

We are thoroughly satisfied that the work of reformation in Utah is progressing rapidly, and that it will soon result in a successful issue without a resort to legislation that is proscriptive of religious opinion. Our view may be epitomized in a few words: Punish criminal actions; but religious creeds, never.

The present laws of Congress appertaining to Utah are very stringent, and they will accomplish all that can be reasonably required of legal coercion. We are therefore unwilling to advise any further abridgment of local self-government in that Territory.

Without going into tedious detail, the general result shows gratifying progress in the enforcement of the laws in Utah.

After instancing the taking of the registration oath by "the mass of the Mormon voters" who swore "that they will not go into polygamy," and the fact that "95 per cent. of them voted in August of last year for the adoption of a constitution prohibiting and punishing the offense," and the passage of "a well-considered and efficient marriage law providing among other things severe penalties against clerks who issue licenses for plural marriages," and declaring all "polygamous marriages null and void," and pointing out that a resolution had been passed by the assembly declaring "in favor of a just, humane, and impartial enforcement of the laws of the United States in the same manner as other criminal laws are enforced" against polygamy and kindred offenses, the minority report calls attention to fusion of "Mormons and Gentiles" at the last municipal election in Salt Lake City, and says:

The import of these facts is emphasized in a remarkable manner by what is now transpiring in the courts in Utah. Within a few days past a number of Mormons, charged by indictment with sexual offenses, and who had been evading trial, came into open court, waived trial, voluntarily pleaded guilty to the indictments, and received sentence of fine and imprisonment. Among the number so doing were one or more leading men. We repeat that this example is, in our opinion, pregnant with significance, and that it will be followed by other like examples; that the hinderance which has hitherto impeded the course of law and justice is giving way as a raft before the steady and increasing current of the rising stream. It is hardly to be supposed that they or other men in the same category would voluntarily take such steps with the purpose to repeat and continue to repeat them. On the contrary, rationally they conduct to a different conclusion, namely, a disposition on the part of the Mormons to abandon the commission of sexual offenses and to yield obedience to the law. Yet the laws should continue to be vigilantly and strictly enforced against all violating them. No step backward in this regard should be sanctioned. Let the laws be executed.

The facts above set forth, with others that have fallen under our observation, confirm the opinion that a great majority of the Mormons have wisely resolved that the practice of polygamy should be abandoned.

Our view that polygamy is on the decline in Utah is supported by an eminent Methodist minister, who for many years has been in charge of the "Methodist mission in Utah," and who has mingled with the people in all parts of the Territory. He is credibly reported as having stated in conference, at Cincinnati, early in this month, "that notwithstanding reports given out by the press in general, polygamy is on the decline," and that "in a few more years it will be driven out of Utah."

The ex-chief justice of Utah, Hon. C. S. Zane, over a year ago expressed the opinion "that the existing laws diligently and strictly enforced might be reasonably relied on to work a cessation of polygamy as a practice," and about the same time Hon. William G. Bowman, surveyor-general of Utah, stated that "the change in Mormon sentiment in the last year has been marked and encouraging on the question of the supression and abandonment of polygamy."

The statement of the reverend gentleman hereinbefore mentioned suggests the remark that on account of the "peculiar institutions" of a portion of the people of Utah "the reports given out by the press" are not only at present but have been for years of a sensational and highly colored character.

The Mormons have always contended that the faction in Utah which has been so persistent in its efforts to have them deprived of their civil rights in order that they, a minority, might rule the Territory made a handle of public opinion against polygamy, and that its abandonment by the Mormons would not abate the hostility of these self-seeking people. This has been shown to be true by the cry which is now raised about the Mormons being in favor of a union of church and state. Dealing with this cry, the minority report of the commission says:

The revolution of opinion and conduct among the Mormons in Utah, particularly in the rising generation, is inaugurated and advancing with increasing momentum to the front and the control, and, in our opinion, it will irresistibly proceed until its mission is finished. Revolutions, as a rule, do not retrograde.

Now that it is apparent that the practice of polygamy is passing away, another thing is made prominent and brought forward by non-Mormons in Utah as a justification for further hostile discrimination by the Government against the Mormons, namely, their religion and church government. On this subject we will repeat the language of our last annual report:

"Now, in the close of the most enlightened century in the tide of time, shall we invoke legal coercion over the consciences of men and resort to the pains and penalties inflicted in former times for recusancy, non-conformity, apostasy, and heresy?

"In this age the world moves; and even religious fanatics must keep pace with progress. The Utah of to-day is not what it was when Brigham Young as prophet, seer, and revelator dominated over his devoted followers, isolated from all the world in the secluded valleys of the Rocky Mountains; nor, in our opinion, can that fading and dissolving specter of the past be justly or properly invoked as an excitative to legislation proscriptive of religious opinion. The railroad and the telegraph, free speech and a free press are there now. Schools and colleges and churches of many denominations are found in all parts of the Territory. The people are no longer isolated, but are now in communication with all the world; and Salt Lake City is one of the most cosmopolitan on the continent, a resort for tourists, savants, statesmen, and scholars from abroad. Under such circumstances is it not morally impossible that Utah shall ever again become subject to that church domination and oppression which are now imputed by some persons as an existing reality against 'the Mormon hierarchy?'"

In concluding this report we wish to say that we take our stand on the Constitution, the decisions of the Supreme Court, and the principles of civil and religious liberty as proclaimed by the fathers of the Republic, principles that should never be violated at the behest of popular prejudice against Jews, Catholics, Protestants, or Mormons.

The Supreme Court of the United States has declared that—

"Laws are made for the government of actions, and while they can not interfere with mere religious belief they may with practices. * * *

"Congress can not pass a law for the government of the Territories which shall prohibit the free exercise of religion. The first amendment to the Constitution expressly forbids such legislation. Religious freedom is guarantied everywhere throughout the United States, so far as Congressional interference is concerned. (8 Otto, 145).

Madison says, sententiously:

"Religion, or the duty which we owe to our Creator, is not within the province of civil government."

Jefferson says:

"Believing that religion is a matter which lies solely between man and his God, and that he owes account to none other for his faith or his worship; that the legislative power of the Government reaches actions only, and not opinions, I contemplate with solemn reverence that act of the whole American people which declares that their legislature should make no law respecting an establishment of religion or prohibiting the free exercise thereof." (8 Jefferson's Works, 113.)

I have shown that the underlying cause of the objection of the controlling spirits of the Industrial Christian Home Association of Utah to any control being exercised over the expenditure of the money voted by Congress is their desire to divert it to purposes which were not contemplated by the legislators. That is why Mrs. Newman wants "an expansion of the law to the status defined in the original memorial of the association to the Senate, namely, the dependent classes of Utah Territory." The object is to have Congress recognize an institution with scope and purposes entirely different from the one Congress originally supposed it was assisting. The Senate amendments with the objectionable phrase about women who desire to sever their allegiance to the Mormon Church stricken out will be entirely satisfactory to Mrs. Newman and her coadjutors. Their willingness to have this phrase disappear is another proof of the fact that is plainly evident, namely, that their agitation of charity for dependent Mormon women and children is a mere pretext to get access to the national Treasury.

This was at the bottom of all the trouble with the board of control. This is why such terrific onslaughts are made on the Mormon Church and people. They desire to take advantage of the prejudice existing, not only in the public mind, but in Congress, where such silly, wicked, and improbable statements ought not to be accepted on the mere assumption that Christian women would not make them if they were not true. The utter untruthfulness of some of these statements has been proved by irrefragible testimony. I do not charge that those who become responsible for these calumnies originated them. On the contrary, I believe that those who became sponsors for them were deceived. But I do insist that persons who will make themselves responsible for such falsehoods are not worthy of credence in any statements they make concerning the Mormon people

The scope of the multifarious undertakings of the Industrial Christian Home Association of Utah has been made apparent by reference to the sixth article of its articles of incorporation. The Senate amendments turn over $80.000 to the treasurer of that corporation, and the Utah commission is merely to audit the accounts without responsibility for the expenditure of the money further than to see that vouchers are furnished. It was distinctly stated in the Senate by the Senator speaking for the Committee on Appropriations, and for the Senate conferees, that—

The objects, pursuits, and business of the association are set out fully—

in the article I have quoted. And it was maintained in the Senate, and is maintained in this House, by the advocates of the Senate amendments, that Congress has already "recognized" this corporation by the appropriations already made, and that it is most singular that the point should be made at this late day that it is not a responsible concern and can not be trusted to receive and disburse the funds designed to aid in carrying out the objects it has in view.

With the sum now proposed to give, with the unexpended balances to be turned over, more than $100,000 will be handed over for "the objects, pursuits, and business of the association" as set forth in the sixth article of its articles of incorporation. Does Congress propose to commit itself to what, I submit, is the most visionary of visionary schemes? I have called attention to some of the absurdities of "the objects, pursuits, and business of the association," and if Congress is ready to indorse them by voting vast sums of money, and to assume the moral responsibility of supplying still vaster sums, let it do so. But it should assume this responsibility with full knowledge, and hence I have felt it my duty to set forth the facts.

It must not be assumed that, in the language of Senator HALE, the Mormon leaders see in this institution a "menace" to their cause "sufficient to arouse" their hostility. It is a matter of perfect indifference to the Mormon leaders, to the Mormon Church, and to the Mormon people, how many thousands of dollars Congress votes to the Industrial Christian Home Association of Utah, or how many hundreds of thousands of dollars it assumes the moral responsibility to vote in the future, so long as it does not undertake, in the name of charity, to set up an institution with the Treasury of the United States at its back, to induce persons "to sever their allegiance to the Mormon Church." Speaking from a strictly selfish standpoint, the more money Congress votes for use in Utah Territory the greater will be the benefit the people thereof will derive. So far as the Mormon Church is concerned it will survive not only this scheme to destroy it, but all others concocted by men. It is of God, and He will preserve it!

I have been gratified by hearing the vigorous denunciations of this covert attempt to make the national Treasury contribute to those who doubtless have convinced themselves that they are serving God by laboring for the overthrow of the Mormon Church. It has seemed passing strange to me that the note of alarm has not been sounded earlier in this war which is being waged for the destruction of the Mormon Church. The remark of the gentleman from New York [Mr. SPINOLA] was pregnant with truth when he expressed the fear that if the power of the General Government could be used to destroy one religious organization it might in turn be directed against others. Let me call attention to a fact which scarcely attracts any notice—a fact which is of more serious import than any of the so-called "burning questions of the hour" in this country.

The entire property of the Mormon Church, real and personal, except the Temple Block in Salt Lake City, has been adjudged not to belong to its rightful owners, and is to-day in the hands of a receiver, a United States marshal, appointed by a United States court, in a suit begun by the Attorney-General of the United States in accordance with a law enacted by the Congress of the United States. The property thus in the custody of a receiver, who is an officer of the United States, consists of both real and personal estate, and the nominal value of the personalty amounts to $825,583.06 without including 30,158 head of live-stock. The actual cash amounts to $237,666.15. The other personal property is actually worth about $125,000, and with the cash in the hands of the receiver, and real estate, is valued at $790,666.15.

The real estate which has been declared not to belong to the church consists of the ground in Salt Lake City whereon stand the Tithing house, the church offices, the Historian's office, the Gardo house, the residence of the president of the church, and other real estate, all of which was set apart and dedicated to the church from the first settlement of the Territory. The Temple block, whereon stand the great tabernacle and the unfinished temple, is graciously conceded as a place of worship.

The live-stock was accumulated by contributions, in kind, made by devout people, and its care gave employment to worthy persons entitled to assistance in this way from the church. The management of all this property, the care of the herds and flocks, is now the business of the United States marshal of Utah.

In making up the value of the property turned over to the receiver there was no estimate placed upon the Temple block. It would be difficult to place an approximate value on this piece of real estate, because the Temple is unfinished, and will require a very large sum to complete it. What has been expended upon it can scarcely be determined because a large part was labor contributed. Moreover, as the building was designed for the peculiar rites of the church, and was also to stand a monument of the people's reverence for, and devotion to, Almighty God, its value for any other purposes would be only the material of which it is built.

The entire personality of the nominal value of $825,583.06 and of an admitted actual value of nearly $400,000 is declared escheated to the Government of the United States.

What is the purpose of the suit under which this property has been seized, and some of it forfeited and escheated to the United States, and all turned over to a receiver? Nominally the suit is to dissolve the corporation of the Church of Jesus Christ of Latter-Day Saints, wind up its affairs, and distribute its belongings. There is another suit to forfeit and escheat to the United States the real property alleged to have been illegally acquired by the church. The two together are really meant to destroy the Mormon Church by depriving it of its property. It is nothing more nor less than a disguised attempt to overthrow a religious denomination.

Let me point out upon what flimsy grounds this attempt to dissolve the corporation of the Mormon Church is bottomed. The incorporation of the Church of Jesus Christ of Latter-Day Saints was originally by an act passed by the so-called Legislature of the State of Deseret—a sort of provisional government provided by the Mormons for themselves in 1849, before there had been any territorial subdivision of all that vast domain acquired from Mexico by the treaty of Guadalope-Hildago out-

side the somewhat indefinite boundaries of California. The Mormon settlements, beginning in Salt Lake Valley in 1847, grew rapidly and there was pressing need for government of some kind. The people had petitioned Congress for a form of government, and no heed being paid thereto provided for themselves, in 1849, a provisional one.

In 1850 Congress, under an omnibus law, provided for the erection of several Territories, and among them was Utah. This organic act provided a Territorial government with certain executive officers to be appointed by the President, by and with the consent of the Senate, and a Legislative Assembly the members whereof were to be chosen by the people. The powers granted to this legislative body were by no means restricted in the matter of granting corporate powers save a general proviso to the effect that Congress reserved the right to disapprove of any legislation which might not meet with its approval. An absolute veto power was, however, given to the governor, an officer to be appointed by the President.

One of the first acts of the Territorial Assembly of Utah was the reenactment of the act passed in 1849 by the legislative body of the so-called state of Deseret, incorporating the Church of Jesus Christ of Latter-Day Saints. The act was approved by the governor of the Territory. It was never in whole disapproved by the Congress of the United States.

In 1862 Congress, in enacting the law against polygamy, disapproved of and annulled so much of the act incorporating the Church of Jesus Christ of Latter-Day Saints as might authorize that organization to legalize any particular church doctrines whereby plurality of wives possibly might be sanctioned or civil power of any kind be conferred. At the same time there was a limit placed on future acquisition of real estate by "any religious or charitable organization whatsoever in any of the Territories." That limit was $50,000 in value at the time of the acquisition of the property. It was especially stipulated that there was no intention to interfere with merely ecclesiastical features of the corporation in so far as they related to purely religious subjects, and not to question vested property rights. The discussion of the bill, which became a law, shows how scrupulously careful the legislators were to guard vested rights, and to avoid even the suspicion of violating the constitutional prohibition of legislation infringing the sacred right of religious liberty.

The act of March 3, 1887, in addition to directing the institution of proceedings to dissolve and wind up the affairs of the Church of Jesus Christ of Latter-Day Saints, provided further for suits to forfeit and escheat to the United States whatever property that corporation had acquired in derogation of the act of 1862. The law of 1862 restricted the prohibition to real estate of greater value than $50,000, but the act of March 3, 1887, speaks of property, and not that particular kind mentioned by the former enactment.

Now what becomes of the doctrine of vested rights if the Congress of the United States can, after a lapse of so many years, direct a corporation created by a Territorial Legislative Assembly to be dissolved, its affairs wound up, and its property disposed of? The organic act creating the Territory of Utah provided—

> That the legislative power of said Territory shall extend to all rightful subjects of legislation consistent with the Constitution of the United States and the provisions of this act.

There was no restriction in regard to creation of corporations.

But I have no intention of discussing the momentous interests involved, or of dealing with the questions of law which have to be passed upon. I simply desire to call attention to a fact—one that ought to give pause to thoughtful men. If it seems dangerous to appropriate money "for the benefit of those who desire to sever their relations to the Mormon Church," is it not far more dangerous to begin suits to dissolve church corporations, seize church property, and to forfeit and escheat it to the United States?

There is no dispute as to certain facts involved in the controversy as to the real estate in Salt Lake City, which, as the property of the church, has been adjudged to belong to no one, and therefore, in effect, to be ready to be escheated to the United States. The ground whereon stand the Tithing office and the church offices was, at the very founding of Salt Lake City by the Mormon settlers, set apart and dedicated to their church, just as was the ground known as the Temple block. It was not then a part of the domain of the United States, but of Mexico, the actual settlement having been made before the treaty of Guadalupe Hidalgo. The treaty made it part of the domain of the United States, but it was not possible until long after to obtain strictly legal titles under the land laws. The ground, however, was always deemed and held to be the property of the church, and was used by it for strictly religious and church purposes.

In the case of the real estate known as the Historian's office it is admitted that equitable title thereto was obtained in 1855 by purchase for a valuable consideration, and that the property ever since has been occupied by the Historian office of the church.

The, strictly speaking, legal titles to these several lots or parcels of ground were not obtained under the town-site law until 1871 and 1872.

I quote the finding of facts in relation to the Temple block, the Gardo house and grounds, the Historian office and grounds, and the Tithing office and grounds as agreed upon and accepted by the supreme court of Utah and made part of the final decree in the case of The United States of America, plaintiff, *vs.* The Late Corporation of the Church of Jesus Christ of Latter-Day Saints *et al.*, defendants:

> The said Temple Block was taken possession of by the agents of the Church of Jesus Christ of Latter-Day Saints, then existing as a voluntary unincorporated religious sect, when Salt Lake City was first laid out and surveyed in 1848, and since said date has been in the possession of said church as a voluntary religious sect until it became incorporated as aforesaid, and then as a corporation; that at the time the same was taken possession of as aforesaid, it was a part of the public domain, and continued to be such until said land was entered by the mayor of said city, along with other lands, on the 21st day of November, 1871, under the town-site act of Congress entitled "An act for the relief of cities and towns upon the public lands," approved March 2, 1867. That on the 1st day of June, 1872, the same was conveyed by the mayor of said Salt Lake City to the trustee-in-trust, in whom the title remained until the act of Congress of February 19, 1887, took effect.
>
> The facts in regard to the possession and acquisition of the balance of said real estate above described, are as follows: The second property above described and known as the Gardo house and grounds, was owned by Brigham Young individually at the time of his death in 1877 and was thereafter conveyed by his executors to John Taylor as trustee-in-trust, for a valuable consideration; that subsequently, on the 24th day of April, 1878, the said John Taylor transferred the same to Theodore McKean, on a secret trust for said corporation, who held the same until the 2d day of July, 1887, when he attempted to convey it to trustees Burton, Winder, and Preston for the sum of $1. That said Gardo house and grounds were used and occupied by said John Taylor, president of said church, from 1878 up to the time of his death, as a residence.
>
> The Historian's office and grounds were taken possession of by Albert P. Rockwood, in 1848, and was a part of the public domain, and continued to be such until November 21, 1871, when the town site of Salt Lake City was entered. That on October 3, 1855, the Church of Jesus Christ of Latter Day Saints, through Brigham Young as trustee-in-trust, purchased Rockwood's claim and erected thereon the building which has ever since been known as the historian's office and residence; that from 1848 till his death, George A. Smith was historian, and lived in said building with his family; that the books, papers, and records of the church have always been kept in said building from the time of its construction to the present, at the cost of said church; and that said office has been and is necessary for the use of said historian in the discharge of his duties; that in 1872 George A. Smith obtained the title of said premises from the mayor of Salt Lake City under the town-site act; and that after his death the same was conveyed to his wife and one of his daughters, who afterwards transferred the same to Theodore McKean for a valuable consideration; that the said McKean has held the property since that date on a secret trust for the use and benefit of said corporation.
>
> The part of the Tithing office and grounds were taken possession of by agents of the church in 1848, when Salt Lake was first laid out, and ever since that time have been used by said sect in receiving and distributing tithing and voluntary contributions of property; that prior to July 1, 1862, buildings and other improvements of considerable value had been built thereon by the church; that at the time they were taken possession of it was part of the public domain; on the 21st of November, 1871, said land was entered under the town-site act. That Brigham Young, then president and trustee-in-trust of the church, claimed said land under the town-site law, and it was conveyed to him by Daniel H. Wells, then mayor of said city; that in November, 1873, Brigham Young transferred the same to George A. Smith, as trustee-in-trust; that at his death the legal title to said premises vested in Brigham Young and his successor, and the executors of the Brigham Young estate transferred the property to John Taylor, who in April, 1873, transferred and conveyed the same to Edward Hunter upon a secret trust for the use and benefit of said corporation; that Hunter on the 24th day of April, 1878, transferred and conveyed the same to Robert T. Burton on a secret trust for said corporation, and on the 2d day of July, 1887, the said Burton attempted to convey the same to W. B. Preston, John R. Winder, and Robert T. Burton, as trustees.
>
> That the other piece of property known as part of the Tithing office and grounds was possessed, acquired, and owned, as follows: That in 1848 Newell K. Whitney, then presiding bishop of the church, took possession of lot 5, block 88, plat A, Salt Lake City survey; and in the same year Horace K. Whitney took possession of lot 6 in said block; that some time in the year 1856 the Church of Jesus Christ of Latter-Day Saints, by its agents, took possession of the south half of said lots, and placed thereon yards and corrals, and have continued to occupy the same down to the present. That in 1870 the foregoing lots became a part of the town-site entry. The said church in 1871 filed an application in the proper court for a title to the south half of said lots, and the heirs of Newell K. Whitney also filed an application in the proper court for the south half of said lot 5, and Horace K. Whitney filed an application in the same court for the south half of lot 6. The court awarded the title to the said premises to Brigham Young, as aforesaid. That in 1872 Brigham Young, trustee, obtained a deed from the heirs of Newell K. Whitney to said south half of lot 5, and in consideration thereof paid them $7,000, and at the same time he also obtained a deed from Horace K. Whitney of lot 6, and paid therefor the sum of $2,000. At the time the act of Congress of February 19, 1887, took effect, the legal title thereto was held by Robert T. Burton on a secret trust for the use and benefit of said corporation; that on the 2d day of July, 1887, he attempted to convey the same to Trustees Winder, Burton, and Preston, by a certain instrument of writing.

It will be observed that the "agreed upon facts" as to the Temple block ground are precisely the same in substance and effect as those in relation to the Historian's office and grounds and the Tithing office and grounds. As to the Gardo house and grounds, it is "agreed" that Brigham Young individually owned the same at the time of his death, and that they were conveyed by his executors to John Taylor as trustee in trust for a valuable consideration. The true meaning of this is that the deed from Brigham Young's executors to John Taylor, trustee in trust, sets forth a consideration, but, in point of fact, while the Gardo house and grounds stood in the name of Brigham Young, it was actually the property of the church. In this statement of facts "agreed upon" only such facts as appeared of record were admitted by the plaintiff.

The following is the statement as "agreed upon" in relation to the personal property of the church:

> That at the time the said act of Congress of February 19, 1887, took effect, said corporation owned, held, and possessed the following-described personal property, to wit: One large safe, 1 medium-sized iron safe, 25 arm chairs, 11 rotary chairs, 10 upholstered chairs, 2 desks, 1 letter press, 800 shares of $100 each of the capital stock of the Salt Lake Gas Company, 4,732 shares of $100 each of the capital stock of the Deseret Telegraph Company, 1 promissory note, dated March 2, 1887, due and payable to John Taylor, trustee-in-trust, or order, two years after date, calling for the sum of $13,333.32, bearing 6 per cent. interest from date, signed by Sharp and Little; 1 promissory note, dated March 2, 1887, due and

payable to John Taylor, trustee-in-trust, or order, two years after date, and calling for $1,666.66, with 6 per cent. interest from date, signed by LeGrand Young; 1 promissory note dated March 2, 1887, payable to the order of John Taylor, trustee-in-trust, two years from date, calling for $4,833.33, with interest at 6 per cent. from date—signed James Jack; 1 promissory note, $5,000, with 6 per cent. interest—signed H. B. Clawson; 30,158 sheep; $237,666.16 money, proceeds of sales of miscellaneous property. That since said personal property came into the possession of the receiver heretofore appointed in this cause, he has collected as rent from the said real estate, $2,850; as dividends on said gas stock, $4,900; as interest on said money, $2,233.60.

As to the status of the corporation of the Church of Jesus Christ of Latter-Day Saints at the time of the passage of the act of Congress of March 3, 1887, the plaintiff admits:

That the Church of Jesus Christ of Latter-Day Saints was, from the 19th day of January, 1851, to the 3d day of March, 1887, a corporation for religious and charitable purposes, duly organized and existing under and in pursuance of an ordinance enacted by the Legislature of the Territory of Utah and approved by the governor thereof on the said 19th day of January, A. D. 1851, a copy of which ordinance is made a part of the complaint herein.

And it is also admitted:

That since the passage of said act of Congress on February 19, 1887, the Church of Jesus Christ of Latter-Day Saints has existed as a voluntary religious sect, of which the said Wilford Woodruff is the acting president, and has had duly designated and appointed by the probate court of Salt Lake County, in said Territory, in pursuance of the act of Congress aforesaid, the following-named trustees: W. B. Preston, Robert T. Burton, and John R. Winder, to take the title to and hold such real estate as shall be allowed said religious sect by law for the erection and use of houses of worship, parsonages, and burial-grounds.

As to the nature of the corporation itself the following was "agreed upon in the statement of facts:"

That the said corporation of the Church of Jesus Christ of Latter-Day Saints was in its nature and by its statute of incorporation a religious and charitable corporation, for the purpose of promulgating, spreading, and upholding the principles, practices, teachings, and tenets of said church, and for the purpose of dispensing charity, subject and according to said principles, practices, teachings, and tenets, and that from the time of the organization of said corporation up to the time of the passage of said act on February 19, 1887, it never had any other corporate objects, purposes, and authority; never had any capital stock or stockholders, nor have there ever been any natural persons who were authorized under its act and charter of incorporation to take or hold any personal property or estate of said corporation, except the trustees provided for by said statute of incorporation.

That the said personal property hereinbefore set out had been accumulated by said latter corporation prior to the passage of said act on February 19, 1887, and that such accumulation extended over a period of twenty years or more. That prior to and at the time of the passage of said act the said personal property had been used for and devoted to the promulgation, spread, and maintenance of the doctrines, teachings, tenets, and practices of the said Church of Jesus Christ of Latter-Day Saints, and the doctrine of polygamy or plurality of wives was one of the doctrines, teachings, tenets, and practices of the said late church corporation, but only a portion of the members of said corporation, not exceeding 20 per cent. of the marriageable members, male and female, were engaged in the actual practice of polygamy. That since the passage of the said act of Congress on February 19, 1887, the said voluntary religious sect, known as the Church of Jesus Christ of Latter-Day Saints, has comprised the great body of individuals who formerly composed the membership of said corporation, and the organization, general government, doctrines, and tenets of said voluntary religious sect have been and now are substantially the same as those of the late corporation of the Church of Jesus Christ of Latter-Day Saints.

That certain of the officers of said religious sect, regularly ordained and certain public preachers and teachers of said religious sect who are in good standing, and who are preachers and teachers, concerning the doctrines and tenets of said church, have, since the passage of said act of Congress on February 19, 1887, promulgated, taught, spread, and upheld the same doctrines, tenets and practices, including the doctrine of polygamy, as were formerly promulgated, taught, and upheld by the said late corporation, and the said teachings of the said officers, preachers, and teachers have not been repudiated or dissented from by said voluntary religious sect, nor have their teachings and preachings or their actions created any division or schism in said voluntary religious sect.

That any dedication or setting aside of any of the personal property hereto fore set out as having belonged to the late corporation to the uses and purposes of or in trust for the members of the late corporation of the Church of Jesus Christ of Latter-Day Saints, or any of them, would practically and in effect be a dedication and setting aside of said personal property to the uses, and for the purposes of, and in trust for, the unincorporated religious sect known as the Church of Jesus Christ of Latter-Day Saints.

It was also agreed that at the commencement of the suit all the personal property now held by the receiver was held in trust for the church corporation, and that the Temple block was used exclusively for the worship of God according to the doctrines and tenets of the Church of Jesus Christ of Latter-Day Saints; and further, that proceedings were pending and undetermined "for the purpose of having declared and adjudged forfeited and escheated to the Government of the United States" all of the real estate except the Temple block.

These were the essential finding of facts as agreed upon, and before the court made its decree the persons representing the voluntary association of the Church of Jesus Christ of Latter-Day Saints asked leave to intervene, and by their counsel filed the following petition:

In the supreme court of the Territory of Utah. The United States of America, plaintiff, *vs.* The Late Corporation of the Church of Jesus Christ of Latter-Day Saints *et al.*, defendants.

Now come George Romney, Henry Dinwoodey, James Watson, and John Clark, and by leave of court first had and obtained file this petition in intervention in the above-entitled cause on behalf of themselves and all others who are members of the church hereinafter mentioned, and for their grounds of intervention allege:

That the said members are more than one hundred thousand in number, and so numerous that they can not, without manifest inconvenience and oppressive delays in the said suit, be brought before the court; that all said members have an interest in common with said petitioners in the subject of this petition, and the questions involved in this suit. Wherefore said petitioners file this petition for the benefit of all said members.

That heretofore, on the —— day of ——, 1887, this court made an order in the above-entitled action, appointing Frank H. Dyer, receiver of the Church of Jesus Christ of Latter-Day Saints, who thereupon duly qualified, and ever since has been, and still is, acting as such receiver.

That since his said appointment said receiver has seized, taken possession of, and now holds, subject to the order of this court, the following described real and personal property, to wit:

(The petition then describes the Temple block, Tithing-office property, Gardo house, Historian's office, Church farm, and coal lands. Also the personal property in the hands of the receiver, of the total value of about $790,000, exclusive of the Temple block.)

That all the said described property is, and at the time it was taken by said receiver was, and long prior thereto had been, the property of the Church of Jesus Christ of Latter-Day Saints, and the possession thereof by said receiver is wrongful and without authority or right.

That the Church of Jesus Christ of Latter-Day Saints is, and for many years last past has been, a voluntary religious society or association organized and existing in the Territory of Utah, for religious and charitable purposes.

That said petitioners, and the others for whose benefit they file this petition, are members of said church residing in said Territory. That said church became possessed of all the above-described property in accordance with its established rules and customs, by the voluntary contributions, donations, and dedications of its said members, to be held, managed, and applied to the use and benefit of said church, and for the maintenance of its religion and charities by trustees appointed by said members semi-annually at the general conference or meeting of said members.

That John Taylor, the last trustee so appointed, died on the 25th day of July, 1887, and since his said death no trustee has been appointed.

That said property in the hands of said receiver is claimed adversely to said church, said petitioners, and the members thereof, but wholly without right, by said plaintiff, and is being wrongfully withheld and diverted by said receiver from the purposes for which it was donated, dedicated, and granted. That said petitioners and the said members on whose behalf this petition is filed are equitably the owners of said property and beneficially interested therein, and to prevent the diversion of the same from the said religious and charitable purposes of said church to which they donated and granted said property.

Wherefore your petitioners pray that in case said corporation of the Church of Jesus Christ of Latter-Day Saints should, upon the final hearing of this cause, be held and decreed to be dissolved, an order and decree of this court be made and entered, adjudging and decreeing:

First. That the said property belongs to the individual members of said church, and that they are authorized to appoint a trustee or trustees to hold, manage, and apply such property and money to the purposes for which it was originally given.

Second. That the said receiver deliver the possession of said property, together with its proceeds and income in his hands, to such trustee or trustees as may be named and appointed at a general conference of the members of said church in accordance with its rules and customs.

Third. For such and further relief as may be suitable and just.

JAMES O. BROADHEAD,
F. S. RICHARDS,
LE GRAND YOUNG,
SHEEKS & RAWLINS,
Solicitors for Intervenors.

Colonel Broadhead, for the defendants, insisted upon the following points, upon the facts stipulated:

First. On behalf of the corporation of the Church of Jesus Christ of Latter-Day Saints, we claim that the act of Congress of February 19, 1887, is unconstitutional and void, so far as it undertakes to dissolve said corporation, and that the said corporation is not dissolved, nor is there any power in this court to decree a dissolution of the said corporation.

Second. That the act of July 1, 1862, so far as it undertakes to limit the powers of said corporation as to the amount of property it may hold or otherwise, or to amend its charter, is unconstitutional and void.

Third. That at the time of the passage of the act of July 1, 1862, the right to the property referred to in the agreed statement of facts as the Tithing Office property, was vested in the said corporation of the Church of Jesus Christ of Latter-Day Saints, and is therefore not subject to escheat and forfeiture.

Fourth. That the Temple block, which is used exclusively for the worship of God, and religious purposes, ought to be set aside for the use of the church.

Fifth. That the property known as the Gardo house ought to be set aside to the church as a parsonage.

Sixth. That the property known as the Historian's office ought to be set aside to the church as a part of the parsonage, and because the said corporation had a vested right in the same before the 1st of July, 1862.

Seventh. That if the court should find that the corporation is dissolved, then the personal property described in the agreed statement of facts ought to be turned over to the present members of the church or to trustees for their use and benefit.

But the court adopted the following, suggested by the plaintiff, the Government, as its final decree:

It is therefore adjudged and decreed by the court upon the facts ascertained and declared as aforesaid, as follows, to wit:

That on the 3d day of March, 1887, the corporation of the Church of Jesus Christ of Latter-Day Saints became and the same was dissolved, and that since said date it has had no legal corporate existence.

Second. It is furthermore adjudged and decreed that the following alleged deeds hereintofore set out were executed without authority, and that no estate in the property set out in said deeds is passed by the same or any of them, to wit: The deed dated June 30, 1887, from John Taylor, trustee-in-trust, to W. B. Preston, Robert T. Burton, and John R. Winder, as trustees, for the property described in the Temple block; the deed dated July 2, 1887, from Theodore McKean and wife to the property known as the Gardo house and grounds; the deed from R. T. Burton and wife for the property described as the Tithing house and grounds. And it is, therefore, ordered and decreed that said alleged deeds and each of them be, and the same are hereby, annulled, canceled, and set aside.

Third. It is further adjudged and decreed that block 87, known as the Temple block, be, and the same is hereby, set apart to the voluntary religious worshipers and unincorporated sect and body known as the Church of Jesus Christ of Latter-Day Saints, and that the said W. B. Preston, Robert T. Burton, and John R. Winder, trustees appointed by the probate court of Salt Lake County, as hereinbefore set out, do hold, manage, and control said property, so set aside for the benefit of said voluntary religious worshipers and unincorporated sect and body, and for the erection and use by them of houses of worship, and for their use and convenience in the lawful exercise of worship, according to the tenets of said sect and body. And it is ordered that Frank H. Dyer, receiver of this court heretofore appointed, do surrender and deliver possession and control of all of the property so set aside, to the trustees, William B. Preston, Robert T. Burton, and John R. Winder.

Fourth. It is furthermore adjudged and decreed that except as to the Temple block aforesaid, the petitions of William B. Preston, Robert T. Burton, and John R. Winder, trustees, filed the 6th day of October, 1888, in this court, for the setting aside of certain real estate for the uses and purposes of the religious sect known as the Church of Jesus Christ of Latter-Day Saints, be, and the same are hereby, denied. And it is adjudged and decreed that the balance of the real estate, over and above said Temple block, which has been hereinbefore found as belonging to said corporation, has not, nor has any of it, ever been used as buildings or ground appurtenant thereunto, for the purposes of the worship of

God or of parsonages connected therewith, or for burial-grounds, by the said late corporation of the Church of Jesus Christ of Latter-Day Saints, nor is the said real estate, except as set aside, or any part thereof, necessary for such purposes for the unincorporated religious sect known as the Church of Jesus Christ of Latter-Day Saints.

Fifth. It is further adjudged and decreed that all of the real estate set out in the findings of fact hereinbefore was the property of and belonged to the late corporation of the Church of Jesus Christ of Latter-Day Saints, and the same was held in trust for said corporation. And, furthermore, that the legal titles of and estates in said real estate, and every part and parcel thereof, were acquired by said late corporation and its trustees subsequent to July 1, 1862, and that prior to said date neither the said corporation nor its trustees had any legal title or estate in and to said real estate or any part thereof.

Sixth. And it is further adjudged and decreed that the petition of intervention by George Romney, Henry Dinwoody, James Watson, and John Clark, on behalf of themselves and other members of the late corporation of the Church of Jesus Christ of Latter-Day Saints, filed this day in this court, which said petition alleges the claim on behalf of the petitioners and those for whom it is filed in and to the real and personal property formerly belonging to said late corporation and now in the hands of the receiver of this court, be, and the same is hereby, denied. And it is adjudged and decreed that neither said intervenors nor those in whose behalf they filed said petition have any legal claim or title in and to said property or any part thereof.

Seventh. And the court does further adjudge and decree that the late corporation of the Church of Jesus Christ of Latter-Day Saints, having become by law dissolved, as aforesaid, there did not exist any trusts or purposes within the objects and purposes for which said personal property was originally acquired, as hereinbefore set out, whether said acquisition was by purchase or donation, to or for which said personalty or any part thereof could be used or to which it could be dedicated that were, and are not in whole or in part, opposed to public policy, good morals, and contrary to the laws of the United States. And, furthermore, that there do not exist any natural persons or any body, association, or corporation who are legally entitled to any portion of said personalty as successors in interest to said Church of Jesus Christ of Latter-Day Saints, nor have there been, nor are there now, any trusts of a definite and legal character upon which this court, sitting as a court of chancery, can administer the personal property hereinbefore set out, and it is futhermore adjudged that all and entire the personal property set out in this decree as having belonged to said late corporation of the Church of Jesus Christ of Latter-Day Saints has, by reason of the dissolution of said corporation as aforesaid, on account of the failure or illegality of the trusts to which it was dedicated at its acquisition, and for which it has been used by said late corporation and by operation of law, become escheated to and the property of the United States of America, subject to the costs and expenses of this proceeding, and of the receivership by this court instituted and ordered.

Eighth. It is furthermore ordered and adjudged that there is not now, and has not been since the 3d day of March, 1887, any person legally authorized to take charge of, manage, preserve, and control the personal and real property hereinbefore set out, except the receiver heretofore appointed by this court; and it is therefore ordered that the receivership hereinbefore established by this court is continued in full force and effect, and that the said receiver shall continue to exercise all and entire the powers and authority conferred upon him by the decree appointing him. And it is further ordered that he do continue in his possession and keeping all of the property, real and personal, hereinbefore set out, except such realty as has been set apart by the provisions of this decree, for the benefit of the unincorporated religious sect known as the Church of Jesus Christ of Latter-Day Saints, and that he do safely keep, manage, and control the same in accordance with the provisions of the order of this court appointing him receiver, pending the determination of the proceeding upon information hereinbefore referred to, and until the further order of this court and final action upon and determination concerning the accounts, proceedings, and transactions of said receiver, and all matters connected with or incidental thereto are ordered to be reserved for the future consideration and decision of this court.

It is worthy of note that while the court directs the Temple block to be surrendered to the representatives of the voluntary association known as the Church of Jesus Christ of Latter-Day Saints, it denies the petition of these same representatives to have the rest of the real estate, the titles to which were in all respects practically similar to that to the Temple block. The title to this other real estate is declared not to be in the late corporation and does not belong to its successor, to whom the Temple block is adjudged, and all personal property is adjudged—

Escheated to and the property of the United States of America, subject to the costs and expenses of this proceeding, and of the receivership by this court instituted and ordered.

Upon what broad legal ground was this judgment as to escheatment of the church's personal property based? Because, in the language of the decree—

There did not exist any trusts or purposes within the objects and purposes for which said personal property was originally acquired as hereinbefore set out, whether said acquisition was by purchase or donation to or for which said personalty or any part thereof could be used, or to which it could be dedicated that were or are not in whole or in part opposed to public policy, good morals, and contrary to the laws of the United States.

The forfeiture and escheatment of the real estate is not adjudged because separate suits are pending for that purpose, but in effect the final degree declares it to be subject to forfeiture and escheatment because—

The legal titles and estates in said real estate, and every part and parcel thereof, were acquired by said late corporation and its trustees subsequent to July 1, 1862, and that prior to said date neither the said corporation nor its trustees had any legal title or estate in and to said real estate or any part thereof.

I do not make any comments on these extraordinary proceedings, and the still more extraordinary decree of the supreme court of Utah. An appeal has been granted to the Supreme Court of the United States, and that august tribunal will finally pass upon the law involved therein. I simply want to call attention to the undisputed facts, and to suggest that there are involved in the issue joined pecuniary interests and legal rights of the most transcendent importance outside of and beyond those of the Mormon Church and people.

If it is possible for the Congress of the United States to legislate a religious corporation, which it is admitted had a legal existence and vested rights, out of existence upon the assumption that it is opposed to public policy and good morals, then the existence of any religious corporation and the security of its vested rights, its real and personal property, depends upon, in the United States, its political power, the votes it can influence and control.

But religious corporations are not alone endangered. If the Congress of the United States can direct the dissolution of one kind of a corporation, it can do likewise to another. It only requires that its objects and its purposes shall be deemed by the majority to be opposed to public policy and good morals and laws enacted after its incorporation, and down it goes.

Let me tell you that fundamental rights can not be taken from Mormon citizens and the Mormon Church without endangering the liberties and rights of others. The Constitution can not be violated with impunity, even temporarily, because a people hated and despised, unjustly maligned and misrepresented, are the only sufferers. Experience teaches that the only sure guaranty which any one religious denomination has for equal rights is absolute security for all. If for one pretext or another the property rights of one sect can be invaded, inevitably a like fate will sooner or later overtake the adherents of some other creed.

Is there no danger threatening religious organizations except sectarian jealousies and rancor? Is there not some reason to fear assaults upon church property from a rapidly growing class that is at war with all conservative institutions? If the time ever comes when an assault is made upon the rights of property in this country, at what class will it first be aimed? Remember, history repeats itself. A Roman Catholic priest having persuaded Louis XIV to revoke the edict of Nantes, whereby more than a million Protestants were driven from France, doubtless hugged the delusion that for all time his church was secure. For a century Roman Catholicism lorded it over France, and then reaped the whirlwind. Talleyrand, degenerate son of the church, suggested to the Constituent Assembly the policy of the state hiring the priests and regulating religion as it did any other domestic affair. Irreligion was in the ascendant. Church property was confiscated, one hundred and thirty-four archbishops, bishops, and coadjutors, and forty-six thousand priests who refused to become functionaries of the state were placed outside the pale of the law. Persecution followed. The non-juring clergy were declared "suspected of revolt against the law and of evil intentions against the country." In due time, adoration of the Goddess of Reason supplanted the worship of Almighty God, and following came the revolt of the peasantry, the insurrections of Mismes, Franche-comté, La Vendée, and Brittany, emigration, transportation, imprisonment, the guillotine, or drowning, for two-thirds of the clergy of France.

Let the precedent be made that the state, for any pretext whatever, can interfere with the property rights of religious corporations, and the whole church structure will be struck down by the iron hand of conscienceless uniformity. To-day it is the Mormon Church, upon the theory that the state, being the conservator of public morals, can deprive it of the control and management of its property, because it teaches and upholds a doctrine inimical to society. To-morrow it will be the Roman Catholic Church, because its ecclesiastical polity recognizes an executive head extraneous to the state, and compels obedience to its decrees by exerting an influence over superstitious minds which degrades the object thereof, and thus injures society. There will be no lack of pretexts, and the logic of common sense will avail nothing against the swelling tide of popular prejudice or the radicalism of irreligionists.

The arguments which support the assumption, by the state, of such extraordinary power are not new. Mirabeau forged them from the suggestions of Talleyrand for the Constituent Assembly of France, and the advocates of sequestration of Roman Catholic Church property in Germany and its confiscation in Italy and Mexico have not improved thereon.

Your aim—

Said Mirabeau—

was to destroy ecclesiastical orders, because their destruction was essential to the safety of the state. If the clergy preserve their property, the clerical order is not destroyed; you necessarily leave it the right of assembling; you sanction its independence. If they are proprietors they are independent, and if they are independent they will associate this independence with the exercise of their functions.

The Mormons have experienced persecutions and endured trials in the past. They have contended with mobs, and had to do with State authorities, unable or unwilling to withstand mob leadership. They have, as a people, been twice driven from their homes and despoiled of almost all their earthly possessions. They were compelled to make an unparalleled march across trackless plains and over unknown mountains to find a place of refuge in a desert region. They reclaimed the desert and have made it the marvel of this age. Their church is now being despoiled. Its property is in process of being, or is declared, escheated to the United States, and under the guise of a great charity it is deliberately proposed to vote a large sum of money, to relieve whom? Only women "who desire to sever their allegiance to the Mormon Church."

Let me say that, having survived all efforts to destroy it in the past, the Church of Jesus Christ of Latter-Day Saints will doubtless survive, even if its property is taken from it and missionary establishments set up and maintained in Utah at the expense of the Federal Treasury.

Federal Restrictions on Music.

SPEECH

OF

HON. S. S. COX,

OF NEW YORK.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, October 17, 1888,

On joint resolution 24 (introduced by himself January 4, 1888) in reference to the employment of Army and Navy bands.

There is a difference between liberty and liberties. The people should have the one, the Government often takes the other. Freiheit is von Gott; freihetan von Teufel.—*German proverb.*

> Preposterous ass! that never read so far
> To know the cause why music was ordain'd!
> Was it not to refresh the mind of man
> After his studies, or his usual pain?
> —*Taming of the Shrew, Act III, scene 3.*

Mr. COX said:

Mr. SPEAKER: The resolution to which I address myself is one of many which have been commended to the House by the Committee on Labor, of which Hon. JOHN J. O'NEILL is chairman. It has not yet become a law. Owing to the extraordinary character of this session, and the difficulty in obtaining a day for the consideration of matters from that committee, but few of the bills which pertain to the labor interests of this country have had final determination. But I beg to say that all of these bills have had my warm sympathy and support, and always my voice and vote, especially those which relate to the eight hours for our letter-carriers, and those which were intended to prevent the competition of convict labor with the honest labor of our people.

Upon the last-named bill, as well as upon the bill for the back pay of Government employés who have labored more than eight hours, I have spoken for my constituents, and, I believe, for the best interests of those upon whom rests the substantial prosperity of our communities.

The bill to provide a Department of Labor became a law not without much effort, for it seemed to be the special object of certain members to place impediments in the way of any remedial measure looking to the interest, comfort, and elevation of the laboring class.

It has been said by some that the bill in reference to a board of arbitration is not a substantial measure. But if it be useful to settle controversies and differences between railroad corporations and other common carriers engaged in interstate and Territorial transportation of property and passengers and their employés, I am sure that that bill of far-reaching magnitude will be found to be one of the many acts by which this Congress will be kindly remembered.

But the resolution, sir, which I desire especially to analyze and enforce upon your attention is the one introduced by myself in reference to the employment of enlisted men in competition with local civilians.

It was reported early in the session, but did not come up for debate and passage until April 18, 1888. At that time it was championed by my friend from Missouri [Mr. O'NEILL], and opposed by the gentleman from Alabama [Mr. HERBERT].

And why did he oppose it? Because he thought it to be an outrage on natural liberty. He asserted that one free American should not compete with another American. He thought that many persons on whom the bill would operate should not have been comprehended with mere musicians, and that the bill had too broad a scope. He said it came from the musicians and from no one else. It was thus, and by these fallacious statements, that he argued against the bill.

While it was intended to apply to the musicians especially it would not have been so generous and liberal a measure had it not been more comprehensive. The gentleman from Alabama desires to know what harm there was in allowing a poor enlisted man in the service of the Government to engage in other occupations by which he could add to his happiness and comfort. He thought it was a discrimination against the poor man. He looked in vain for the people who had petitioned for it.

These grounds of opposition are not founded in that policy of individual liberty which should be the basis of all republican democracy, for if the present system in our Army and Navy authorizes Government employés to engage in outside employment, the effect is, as the musicians have found to their cost, an outrage for which there can be no excuse.

The resolution was temporarily withdrawn, but it will come up for action in the next session, when a more thorough and radical discussion will illustrate its desirability.

There may be, Mr. Speaker, two sides to this question. The gentleman from Alabama has the "aye," I take the "no." As the German proverb says, "*Ja und Nein ist ein langer Streit.*" The propriety and justice of such regulations against musical workmen, who are not in the Army and Navy, is no new dispute, but the "noes" should carry when doubt has so long existed as to the propriety and fairness of the competition involved in the present system.

Mr. Speaker, this bill is not a new affair with me. It is, *in hæc verba*, the same bill which I introduced several years ago, and which would have passed had it ever been reached. Since that time the musical force in this country has greatly increased for many reasons. One reason is that there is an increased fondness for music among our people, and especially that of bands.

INCREASE OF MUSIC IN THE UNITED STATES.

As an evidence of this increased fondness for music, I may say that there is a national league of musicians of the United States; and perhaps there is no district represented on this floor where there are more professional musicians in connection with the league and otherwise than in my own district. The reason of this is that the district is largely made up of German people, whose singular attraction toward music is proverbial.

These musicians have a grievance which is very grave. It is caused by the encroachments upon resident bands in certain localities in the employment of the United States Government, located at army posts, army garrisons, navy-yards, training-ships, soldiers' homes, etc. This competition interferes with the business interests of musicians in civil life, and these musicians are dependent solely upon their profession for the support of themselves and families.

They are tax-payers, and pay their quota toward sustaining the bands employed by the Government. Their grievance consists in competition that is neither fair nor just, and this bill can be advocated on that ground.

The Government musicians are provided subsistence, fuel, and quarters free, and with clothing at low rates, while the civil musicians have to bear these burdens. Therefore they are left at the mercy of Government competition.

It may be said that the Government bands are not adequately compensated. This may be true. But why should they not be well paid instead of making this competition, so ruinous, on such a frivolous pretext?

Let it be remembered that by the census of 1880 there were recorded some 30,477 musicians in the United States. Doubtless there are 50,000 at present. Their earnings are estimated at $20 weekly, and therefore the annual earnings would run up to over thirty millions.

Why should this honest wage of these deserving people be reduced by unjust legislation? Why should it not be corrected by the Departments? The answer to the last query is to be found in the fact that there have been more or less directions given about this from the Departments—Navy and War; but such direction is by no means uniform, and it amounts really to nothing. In fact, complete failure on the part of the Departments would be better than this whimsical control which the Departments are in the habit of using when applied to by bands who are driven somewhat to desperation by the competition.

These musicians have appealed to Congress again and again, and in their National League they have asked for legislation as well to prevent the importation of foreign bands or orchestras under contract as to devise a plan for the recognition of the skilled laborers in this branch of work; for, I imagine, the House will see very promptly that there is no more reason why a skilled laborer who works with a sewing-machine or runs a steam engine should have discrimination in his favor than the man who handles the little octave flute and the majestic trombone, or plays "The girl I left behind me" on a snare-drum with a "double drag."

ABUSES OF SUCH REGULATIONS.

There are several abuses connected with this business, one of which I will notice.

Not only do these bands compete with their fellows in civil life, but there is a percentage of their earnings deducted and paid into a fund at the various posts. This varies, because it is fixed by officers who determine its ratio.

Again, if Government can interfere with civil pursuits in regard to music, why may not they also interfere in such pursuits as the practice of the law, teaching of school, or practicing medicine?

The answer is that they do allow the right in this city to many parties who are connected with the Government upon regular salaries to practice their professions.

I am told that there are at least fifty physicians who are connected with the Departments that take care of other business, and especially their professional business. It may be outside of office hours, and it may be not. And I know of one case, which is quite flagrant, and the man who did it became derelict in many ways—I will not say criminally, but it led to a great loss to the Treasury.

Is it not wisest, when a man enters the service of the Government, to confine him to that business? By the same reasoning with which we require him to hold only one office, so we should require him to attend strictly to the business for which he is paid by the Government, and not go outside and compete with others who have not the prestige and pay of the Government.

THE NUMBER OF GOVERNMENT BANDS.

The House will be astonished to know the number of Government

bands used in different parts of the country. They do a regular business in their vicinage, to the detriment of civil musicians. Notably are those at West Point, Fort Hamilton, David's Island, New York; Naval Academy; navy-yard, Brooklyn; Newport; Jefferson Barracks; Columbus arsenal; navy-yard, San Francisco; Newport, Ky., and other places.

They disregard instructions very often in order to cut down prices, and do the work which others are entitled to do.

The schedule rates of these men who labor to make concord and to give éclat to our occasions of celebration are thus injured by the monopoly of the Government.

Mr. Secretary of War Lincoln forbade this competition. It was afterwards modified by the present Secretary of War, but the temporary restraint or modification seems to have given no value to the civilian.

THE MARINE BAND.

There is considerable sympathy evoked on behalf of the Marine Band of this city. Their leader is paid $95 per month; their first-class men, $38; second-class, $24; third-class, $21; they get rations, fuel, and clothing, and they control most of the local business at this capital.

They have circulated petitions, some of which have been presented here, to make them an exception to the operation of this resolution.

I am at a loss to see why they should be excepted. If this law be good for anybody, it is good for them. If they are not paid enough, let their pay be increased.

The band has a famous leader, I am told, who has endeavored to make some discord on this subject, of which I will not complain, for some one says that "oftentimes a discord tendeth to a comely concordance." And when we see this magnificent band inspiring to patriotic duty and surging through the broad avenues of the city on our gala days to the great delight of the infantile colored population, who look up to the drum-major with his big barber-pole and bear-skin cap as if he were a very god, a martial Apollo, just dropped from an Olympian height, we can not but feel proud of the band and the flag and the nation that pays for such a superb entertainment.

But, after all, is there not something too much of this? If this band is to play at the President's receptions, or on official occasions, very well. Let them play away! But if they are to go tooting around into all sorts of private arrangements, and attending private balls and soirées and minstrel shows and picnics, is it not best to call a halt, take down the baton of the drum-major, set the moths to work on his bear-skin cap, and hang up their brazen instruments as bruised monuments for the wonder of future generations?

I have a communication from the league of musicians at Chicago, Ill. The writers desired to send a committee here with proper memorials to the Secretary of War. They claim that the business to which they have given their life study is monopolized by the competition of the United States barracks' band with the bands at that place, and that it has repeatedly ignored the order from the War Department issued in 1884. They desire our officials to remedy the evil.

It is not quite fair, and certainly it is not natural justice or personal liberty, to allow these bands to beat down the prices of these men. I do not wonder that the bands in my old district at Columbus, Ohio, complain in a letter, which is also before me, dated the 14th of March, 1888, that they have families to feed and clothe, and that the United States soldier is driving them almost to desperation by depriving them of the means whereby they live.

It does not tend, Mr. Speaker, to make our citizens, or at least this portion of them who are civil musicians, look upon our flag or our little Army with much respect. They curse the blue-coat band.

It is said that in a well-organized orchestra the instruments may be divided into groups, each being complete in itself, and each producing harmony without aid from the others. As, for instance, a flute—like that of the voice of my friend from Kentucky [Mr. BRECKINRIDGE]—may be set off against a single reed, so-called, like the gentleman from Maine [Mr. REED]. The reed may be harmoniously contrasted with the trumpet, like that of the voice of the gentleman from Kentucky [Mr. TAULBEE]; and the saxophone, which, I take it from the name, comes mostly from the Northland, via Wisconsin and Minnesota, can be happily blended with any other brass instrument which honors this floor with its blasted music. For a combination which forms a new tone-color never heard in this House, give me the bugle horn sweetly blending with the cymbal, with a touch now and then upon an alto and basso clarionet, assisted by the stunning undertone of the big bassoon!

If these analogies are not too fanciful, may we not well divide the superb and imposing Marine Band into several parts and distribute them over our land without much loss to music and with some gain to melody and its artistic devotees in civil life?

There are some gentlemen in this House who, I am persuaded, could illy be spared because of the harmony they create. It is said that the clarionet is a wind instrument—can give a mere whisper, or produce a volume of tone equal to the trumpet. I have, sir, in my mind several gentlemen who can fill these requisitions with satisfaction at the rate of $5,000 a year.

No doubt the Marine Band is a pet institution of this city. No doubt every member of the band, as has been claimed—whether the shrill little piccolo, the sonorous French horn, the ear-piercing clarionet, the jangling triangle, the clashing cymbal, or the thundering trombone—are each so perfect in their parts that each could be the leader in place of Director Sousa in some grand emergency, say a German dance!

I have seen it stated that on certain occasions in our public grounds, where youth and beauty meet to pass the hours with dampened feet, these petted Government musicians are well appreciated. But it is to me a matter of surprise that such stupendous makers of harmonious noise, after their performances at the White House and at the departmental and Senatorial levees, should condescend to give the music of motion to the little dances given by the humble private citizen.

This Marine band also forms, it is said, the better part of the local theater orchestra. It is a matter, therefore, of poignant regret that the Committee on Labor should have interfered with this delicate governmental fraternity, which thus thrusts its unwelcome and intrusive instrumentation into the business of the civil musicians.

THE FEMALE LOBBY.

It is also said that a charming little female lobby has been organized, and has besought our members, while purring around the corridors like a brood of gentle kittens over a saucer of new milk. They have with their eyes plead for their dear marines with more seductive allurements than Mendelssohn's "Songs Without Words," or more entrancing than even the *andante* of the high saxophone played with a single reed.

It is a pity to disturb the dreams of these young maidens as they flit through the corridors or the mazy waltz when Sousa interprets Strauss with agonizing catgut, or with his bâton leads the first alto into a maze of inextricable melody.

MUSIC EVERYWHERE.

Still, is not our duty here apparent? Let us be disenchanted of these sweet and alluring sirens by the passage of the resolution.

I have never voted for the increase or exaggeration of Federal power. Certainly I would not vote even to keep up an Army or Navy band—any measure in restraint of that which gives comfort, grace, and bread to the civilian artist—whether he keep time at the ringing anvil or with the resonant trombone. Of all things I would not aggrandize power here—in restraint of the blessings of music.

We Americans are already little enough prone to recreate our worn frames. Music! Let it be heard everywhere among our feverish people. Let us in this regard learn of our Teutonic relations. Music! Is it not the very keynote of all other harmonies? Does not Nature give us its music for refreshment in the rustling leaf and the autumn wind? Is it not murmured in the sea-shell and thundered in the sea-waves? When refined by Art, has it not a "golden tongue" that speaks the still, soft voice of humanity? Is it not the language of all-conquering Love in all ages and every land? Does it not give cheerfulness at our birth, make merry at the marriage feast, and at death melt the heart to solace our sorrow? Longfellow calls music the universal language of mankind. Lydian airs, organ peals, vocal pathos, and humor set to sweet, lyric sounds, and even political assemblies, with their partisan and patriotic strains and songs, allay our passions and attune us into better temper and higher thoughts—thoughts other than those of "treasons, stratagems, and spoils." Music! It is the charm of earth, the prelude to heaven. Through its reverberations in the Gothic minster, and, as we fondly fancy, in the courts of the better world, it touches the soul of man—

> And wings it with sublime desires,
> And fits it to bespeak the Deity.

When a government of strictly granted powers, made to conserve social order and general welfare, undertakes to interfere with so as to lessen the blessings of this finest of fine arts, may we not exclaim against its arrogant intermeddling and present the canons of our political creeds of personal liberty and constitutional order in restraint of its excesses?

When, therefore, the gentleman from Alabama [Mr. HERBERT] opposed this bill because it may interfere with natural liberty, he forgets that if there be one distinguishing feature between our theory of government and that of monarchical countries it is this, that in our system no powers are given to the state by which the right to create and enjoy the means of life are taken from the people.

In Europe military bands are supported by the government. But here they are not only supported by the Government, but by many people besides, who desire that cheap federal music, which comes in competition with the rightful employment of our own uncivilian musicians.

In other words, the whole mass of powers of a powerful Federal Government is called into activity in order to strike down the poor, who depend upon their skill in music to sustain themselves and their families. They come to this Congress, which has ample supervision over such matters as the Army and Navy, and demand their inalienable rights as citizens.

Therefore, in conclusion, I place this matter before the House as an element in individual liberty which should be protected and preserved against the encroachments of Federal authority.

Chinese Exclusion.

SPEECH

OF

HON. JOHN P. JONES,

OF NEVADA,

IN THE SENATE OF THE UNITED STATES,

Thursday, September 13, 1888.

The question before the Senate being the bill (H. R. 11336) supplementary to an act entitled "An act to execute certain treaty stipulations with the Chinese," approved the 6th day of May, 1882—

Mr. JONES, of Nevada, said:

Mr. PRESIDENT: Having on more than one occasion heretofore submitted my views on this question fully to the Senate, I shall at this time present but a few general considerations. I am the more content to do this from the conviction I entertain that, by consent of all parties, the question has passed beyond the realm of controversy. The masses of the American people, in advance of their diplomatists and representatives, have irrevocably decided this question, as they decide nearly all questions of moment, while political philosophers and *dilettanti* are still engaged in considering abstract refinements that are immaterial to the issue. The whole question is now reduced to one of etiquette, whether or not we shall at once take affirmative and decisive action to prevent the influx of this stream of Mongolian barbarism or wait still longer and until the Chinese Government shall see fit to give us permission to do so.

The power to obtain relief is inherent in the American people themselves by virtue of their national sovereignty, and does not in any way depend upon the Chinese Government. The duty of giving relief and giving it immediately is imposed upon Congress by the exigencies of the situation and by the demand of constituencies all over the United States, whose will it is that we shall now declare that the immigration into our country of this non-assimilating race shall at once and forever cease.

This demand, Mr. President, is not a hasty or ill-considered one, but is based on profound conviction arrived at after years of observation and reflection with ample opportunity for knowledge.

The conclusion of our people is irresistible that two such races—races having not only separate origin, but which by blood, training, and tradition are totally distinct and dissimilar—can never coalesce. They are profoundly impressed with the conviction that for a nation to be harmonious and progressive, its inhabitants must have unity of aims, purposes, and aspirations. In other words, that to attain the highest development a people must be homogeneous. This homogeneity can not be brought about by the schoolmaster, the missionary, or any other external agency. It can result only from assimilation—from intermingling of the blood. Even if this were advisable, it would take countless ages to accomplish. But the attainment of homogeneity by this agency between those people and ourselves would be treason to our race and a crime against posterity.

Never in the history of the world did two races so antipodal as the Chinese race and ours live harmoniously together. Two civilizations so antagonistic and incompatible, the imperial and progressive civilization of America, and the persistent, stagnant, and degraded civilization of Asia, can not continue to exist side by side. Either the higher civilization must retire, or it must subject to vassalage the people of the lower—a policy which would be inconsistent with the fundamental principles of our Republic.

Contrast for a moment the condition and aspirations of the Chinese race with those of the race that dominates this continent. According to the latest estimates the population of the Chinese Empire numbers 450,000,000—all trained athletes against starvation, living under a crushing despotism, always in squalor, and consequently in the very atmosphere of crime. This has been their condition for scores of centuries—and they are contented! Their dreary civilization culminated ages ago. They have contributed nothing to the welfare of the human race—neither in art, science, literature—nor even in example, save as a warning.

Our race, on the contrary, is the great creative race of the earth. It has harnessed the elements and subordinated the subtle forces of nature to the wants and uses of man. By its inventive genius it has vastly ameliorated human conditions. It is aspiring, sensitive, hopeful, energetic, untiring. In art, literature, and achievement in every field of human action it has enriched the annals of mankind. It has brought to the foot of imperial time the noblest harvest of deeds ever gleaned from the field of human endeavor. The presence of the Chinese acts as a dissolving chemical—a poisonous drug—in the veins of such a civilization.

The speakers on the other side of this Chamber, Mr. President, have exhausted themselves in attempts to prove that their party was the first to be right on this question. While I do not regard that consideration as of special consequence, I have observed that none of our Democratic friends have presented to this Chamber any statement of the evil results of Chinese immigration, nor what the injury is which they wish us to understand they attempted to ward off. The whole of their argument has been devoted to the proposition, which, if true, would be of no practical consequence, that they "got there" first, and that on that account they are entitled to the votes of the American people in the coming Presidential election. Their claim in this regard, however, is not true.

After 1865, when the Democratic party took off the gray uniform, it was at a loss for a platform. Every plank of every platform it ever had had been destroyed by the war. It was for some time floundering around for a place on which to stand. It was not to be blamed for this; it had to stand somewhere. Its only policy was opposition to the party in power, and while occupied in this opposition it struck wildly about for a platform of its own. In 1872 it hit upon a curious one—a sort of free-trade platform, with the chief priest of protection in command, and in which, unlike its present position, it insisted on a discussion of the tariff "wholly free from executive interference or dictation," but at that time it had not yet discovered that there was a Chinese question.

To the Republican representatives in Congress from the Pacific coast must be awarded the credit of first giving warning to the country on this question, yet it must be conceded that when the agitation began the Democrats in Congress in larger numbers than the Republicans voted for the exclusion of the Chinese. A majority of the Democrats from the East united with the solid Republican vote of the far West. The fact is patent, however, that the Democrats were listless about it.

If they regarded Chinese immigration as an evil at all, they considered it a local affair of no special importance to the nation at large. They were acquiescent rather than aggressive, and contented themselves with saying: "If the people of the coast want this exclusion law, let them have it." But in the inception of the policy which admitted the Chinese, neither Republicans nor Democrats, whether of the Pacific coast or of the country at large, foresaw the baleful consequences necessarily resulting from their presence among us.

In order to understand the sentiments with which the two political parties of the country approached this question, it is necessary to review briefly the history and traditions of those parties, respectively, on cognate questions.

The Republican party was the party of liberty; the Democratic party, the party of slavery, having no use for labor that it could not own. The Republican party inscribed on its banner, Justice, Freedom, and Equal Rights for all. It is the pride and boast of its history that it has been the friend of the oppressed of every clime. It believed, and still believes, in the immortal declaration that all men are created equal and are endowed with certain inalienable rights, among which are the enjoyment of life, liberty, and the pursuit of happiness.

But when the agitation for Chinese exclusion commenced the Republican party had but recently passed triumphantly through a great war, in which it had succeeded in striking the shackles from the limbs of four millions of slaves. When it emerged from that struggle, exultant at the establishment of freedom throughout the Republic, it is hardly to be wondered at that it was not yet prepared to listen to a proposition to exclude any race or people from sharing with us the blessings of our free institutions.

It had intertwined the Declaration of Independence with the Sermon on the Mount, and it was not willing, without the demonstration of actual experience, to admit that races of men, even with totally dissimilar systems of civilization, could not live and commingle under the shield of the Republic without danger to the institutions which had cost so much blood and treasure to establish and preserve. It had had no experience with unassimilating races of men; it knew little of the real character of the Chinese and nothing of the industrial disturbance and demoralization that was sure to result from their presence in large numbers among us.

The Republicans of the Pacific coast warned their brethren of the East that if they did not join them in efforts to exclude the Chinese the Republican party of the nation would lose control of the States on our western border. The reply was, that while that would be a great disaster, it would not be so great a disaster as if they abandoned their principles, not so great a disaster as if the Republicans should become traitors to their convictions, and barter principles for power.

When it is remembered that we of the Pacific coast had for years had every opportunity for personal observation of this immigration before we came fully to appreciate the character and extent of the evils impending, we had no reason to be surprised that the people of the East, with no opportunities for personal observation, believed on first presentation that the cause of our alarm was groundless. We had no reason to be surprised that they did not at first perceive that there was involved in Chinese immigration a system of contract slavery almost if not fully as repulsive as that which had been melted away in the hot crucible of war.

We were confident that observation and reflection would in time bring the masses of our party to our view, and that when they came they would come to stay. In this we were not mistaken. They now plainly

see and appreciate that the exclusion of this alien race is not obnoxious to the principles of the Declaration of Independence; that in excluding Chinese we do not necessarily deny that they have as much right as ourselves to life, liberty, and to the pursuit of happiness, or that it is their privilege to exercise that right in their own country in such manner as they may deem best conducive to the end sought. But the Republican party agrees and affirms that the Chinese have no right to invade a country to the development of which they have contributed nothing, and prevent us from enjoying the inalienable rights guarantied to us by our great charter.

How was it with our Democratic friends? The inscription on their banner was "Slavery." We all understand that the principal assets of the Democratic party are in the former slave-holding States. The assets in brains, in numbers, in ability, and in will are all in that section. Why, sir, with them the Declaration of Independence applied to white men alone, to the exclusion of all other races. They scouted the idea that the principles of that Declaration applied to the Chinese. They had had long experience with a non-assimilating race, and fully realizing the difficulties of adjusting the relations between two distinct and dissimilar races living in the same country, they were ready to vote to exclude the alien race if they could not enslave it.

So indifferent were they, however, in support of our propositions for Chinese exclusion that we did not believe much in their sincerity. Their support was colorless. Presenting no bills for our relief, manifesting no zeal in the support of bills introduced by Pacific coast representatives, we were afraid that at any time they might change front, as they had done in the last twenty-five years on almost every important public question.

On the other hand, we noticed that every Republican that came to our side came there with enthusiasm. When Republicans became convinced that it was essential to the well-being of our people that Chinese should be excluded, they espoused the cause with zeal. The masses of that party are with us to-day. The success of our cause is assured, as will be the success of every cause espoused by that invincible party whose history is an Iliad of freedom and whose life has been an anthem of justice.

It is cause for congratulation that the Democratic party stands to-day side by side with the Republican party for the policy of Chinese exclusion. The Democrats started right by accident; I believe they are now right by design. But it is unfair and disingenuous on their part to attempt to make political capital out of a question on which there is no diversity of opinion.

Mr. VEST. Will it interrupt the Senator in his argument if I ask him a question?

Mr. JONES, of Nevada. Not at all.

Mr. VEST. I am curious to know, what I have never been able to understand, whether there was a difference of opinion between the Republican party at large throughout the United States and the Republicans of the Pacific Slope upon this question of the meaning of the Declaration of Independence? Does my friend from Nevada mean to say that that difference existed? In other words, does he mean that he agrees with the Democratic party that this is a white man's Government, or does he agree with what he says is the opinion of the Republican party throughout the nation?

Mr. JONES, of Nevada. As a boy, Mr. President, on every Fourth of July I heard read the declaration that all men were created equal, and on every patriotic occasion I listened to stirring speeches claiming this country to be the asylum and refuge of the oppressed of all nations. I fully believed in that claim, and I also believed that the right of expatriation meant not only the natural right of men to leave their own country, but an equal natural right to domicile in ours, or in any other country.

But, Mr. President, experience, observation, and reflection wrought a change in my mind on this question, as on many other questions. I now believe that a nation has the absolute right to exclude any and all races of men whose presence it has reason to believe would be inimical to its own welfare, and that not only has it the right in such case to exclude them, but that its highest duty imperatively demands that it should do so. And, speaking for myself, I do not believe that all men are created equal; and I do not believe that the authors of the Declaration of Independence meant to assert for all men equality in its broad sense. The experiences of every-day life contradict it.

They doubtless intended to assert that all men should stand equal before the law; that the birthright of all men in any given country was equality before the law. This does not necessarily imply that the laws of any country should be universal, for it is obviously true that laws entirely suitable for one civilization may be ill adapted to another. The question of the Senator from Missouri opens a very wide door for discussion and involves too many subtle considerations not germane to the subject in hand for me to attempt to make a full answer at this time.

The super-sentimental idea that our gates must be opened wide to all peoples, in obedience to some fanciful injunction, found nowhere in law, human or divine, concerning "the universal brotherhood of man," would abolish quarantine laws, open the doors of pest-houses and release their inmates, and make it a crime to exclude the small-pox from the play-grounds of our schools. There are follies that are the worst of crimes. Among all that have ever been proposed is that which would make the United States of America an annex of Asia to receive its overflow until the black waters of vice, poverty, and degradation should reach the same line in both. It would be like establishing a conduit between a cesspool and a drinking well. The former would not be improved; there would simply be two cesspools.

The simile is not a violent one. What Americans revere the Chinese of the emigrating class despise; what we cherish they scorn; what to us seems barbarism is to them civilization; what we call degraded vices are with them the common manners of every-day life. There are words in their language that signify truth, honor, and chastity, but they have not progressed in education so far as to know of them. They have no words that mean "home," "fireside," or "conjugal affection." As between highest virtue and foulest crime they are absolutely impartial. We honor the home; they desire only the harem. With our home we want a door-yard; they want six bunks in a room 10 feet square. We enjoy fresh air; they shut themselves in with foul odors. Their vices can not be hinted at. Their redeeming quality is industry. They are cunning of hand and artful in money getting, but they add only to the coffers of the rich who profit by their labor. They become no part of our people. Wherever they go they establish a quarter of their own. They absorb, but never contribute. What nourishes them would starve the lowest of our population. They are the shadow in the path of labor, the mire to the laborer's feet. Five thousand years ago they were as they now are. Five thousand years hence they will be the same. Let them tarry on their own continent. Ours is not for them.

I had ample opportunities, Mr. President, for observing the early immigration of the Chinese to California, and soon came to realize the dangers of that immigration. I perceived that they had nothing in common with us, that our civilization and theirs were separated by unnumbered centuries of time, and that not eons of ages could bring us together. If the Chinamen that came to California forty years ago have changed in any degree whatever, the change is imperceptible to the most acute observer. When I state the fact that the Chinese on the Pacific coast are about equal in number to the voters on that coast it will be seen that in every aspect of the case they are an unmitigated evil.

An industrial struggle between our people and the Chinese is unequal, unjust, and oppressive to the race to which we belong. Our wage-earners are charged with the duties and responsibilities of citizenship. They form alike the basis and superstructure of our society. They are the foundation on which the prosperity of the State must rest, and upon which it must depend for moral, intellectual, and material advancement. They are equally consumers and producers. The money they receive in wages is paid out by them to other wage-earners and so kept in continuous round of circulation, insuring stimulus and prosperity to industry and commerce.

Not so, however, with the Chinese. They acknowledge no allegiance, save to the Six Companies; they care nothing for either our political or social institutions. The money they receive in wages is instantly withdrawn from circulation in this country and sent to China, causing continuous contraction of our currency and consequent stagnation in industrial and commercial enterprises. They have already foraged on us to the extent of hundreds of millions of dollars, which have been sent out in this way. Even the small amounts which they pay out for their own miserable subsistence are paid out for goods produced entirely in China. Hundreds of them, men, women, and children, herd together like dogs in a kennel; no distinction being made between families. They live on the coarsest and cheapest food, so that the cost of their living is reduced to a minimum. They are not subjected, as are our families, to the expense of maintaining the home—the family circle—separate and distinct. Social life, as we understand it, is unknown to and unrecognized by them.

Under those conditions they find no difficulty in crowding our unskilled workmen, and, in many instances, our skilled workmen, out of every avenue of employment. Within the limits of every city of considerable size they have built up towns and cities of their own, where are found such immorality and squalor as has hitherto been unknown to our civilization, with such crimes and such vices, Mr. President, as I am compelled to refrain from even hinting at in this presence; and, what is saddest of all, and perhaps not to be wondered at, very considerable numbers of our youth of both sexes, deprived of the means of livelihood by the grinding competition of these people, seek solace in their somnolent opium dens.

It will not be amiss at this point to indulge in a brief review of the historical phases of the question.

In 1868 a treaty, known as the Burlingame treaty, was entered into between the United States and China, by which the people of China were accorded the privilege of domiciling in the United States. Before that time the Chinese had emigrated to this country in large numbers, but they came in by sufferance. Up to 1868 we had the undoubted right by virtue of our own sovereignty to exclude them, and in excluding them we should have given no real cause of offense or violated any agreement.

The treaty was one-sided and unjust to our people. It was all gush

and sentimentality toward the Chinese; all narrow proscription toward us. The privileges were all given to China; the penalties all inflicted on the United States. It operated perniciously upon our national welfare from the beginning. It was the work of an American, who, being our minister to China, did not think it unbecoming in him to abandon his post, lay down the honorable commission of his own Government, and become the embassador of the Celestial Kingdom to the outside "barbarians" of his own country.

He negotiated a treaty with us for them in which the opening of our whole country to the subjects of his imperial master was conceded as an equivalent for the admission of our citizens into five ports of China. Our people could not pentrate beyond those five ports in that country, while the Chinese were free to colonize and overrun our land. Mr. Burlingame struggled desperately against the Senate amendmen' to his treaty by which they were denied the privilege of naturali here.

Railway contractors, steam-ship companies, and all others who could gain anything from the importation of cooly slaves to occupy American labor fields, were eager allies of mistaken though sincere philanthropy, and of apathy, greatest force of all, in holding back the Government of the United States for years from any step towards undoing the disastrous folly of 1868.

The extent of the blunder that had been made in the Burlingame treaty began to be realized soon after its ratification, and there was a universal demand for its abrogation by the people of the Pacific coast, who were the principal sufferers under it. The party in power, as usual, was charged with the responsibility for the evil, and in 1867 from that cause, and that alone, the Republican party was overwhelmingly defeated in California. Eastward of the mountains the people had never heard of the question.

In 1871 a Republican Representative from the State of California introduced in Congress a bill to prohibit "the importation of Chinese coolies"—that being understood to be their character, and that being the term by which they were known on the Pacific coast. This sounded the note of alarm throughout the country. The bill passed Congress and was signed by the President. At that time both branches of Congree were Republican, and President Grant occupied the executive chair.

Although it was well known that no Chinese laborers other than contract coolies ever entered the United States, yet, false swearing in our courts not being by them deemed perjury, the importation continued under the name of "immigration," notwithstanding the law. To remedy this defect and to settle, as was then believed, the Chinese question, Mr. Page, a Republican Representative from California, with sagacious foresight introduced a bill in the House of Representatives proposing the abrogation of the Burlingame treaty—a course which experience has since proved to be the only fundamental remedy for the evil.

The discussion which then took place served to some extent to educate the Eastern mind, especially the masses of the people. It presented for the first time the overshadowing evils of Chinese immigration. The proposition was made clear that so far as we were concerned, the Chinese were an incongruous and unassimilating race; that they had neither aims, purposes, nor hopes like ours; that no matter how long they remained with us, they never became of us; that from thousands of years of habit, thousands of years of training, they were able to live in conditions that were odious and impossible to our people. It was found that the sons and daughters of those who under scorching suns, in weary processions across alkaline deserts, had carried our flag and planted our civilization on the shores of the Pacific, were being driven from their homes, driven to want, driven to crime, driven to desperation and despair by the cruel competition of this semi-barbarous race in all the avenues of labor.

It was seen by the reflective portion of the people of the coast that this evil constituted a foul ulcer upon our body politic, and that the advanced civilization of the nineteenth century was being inoculated with the virus of antique barbarism. This alarming condition was not appreciated by the people east of the Rocky Mountains. The people of the East did not seem able to understand how it was that while for many years a great influx of Chinese had been taking place on the Pacific, the evils complained of had not been earlier observed. The answer to that is found in the fact that the Chinese were for some time scattered in isolated groups all over the gulches and cañons of California, extracting gold from the alluvial sands, which, I may observe in passing, they sent immediately to China.

They had not at that time come into competition with the American workingman. They took up claims that white men, with richer claims in sight, did not then care to operate. For instance, in 1867 they worked in placers that the white workingman did not then want, but which in 1868 he would have been glad to occupy. In 1868 they worked placers which the American miner would have been glad to occupy in 1869, but did not care to occupy in 1868. And things so continued until the placer mines were practically exhausted. Then the Chinamen, driven out of the mines by the exhaustion of the placers, began to come into competition with our working people in all departments of industry.

By that time a new generation was coming upon the stage of action, a large proportion of which had no means of livelihood except their labor.

The self-respecting working men and women of the Pacific then for the first time began to find themselves forced to compete with this degraded labor. They began to realize that the Chinese had developed the faculty of doing the largest amount of work upon the smallest and coarsest amount of human food. They found these Asiatics satisfied with a form and modicum of subsistence upon which American working men and women would starve. Then it was that the working people, feeling the tremendous pressure of this miserable competition, began in all their assemblages to organize against it. Accordingly a universal demand was made for the abrogation of the Burlingame treaty.

When the demand could no longer be ignored without defiance of that public opinion which, under our system, sooner or later becomes the supreme law, a feeble response was made by sending commissioners to China with the object of securing a modification of the Burlingame treaty. The Executive did not move in the matter until compelled by Congress, and Congress did not move until the efforts of our Pacific coast representatives had been supplemented by the great labor interest throughout the country, when longer resistance required more courage than did action. The State Department appeared to regard the yielding of Congress to our entreaties as in the nature of a disaster, to be repaired by leaden-footed diplomacy, and in the negotiations that followed then, as now, Chinese sensibilities seemed the most important object of consideration.

The Chinese Government could not fail to observe, through the intelligent eyes of its minister here, the unnecessary procrastination of our officials and the perfunctory manner in which they acted when delay was no longer possible. In the negotiations which followed, and which, for no good reason, took place in China, there was a sort of semi-official admission (though not by all of the commission) that our Government was acting under pressure from an ignorant mob, which for political party considerations could not longer be openly resisted, but which the Chinese Government might disappoint by niggardly concessions without offending our officials.

The demand for abrogation continued, however, and in response thereto, between 1872 and 1879, many measures were introduced in Congress having that object in view.

In 1879 a bill was passed which abrogated the obnoxious portions of the treaty and reasserted the exclusive prerogative of this Government to decide for itself who should become domiciled on our soil. The news of the passage of that bill was received with joy all over the Pacific coast, but unfortunately the will of the people was thwarted by a Presidential veto. The only substantial reason given by the President for that veto was that the bill was obnoxious to certain provisions of the Burlingame treaty.

There never was a more unfortunate exercise of the veto power than in that case; never in the history of the Government was there a veto more prolific of evil. In its baleful effects it overbalances, in my opinion, all the benefits which have ever resulted from the exercise of this Presidential prerogative, and furnishes ample reason for such an amendment to the Constitution as will take from any one man the power, through caprice, prejudice, or defective judgment, of thwarting the deliberate and matured decision of a majority of the representatives of the people in both branches of Congress.

This action relegated the whole Chinese question to the delusive realm of diplomacy. A new treaty was negotiated and ratified in 1880, but hedged in with so many reservations and restrictions that it was found almost if not quite impossible to frame an effective exclusion law that should be consistent with its provisions. Two years after the ratification of the treaty a law was enacted to carry it into effect—the act of 1882. That law operated well for a few months, but its provisions could be evaded by false swearing, which, from the nature of the case, in a great majority of instances it was found impossible to detect and punish. This the Chinese soon discovered. Then the cheating began and the tide of immigration rose higher than ever.

In 1884 another act was passed, which it was thought would prevent the rascality and check the flood; but unfortunately the judges of the Federal courts on the Pacific coast decided that the law was not applicable to the classes of cases which furnished the largest immigration. Again, in 1886, a bill was introduced into the House of Representatives by Mr. MORROW, a Representative from California, and in the Senate by Mr. Fair, my then colleague. It was carefully prepared, with a view to remedying the defects, negative and positive, which time had disclosed in the act of 1882.

It was probably the most effective bill that could be framed consistent with the provisions of the treaty. It was reported unanimously from the Committee on Foreign Relations of the Senate, of which the present Republican candidate for President of the United States was then a member. It unanimously passed this body and went to the House of Representatives. It was referred to the Committee on Foreign Affairs of that body, and was there permitted to slumber for many months, when finally Mr. MORROW rose in his place and asked the chairman of the committee what had become of the bill and why it had not been reported.

The reply of the chairman was that a new treaty was under consideration, and that under the circumstances the committee thought it proper not to take action on the bill that had been referred to them. In other words, that even to relieve the people from the curse of Chinese immigration it would not be polite to introduce a measure that would mar the harmony of diplomatic music! It was afterward discovered that the chairman of the committee was misinformed; that no treaty negotiations were then pending, and not until two years afterward was any treaty formulated. That treaty is still under consideration, with all the probabilities against its ratification.

The Democratic members of this body insist that the delay in the ratification of the treaty is chargeable solely to the amendments proposed to it by the Republican members from the Pacific coast, and adopted by the Senate. At the same time and in the same breath they tell us that these amendments made no substantial change in the treaty. If that is true, why all these months of delay in its ratification? Is it to be presumed that the Chinese Government was willing to create delay upon a non-essential point in a treaty—a mere question of verbiage?

The fact of the delay shows conclusively that a change, and one of importance, had been made in the treaty by the Senate amendments. We were informed that the Chinese Government were entirely acquiescent in the policy of excluding its laborers from the United States.

The Chinese minister here having participated in its negotiation, and the treaty, as so negotiated, having, as we were assured, been acceptable to his Government as so negotiated, what was it that rendered it unacceptable to that Government? The only change made by the Senate was the addition of two provisions, which, in exactly five lines, prevented the possibility of any further juggling with certificates, which had rendered the treaty of 1880 and the law of 1882 practically dead letters.

Is it possible that the Chinese Government saw the weak places in the barriers we had set up, and was willing that its people should take advantage of them? Is it possible that it was willing we should have the treaty, provided we should leave holes in it large enough to permit the Chinese laborers to crawl through? The mere statement of the point vindicates the Senate amendments.

By those amendments the Chinese Government has now been definitively informed, if never before, that Chinese immigration is by the American people deemed pernicious, and will be absolutely prohibited.

As to the bill under consideration, it will be conceded by all that it has an extraordinary history.

It is at least suggestive that it was introduced in the House of Representatives by the principal member of what has, not inaptly, been termed the President's "kitchen cabinet"—by the chairman of the "steering committee" of the St. Louis convention that renominated the President—the intimate friend and spokesman of the President, and a distinguished member of the Democratic national committee.

It is curious that that gentleman, who had never before been known to interest himself in the subject of Chinese immigration, should rush, as is stated, from the White House to the Capitol with a bill of this character; that, contrary to the uniform practice of the legislative body of which he is a member, unanimous consent should be given to suspend the rules and take up for immediate action, with scarcely any discussion, and without the usual reference to a committee, a bill abrogating a treaty now in force and rendering useless a treaty under consideration, to the terms of which the President had but recently assented.

I am not finding fault with this action. On the contrary, the bill being one for the exclusion of the Chinese, I heartily favor the promptness with which it was passed. I only call attention to the incident for the purpose of contrasting the action of the Democratic members of the House with that of the Democratic members of the Senate.

It is very evident that the influential gentleman who introduced that bill in the House had an intimation from an authoritative source upon which he felt warranted in relying—secret information withheld from the Republicans—that the treaty which several months prior had been prepared by our State Department and amended by the Senate had been rejected by China.

The very recent history of the Democratic majority of the House, especially their treatment in refusing to consider the Chinese exclusion bill of 1886, showed that they were unwilling to take action on a bill even when there was nothing but a suggestion that negotiations for a treaty were about to be commenced. Yet they did not hesitate in this case to pass a bill in the face of a treaty that had had the assent of the President of the United States. It is wholly inadmissible to suppose that they would introduce such a bill and rush it through in half an hour unless they had had a well-grounded belief, based on presumably accurate though secret information that the treaty had been rejected by the Chinese Government.

The unusual proceedings of the House—their furtive preparation, their suddenness of execution—are only to be explained upon the hypothesis (insisted upon by the press and public, and nowhere contradicted) that the putative author of the bill had had it whispered in his ear that the treaty was a dead letter. Does anybody suppose that it was sympathy with the interests of the laboring masses of the country that induced this hot haste, this new-born zeal? Does anybody suppose that its object was really the exclusion of the Chinese? Was it not rather to gain votes for the Democratic party? Was it not an attempt, by a ruse, before the information became public, to anticipate the action of the Republicans, and to make it appear that the Democratic party was *par excellence* the party favoring Chinese exclusion?

When the bill passed the House the object of its authors seems to have been accomplished. The Democratic enthusiasm for it in that body cools off into indifference in this. The obvious hope was that it would be obstructed by the Republicans of the Senate; and now, that source of obstruction failing, we find Democratic Senators engaged in the attempt to fasten on the Republican Senate a record against Chinese exclusion!

All this strategy, Mr. President, will not do. The masses of the people are not so easily deceived. They will see through the flimsy gossamer of this movement. I sympathize with the Democratic party in its disappointment at discovering that the gun aimed, as was supposed with so much accuracy, at its opponent, proved more damaging at the breech than at the muzzle, and that those who went out hunting for partisan wool came back shorn. But whatever the motive, we are thankful for the bill. We accept the gift with gratitude, and will not be so ungracious as to look a gift horse in the mouth. One can not help, however, being struck by the fact that on discovering that China had not rejected the treaty the friends of the Administration saw fit to make an entire change of front, and to urge delay in this Chamber with the same zeal that they had urged haste in the other.

While professing anxiety for its passage, Democratic Senators consumed days in its discussion. Having discussed it at great length, they voted for its passage. The apparent unanimity with which they now change their attitude and advocate reconsideration and delay, indicates with certainty two things. First, that when they voted for the bill, they believed the treaty had been rejected by the Chinese Government; and, second, that they regard their obligations to be polite to the Chinese Government as outweighing their obligations to deal justly with their own people.

One distinguished Democratic Senator after eloquently advocating the passage of this bill immediately retreated from the ground he had taken and told us that we ought to hesitate, we ought to wait, because the refinements of the diplomatic situation might be disturbed by our action; that etiquette, good breeding, and courtesy demanded a reconsideration of this bill. I wondered then whether if that Senator found himself in a burning hotel and saw a bed-ridden lady in her room destined to certain death if assistance were not instantly rendered, he would come down stairs and give as an excuse for failing to rescue her from her perilous position that he had not been introduced to her husband, and that being a stranger it would be impolite for him to enter her chamber. [Laughter.] If to that statement he should superadd that he really did not have his "calling suit" on, it would be a precise parallel to the position taken by the Senators who favor delay in the passage of this bill.

In appealing for delay our Democratic friends ask us to "rise, above party." We are willing, Mr. President, to rise above party, but we can not consent to continue a gross injustice. If there were not urgent need of the relief sought by this measure, why did we negotiate the treaty which is now before the governing powers of China for ratification?

That is an extraordinary treaty. It is the first time in the history of the world that an agreement has been made between two governments to keep an entire race of people from entering the territory of one of the parties to the agreement. The treaty would never have been entered into except for the most cogent reasons and upon the most exigent necessity. It would never have been negotiated if the people of the United States did not entertain the firm conviction that Chinese immigration was inflicting irreparable injury on them. The reasons impelling the negotiation of the treaty establish the necessity for the passage of the bill now before the Senate.

If this necessity is exigent, which all admit—if the evil is continuing, which none will deny, why should we wait? Why should we wait when the dearest interests of our people are being sacrificed? In reply to this, the claim is made that existing treaty obligations stand in the way. No nation can be bound by a treaty stipulation one day after fair notice to the other nation that experience has demonstrated its pernicious effects upon the nation seeking the release. This is the written public law, as it is also the law of common sense, and the plainest dictate of the law of self-preservation—the highest authority for nations as it is for individuals.

It was through treaties, Mr. President, that we got into this difficulty. It was with the hope that further treaties would get us out of it that the people of the Pacific coast have waited patiently for years before insisting upon the passage of an absolute and unconditional exclusion bill. The additional treaties having served only to delay relief, it is time for us to take our own affairs into our own hands. It is time we stop dancing this diplomatic quadrille, and give ear and heed to the demands of our people for relief. No nation on the face of the earth, unless its actions were controlled by fear, would so long have tolerated a treaty that inflicted such injury on its people.

Suppose we had a treaty with Spain, under the provisions of which

Spanish ships every day in the year and every hour in the day were coming into our ports from the Caribbean Sea; suppose we found those ships to contain the germs of yellow fever, and that our people were seized with that dread malady and were dying all along the coast, what would be thought of the minister of state who, on behalf of the United States, should say to Spain, "We propose an amendment to the treaty so that infected ships may be kept out. To be sure, our people are dying in large numbers; distress and dismay, sorrow and suffering exist all along our coast, still we want to be polite above all things; therefore we wish to negotiate with you about it?"

Suppose we had been weak enough or forgetful enough of the interests of our people to even entertain the thought of negotiating an amended treaty providing for the absolute exclusion of such ships. Suppose the treaty had been formulated, had been submitted to the Spanish Government and had been held by that government without action for four months, the injury to our people continuing meanwhile, and suppose we should then be informed that that government had postponed the consideration of the treaty, would Senators under such circumstances hesitate as to the proper course to pursue? Would they hesitate, for reasons of etiquette, to pass a bill forbidding plague-ships to enter our harbors? And if such ships, in defiance of our laws, continued to enter would we not speak to Spain through the mouths of our guns? Would Senators then rise in their places and urge us to desist on the ground that our action was calculated to wound the susceptibilities of the Spanish Government? Should we permit gild-edged diplomacy or a desire to be polite, or an anxiety to conserve the *crême de la crême* of diplomatic punctilio, to prevent us from saving the lives of our people? Mr. President, this sort of diplomacy might be superlatively refined, but it would not be robust. Every sensible person will concede that that would be a case demanding instant action. We could never consent that the sensibilities of the Spanish Government should be permitted to play any part in a matter of such transcendent importance to us. No matter what the consequences, the ship would be excluded.

To those who know the full significance of this Chinese immigration and appreciate its far-reaching consequences, it is a more appalling calamity than a yellow-fever epidemic. The infirmities of the body, even death itself, are not the worst evils to which a people may be subjected. No matter how severe a fever scourge may be, it would leave our civilization unimpaired. Chinese immigration, on the contrary, is destructive of all that is noble in our civilization. It continues from day to day a monstrous monotony of degradation. The fever at the worst is but the visitant of a season; the frosts of winter are sure to dissipate it. The deadly blight of Chinese immigration, on the contrary, is affected by neither the frosts of winter nor the heats of summer. The fever epidemic affords at least the melancholy satisfaction of leaving the surviving population spiritualized and exalted by the contemplation of suffering, by the example of heroic deeds, by works of mercy, by patient and loving attention to the sick and dying—by innumerable acts that bring into relief the nobler qualities of human nature. The Chinese plague is always a menacing, debasing, and degrading influence.

Whatever division of sentiment may exist on this subject among the representatives of the people in Congress, there is no diversity of opinion among the masses of the people throughout the country. Democrats and Republicans alike regard this immigration as in the nature of an invasion. On the Pacific coast they regard it as more to be dreaded than any warlike invasion that could be precipitated upon us. It is not a party question. The position of the Republican party, at least, is beyond controversy. In proof of this I have but to read a few words from the letter of acceptance of General Benjamin Harrison, the candidate of the Republican party for President of the United States. These words will be found unequivocal and unmistakable. They refer to no treaty; they suggest no diplomacy. They recognize the inherent right of the United States to settle for themselves a question of such paramount importance. General Harrison says:

> We are also clearly under a duty to defend our civilization by excluding alien races whose ultimate assimilation with our people is neither possible nor desirable. The family has been the nucleus of our best immigration and the home the most potent assimilating force in our civilization. The objections to Chinese immigration are distinctive and conclusive, and are now so generally accepted as such that the question has passed entirely beyond the stage of argument.

No self-respecting person can question the sincerity of such an utterance made under circumstances of such responsibility. Whosoever expresses a doubt of it discredits himself and not the author of the utterance. We find disingenuous and unworthy attempts made, however, to confuse the public mind as to the position of parties here on this question. A conspicuous instance is shown by the public press of this morning in an official declaration of the Democracy of New York, which I will read in one moment.

The State of New York is essential to the success of the Democratic party in the coming election. It is relied upon to renew the term of that party's power in the nation. The Democratic convention of that State must therefore speak by authority. It could not afford, at the opening of the campaign, to give forth any uncertain sound upon any subject with which it dealt. Was it supplied from Washington with secret information regarding the rejection or supposed rejection of this treaty? Was it also given a suggestion that the bill now under consideration would probably be delayed in this body by reason of the custom of the Senate to pursue careful and conservative ways in legislation?

In the platform of that convention, held yesterday at Buffalo, I find the following:

> We approve the Democratic measure passed by the Democratic House of Representatives prohibiting Chinese immigration. By it actual and not sham protection will be afforded to the American workingman, and we demand its passage by the Republican Senate.

Yet when we try to pass that bill we find the Democratic members of the Senate the most strenuous objectors to it.

It must be a source of disappointment and mortification to the members of the "kitchen cabinet" to find their calculations defeated, the Republicans of this Chamber being only too glad of an opportunity to pass this bill, while the obstructions proceed from Senators belonging to the administration party.

It is pertinent to inquire from what cause this obstruction proceeds—what can have caused the change in the minds of those Senators since voting for the passage of the bill a day or two ago. We now find them with hands and voices uplifted and with all the eloquence at their command calling for reconsideration, and asking that the affront which the passage of this measure would import may not be put upon the Government of China.

They voted for its passage in the first instance in the expectation of securing a cheap advantage for their party without loss of prestige to the Administration; but on the receipt of further news from China they suddenly recalled that there had been a treaty pending, and now with more regard for the feelings of the Chinese Government than for the interests of the great laboring masses of our own country, they hesitate. Ignoring the direful consequences to our people of Chinese immigration, they see only the offence to the awful majesty of China that would be implied by the passage of the bill. They insist that international courtesy must be complied with before attention can be turned to the wants of the United States. Their sense of diplomatic propriety is shocked at the idea that we should take care of our own interests without regard to the interests of China.

It seems that in voting for the bill in the first instance they considered themselves as law-makers only, while on the vote for reconsideration and in favor of delay they take into account the fact that they are also part of the treaty-making power. However bold they may be as law-makers, they must be circumspect as diplomats. So, after having in one capacity helped to pass the bill, they are now in the other capacity straining every nerve to undo what they have done. In their diplomatic capacity they regard themselves as representatives of the Administration. As such they seem to be apologizing for the action taken by themselves in their broader capacity as representatives of the people.

In the exercise of their functions as law-makers, charged with the responsible duty of caring for the interests of 65,000,000 people, they voted to pass the measure under consideration. But having performed that duty, they discharge themselves from further consideration of the interests of their constituents, put on their dress suits, and, *boutonnière* on the lapel, assume the diplomatic function. In this capacity they deem it their duty to see that the sensibilities of the Chinese Government are not wounded.

In their legislative capacity they did not hesitate to contemn the low civilization of the Chinese; in their diplomatic capacity they are awed into admiration by the barbaric splendor of "a great empire of 450,000,000 people!" As legislators they felt compelled to favor the passage of this measure, but as diplomats they now feel equally compelled to prevent its passage! In contemplating the attitude of Democratic Senators on this question one is almost led to institute a comparison between it and the case of Dr. Jekyl and Mr. Hyde.

For my part, Mr. President, I am glad to have the opportunity to vote to abrogate the treaty absolutely, so that all the world may know that this country will permit no interference in its domestic affairs. Who denies that this nation has the right to say what people shall, for our weal or woe, form the body of our citizenship? If objection is made to instances of harmful immigration from Europe, especially of contract laborers, what can be said in defense of a policy which permits a worse class of such laborers to come in from China?

In the platform of the New York State Democratic convention I find also the following:

> We commend the efforts of the President to enforce the laws relative to imported contract labor. Such efforts have revealed their weakness and the insufficiency of our immigration laws so far as applicable to criminal paupers and contract laborers; and we therefore recommend a thorough revision of the laws in relation to such immigration and imported contract labor, so that our country shall not be made the refuge of the dangerous and criminal classes of other lands; shall not be burdened with the support of their paupers, and that our workingmen shall not be deprived of work or have it cheapened by competition with imported contract labor.

With this resolution before them in this morning's newspapers, Senators here are endeavoring to continue in force a treaty arrangement under which large numbers of the most degraded class of contract laborers are daily coming into our country. A Chinese laborer on the Pacific coast is never anything but a contract laborer. His labor is contracted for by the Six Companies—the slave-traders of the new régime. When one of those laborers is sought for hire, nobody thinks of

going to the laborer himself. He is hired on contract from the Six Companies, and when so hired is compelled to work without any volition on his own part; he dare not refuse to work in his appointed place. Those people have secret tribunals which enact laws more binding than those of the United States, and have murderous "high-binders" to enforce their decrees.

Upon this contract labor the Six Companies are amassing enormous sums of money; and, as the immigration increases, the fund increases with which to make the immigration larger, to the great profit of the Six Companies and the great harm of our civilization. It is understood that the Six Companies have for some time had under consideration a proposition to establish a line of steamers of their own in order to carry on this iniquitous immigration on a gigantic scale.

Who can foresee the consequences to the interests of our laboring masses, and ultimately to our civilization, if this country were subjected to a weekly or fortnightly inflow of thousands of these degraded laborers? From the innumerable population of China millions could detach themselves without being missed, while a much smaller number, by the keenness of their competition with our people in every field of industry, their barbarous economy, and debasing social system, would overturn the civilization of the North American continent.

The meanest, most ignorant and abject contract laborer that ever landed upon our shores from any port of Europe is less threatening and less harmful to our community and our institutions than the best and most intelligent Chinese laborer that ever entered the United States.

Notwithstanding our treaty relations with European peoples of our own race, we did not find it necessary to open negotiations with England, France, Germany, Austria, Italy, or Russia when we concluded to exclude their contract laborers from our country. We were well aware that we had a perfect right to deal with the question directly through our own legislative enactments without consulting any foreign nation or asking any permission from them. We find force enough in our statutes to keep out contract laborers from all those countries. Toward those nations we assert our national sovereignty, assert the right to regulate our own affairs. But when it comes to dealing with the Mongolian the most delicate sensibilities are aroused; we must not touch the refinements of a treaty!

We are told, however, there are important interests involved, and that the Chinese might retaliate. Well, that is their affair, Mr. President. Our trade with China is principally with the British port of Hong-Kong, and for every dollar's worth they buy from us we buy $5 worth from them. The sum total of our trade with China is a mere bagatelle. But whatever we might lose by the loss of that trade, it is no advantage to this country to favor the firm of "Truck, Dicker & Co.," at the expense of our civilization. If the Chinese Government were to order the expulsion from China of all Americans resident there, we should be very glad to exchange for them the two hundred thousand Chinamen in this country. We should be very great gainers by the exchange.

We have even heard something of "war" in this debate. Well, Mr. President, there are worse things than war. If China should wish to make war on us because of the passage of this measure, we would have to stand it, and I have no doubt we could. Better a war with China, better a war with all the world, than the degradation of our race and the destruction of our civilization. Let us preserve untainted our own imperial race, the manhood of our men and the virtue of our women, for those are the foundations of our Republic. Let us see that our people are well employed, and that they receive fair compensation for their labor. Let us see to it that they are not compelled to compete in a race for cheapness with men whose only attributes are labor and sleep. Our civilization demands more than these of our people. Let us see to it that we do not deprive them of the power to meet the demand.

Our Democratic friends are shocked because we do not want to wait, nay, because we do not retrace the steps already taken and then meekly wait upon the humor of the Chinese Government while it is considering whether it will consent to a resumption by the United States of one of its chief attributes of sovereignty. The people of the Pacific States have waited for sixteen years, and in every one of these years, through their press, their representatives in Congress, and in all their public assemblages, have been demanding the passage of just such a measure of relief as this.

Is it not time, Senators, to afford the relief? If the Pacific coast had not been an integrant portion of this Republic its people would long since have taken this matter into their own hands, defied China and all the other barbaric powers, and themselves prevented this immigration. Their deliverance should not now be delayed. Their long-deferred hopes should quickly find fruition. Further dalliance with this question may induce the thought in the minds of that patriotic people that the great Government to which they belong is unmindful of their welfare.

Mr. President, on this subject the roll is about to be called. Those who answer "yea" on the motion to reconsider, and thus show that they are willing to postpone this question or to refer it to a committee for further consideration—those who are not willing to take immediate action and pass the bill at once are simply voting to indefinitely continue the monstrous evils which are growing more monstrous every day upon the fairest portion of this country. They vote that thousands of young men shall be remitted to idleness and thousands of young women driven to desperation and despair. They vote that the people of our own race, who are entitled to have whatever of work there is to do among us, and at fair and remunerative prices, shall either starve outright, or, what is but little better, compete at starvation wages with Chinamen.

In return for this there shall come to those Senators the grateful adulation of the Six Companies, that mighty Chinese labor trust, which, in this age of emancipation, carries on a new slave trade as baneful and dehumanizing in its ultimate results as was the old. They shall enjoy the proud satisfaction of having aided in establishing more securely the authority of the despotic government maintained on our soil by these same Six Companies, under whose laws their subjects are put to death for disobedience. The "high-binders" whose industry is the slaying of Chinamen at the bidding of the companies, will warm with gratitude toward them. Four hundred millions of Asiatics shall rise up and call them blessed for having offered to each of them the bread out of the mouths of the children of American workingmen, if the Chinese will but cross the Pacific and accept it.

They will have the approbation of all our great land-owners, who, if they could secure a large supply of this degraded labor, would become feudal barons in everything but the name. They will have also the thanks of all in our land who deal in human lives and amass fortunes by compelling the most labor for the least pay. Finally, and what should be most grateful of all, they will secure the flattery and simulated approbation of foreign diplomatists, who will assume to see in their votes an assurance that they can be depended upon by any foreign power which may seek to overreach this country in negotiations or to secure immunity for some flagrant invasion of its sovereign rights.

To those on the other hand who vote for the immediate passage of this bill, thanks shall come up from the home of every American toiler, from the heart of every American patriot. To them shall come especially the fervent and enduring gratitude of the people of the Pacific, not alone the present dwellers on that coast, but the teeming millions destined hereafter to find homes and happiness in that favored portion of our Republic. The news of the passage of this bill, Mr. President, will be received with one glad shout of acclaim that shall reverberate from Mount Rainier to the Grand Cañon of the Colorado.

Oklahoma.

SPEECH

OF

HON. CHARLES E. HOOKER,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, August 29, 1888,

On the Oklahoma bill, while the same was under discussion under the five-minute rule.

Mr. HOOKER said:

Mr. CHAIRMAN: I desire to call the attention of the committee as briefly as the gravity and importance of the subject will allow to the character of the amendment which has been offered by the gentleman from Illinois [Mr. PAYSON], and to the objections which are made to it. I had occasion, sir, when speaking upon this subject in the general debate to announce my opposition to this bill upon the general ground that it was an effort to create a Territory out of land which did not belong to the Government of the United States, and upon which, as was said by a gentleman in the course of that debate, there were no citizens and no people over whom a Territory could be created or for whom a Territorial government should be constituted. I am not going over the ground which I then assumed before the committee, because I presume it is fresh in the minds of most gentlemen. Having demonstrated, as I believe, not myself, but as evidenced by the statutes and the treaties and the patents of the Government, that these Indians held this land by virtue of the most solemn form of conveyance known to the Government of the United States, I was very much surprised when my friend from Illinois [Mr. CANNON] on the other side of the Chamber, in the course of the debate, when this question was up before, in answer to an inquiry which I made of him as to how he would dispose of lands patented to the Indians, said he would dispose of them, and that the highest title to land was in the Congress of the United States, and we could give it away notwithstanding the prior conveyance under patents as well as under the treaties.

The proposition is startling in its character, and if it be true in regard to the Indian lands, I submit it is equally true in regard to all other lands which the Government has patented to any other parties, either companies or individuals.

It can not be assumed that the solemn conveyances under which these lands are held can be gotten rid of by an act of Congress. If that were the case, it is competent for the Government to convey any title, and no man would hold them except at the will of the legislative department of the Government of the United States. Now, the amendment which has been offered by the gentleman from Illinois [Mr. PAYSON] is to amend section 5, which requires that these lands shall only be sold to actual settlers at the price of $1.25 an acre, and make them amenable to the homestead law; and it was announced by the distinguished chairman of the Committee on Territories in the speech he made to this committee on yesterday that if that amendment was adopted it would be the Trojan horse which was intended and designed should kill his bill. It is the first time, I submit, in the history of the legislation of this Government that public domain has been attempted to be created in which they are afraid of allowing the homestead law to prevail.

Now, the honorable chairman of the committee says that if this bill passes, when this is created into a Territory and becomes part of the public domain it shall be distinct from all other public lands, and the right of a citizen to make a homestead upon this land shall be denied.

Mr. SPRINGER. I hope the gentleman will not misrepresent me upon that. My point was that under the homestead laws as they now exist a settler was permitted to take the land, and in six months he could sell it. While under this bill he does not get title unless he pays $1.25 and lives on it for three years. How, under those provisions, could they fall into the hands of speculators within six months?

Mr. HOOKER. On the contrary, Mr. Chairman, if we pass the bill, within six months these lands will fall into the hands of speculators, and it is not hard to determine who these speculators will be.

Mr. SPRINGER. I beg the gentleman's pardon. He certainly does not wish to misrepresent the bill. No man can obtain this land except by actual settlement and cultivation; by personal residence of three years.

Mr. HOOKER. I will demonstrate my proposition.

Mr. WEAVER. I say you can not demonstrate your proposition.

Mr. HOOKER. We will see. If I do not, you do not need to vote for my proposition. If I do not demonstrate it, then I will not ask the gentleman from Illinois or the gentleman's lieutenant to vote for it. But if I do demonstrate it I will expect them to vote for it.

Mr. WEAVER. I suppose you will.

Mr. HOOKER. It is very hard to convince those who will not be convinced against their will. But certainly the gentleman from Illinois said that if the amendment of the gentleman from Illinois [Mr. PAYSON] becomes a part and parcel of this bill it will destroy his bill.

Are we afraid to permit the principles embodied in the amendment offered by the gentleman on the other side of the Chamber [Mr. PAYSON] to be applied to these lands, as it is applied to all public lands? Why should we be? It was said by the honorable gentleman from Iowa [Mr. WEAVER] that he spoke for six hundred thousand men who wanted homes. Why, sir, you do not speak for the very men who you say want homes when you are afraid to have applied by your bill the principle of the homestead entry of lands.

Now, Mr. Chairman, the proposition of the gentleman from Illinois [Mr. PAYSON] is, in my judgment, a fair proposition to amend the bill in order to perfect it, and should be acceptable to those who are willing to vote for it under any conditions. I am opposed to the bill, because I believe it violates our solemn treaties with these Indians, and violates the solemn conveyances made by the Government, and therefore ought not in any form to become a law. You propose to create a Territorial government with a governor and all its officials over that Territory, before you have obtained the consent of the Indians, and you propose to create a commission at the vast expense of $10 a day for each commissioner and $6 a day for their secretary to go to that Territory to obtain that consent.

The history of the grant of these lands to the Indians I recited in the speech which I had occasion to make on this subject some time ago, and I will now merely call attention to the position which I then assumed and which I fortified by reading the very patents of the Government themselves, showing the nature and character of the conveyance which the Government made to the Indians, and also by reading the treaties, every one of which would be violated, at least in spirit, by this bill. And even if you can urge the doctrine that we can get rid of a treaty by an act of Congress, you certainly can not urge the doctrine that we can get rid of the patents of the Government by an act of Congress; if so, you can unsettle the titles to all the lands in the United States which are based upon patents derived from the Government, whether they are held by Indian tribes or by individuals.

Some years ago there was a commission appointed by the Senate of the United States for the purpose of investigating the character of the titles to these Indian lands and the propriety of constituting them into a Territory.

The gentleman from Iowa [Mr. WEAVER] in arguing this question the other day said:

> It sounds well to hear gentlemen laugh when there are five hundred thousand homeless people in this country who are praying for an opportunity to settle upon the public domain in accordance with the law, who are seeking a home and a shelter for their little ones. It is a nice thing for gentlemen to sneer and laugh.

Now, Mr. Chairman, what is the extent of the public domain of the United States? I beg leave to call attention to the figures which were presented by the gentleman from New York [Mr. BAKER] in the speech which he made here the other day, and which show that we have still some seven hundred or eight hundred million acres of the public domain unoccupied. Why is it that gentlemen insist that this particular land shall be opened up to public settlement and tell us that there are five hundred thousand homeless and shelterless people of the United States who are seeking homes and demanding this particular land in order that they may make homes upon it, and yet object to this Territory being opened to entry under the homestead law?

I will embody in my remarks a quotation from the speech of the gentleman from New York [Mr. BAKER] showing the extent of the public domain in the different States and Territories. Listening to the speech of the gentleman from Iowa [Mr. WEAVER] one would suppose that no man who is without a home, no man who is landless, could find a homestead or land to settle upon anywhere within the territory of the United States unless this Government should be guilty of Punic faith by taking from the Indians what it has given them by its solemn patents; and this, although we have seven hundred or eight hundred millions of acres of the public domain still open to occupation by those who are landless. No, Mr. Chairman, it is this particular land that is wanted, this territory which belongs to the Indians and which you have patented to them, describing in the patents the metes and bounds in the lands you conveyed, and enumerating the acres down even to a fraction. For instance, in the case of the Cherokees you made a patent of over 14,000,000 acres, and you designated the amount even down to the fraction of an acre. It is this particular land, therefore, that the homeless and landless men of the United States want, according to the advocates of this bill. In the name of the homesteader, in the name of the poor people of this country who desire homes on the public domain, I deny that they want to dispossess anybody else in order to get homes for themselves.

Gentlemen can not account for this bill upon that ground, and if they can not, how can they account for it? The gentleman from Missouri [Mr. WARNER] was eloquent in his appeal to the House in favor of this bill on the ground that he wanted to remove the cattle syndicates and the corporations now in possession of this Territory. Mr. Chairman, if you remove the cattle syndicates and the corporations who are in possession of this part of the public domain and constitute it a Territory, where does it go? Does the honorable gentleman, the chairman of the committee [Mr. SPRINGER], tell you? How will these lands be disposed of? I submit that under this bill they will go primarily to two corporations, the two great lines of railway that run respectively east and west and north and south through that Territory. I see that the gentleman from Iowa [Mr. WEAVER] smiles.

Mr. WEAVER. I smile audibly.

Mr. HOOKER. The gentleman no doubt wants to refer to that provision of the bill which proposes to rescind the acts by which these lands were granted. But, sir, you have got a vested right to contend with, and you ought to be lawyer enough and the chairman of your committee ought to be lawyer enough to know that when the lands given under those grants are mortgaged they are placed beyond your control, and I hope that when I demonstrate this proposition I shall have the chairman of the committee and his intelligent lieutenant on my side of the question and in opposition to the corporations and syndicates who otherwise will grab up all this territory for themselves.

I have said, sir, that some years ago there was an investigation made by the Senate of the United States for the purpose of ascertaining what was the condition of these Indian lands. Upon that committee of investigation was the present distinguished Attorney-General of the United States, Mr. Garland. I do not say that he was the chairman of the committee, but he was one of the prominent members who conducted the investigation, and what did they find, as shown in their report to the Senate? I hold that report in my hand, together with the testimony which was taken. I will not weary the committee by reading the resolution, but I will simply call attention to the language of the report which was made by this committee to the Senate of the United States. They say:

> We respectfully beg leave to submit the following report:
>
> By the acts of Congress referred to in the first resolution there was granted to two railroads a right of way through the Indian Territory, one extending from the southern line of Kansas to the northern boundary of Texas, and the other from the western line of Arkansas to the Pacific coast, and in addition to the right of way a grant of lands was made dependent (I call attention particularly to this language)—a grant of lands was made dependent upon the extinguishment of the Indian title, and upon the lands becoming public lands of the United States. The road from Kansas to Texas passing through the whole width of the Territory, known as the Missouri, Kansas, and Texas Railway, extends from Hannibal, on the Missouri River, through Missouri and Kansas and the territory of Texas, being 576 miles in length, and forming a link in the line of direct railway communication between Chicago and St. Louis and the Gulf of Mexico at Galveston.
>
> It has mortgaged all its line and all its property of every kind in those States and the Territory as security for its bonds, but has issued no bonds "predicated" upon the lands alone.
>
> These mortgage bonds have been negotiated and are largely held in London, Paris, and Amsterdam, as well as New York. They were issued in aid of the construction of the road, and are held by private investors.
>
> The Atlantic and Pacific Railroad has been constructed only some 35 miles from the Missouri line to Vinita in the Territory, and has mortgaged the lands conditionally granted for that distance to secure certain bonds issued by said company, which bonds are held by purchasers for investment.

In the examination made by the Senate committee, in Report No. 744 of the Senate, to the third session of the Forty-fifth Congress, page 26, Mr. G. D. L. Huldro, an expert accountant, was sworn, and asked to state where the bonds were held, and what amount of bonds had been issued, and replied as follows:

By the CHAIRMAN *pro tempore:*

Q. What part of the road did they cover?
A. They covered from Sedalia down to Denison, Tex.
Q. How many miles?
A. Between 400 and 500 miles.
Q. What were they; 6 per cent. bonds?
A. Seven per cent. gold bonds.
Q. What are those bonds worth?
A. Forty-two or 43 cents.
Q. Where are they now held?
A.:

In Amsterdam	$6,600,000
In London	900,000
In Paris	1,700,000
In New York	5,400,000
Total	14,600,000

I call the attention of the committee particularly to this concluding language of the report:

The only condition by which the lands in the Indian Territory could become public lands would be by the voluntary abandonment of the same by the Indians or in case of the extinguishment of their title.

Mr. SPRINGER. Does not the gentleman know that neither of the roads to which he refers touches a foot of land embraced in the Territory of Oklahoma as provided in this bill——

Mr. HOOKER. Yes, sir; but they touch the Indian Territory——

Mr. HOLMAN. The Atlantic and Pacific does.

Mr. SPRINGER. The western terminus of that road has not reached the Indian Territory, and its whole grant has been forfeited by act of the Forty-ninth Congress.

Mr. HOOKER. The Oklahoma territory, as I understand, takes in every portion of the Indian Territory not occupied by the five semi-civilized tribes.

Mr. SPRINGER. Yes, sir; it does.

Mr. HOOKER. That is what I understand.

Mr. SPRINGER. And while the line of the Missouri, Kansas and Texas road, to which the gentleman refers, passes within the territory of the five semi-civilized tribes, it does not go within 100 miles of Oklahoma. The Atlantic and Pacific has not reached that territory, and its grant has been forfeited.

Mr. HOOKER. Then the fact is still more condemnatory that the company should have attempted to mortgage these lands before they reached that territory.

Mr. SPRINGER. That is their business.

Mr. HOOKER. Yes, it is their business; and it is your business, too, to understand this matter, and let the committee understand it. Here are all these lands granted by these acts which you propose by the fourteenth section of your bill to repeal. Why should you propose to repeal these laws if they are not in full force and effect? Mr. Chairman, it will not do to attempt any evasion of this question. The falsity of the argument is apparent upon the statement of it.

The committee go on further in this report:

But both land grants to the railroad companies were ill-advised and should not have been made; and the committee recommend their repeal.

This committee has recommended the repeal of those laws, but they yet stand, and the fourteenth section of this bill proposes their repeal. But the laws have been in operation, have been acted on, and bonds have been issued under them.

Mr. STRUBLE. I would like to ask the gentleman a question. Suppose negotiation is first had with the Indian tribes interested, for the organization of this territory; what difference will it then make in regard to the railroad companies or the lands granted to them by the acts of Congress to which the gentleman refers?

Mr. HOOKER. The gentleman does not at all meet my argument. Whether you get the cession by agreement with the Indians or get it by force, as this bill proposes, when you have extinguished the Indian title and possession, then the rights of these railroad companies supervene; and you can not prevent it, because they have issued their mortgages upon the lands; those mortgages are transferrable and are held by outside parties. I will show directly by whom they are held.

Upon this question with reference to what was granted to these railroad companies a number of gentlemen were examined by the Senate committee; and I will refer to the testimony of Mr. James Baker, who was the attorney of the Atlantic and Pacific Railroad. He was sworn as a witness on this subject; and I read from his examination by Mr. Garland, now Attorney-General of the United States:

Q. Did your company issue bonds predicated upon an additional grant?
A. Yes, sir.
Q. Do you remember the amount of those bonds, and when issued?
A. Not accurately; they were issued, as I remember, in 1871. There were two series on the road amounting to $1,200,000, the other upon land lying upon the side of the road amounting to $500,000, making in all $1,700,000.
Q. What did each bond call for?
A. I presume each bond called for $1,000. There might have been some smaller. I am not positive about that.
Q. Can you furnish a copy of the bond of the road?
A. I can furnish a copy, but the bond is included in the mortgage.
Q. What became of these bonds, or any of them, or all of them, according to your recollection?
A. They were sold to raise funds with which to build the road.

Mr. Hereford, who was also a Senator at that time and a member of this Senate committee, asked:

Q. Then I understand your proposition to be that if the Indian Territory shall be opened for settlement you will be willing to relinquish all your right to the land within the borders of the Indian Territory?
A. Yes, sir.
Q. How can you do that if you hold the fee and predicate your bonds on the land?
A. I do not think we can as against the bonds, but I think that Congress has power to revoke the grant.

Here the attorney of the road states the fact so far as they had mortgaged these lands granted by this act, they had not the power to affect the interest which had been acquired by the parties by whom these bonds had been purchased.

Mr. PETERS. Will the gentleman permit me to ask him a question?

Mr. HOOKER. Certainly.

Mr. PETERS. Did not the grants to the Missouri, Kansas and Texas Railroad and to the Atlantic and Pacific Railroad reserve the rights of the Government?

Mr. HOOKER. Yes; but the Government has not exercised that right, and these bonds were issued under the grant made by the Government to this railroad.

Mr. PETERS. Does the gentleman from Mississippi say that bonds could be issued before the lands themselves were conveyed by the Government?

Mr. HOOKER. Certainly they can. The Indian title being extinguished to the lands and becoming a part of the public lands, they come under the railroad grants, and the railroads acquire title to them.

Mr. PETERS. Let me ask the gentleman a question of law. If the purchasers of these bonds purchased them with the full knowledge that the Government had the right at any time to alter, amend, or repeal those acts, then they took them with the full notice of the power of the Government, and their authority or legal right to any portion of these lands in the Indian Territory is absolutely null and void.

Mr. HOOKER. They took them upon this condition alone, that on the extinguishment of the title of the Indians to these lands, then their title was good in these lands. That is what your bill provides notwithstanding the fourteenth section. You make them a part of the public domain of the United States, and the moment you make them a portion of the public domain that moment the right of the holders of these mortgage bonds on the lands would accrue to them.

Mr. PERKINS. Will the gentleman permit me to ask him a question in that connection?

Mr. HOOKER. Yes, sir.

Mr. PERKINS. Does the gentleman say the title passes to the railway companies in advance?

Mr. HOOKER. That depends on the character of the charter of these roads. These lands were granted without regard to the construction of the road. Their rights were to attach just so soon as the title of the Indians was extinguished. Whenever you make it public domain the right attaches to these railroads.

Mr. PERKINS. It only attaches as the road is constructed, and the Atlantic and Pacific not having been constructed, or indeed any portion of it, if the grant is forfeited before the construction, is it the gentleman's idea any right under these bonds can attach?

Mr. HOOKER. It depends on the charter. The Government may grant lands to railroads without coupling with it a condition requiring the construction of so many miles. I wish to say one other thing.

Mr. SYMES. Will the gentleman permit me to make a statement?

Mr. HOOKER. Yes, sir.

Mr. SYMES. It depends on the language of the grant and not on the language of the charter of the railroad company. We reviewed these grants in the Committee on Territories, and we had no doubt section 14 in this bill absolutely wiped out all rights which might in any contingency arise, and the best lawyers who have investigated the subject have no doubt about it. I simply want the gentleman's attention called to that fact.

Mr. HOOKER. If that be the case, if what the gentleman states in regard to these lands be true, then no railroad could anywhere have any lands conveyed to them by the Government. These lands were granted to aid in the construction of these roads, and they have become the lands of the road, for the moment the Indian title was extinguished they have become a part of the public lands of the Government.

Mr. SYMES. That is where I differ with the gentleman. They do not become railroad lands and the railroads do not acquire any title in them by the extinguishment of the title of the Indians.

Mr. HOOKER. Whether they do or not, it is apparent they have absolutely mortgaged these lands and that they are now held partly by foreigners and partly by people in our own country.

Mr. PETERS. If the gentleman from Mississippi will allow me, the Supreme Court of the United States have decided, Justice Miller

rendering the opinion, that the right to alter, amend, or repeal, reserved to the Government in the granting act, gave notice to all parties of the reserved power of the Government.

Mr. HOOKER. I beg to be excused from yielding further. I have said in substance that it does. But the railroads, on the conveyance of the lands by the Government, performed certain things. The acts have remained in existence in accordance with the original grant, and they are not repealed. Mortgages have been made and bonds issued. The railroads have conveyed whatever title the roads themselves acquired. Those rights may be subject to subsequent repeal by Congress if the charter so prescribed, or prescribed that the rights accrued only upon the construction of so many miles of the road.

But, Mr. Chairman, the question is further asked of this witness:

By the CHAIRMAN *pro tempore:*

Q. In this portion built in the Indian Territory, the company has laid no claim to lands?
A. No, sir; that is, we could not claim the land without the Government extinguished the Indian title.

That is exactly what you propose to do here.

Again:

Q. I see by the act that the land throughout the Territory is double the quantity of that throughout the States?
A. Yes, sir.

Again, in response to a question as to the value of the bonds, the witness replies:

That they can be bought for 5 cents on the dollar. That was the value of the bonds then issued; but they had increased to 35 or 40 cents.

I now want to call the attention of the committee to a still further description of the manner in which these bonds are held.

Mr. SPRINGER. Will the gentleman please explain this as he proceeds——

Mr. HOOKER. I must beg not to be interrupted further. The gentleman will have his own time.

The question is again asked of this witness:

Q. Do you regard those citizens of the United States, who are there without authority, as being intruders in that country?
A. I so consider the treaty.
Q. Does not the treaty provide that the Government shall remove them?
A. Yes sir; that is my understanding.

And the Government has been trying all these years to do just that very thing, so that, in point of fact, as has been stated by a gentleman on the other side of the House [Mr. CUTCHEON], there is not now a single citizen in the United States rightfully living within the limits of the Territory, except that portion which we call the Public Land Strip, or No Man's Land. Not one. Your proposition, therefore, is to create a Territory over lands of which you have not control, within which you have no right to create a Territory, and in regard to which, if you do extinguish the Indian title, that title instead of reverting to the Government will pass, under the granting acts, or may pass to the railroads and to the parties holding the bonds, who will have the right to come in and say we purchased these bonds which were valid obligations; we acquired them subject to that provision of the granting act that at the time of the extinguishment of the Indian title that title should pass to the railroads, and now having extinguished the title, that right accrues.

They will have a legitimate claim to that extent, and it should be borne in mind that these bonds to the amount of $14,000,000 are held mainly abroad, to a large extent in Amsterdam and foreign cities; or, to be more exact, six millions, about, are held over there, five millions of them in New York, and the other three millions are scattered throughout the country. So, in point of fact you have under this granting act and the additional grants to these railways, whether the roads were constructed under the grant or not—the grants still standing upon the statute-books unrepealed—exactly the condition of affairs to which I have called your attention, or else the gentleman in charge of the bill and the Committee on Public Lands would not have introduced a proposition to repeal those grants.

Mr. SPRINGER. But these lands are not affected by this bill at all.

Mr. HOOKER. Then the gentleman could not have been correct when he said that the whole of the Oklahoma lands were embraced within the bill, except the lands occupied by the five civilized tribes.

Mr. SPRINGER. But the gentleman should remember that these roads do not come into Oklahoma at all—I mean Oklahoma proper. They are entirely in the five tribes.

Mr. HOOKER. But I understand that the Pacific road has a right of way through the Territory.

Mr. SPRINGER. It is not yet constructed.

Mr. HOOKER. But it has the right of way, and the grant is extraordinary in this respect, that you give double the amount of land in the Territory that you have given in the States. In the States you give for each 5 miles ten sections, whereas in the Territory for some reason you have seen proper to increase this to twenty sections.

Mr. SPRINGER. But the Atlantic grant, to which the gentleman has referred, has been forfeited.

Mr. HOOKER. But the bondholders will undoubtedly raise the question if your action here affects their interests. If their interests have vested you can not deprive them of them. If their rights have vested, they will insist upon the fulfillment of the bond.

Mr. SYMES. Let me ask the gentleman this question: Are we to hesitate about the enactment of legislation because some railroad company may make a big claim or the bondholders of the road may make a claim, although Congress, in view of the fact that the company has not performed the obligations under which the grant was made, passed a solemn act forfeiting the claim to every acre of land?

Mr. HOOKER. No, sir; not by any means. But that is not the condition here. I say that you are running the risk, where a provision exists that in view of the proposed extinguishment of an Indian title that title shall pass to the company, of doing just exactly what the gentleman suggests in his own question and a large portion of the lands passing to them.

Mr. SYMES. I would like to ask the gentleman if he, as a lawyer, would be willing——

Mr. HOOKER. I beg the gentleman not to interrupt me further, as I have but a few moments more. I will only say in passing that by virtue of the grant made by the United States to these railroad companies, bonds were issued and a mortgage executed. The mortgagees take the place of the railroad company and acquire whatever rights the railroads had themselves under the granting act.

Now, the effect of the passage of the gentleman's bill, with the amendment offered by the gentleman from Illinois on the other side of the Chamber, would be at least to hazard long litigation in reference to these matters. People do not put $14,000,000 in bonds into things they have not investigated and without legal advice as to how far they acquire any right or title in the land for which the payment is made.

Mr. WEAVER. Will the gentleman yield for a question?

Mr. HOOKER. I would rather not. You can answer in your own time.

Mr. Chairman, if this bill is passed in the shape in which it has been presented by the Committee on Territories you will have violated every single one of the treaty obligations which you have made with these Indians. While it may be said there is power in the Congress, the Senate and the House acting together, and the President approving your measures, to do away with the treaties, yet I say that this would violate all the treaties. I want to cite these treaties. There are plain and simple provisions, every one of which would be violated by every man who votes for this measure to take away this land from these people.

I think, Mr. Chairman, the committee has been premature in its action, and that before a measure of this kind was proposed you should have had the consent of the Indians. You ought to have had a commission to obtain that consent. It should have been a condition-precedent before asking any legislation of this character. That was originally contained in a proposition that there should be representatives of the Indian Territoy in the Congress of the United States, and which would have given them representatson in the Senate and in the House. But I say, Mr. Chairman, and I put it to the conscience of the members of this committee to say whether they are willing to violate the letter and spirit of every treaty which has been made with these Indians. I call attention to the treaty made with Cherokees, one of the tribes.

ART. 5. If any citizen of the United States, or other person not being an Indian, shall attempt to settle on any of the lands westward or southward of the said boundary, which are hereby allotted to the Indians for their hunting-grounds, or having already settled, and will not remove from the same within six months after the ratification of this treaty, such person shall forfeit the protection of the United States, and the Indians may punish him or not, as they please: *Provided, nevertheless,* That this article shall not extend to the people settled between the fork of French Broad and Holstein Rivers, whose particular situation shall be transmitted to the United States in Congress assembled for their decision thereon, which the Indians agree to abide by.

Mr. WARNER. Does that relate to these lands?

Mr. HOOKER. It relates to the treaties. The treaty with the Wyandots provides:

ART. 9. If any person or persons, citizens or subjects of the United States, or any other person not being an Indian, shall presume to settle upon the lands confirmed to the said nations, he and they shall be out of the protection of the United States; and the said nations may punish him or them in such manner as they see fit.

This, Mr. Chairman, was an early treaty, and was one where we very carefully guarded the rights and interests of these tribes when we conceded lands to them and got vast concessions from them. Then, in the treaty with the Cherokees, dated August 7, 1790, and in the treaty with the Cherokees of July 2, 1791, and that with the Wyandots of August 3, 1795, and the Choctaws of September 27, 1830, similar provision was made.

The provisions of the Choctaw treaty I will read, because it shows in what temper these people were dealt with and what was regarded as just and proper at that time:

ARTICLE 4. The Government and people of the United States are hereby obliged to secure to the said Choctaw Nation of red people the jurisdiction and government of all the persons and property that may be within their limits west, so that no Territory or State shall ever have a right to pass laws for the government of the Choctaw Nation of red people and their descendants, and that no part of the land granted them shall ever be embraced in any Territory or State; but the United States shall forever secure said Choctaw Nation from and against all laws except such as from time to time may be enacted in their own national

councils, not inconsistent with the Constitution, treaties, and laws of the United States, and except such as may and which have been enacted by Congress, to the extent that Congress, under the Constitution, are required to exercise a legislation over Indian affairs (pages 333, 334).

That was the provision under which the Choctaw grant was made, and the same treaty provided:

ART. 5. The United States hereby covenant and agree that the lands ceded to the Cherokee Nation in the foregoing article shall in no future time, without their consent, be included within the territorial limits or jurisdiction of any State or Territory; but they shall secure to the Cherokee Nation the right, by their national councils, to make and carry into effect all such laws as they may deem necessary for the government and protection of the persons and property, within their own country, belonging to their people, or such persons as have connected themselves with them: *Provided, always*, That they shall not be inconsistent with the Constitution of the United States and such acts of Congress as may have been or may be passed regulating trade and intercourse with the Indians, and also that they shall not be considered as extending to such citizens and Army of the United States as may travel or reside in the Indian country, by permission, according to the laws and regulations established by the government of the same.

Coming down to a later treaty, I find the same provision embodied. I find in the treaty with the Choctaws and Chickasaws of June 22, 1855:

ART. 4. The government and laws now in operation and not incompatible with this instrument shall be and remain in full force and effect within the limits of the Chickasaw district until the Chickasaws shall adopt a constitution and enact laws superseding, abrogating, or changing the same. And all judicial proceedings within said district, commenced prior to the adoption of a constitution and laws by the Chickasaws, shall be conducted and determined according to existing laws.

ART. 7. So far as may be compatible with the Constitution of the United States and the laws made in pursuance thereof, regulating trade and intercourse with the Indian tribes, the Choctaws and Chickasaws shall be secured in the unrestricted right of self-government, and full jurisdiction over persons and property within their respective limits, excepting, however, all persons with their property who are not by birth, adoption, or otherwise citizens or members of the Choctaw or Chickasaw tribes, and all persons not being citizens or members of either tribe found within their limits shall be considered intruders, and be removed from and kept out of the same by the United States agent (assisted, if necessary, by the military), with the following exceptions, namely: Such individuals as are now or may be in the employment of the Government, and their families; those peacefully traveling or temporarily sojourning in the country, or trading therein under license from the proper authority of the United States, and such as may be permitted by the Choctaws or Chickasaws, with the assent of the United States agent, to reside within their limits without becoming citizens or members of either of said tribes.

Article 7 provides that—

So far as may be compatible with the Constitution of the United States and the laws made in pursuance thereof, regulating trade and intercourse with the Indian tribes, the Choctaws and Chickasaws shall be secured in the unrestricted right of self-government for jurisdiction over persons and property within their respective limits.

These are the provisions of the more recent treaty.

Mr. WARNER. Will the gentleman pardon me for interrupting him just there to call attention to another part of that treaty. In the same treaty did not the Choctaws lease to the General Government every inch of land that is included in the territory of Oklahama with the simple reservation that the territory so leased should remain open to settlement by Choctaws and Chickasaws?

Mr. HOOKER. They leased it simply for the settlement of friendly Indians upon it—for no other purpose.

Mr. WARNER. And in 1866, for an additional $300,000, did they not quitclaim to the United States every right that they had?

Mr. HOOKER. No, sir; not at all—only the right for the settlement of friendly Indians. The treaty of 1866 is the latest treaty, and it refers to all the other treaties and shows exactly what was the spirit of the Government in treating with these tribes of Indians. It is too late now to say that you will not treat with the Indians. You have treated with them from the beginning, and the Supreme Court of the United States itself has said that they are a people and nation *sui generis*, and that although they may have made unequal treaties with the United States it is not less the honorable obligation of the United States to observe those treaties and carry them out in good faith.

The treaty of 1866 with the Seminoles provided that—

The Seminole Nation agrees to such legislation as Congress and the President of the United States may deem necessary for the better administration of justice and the protection of the rights of person and property within the said Territory; *Provided, however*, That the said legislation shall not in any way or manner interfere with or annul their present tribal organization, rights, laws, privileges and customs.

In the treaty with the Choctaws and Chickasaws there was a similar provision.

The Chickasaws and Choctaws agree to such legislation as Congress and the President of the United States may deem necessary for the better administration of justice and the protection of the rights of person and property within said Territory; *Provided, however*, Such legislation shall not in any way interfere with or annul the present tribal organization or the respective legislatures or judiciaries or the rights, laws, privileges, and customs of the Choctaw or Chickasaw Nations respectively.

That shows how carefully they guarded their rights in all these treaties.

Article 38 of the same treaty contains provisions with reference to persons who should go there and intermarry with the Indians.

Article 45 provided that:

All the rights, privileges, and immunities heretofore possessed by said nation or individuals thereof, or to which they were entitled under the treaties and legislation theretofore made and had in connection with them, shall be, and are, hereby declared to be in full force so far as they are consistent with the provisions of this treaty.

It will thus be seen, Mr. Chairman, that from the earliest treaties made in the last century down to the latest treaty made in this century it has been the spirit and purpose of the Government of the United States to secure absolutely the government of these Indians in their own Territory, under their own legislative council, under their own judiciary. This bill proposes to take a large portion of the territory embraced in the Oklahoma district and constitute a Territory of the United States in violation of the language and spirit of the treaties made by the Government with every one of these tribes from the earliest period when we began to treat with them down to the present time.

What should have been the course pursued? If there were a foreign nation involved, our course would have been very plain; but these people do not occupy that attitude. When you want to get their lands you say they are "the wards of the nation" and that you owe them protection. When you find that plea will not operate, you then come in with the argument that "the best Indian is a dead Indian;" and you propose to kill off the Indians if you can not cheat them out of their lands. That is the gravamen, the substance and object of the bill. This bill should have proposed that a commission be sent out to treat with these Indians to ascertain whether they wish to abandon their form of government. No white citizen is there now in accordance with law; every white citizen who may be there is there either in violation of law or without authority of law; and the Government of the United States has time and again used its military power for the purpose of expelling anybody who attempted to invade the rights of these Indians to that Territory. You regarded this obligation as so valid and binding that you were willing to send there the whole Army of the United States for the purpose of protecting these Indians. Now, this bill reported by the Committee on Territories proposes to take this land without consultation with those Indians, to create a Territory with a governor and other officers, and then to go and ask these Indians whether they will consent. What a beautiful line of Territory we should have, zigzagging in and out according as this or the other tribe might assent or refuse to assent to this measure! Where would be the boundaries of this grand Territory which the Committee on Territories proposes to create? Can anybody tell? This Territory is to be dwindled down and zigzagged into shape as this, that, or the other tribe may refuse assent to this measure.

Why, sir, one gentleman testifies in the very examination to which I have referred that there are not twenty-five men in the Indian Territory who want to change their form of government and become an organized Territory. If that be the case, why do you presume that you are going to get the assent of the Indians? Sir, you had a singular exhibition of what agreement is likely to do when you passed your bill in regard to the great Sioux reservation. You sent your commissioners there with Mr. Pratt at their head to treat with the tribes in Dakota. Your commissioners held pow-wows with them, smoked the pipe of peace, remained there for months and months. What was the result? They said the Indians were accusing the Great Father of telling lies to them. What did the leading chief of the Sioux tribe say to them? He said, "No; you accuse us wrongfully; we did not say that our Great Father at Washington had lied to us; but we did say that the commission which he sent to treat with us has lied to us; and we do not intend to sell our lands." If the Sioux tribe said that, what will the civilized tribes, what will the other Indians say?

We ought therefore to send out a commission. Instead of endeavoring to force this bill through, in violation of our obligations to the Indians, we should primarily ask the Indians, not as the result of persuasion, but as a free and voluntary act on their part, to concede that their Territory may be constructed into an organized Territory of the United States, with Indian representation on this floor, and with Indian representation in the other branch of Congress; for I say here and now that the only safeguard for these people against the rapacity of which this bill is but the outcome, the only protection of these Indians against the rapacity of the States bordering upon their Territory, is that they shall have representation on this floor and in the Senate, so that they may be able to defend their rights intelligently. They have now no special representative to speak for them. They should have representation in the Congress of the United States, so as to be heard in vindication of their own rights.

But this Territory is proposed to be created out of land which does not belong to the Government and over citizens who exist only in the imagination of the distinguished gentlemen of the Territorial Committee who have presented this bill. I am speaking now to the general merits of the bill. I am opposed to it upon principle. I believe it wrong from the first section to the last. I do not think that the people of the United States can be induced to perpetrate this wrong upon the Indians; but if this bill is to pass, then, certainly, unless there is some interest to be subserved which is not apparent upon the face of the bill, I can see no reason why the amendment of the gentleman from Illinois [Mr. PAYSON] should not constitute a part of the bill. If there are interests so dear to the Territorial Committee that the adoption of this amendment will, as the gentleman from Illinois suggested yesterday, prove a "Trojan horse;" if there are to be ideas carried out and people to be protected that we know nothing of, and if this amend-

ment is to be a "Trojan horse" to kill this bill, then, as I said to the chairman of the committee yesterday, the bill ought to die, because it has the seeds of destruction within itself.

With these remarks, asking permission to include in my printed speech some treaty provisions which I have not had time to read, I leave the question for the consideration of the committee.

Alaska—The United States Should Give It a Better Government.

SPEECH

OF

HON. OSCAR L. JACKSON,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 21, 1888.

The House being in Committee of the Whole and having under consideration the sundry civil appropriation bill, on an amendment offered to increase the appropriation for education in Alaska—

Mr. JACKSON said:

Mr. CHAIRMAN: The purchase of the Territory of Alaska by the United States from Russia may not have been good policy. We do not seem to have any great use for it, either present or prospective, and our form of government is not well adapted to the control of distant colonies.

But whether it was wise or unwise to acquire it, we have actually purchased it, and it is now a part of our national domain. We are under obligations to provide a good government for the inhabitants, one suited to their condition and circumstances. I am not satisfied that we have done all that we should in this respect. In fact, I feel quite certain that we have not.

One great difficulty Congress labors under is a want of correct information in regard to the territory and the people who live in it. Prior to the purchase from Russia, citizens of the United States were in general as ignorant of this vast territory as if it had been in Asia. We have owned it over twenty-one years, and the information yet obtained is meager indeed. Officers of the Army and civil officers of our Government have made explorations in this country and furnished very interesting reports of their observations. But the extent of the territory is so great and the means of travel so poor that these reports make it certain that the greater part of Alaska is wholly unknown to us.

The inhabitants are largely half-civilized tribes, scarcely equal in point of intelligence to the blanket Indians on our Western reservations. Among these, Christian missionaries from the United States are doing good work. Those who have gone from comfortable homes to this distant territory as teachers and preachers are deserving of great credit for their self-sacrifice and devotion to duty.

It would be a great mistake, however, to suppose that all the inhabitants of Alaska are uncivilized. There are some ten or twelve thousand civilized inhabitants living in communities that have had Christian churches and schools for several generations. These are the people that feel most the want of proper laws and a government to protect their lives and property.

In addition to the natural obligations we are under to these people by reason of having purchased the Territory, our Government is bound by solemn treaty to maintain and protect these people in their rights. The Territory was ceded to the United States by Russia for the price of $7,200,000 by a treaty dated March 30, 1867. The Emperor of Russia, who is remembered as the firm friend of our Government during the rebellion, when he transferred this Territory to the United States, took from our Government this covenant in the treaty in regard to the people who then lived in Alaska:

The inhabitants (with exception of uncivilized tribes) shall be admitted to the enjoyment of all the rights, advantages, and immunities of citizens of the United States, and shall be maintained and protected in the free enjoyment of their liberty, property, and religion. The uncivilized tribes will be subject to such laws and regulations as the United States may from time to time adopt in regard to aboriginal tribes of that country.

Mr. Speaker, it must be confessed that we have not fulfilled this treaty obligation with the promptness and fairness that should characterize a great nation like ours.

Alaska is a Territory in size almost equal to all the States of the Union east of the Mississippi River. It is true that the civilized inhabitants occupy but a small fraction of the Territory, but their numbers, as I have stated, are considerable, and we have reliable information that the civilized population is increasing rapidly.

A colony from British Columbia under the lead of Rev. William Duncan, consisting of one thousand educated Christian natives, has recently settled within the Territory, bringing with them all their industries. The gold, silver, and other minerals are attracting prospectors, and the vast undeveloped resources of forests, fisheries, and grazing are bringing immigrants in very considerable numbers.

I am not expecting that any great part of this Territory will soon be settled like our Western lands, with their genial climate and fruitful soil. We need not expect its great resources to be even generally developed for several generations. In fact, its great value consists in this, that it may furnish to future generations fields for development and homes for crowded thousands of American citizens when the public lands in the older Territories and States of our Union are exhausted. But there is a present population that demands our attention, and in addition to this the population, without any doubt, will increase very considerably within the next few years. The foundations should be laid now by education, religious instruction, and the passage and execution of just laws for a republican form of government that will make this Territory, a hundred years from now, suitable for homes for millions of American citizens.

When we obtained possession of the Territory the laws of Russia ceased to operate in it. What have we done since to give it reasonable and just laws? We have given it a governor, whose office consists mostly in the name. His duties are few, and he is without means to enforce and execute laws, even if he had the authority and there were laws to execute. It is true Congress passed an act extending all the laws of the State of Oregon to this Territory so far as they are applicable. But when it is considered that Alaska is not divided into either townships or counties and has no local courts or officers such as Oregon, it is easy to see that these laws can be of no practical benefit. The act providing for a governor expressly states that the public-land laws of the United States shall not be extended to Alaska, and there is to-day no law whatever for acquiring title to public lands.

Congress in 1884, as a temporary matter, directed the Secretary of the Interior to make needful provision for the education of children, and appropriated the sum of $25,000 for the purpose. Notwithstanding the criticisms that have been made here to-day I am satisfied, from the governor's annual report and other evidence, that this money has been as well expended for the purpose as we had any right to expect under all the circumstances. The present bill proposes an appropriation of $25,000 to continue the work of general education and $20,000 for an industrial school. The proposed amendment is to increase this sum $25,000. I am in favor of the amendment, and hope it may be adopted.

Much good has undoubtedly been done, as I before remarked, by Christian missionaries and teachers in the way of establishing and conducting schools. I regret that I am unable to give the names of all of the self-sacrificing men and women who have devoted themselves to this work.

GOVERNMENT SCHOOLS.

There was in operation in the territory last year fifteen Government day-schools. They are much in need of buildings and furniture. Additional schools are also greatly needed. All expenses, including salaries of teachers and new buildings, must be paid from the appropriation we now make.

There are in addition to these Government schools, two in a large part supported by the Government appropriation, and the schools to which I have referred under the charge of the Presbyterians, Friends' Society, and Catholics. There may be others of this class, but if so, I have not seen any account of them. One thing in this connection I consider worthy of notice. The despotic government of Russia, through the organization of its established church, yet supports seventeen schools among these people who were once its citizens. It is far from creditable to us that whilst the territory belongs to us and we are deriving a large revenue from it, the Russian Government, without any interest whatever except love for its former citizens, is yet expending annually more money for the education and christianization of the native people of Alaska than our own Government.

In reply to the gentleman from Illinois [Mr. SPRINGER] I say that our Government is under greater obligation to provide for education in Alaska than in any other Territory we have. The reason is that other Territories have local laws, Legislatures of their own, and a system of government under which taxes can be levied and schools supported. Alaska has none of these. The United States Government collects revenues from the seal fisheries and other sources to a large amount, and can well afford to appropriate money for the government and education of the people. I say further to the gentleman that I do believe that our Government assumed the responsibility of educating the youth of Alaska when it purchased the Territory. We are at least under obligation to see that the people have the means of securing education for their children.

I want to call the attention of Congress to the urgent need of legislation on other subjects for this Territory. It seems to me that we have been very negligent in regard to this matter. This is the only Territory we have in which the people are wholly without representation. They have no local Legislature such as our other Territories have, and it is probable the circumstances will not justify giving them one for some considerable time yet. I do not think they are now fitted to have a Legislature. But I do think they ought to have a representative in Congress, like other Territories. Congress greatly needs the information a Delegate could give in regard to legislation suitable for the Territory. The remoteness of its location and the want of knowledge as

to its conditions are reasons why Alaska needs a Delegate in Congress more than any other Territory belonging to the United States.

The great reason why it has been so long neglected is that there is no one here that seems to feel responsible for its welfare. No one member of Congress feels it to be his special duty to look after its interest, and with a divided responsibility and its people unrepresented and unheard its great interests are entirely neglected. We have all been derelict in this respect. This session of Congress ought not to be allowed to close without enacting laws that would give the people of Alaska, representation in Congress by a Delegate, better mail facilities, some system of land laws by which homesteads might be acquired on the public lands, and at least some provisions of law and courts to punish crime, preserve the peace, and protect life and property.

Much more is needed for the civilized settlements in the way of local government, that should have attention at an early day. But the matters I have enumerated are of such pressing, urgent necessity that they should be granted at once. I am aware that for years information has been circulated about the capital that the inhabitants of Alaska are of such a character that they do not need any better government than they have. This information, Mr. Speaker, seems without doubt to come from the Alaska Commercial Company, a corporation that has a monopoly of the fur trade of Alaska, and which is interested in keeping the Territory in a state of savage barbarism.

This company desires to prevent immigration and development of the resources of the Territory. It is opposed to all industries except fur trading, and makes a monopoly of that; and we ought not to be deceived by its misrepresentations.

I have extended my remarks in the hope of calling the attention of Congress and the country to the manner in which this great Territory and its civilized inhabitants have now for twenty-one years been neglected. I trust that we shall this day begin to do justice by voting a liberal appropriation for education in Alaska, and that we shall at an early day follow it by legislation that will give its inhabitants a better government and tend to the development of its really great natural resources.

The Tariff.

SPEECH

OF

HON. WILKINSON CALL,

OF FLORIDA,

IN THE SENATE OF THE UNITED STATES,

Friday, October 12, 1888.

The Senate being in Committee of the Whole, and having under consideration the bill (... R. 9351) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. CALL said:

Mr. PRESIDENT: The issue at the present time between the two political parties of the country can not be said by any fair process of argument to be questions concerning the propriety or wisdom of the policy of protection or of free trade. Senators have discussed it in this method of argument, but it can not address itself to the approval of intelligent or thoughtful people in the Congress of the United States or outside.

CONSPIRACY OF SOUTHERN PEOPLE.

It has been said by them to be a conspiracy against American labor for the House of Representatives to have formulated a bill and presented it here for a reduction of the rates of duty upon imported goods. I think the Senate of the United States and the people of the United States are sadly wanting in intelligence if arguments of this description can address themselves with power to their judgment. It might as well be charged that it was a conspiracy against the sun and the moon and the whole planetary system.

Labor, as is known by all intelligent men who reason upon the subject, whether in New England or out of it, is governed by laws which no conspiracy in the world can affect. The economies which control mankind in their business relations, in their productive forces, are absolute and can not be affected, if every man in the world were to conspire against the divine order of nature and of natural economy.

Mr. President, it is a matter of surprise that in this body, whose processes of reasoning should be of a high order and informed by the intelligent thought of the world, such ideas should be propounded as a conspiracy of the Southern people, of the Southern States, against the interests of American labor—a conspiracy in favor of cheap labor as against the well-paid labor. There is no predicate for such a proposition.

HIGHEST PAID LABOR CHEAPEST.

Suppose it were true that the Southern people and their representatives in Congress were so unwise as to desire a controversy of this description, how would they proceed to do it? What interest could they have? Highly-paid labor produces the lowest cost of goods everywhere. It is highly paid because it is more valuable. If not more valuable, it can not be paid a larger sum than is paid to less valuable labor by a natural law which all the world could not control.

Why is this so? It is because production must pay its own cost. If it does not do so, it will soon cease to be production. It must support itself and something more. This is a self-evident proposition.

There is no such thing as a controversy between highly-paid labor and cheap labor, because the highly-paid labor is the cheapest in production; it produces more to him who pays the higher wages than does the cheap labor, and it is for that reason alone that it can be better paid for.

I hold in my hand a treatise by Professor James H. Canfield, of the University of Kansas, from which I read the following:

The general effect of the protective system on Western development and upon our agricultural interests is detrimental and repressive. We are handicapped at the beginning of the race, and heavy weighted clear through to the end. That we have made rapid advancement goes without saying; we simply can not help this, with the constant influx of fresh blood, much of it the best that the country affords. That the tariff tax has been our only enemy is not true; we have all the failings and shortcomings of mankind, and must make the usual struggle against nature both within and without ourselves. But at every step we have been obliged to overcome tariff obstacles; and some of these have been so great as to prove insurmountable to the weaker folk who have tried to "grow up with the country" and have painfully failed.

Take Kansas as a fairly typical State. It has just completed the first quarter century of its existence. During the four years of civil strife it was subjected to all the terrible waste and strain of border war. Since peace came it has been compelled to wrestle with grasshoppers and with drought. Its water supply is small, and its timber very inadequate. It is at a great distance from those central markets, those points of storage, where the prices of most of its exports are determined. Rival Western States have left no stone unturned to direct from it both population and capital. It has a fine climate, a wonderfully fertile soil, and a commanding geographical position. Consider very briefly what was needed that it might most readily and surely rise in material well-being and in influence and power.

Taking Kansas as a typical State, this essay shows with very great ability how much there is in the suggestion of a conspiracy against labor by reducing the taxation upon that which labor supplies, upon labor itself. Mr. Canfield shows that the labor of Kansas, producing untaxed goods, is the highest and best paid labor to be found in the whole country, and that this labor so highly paid of the people of Kansas and producing untaxed goods entirely, deriving no benefit from the imposition of the high rates of duty produces a large surplus, which is sold abroad in foreign countries in competition with the cheapest labor of the world, and in successful competition; and that there is returned back to this country the product of the labor of the people of Kansas, paid for in higher wages than in any manufacturing center in the country, to be taxed 47 per cent. for the benefit and the support of the protected industries of the country.

Why, then, talk about a conspiracy of cheap labor against well-paid or highly paid labor? Why talk about the continuance of the sectional spirit and feeling of the war when all intelligent men have arrived at the conclusion that highly paid labor is the best economy for the producer?

The proposition, then, is that highly paid labor is the cheapest labor in the world. It is the cheapest, as I said, to the person who pays the wages, and therefore there can be no conspiracy in favor of cheap labor as against high labor, because high labor is cheap labor, the cheapest in the world to the producer, to the man who pays the wages.

Cotton, breadstuffs, and provisions are the farmer's wages—not his day-wages but his piece-wages. They are all cheaper here than in England. Work by the piece is therefore cheaper here than in England, for half the workers. Such being the case, if their work is higher by the day, the fact must be attributed to something besides the tariff.—*Henry J. Philpott, Tariff Chats.*

To this effect are to be found the statements and reasoning of Mr. Edward Atkinson, a New Englander, who I think in many respects is one of the ablest men and statisticians in the country. Although many of his conclusions do not address themselves to my judgment favorably, yet they certainly are the result of long study and intellect of a very high order, and his opinions are those of a man whose business associations are all in the interest of those who have accumulated capital, and whose prejudices, if any he has, are in the line of that system of legislative interference with the relations of labor and production which have characterized the policy of the country for so many years.

I take it, then, that the country has advanced too far to give any consideration to the suggestions that whatever policy may be advocated or adopted in the diminution or increase of the duties will not be the product of sectional feeling or be in anywise connected with the differences which have been created in past years between the two sections of the United States.

The attempt to connect financial questions, economical questions, with the old difficulties that existed between the people of the United States is equally unworthy of a Senator and of a reasoning mind outside of the Senate. It can not address itself to the judgment and the intelligent thought of any class of people.

DEMOCRATS PLEDGED TO REDUCE TAXES.

The Democratic party since the close of the war have appealed to the people of this country for their support upon the pledge that if they obtain power they would reduce the taxes imposed upon the people for the defense of the country in time of war to such an amount as was adequate only to pay the expenses of the Government in a time of peace.

That proposition has not been antagonized by the political organization of the country in opposition to the Democratic party, nor has it been antagonized by the judgment of sensible or thoughtful men elsewhere. But events have passed on until a quarter of a century has expired, and these impositions still remain a burden upon the people.

We are all agreed that taxes shall be reduced, and the question addresses itself, how shall they be reduced? That is the only question before the American people at this time, as between the two parties in reference to the financial policy of the Government. How shall the taxes be reduced? There the point of division occurs.

The Democratic party as represented in the Congress of the United States have formulated and placed before the country a proposition to the effect that the method for the reduction of taxation shall be by reducing taxes upon the articles of general consumption of necessary use for the people of the country, and the opposing party have antagonized that proposition. They have insisted that the duty upon a large proportion of the articles necessary for the subsistence of human life shall not be reduced, but shall be increased. They insist that the taxation is a benefit to the people of the country, and not an injury to it; and they antagonize sharply and forcibly the proposition that taxation is a burden, that taxation should not be placed upon the necessaries of life, that the economies which produce cheapness of all things necessary for subsistence and human comfort should be ascertained and closely followed.

NECESSARIES TO BE FREE FROM TAXES.

Here comes the great question to be considered by the people of this country. Abstractly, there would be no difference of opinion that the necessaries of life should be untaxed; that they should be most easily obtained and with the least amount of human labor; that this is necessary to the preservation of human life and human comfort; but considerations intervene claiming that this taxation will ultimately benefit the people of the country and not injure them.

Mr. President, let us examine very briefly that proposition. Let us see whether or not we can afford, whether the capitalists of this country, the men who have accumulated fortunes, can afford to impose a tax upon the necessities of life.

The great historian of the Decline and Fall of the Roman Empire has said with a great deal of force:

The true interest even of an absolute monarch generally coincides with that of his people. Their numbers, their wealth, their order, and their security are the best and only foundations of his real greatness, and were he totally devoid of virtue, prudence might supply his place and would dictate the same rule of conduct—

Namely, to consult the interests and the welfare and the comfort of all of the people.

ONE-HALF OF LABORING MEN'S WAGES PAID FOR TAXES.

What is the condition of the people of the United States? Is it true, or is it not true, that 47 per cent., nearly one-half, of the product of every man's labor, whether it be high or low, dear or cheap labor—is it true that by a system of tax levies, either directly or indirectly, every man pays, taking it as an average, 47 per cent. of his labor to be invested in the necessaries of life? It is no treason to consider that proposition. It is not the subject of denunciation, as it was made yesterday by the Senator from Connecticut [Mr. PLATT]. If it be true, it is a fact which will force its own conclusions. If it be not true, then it can be shown by a fair, an enlightened, and a reasonable consideration of the propositions which tend to demonstrate its truth. Is it true that the laboring people of the United States pay 47 per cent. of their labor, of their lives, by reason of a system of tax levies?

That is affirmed by many men of great power of thought, and is believed by men of great capacity and great research and great practical business knowledge. Why do not Senators on the other side address themselves to the point of disproving that proposition? There are methods of thought by which that is proved.

I read again from a little book by Henry J. Philpott, an able man, but it does not matter who is the author of the book. He may be a very bad man or a very good man. He may be in the penitentiary or out of it, but thought is the same; it is true or untrue; it is capable of examination. Facts are none the less facts, be the source from which they come elevated or degraded. We are here to reason in regard to matters.

The proposition which Mr. Philpott makes is that very nearly the amount of the tax, not an absolute, not a fixed, not an invariable quantity, not without its exceptions, but that the amount of the tax, whether it be a tariff tax or a domestic tax, is paid by the laborer of this country to the producer of the thing taxed. He says:

You may think this an exaggeration. But reflect that this tax, which we have empowered the tariff trustees to levy on us, along with the Government, is laid on everything you wear and many things that you eat, as well as on all the dishes and the table-cloth; it is on the pane of glass that lets God's sweet sunlight shine on your baby; it is on the baby's flannels, on the wood in its crib or cradle; it is on the lumber in the house that shelters you; it is on the tools with which you earn your bread, and on the materials to which your diligent hands apply them; it is on the wheels and rails that carry your goods to market; it is on your beds and bedding; it is on your books, Bible and all; and if you die before the law is changed, it will be on your grave-clothes, your coffin, and your tombstone. Yes, even the plain white marble slab that marks the spot where your tax-ridden remains await the resurrection must pay a tariff tribute to one of the closest and most soulless tariff trusts in the country. From the cradle to the coffin, from the baby linen and baby flannel to the linen (cotton or woolen) grave-clothes, from the family Bible where the birth is recorded to the heavenward-pointing tablet whereon both death and birth are carven, the tariff trustee follows you and taxes you, and you let him; and when asked why, you reply that you don't understand these deep questions.

It is certainly true that a tax is imposed on all of these articles enumerated.

I read further from the same author:

What in the world is this average $18 tax which nobody understands? Who are these men who either pray or swear every time a cut is hinted at? And whence these tears and oaths? Perhaps it is not quite so deep a mystery as they would like to have us believe. Suppose we play the detective, and probe it.

A tariff tax is a tax on foreign goods. No civilized country produces all the things its own people use. Some savage tribes live entirely on their own products, and everything that is produced is consumed by the "home market." But the moment they become civilized, or even start fairly on the road to civilization, they begin to use things that other tribes or nations produce. They pay for them with the things they themselves produce, and thus commerce arises. How this has benefited and civilized humanity has often been pointed out.

The quantity of foreign goods used in this country is quite surprising to people who haven't thought much about the matter. All our tea, coffee, pepper, and spices are foreign, and most of our sugar. We should not like to do without these. A large part of our clothing is foreign, and so are a great many other things that we use in every-day life. Altogether, we used in 1887 so many of these foreign things that their total cost, in the countries from which we bought them, was $683,000,000. They are not all taxed, but $450,000,000 worth were taxed when they entered our ports, and the total tax amounted to $214,000,000; so that, counting the tax and all, our people paid last year $897,000,000 for the foreign goods they used. This does not include the cost of bringing them to America and distributing them to the storekeepers, nor the profits and commissions. What these amount to no man can exactly estimate. Is it extravagant to guess that, adding them all together, the freight from all the far-off foreign countries, the ocean insurance, the profits of the importer, wholesaler, and retailer, and the railroad freights, they amount to 50 per cent. of the value of the goods in the countries of production? That is my guess. Make yours lower, and then figure on your own plan. I heartily wish I was sure that my guess was not too low. Yours can not be enough lower to make any difference in the argument. Accept mine, and we have a total sum paid by you and me and our fellow-countrymen, for foreign goods, of $1,440,000,000 in a single year. Dividing this up among the families in the country, we find that each average family used last year $120 worth of foreign goods.

Why are two-thirds of these foreign goods heavily taxed, while the other one-third is allowed to come in free of duty? If part are taxed, why not all? What can be the matter with our people that in spite of the tax they use twice as much of the taxed as of the untaxed foreign articles, and pay for them, including the tax, three times as much? Are the whole American people crazy, or are some of them selfish and mistaken? All buy these foreign goods—protectionists, free-traders, tariff reformers—and all alike. Who is it that is gifted by Heaven with such wisdom as to dictate to 60,000,000 of people what foreign goods they should buy, and what not?

"Oh, surely," you say, "no foreign article is taxed as high as 50 per cent." Yes, indeed. Some of the taxes are as high as 150 per cent., and all averaged 47 in the year 1887.

THE DUDE AND THE MILLIONAIRE.

In the United States Senate, on February 2, 1888, Senator PLATT said:

"There is a standing challenge in the office of a protection newspaper in the city of New York, with the samples ready to be shown to any free-trader, to show that clothing in this country is not as cheap as in England. The truth is that everybody, except the dude and the millionaire, can be clothed cheaper in this country than in England, and in woolen clothing too; and I apprehend that we are not very anxious to reduce the tariff duties for the purpose of benefiting the dude and the millionaire."

Now, let us see about this. Do the dude and the millionaire use women's and children's woolen dress goods? Are these cheaper in America than in England? Then how happens it that in 1886 we imported over 60,000,000 square yards of them, paying $15,000,000 for the goods and $11,000,000 tariff on them? This is an average of 2 yards for every woman and girl in the country. It would make a whole dress apiece for half the American women.

And these are the goods that are actually imported and on which the tax is actually paid. Do you think we would import enough of this one single class of goods to give half the women in the country a spick and span new woolen dress every year if they were cheaper here than in countries from which they were imported? Do you not think the trustees of the tariff trusts are trying to impose on your credulity a little?

CALICO.

Speaking of calico Senator PLATT, on behalf of his clients, who say (without blushing) that they can not run their business if your taxes and mine are reduced, made another remark which affords me a long looked for and confidently expected opportunity. We have all heard of the backwoods free-trader who interrupted a protectionist speaker and asked him about the tax on shirtings. "The tax is 7 cents a yard," said the speaker. "Now, what did your shirt cost you?" "Five cents a yard," was the reply, and of course the free-trader was crushed.

I heard that story when I was a boy, but there never was any chance to run it down and corner the man who started it. I have been waiting ever since for some responsible person to make a similar argument in a tangible shape.

It is not true that the duty on calico is 6 cents a square yard, and it is not true that you can buy it at retail for 6 cents a square yard. The tariff on this class of goods is purposely made as complicated as possible, so that as few people as possible shall be able to "understand the tariff." On goods having less than 100 threads to the square inch, counting warp and filling, which would certainly include any 6-cent calico, the duty is 4½ cents a square yard. But you can not get 50 by 50 calico for 6 cents a square yard. You may get it for 6 cents a running yard, but such calico is only 22 inches wide. Hence you pay more than 9 cents a square yard; and while you might not get it 4½ cents cheaper in England you would certainly get it some cheaper.

Of the colored cotton goods that pay 6 cents a square yard, we actually imported in 1886 two and a half million yards, and paid 12½ cents for the cloth and 6 cents, of course, for the tax. That made these goods cost us, wholesale, 18½ cents, and at retail perhaps 25. These are the nice lawns and the like which our wives and daughters like to wear. They are not calicoes at all. To speak of them as such is to perpetrate, whether intentionally or unintentionally, a falsehood. To prove this, cut a square inch of the best calico you can get, not bias, pick it to pieces, and count all the threads both ways. See if there are 200 of them. I have tried it.

The tax on the running yard of actual calico of the common grade and width is not 6 cents, but 2¼ cents. A gentleman who has sold scores of thousands of yards of calico at retail in both countries, and is now in the business, tells me that, quality and width considered, there is at least 1½ if not 2 cents' difference in the price between this country and England. This is one of the cases where the manufacturer is not able to realize the whole amount of the protection apparently afforded by the duty. In such cases very little if any of the goods are imported.

* * * * * * *

I do not mean to say that the duty is always added to the price, and in fact

I have proved that it is not; but in many cases it is, and I have no hesitation in saying that this tax system, by which the Government realizes $18 from each average family, costs that family at least $90 a year. It costs the whole American people not less than $1,000,000,000,000 a year, and I think much more, to have their taxes dictated by the trustees of half a hundred trusts.

* * * * * * *

I used to rise on Sunday morning from my humble cot in a log farm-house, throwing off the bed-clothes taxed 40 to 100 per cent. and donning my clothing taxed 35 to 100 per cent., eat my taxed breakfast from dishes taxed 45 per cent. on a table-cloth taxed 40 per cent., and when the Sabbath bell, taxed 35 per cent., sounded its inviting notes, I took my Bible, taxed 25 per cent., and went to the church built of lumber taxed 20 per cent., and there, in a Sunday-school song-book taxed 25 per cent. (and all these taxes paid to the objects of my charity, not to the Government), I read:

"Far out upon the prairie
How many children dwell,
Who never read the Bible,
Nor hear the Sabbath bell."

* * * * * * *

Our manufacturers as a whole class have as great advantages over any other country as the farmers have. I have already called attention to these advantages. The result is that the American manufacturers get their work done for less labor expense than those of any country in the world. Here is a little table worked out by our consul at Tunstall, Mr. J. Schoenhof, showing the daily wages per yard of cotton-mill operatives in three countries:

	Daily wages.	Wages per 100 yards.
In Switzerland, and we may include Germany	$0.44 to $0.49	$0.60
In England	.65	.55
In America	.80 to 1.12	.40

So the pauper labor of Europe is not so cheap to the man who buys it and sells its products as American labor is. Mr. J. B. Sargent, of New Haven, the most extensive hardware manufacturer in America, has told me over and over again that the same is true in his business, and, as he believes, in the great majority of American manufactures. This is one method of proof that it is not the workingman who gets the benefit of the tariff. He would be a pauper if he did, but he does not. The tariff pauper is the mill-owner. He owns the goods when they are made. He sells them. He pockets the proceeds. He imports laborers, free of duty. He joins a trust, closes his mill half the year, gets a dividend for lying idle and "limiting production," and turns his hands into the street to lie idle without a dividend and without wages.

Wages are lower in the protected than in the unprotected industries, and the workingmen are more generally foreigners and treated worse. Many of them are to all intents and purposes bought by the ship-load, like slaves, in Europe. Of the 340,854 persons engaged in strikes last year, 112,317, or about one-third, were in Pennsylvania, the most highly protected of all the States. There were half as many strikers in Pennsylvania as in all the rest of the country together.

In 1880 the trustees placarded every workshop in the country with a comparison of wages in thirteen occupations between different European countries and New York City and Chicago. This was not a fair comparison, because the United States census of manufactures shows that wages are 24 per cent. higher in New York City than in the country as a whole. Without making any allowance for this, and averaging the whole thirteen occupations, we have on the trustees' own authority:

Germany, per week	$3.46
England	7.69
New York	12.38

England higher than Germany, 111 per cent.
New York higher than England, 61 per cent.
Nearly double the relative difference between England and Germany, as between New York and England, though Germany protects and England admits German goods free of duty. Our census of 1880 shows:

WAGES IN WOOLEN MANUFACTURES.

Ohio—yearly	$196
Connecticut	335

Connecticut higher than Ohio, 70 per cent.

WAGES IN COTTON MANUFACTURES.

North Carolina—yearly	$135
New Jersey	255

New Jersey higher than North Carolina, 88 per cent.
A greater relative difference in both cases than even a red-hot protectionist campaign card claimed between New York City and England. If the latter difference is caused by the tariff, what, pray, has created the others? While the trustees were at it they ought to have done a smoother job of wage-raising—or deception.

The question we have to investigate is, what is the effect of the tax? It can not be said anywhere that the effect of a tax is to reduce the cost of the thing taxed. If you have a coat and it has cost a dollar to make that coat, and it is taxed 47 per cent., there is no one who will pretend to say that that 47 per cent. added to the cost of the coat, making it cost $1.47, will cheapen that particular coat. The most that could be claimed would be that it will in some indirect method cheapen some other coat yet and hereafter to be made. Whether it will or will not have that effect depends upon many questions, upon questions of great practical importance, questions which, if we have erred in assuming that their effect will be to cheapen the price of other coats, will carry with them a power that may even destroy the Government itself, may destroy social order. It carries with it the question whether or not there shall be abundance or want, whether distribution shall be equal and easy on the necessaries of life or whether they shall be so burdened and taxed that they will come to the people at such rates as will diminish their consumption and use of them.

CONDITION OF THE COUNTRY.

What, then, is the fact? I take it it will be determined by the condition of the country. We have no accurate census to inform us of what the condition of the country is; we do not know as a matter of absolute certainty, but we do know this, that in the last twenty-three years there has been eight thousand millions of dollars of products sold by one portion of the people of this country in foreign markets for gold values in imported merchandise, and brought back to this country to pay 47 per cent., or nearly one-half, nearly four thousand millions, to somebody. To whom is that paid? Put the rates at what you please, and with what sophistry or with what force can it be alleged that outside of the specific duty paid to the Government there is no effect upon the larger portion of this eight thousand million of gold values imported into this country during the last twenty-three years? We can not convince ourselves or any one else that it has had no effect in increasing the cost of productions at home, which it was intended to benefit; you must allow that something of this eight thousand millions of dollars shall represent the sale of farm products, of agricultural productions, of the cattle productions, of the dairy interests of the country; you must admit that this eight thousand millions of dollars have gone to some extent to pay for this advanced price, or you must admit that the system has no merit, and that in place of the eulogies which have been bestowed upon it, it has no real advantage and amounts to nothing; that it is simply a method of collecting revenue which is the most agreeable to the people and attended with fewer discontents in the public mind.

How shall we arrive at the question whether or not these eight thousand million dollars made by the farmers, by the agricultural people of the country, by the wine-growers, by the dairymen—I have a list here of these products, specific ones, and their values sold abroad, but I will not detain the Senate by reading it; I will ask the privilege of printing it with my remarks; but I ask how shall we ascertain what portion of this vast amount of eight thousand millions of dollars, as against less than one thousand millions in the twenty-three years of manufacturing products sold to the farming interests in competition with what is called pauper labor, poorly paid labor, the ryots of India, the serfs of Russia before they were emancipated, the peasantry of Europe—how is it that these eight thousand millions of dollars of agricultural production of the highest and best paid labor of the free American citizen in the world have been sold in competition with this species of labor and brought back in the shape of what? Of foreign goods at the rate of five or six hundred millions, nearly seven hundred millions a year of imported goods, to compete with the protected productions of American manufacturers.

AMOUNT PAID BY FARMERS.

I desire here to read from Lieb on "The protective tariff; what it does for us." On pages 76, 77, and 78, he says:

A few years ago the Chicago Tribune was asked by an Illinois granger "how much tribute the farmers of Illinois had to pay for the support of our infant industries." "Please give us the cold facts," said the granger, "to paste in our hats." To these inquiries the Tribune replied:

"The cold facts may give our granger reader a chill colder than does the frosty weather, unless perchance his indignation should warm him up. We will classify a few of the items of the expenditure of an Illinois farmer's family, with the amount per cent. of tax it pays either to the Government on the articles imported or to the manufacturer if produced in the Eastern States:

TAXES ON AN ILLINOIS KITCHEN.

	Per cent.
The iron the stove is made of	45
Hollow ware, pots, and kettles	53
Copper and brass utensils, if any	45
Crockery of the commonest kind	55
Glassware, of the cheapest kind	45
Table cutlery and spoons	45
Pickled or salted fish	25
Salt	36
Sugar	48
Vinegar	36
Pickles	35
Rice	123
Oranges and other foreign fruits, about	20

TAXES ON AN ILLINOIS PARLOR.

Carpet, if made of druggets	74
Carpet, if made of tapestry	68
Furniture	35
Wall-paper	25
Window-curtains	45
Looking-glass	60
Ornaments or knick-knacks	35

TAXES ON AN ILLINOIS WARDROBE.

Men's clothing, of wool	48
Woolen hosiery and undershirts	75
Cotton hosiery and undershirts	45
Woolen hats and caps	75
The farmer's wife's black silk dress (less now)	60
Gloves	60
Blankets	60
Alpaca dresses	63
Any other woolen dresses	70
A pair of scissors	45
Brass pins	30
Hair-pins	45
Penknives	50
Needles	25
Steel pins	45
Ink	25
Paper	20
Razors	45

TAXES ON SUNDRIES.

Castor-oil	102
Castile soap	50

	Per cent.
A dose of Epsom salts	30
Insect powder	20
Salad oil	34
The commonest window-glass for houses	80
Paint, white lead for farm-house	54
Brick	35
Roofing slates	30
Horseshoe nails	31
Trace chains	53
A hand-saw	40
Files	40
Spool thread	60
Bags and bagging for grain	40
A burr-stone	20
Combs and brushes	30
A wooden pipe	80
An alpaca umbrella	50
Any iron or steel a farmer may need, average of	45
Tincups, skimmers, dippers, and all tinware	42
Tin-plate, for canning meats and fruits	34
Fencing boards, $2 per thousand	
Pine boards, for building, about	20
If planed	33
Fencing posts, about	30
Shingles for roof	25
Lath for house building	20
Barbed wire, for fencing	55

Mr. President, a man must reason. Be he an advocate of one theory or another, as a man who has intellect he must weigh and value facts. If it be true that the highest and best paid labor of the world has gone into the markets of Europe in competition with the agricultural labor of the poorest and cheapest paid people upon the earth, and been enabled to sell its productions at an advantage in that competition, and has brought back this $8,000,000,000, for what purpose has it been done? To benefit themselves? To improve their own farms? To make agriculture respectable and profitable and remunerative? Mr. President, the census shows that these people who have produced this $8,000,000,000 of value in twenty-three years, as contrasted with the millions of dollars of manufactured products, are resting now under mortgages upon their homes of a total amount of $4,871,000,000. In the place of this excess over their own consumption they are resting under a mortgage indebtedness of $4,871,000,000.

I have here an investigation of the condition of the laboring people in respect to their own personal and immediate supply of the necessaries of life. I have collated portions of Lieb which I propose to publish with my remarks without detaining the Senate to read them.

*Protected occupations.**

Occupations.	Weekly wages.		
	1880.	1886.	Decrease.
			Per cent.
Brush-makers	$12.00	$10.80	5
Cloak-factory workers	14.75	11.75	20
Coal-miners	12.02	8.02	33
Confectioners	18.86	12.14	35
Iron and steel workers	41.10	36.50	11
Iron-molders	16.43	14.41	12
Organ-builders	15.00	12.00	20
Paper-mill operatives	12.00	10.05	16
Salt laborers	13.20	12.00	9
Shoemakers	12.30	9.90	19
Tinners	12.90	11.25	12
Zinc-factory men	25.00	18.75	25

* The average rate of wages of watch-factory workers at Elgin, as reported, was $12 a week in 1882 and only $9 in 1886.
Similar workers employed in the watch factory at Rockford received $16 per week in wages in 1882 and but $12 in 1886.
The tariff on watches is 25 per cent.

Unprotected occupations.

	Weekly wages.		
	1880.	1886.	Increase.
			Per cent.
Bricklayers and stonemasons	$19.05	$20.10	14
Electrotypers	13.50	19.15	44
Hod-carriers	9.00	11.50	27
Slate-roofers	14.25	15.75	10
Press-feeders	7.00	8.50	21
Stair-builders	13.50	15.75	17
Steam-fitter helpers	9.00	12.00	33
Stone-block pavers	18.00	24.00	33
Stonecutters	18.00	21.60	20
Street-railway employés	10.25	13.01	27
Wooden-block pavers	18.00	23.50	30
Wood-turners	12.00	14.25	19

Thus it appears that the wages in the twelve protected industries suffered a decrease of 18 per cent. on an average during those five years, while the wages in the twelve unprotected industries received an average increase of 21 per cent. And again, Mr. Arrott, of Philadelphia, who was selected to collect statistics for the United States census of 1880, says:

"While wages earned in protected industries in 1870 was, per hand employed, $346, for the year 1880 it was but $313.75, or a decrease of about 29 per cent."

And again, Mr. Wright, in his annual report of 1883, states that in 1875 the percentage of wages paid to the value of production in over two thousand establishments was 24.68, and that in 1880 it was only 20.23, a decrease of one-sixth in five years.

It appears that in many portions of the country, with an annual average receipt varying in different States and in different localities in the same State of from $350 to $450 and upwards, they are in a condition of great want, that in large part their compensation, their share of this great aggregate production, is not sufficient to support them even in ordinary comfort, but that they are in absolute want, that for a large portion of the time they are without a comfortable subsistence.

I hold in my hand a treatise by Mr. Edward Atkinson, going into the details, with the figures, showing that a difference of 1 cent or 5 cents in the compensation of these people is a matter of almost life or death to them, showing the economies which are necessary, the rigid economies for even the support of human life.

Mr. Carroll D. Wright, present Chief of the United States Labor Statistics Bureau, testified before the United States Senate committee in relation to wages and its proportionate share in the profits as follows:

Senator PUGH. "That is the value of the product of the labor of the mechanic?"

"That is what each mechanic, man, woman, and child, produces. Now, to each man, woman, and child employed in a mechanical industry the employer gets $98 net profit; that is giving him 6 per cent. on his capital and 5 per cent. on his product, etc. Each employé gets $364. That brings $98 to the employer as net profit on the product of each employé. It is the product of $364 yearly wages paid to each employé that produces that $1,792. The balance is raw material and expense."

"Suppose there were but one employer in Massachusetts, and the present number of employés, how much would that employer get?"

"He would get a net profit of $34,505,367."

"What would the laborers receive?"

"They would receive $128,315,362, divided among 352,255 of them, or $364 each."

"How much capital would one employer have in business then?"

"He would have $303,806,185."

"What he has left after paying all expenses is $34,505,367?"

"Yes; after all his expenses of labor, raw material, etc."

"That is to say, that would be the profit after the payment of interest on his capital invested and all insurance and outgo of every description, and keeping up his plant, repairs, and all that?"

"Yes."

These questions are presented here by capable men. They are subjects of reason and thought, and they correspond with the abstract facts of the case. You can not convince these people, if these facts be true, that they are not suffering from want. They know whether their families are well clothed and well fed; they know whether they have abundance to eat of nutritious and healthy food; they know whether their wages are adequate to give them comfortable shelter and reasonable recreation; and it is the man who has accumulated fortune, it is the man who by his superior sagacity has become a millionaire or a hundred millionaire who has taken so large a part of the annual production of the country, for it can be neither more nor less, its gross amount must be divided in some proportion between either the whole number of the people or between a small number on one side and the vast body on the other.

We see here in the facts and figures that the division of this distribution has not been equal. We find that by the best estimate, which is somewhat in the nature of a conjecture, but still has some degree of probability in it, that there are in this country one hundred persons who own from $100,000,000 upwards to an indefinite amount; that there are a thousand people who own a million of dollars and upwards but less than one hundred; we find that there are something like 100,000 people who own $10,000 and upwards, and that the whole remainder of the 65,000,000 people of the United States, the 17,000,000 of workers, have from $350 to $500 as the largest estimate of the average annual share of this annual production of upwards of ten thousand millions of dollars estimated in money value.

In the presence of this inequality of distribution, it is a grave and serious question for those men who own this vast amount, this vast disproportion of the annual production of the country, to arrest it before it shall reach the point at which this large body of sixteen or seventeen millions of men shall feel that they have arrived at the point of starvation. All wise public economy centers in stopping the inequality of distribution before it shall become seriously threatening to the life and happiness of the people of the country. As Gibbon says, even under an absolute monarchy, the security of good order, the comfort of the great mass of the people of a country, are the sure protection to the Government, even in the absence of virtue. And as to the governing people of any country, whether they be the whole people or a part, so to the people themselves, is it a matter of the greatest concern that the distribution of the production of the country shall be made in its public economies so easy, so untaxed, so free, that it will carry comfort and abundance of the necessaries of life, at least, to every home in the country.

How shall we arrive at that point? Shall we be told that there should be a division of the entire production of the country? We will say there is produced here $1,000,000,000 annually of agricultural productions, the result of highly-paid wages, of a fertile soil, of an efficient railroad method of transportation; we will say that this $1,000,000,000 is the excess over the consumption of our own people, and that

it is forwarded abroad and invested in money or in goods and returned to this country. It is admitted here now that we have a law which divides all the production of the year into taxed and untaxed goods. That is the tariff law. It is a division of the production of the country into taxed and untaxed values. Nobody can question, and I defy a disputation upon that point, that the tariff law is simply a division of the annual products of the country into taxed and untaxed values. The law then says that those who may become the owners of a certain portion of the productions shall be untaxed; that the burden of Government shall be placed upon the other portion of the production; the taxed portion shall bear the whole expense of the burden of the Government, and for that purpose that a tax shall be placed upon that portion of the goods, it matters not how we describe them, whether of domestic production or of foreign production.

LAW DIVIDES VALUES INTO TAXED AND UNTAXED PROPERTY.

You may as well apply the principle and say that the domestic production shall be taxed a certain amount; what would be the result? Here is a demand for both the domestic and the foreign productions. If not, why is there brought here every year six hundred and upwards of millions of dollars of foreign values to compete even with the tariff duty of 47 per cent., and to sell over and above that duty to the men who have made these thousands of millions of agricultural value sold abroad and brought back here in money and sold to them with the tax added, for there can be no question in regard to that? We have a law which taxes a portion of the values of the country and gives the privilege of being untaxed to another. The reasons of public policy that may justify this are not of importance here to consider. It may or may not be wise; but that is the law and that is the effect of the law, and the fact is that the tax is imposed upon one portion and the other portion is left untaxed. Do you not suppose, or do you not see as a necessary effect, that when there is a demand for both the taxed and the untaxed goods—for instance, there are three coats and six men to use them; two of them are taxed and the other untaxed; will not the cost of the taxed goods and tax added be the price which will be asked by the other provided that the demand is for both? The only theory is that this tax is intended to stimulate the production of untaxed goods and that it will eventually do it; but it can only do it by imposing upon the country that uses the taxed goods the penalty of paying the full value or cost of the untaxed goods, estimated at the cost of the foreign article with the tax added; and this is a law which all the world can not change.

It may have its exceptions; it may be that here and there there may be a combination of favorable circumstances which give to some one article a superabundance of production above and beyond the local demand; but that the result is not so in our country is proved by the fact that during this last year $600,000,000 of foreign values were imported and sold in our country, with the tariff duties at an average of 47 per cent. added, in competition with our domestic production; or, in other words, that our domestic production, after these fifty years of development of our industries, has not been sufficient to supply the demand at home for the goods which are imported from abroad and subject to a tax.

TAX INCREASES PRICE.

Then let us consider that whatever may be the theory and whatever the true proposition upon which a system of revenue based upon customs is to be founded or justified, it has its necessary effect, as every tax must, of increasing the cost of the thing taxed. Let that be admitted. Upon a wider range of view it is evidently true that, if any man can produce something and sell it at a higher price at one place than another, or he can buy something at one place less than he can at another, there is a loss to him, and no law, no interference, can prevent that consequence. This is equally true of a nation as it is of an individual. This is what is called free trade; but as a qualifying fact—and that proposition we all perceive—there are certain local and national advantages attending the coexistence of arts, of manufacture, and agriculture, and a people may well afford to sacrifice something in order to diversify the employments of their country. We can perceive that the economy which inflicts a loss upon a people by legislative interference with the free exchange and commerce of goods is an unquestionable fact. You can not stimulate by all the legislation and all the bounties you can impose the productions and manufactures of a country beyond the point of permanent demand. If you studded every rill and every stream with a factory and diversified your arts to the utmost extent to which human ingenuity and invention could go, you could not prevent its being true that if anywhere in the world the national production might be exchanged for less, then you are the loser, because the sum total of production is the same, and you can advantage yourselves only by increasing your relative proportion of it or acquiring that which you do not have for a less amount than it cost you.

That is true no matter what the condition of the prosperity of the country; but all persons agree that, to a reasonable extent, short of the general oppression of the people, short of the restriction and limit of their consumption of the necessaries of life, whatever advantages or benefits may be derived from such incidental aid as may be given as a stimulus to manufactures, it is a wise policy to extend. Hence this idea of free trade which has been discussed here and imputed to the thoughtful men who are seeking not to establish unrestricted trade, but who are seeking to free the people of the country from the burdens of an enormous and oppressive taxation, which neither increases the wages of labor nor the benefits of capitalists, if they will look in a wise and enlightened view at their own condition and the prospects before them, has no application to our situation. We are suffering from taxation which oppresses every poor man, every woman, and every child, which limits the quantity and character and comfort of the clothing which they wear, which reduces the amount of food they consume, which taxes the very salt of life—that very tax that brought about the great revolution in France, which resulted in blood and in the destruction of the crown and of virtue and the great elements of heroism of the people for so many years, even in their religion.

The policy which looks to making these things easy to be obtained, which enables the workman to give one hour of labor for that which now costs him two, which secures to him an hour of recreation instead of a lifetime of toil for the benefits of others—why characterize this simple question of the reduction of revenue by reducing the taxes on the necessaries of life as free trade?

SAVING BANKS.

I see that Mr. Blaine alludes with great triumph to the amount of deposits of the laboring people of the United States in the savings-banks. What is the proportion of depositors in the savings-banks to the seventeen and a half millions of toilers in the United States, to the seven and a half millions of agricultural laborers in the United States? I think there are about one million four hundred thousand—I have not the table here but will print it—in the States of New England and in New York, out of a population of nearly five millions, and how many of those are laboring people? How much of suffering and want and destitution those deposits represent, or how much of wealth, we do not know.

In the other States the number is so insignificant as not to be worthy even of consideration. That merely proves this inequality of distribution, which leaves the great body of the people without sufficient food, without sufficient clothing, without sufficient shelter.

I have here some articles from the Chicago Tribune and from a protective paper in Cleveland, Ohio, on the condition of the people in the mines of Pennsylvania, showing the entire and exclusive system of proprietorship of the immensely rich mines of that region of country by a few persons in connection with the great transportation interests of the country, representing the great body of that people, with exceptional instances here and there of men and companies who are generous and liberal and philanthropic in their economies, as in a state of almost absolute destitution.

How, then, can this argument be addressed to the American people, that the amount of money deposited in the savings-banks by a small proportion of the whole number of the people in the United States indicates anything whatever as to the condition of the people; and who will deny that the condition of the masses of the United States in respect to the houses in which a majority of them live, to the furniture contained in those houses, to the clothing which they wear, to the food upon which they subsist, determines absolutely the benefit or the evil of any system of taxation or finance that may exist in the country?

Admit that the fertility of soil, admit that economies of transportation, admit that the inventions and machinery of a country are the elements which have made the colossal production of this day, which is true, yet the fact that a portion of the people are saving a thousand or two thousand millions of dollars is no evidence whatever that the distribution of this total production is equal, fair, and general of the necessaries of life. It signifies nothing. I am of the opinion from the best evidence I can obtain, from the fact that there are mortgages upon the agricultural interest, which has produced and paid in gold values eight thousand millions of dollars in the last twenty-three years into the aggregate gold values of the United States, from the fact that these people who have no benefits from any system of government aid or legislative interference, who have nothing but the natural fertility of the soil, who have nothing but the improvements and the inventions which the progress of civilization and the arts and sciences have made in Europe and America, to which, no doubt, we have contributed, and that much benefit, perhaps, may be said—I think a doubtful question—to have been derived from our system of duties and protection; but grant that it may be so; we have contributed our part in the progress of civilization, of invention and machinery, and these great people, these agricultural people, these cotton producers, these wine producers of California, these wheat and grain growers of the Western States, these dairymen of the country at large, have produced eight thousand million as compared with less than a thousand million of manufactured productions which has been returned to this country and gone into the national values. Now, notwithstanding that they are embarrassed with nearly $5,000,000,000, of loans, of mortgages, if the census be true—I am impressed with the fact that $335 of wages is the highest average rate to be found in this country, one rate in New England, another in New York, another in Ohio, another in the West; but I insist that it is a reasonable conclusion that with three persons dependent upon that $350, and with a taxation of nearly one-half, nearly 50 per cent., an average tax of 47 per cent., increasing the

price of all the necessaries of life—I am of the opinion that the American laborer in the average is in a condition of personal want and personal necessity.

I find in the statistics as given by Mr. Carroll D. Wright, of the State of Massachusetts, and as given by Mr. Atkinson, that the margin is very small between want and suffering, even in those States where the larger portion of the wage people of the country are to be found, and that almost a hair's breadth will turn it one way or the other.

Mr. President, that is a commentary, I think, upon our present tariff and on the Senate bill; that is a commentary upon the remarks we have had here on the subject of a Southern conspiracy against labor by simply insisting that in our opinion, upon the basis of these facts, it is a logical conclusion that the seventeen and a half millions of working people, with the forty millions of people, and more than that counting the women and children, who are dependent upon them, will be benefited by a reduced price for the necessaries of life, and in answer to this we are met by the proposition that this is a Southern conspiracy.

FORTY CENTS A DAY THE AVERAGE WAGE OF AMERICANS.

Mr. Atkinson, in his very useful book on the Distribution of Products, of which I have already had occasion to speak as a very valuable work, and he himself is certainly a man of ability, who, whatever may be the correctness of his politics, is contributing a great deal to the advancement of science and knowledge in respect to political economical questions, says—

These families comprise 99 persons, of whom 41 are engaged in some kind of gainful occupation—*i. e.*, earning wages. Each working member of this small force, therefore, represented a group of 2.17 as against the average of 2.90 in the whole country.

The average income of each one of these persons was $372 a year, somewhat less than the average which I have assigned to each person in my estimate, but when we convert the $372 per year into so much a day for each person, the result gives 47 cents a day in Massachusetts, in arts conducted mainly by machinery, against my estimate of 40 cents for the average of the whole country, the group 217 being smaller.

Forty cents a day for the great majority of the working people connected with the arts and machinery in Massachusetts! I have also the calculations from a large number of mills taken in certain States. I submit the question to the capitalists of this country. They are men of great intellects many of them, and are leaders in the arts, in the beneficences, in the great charities which give life and joy and happiness to the people.

The accumulation of wealth is not an evil to a country with a fair and just distribution; it is a benefit. These men become leaders in the great philanthropic arts for the advancement of mankind; but if they tie down the safety-valve, if they stop the flow and distribution of the productions of the country into the homes of the poor people, if the seventeen millions of workers, with the 2.91 of women and children dependent on each one, are brought to a state of starvation in connection with the arts of machinery, which make the colossal production of this country, and a tariff of 47 per cent. on the necessaries purchased and consumed by them is levied, and if that brings want and suffering, these great men who give credit to governments in war or in peace, who control so largely our policies, had better take heed of the fact that the economies of nature, of cause and effect, are immutable; that they do not depend on the policies of governments. They may be advanced or retarded by a compliance with or adherence to them, but opposition is like attempting to dam the mountain torrent, which will break through and overcome any and all obstacles.

ERROR OF SENATE COMMITTEE.

Mr. President, the error of the Senate Committee on Finance in increasing the duties, instead of reducing them, upon the necessaries of life, has no connection with a proper system of revenue or of incidental protection or of absolute protection. If their theories are right, they had better abolish the tariff and put an embargo upon commerce, upon importations of every kind. They would be wise to say, for the purpose of protecting the productions of our own country against the temporary invasion of a mass of production from another country—whether the product of cheap or dear labor is immaterial—that this importation should be prohibited. They would be wise if they would say, let us encourage, if we desire to do so, the productions of our own country by some other and direct means, rather than to interfere with the flow of the necessaries of life into the household of each man; let us encourage and stimulate it. Let us not divide the production of the country into one part of taxed and the other part untaxed goods. Let us not create a privileged class, a class with a privilege greater than ever was given by the government, for you may by legislative interference with trade confer privileges which are greater than any direct grants made by any government.

For myself, I am not opposed to a fair and just system of tariff revenue in the present condition of the world, but I am opposed to a system which will impose a tariff upon the necessaries of life. Let your tariff be as low as possible upon necessaries. In that respect the Mills bill is a correct one. You can not interfere with the great mass of the comforts of the people of the country, as you must inevitably do, by taxing what they consume. You can not trust to incidental and indirect causes the domestic competition which you say will come from the prohibition of foreign competition. You can not do that so long as you have a surplus of agricultural production to sell. It matters not what it is, it must come back in goods in competition with American labor. Money is of no value, except as it represents production. It is not an entity in itself; it is of no value except as it represents property.

TAX ON NECESSARIES THE SOLE QUESTION.

But be that as it may, be it theory or be it speculation, there is in this controversy no question of free trade. There is a question of taxation. Will you tax the necessaries of life or will you not? That is the sole question. Will you tax the necessaries of life and increase the price to every consumer throughout the United States of his clothes and of his wife's clothing, of his food, of the salt with which he makes it nutritious and wholesome to the taste? Will you impose an increased duty upon his kitchen utensils, upon the furniture of his house, upon the blankets and the woolen clothing he must use? Two-thirds of the clothing of the people of this country is of wool, and even in my own State, the nearest of all the States to the tropics, our people have to be clad in wools. Will you increase the cost with 40 cents a day, as estimated by Mr. Atkinson, the friend of capital, the advocate of capital, the representative of the manufacturing interests of Massachusetts, the ablest man and statistician to be found in the country, a man of research—with 40 cents a day the best paid labor in connection with the arts and machinery of Massachusetts—will you increase above the 47 per cent. of the present tariff, as is done, the cost of the utensils which are used in cooking, the tin, the furniture, the woolen hats, the woolen clothing of the laborer?

DANGERS OF THE TAX.

This is a theory that the rich people of this country ought to oppose. Every capitalist in the United States is interested in the defeat of this Senate committee's substitute. It is the most unwise bill that has ever been presented under the circumstances and conditions of the country. It is a bill that menaces the peace and order of society. Enforced it will bring want, it will bring that suffering which knows no limits but the extent of its violence, its disorder, and its desperate intent to protect itself.

As the friend of order and conservatism, as the friend of peace and the conservation of the different interests of society and business, I deplore the doctrines upon which this measure is founded. It is not in the interest of a wise protection. It is not in the interest of a just distribution. It is not in the interest of the protection of capital. It is upon a wild theory which every thoughtful economist in the world ha, demonstrated to be utterly untrue, a theory that restrictions upon trade that taxation can bring prosperity and comfort and wealth and invention and a domestic competition which will advance and protect the mass of the people. Mr. President, that is not so. Incidental protection, which does not oppress, which gently stimulates, may at times be an advantage, as a bounty of so many cents a yard would be or so many cents a pound paid out of the public Treasury. The proposition would be made with the least injury to the public. You may make one man contribute to the support of an enterprise of another for the purpose of ultimately obtaining a benefit to himself in diversified production and to cheapen the sale of commodities and enhance the employment of labor. That is the proposition. A limited tariff for revenue, discriminating wisely not upon articles of necessity, not upon salt, not upon those things which are necessary to the people, but touching them lightly upon the revenue standard, but as little above it as can be, is the only reasonable theory for the basis of a protective duty.

But, Mr. President, before I close I desire to say that the theory of taxing the people on the consumption of the necessaries of life for the benefit of a few, to build up great masses of interests in the hands of a few, taxing the consumption of the necessaries of life and putting in the hands of a few hundred thousand of the people of the United States, a privileged order, growing rich upon the wants and sufferings of the other—this principle and this theory is still illustrated by the features of this bill that concern the State that I in part represent. We have a country down there which abounds in delicacies and luxuries. The skill of the gardener and the horticulturist produce the fruits which are delightful, but costly, which the poor man can rarely afford to use, the bananas and oranges which perish upon short transportation, and which, therefore, have to be sold, and sold at high prices. These fruits, which are articles of luxury, are consumed by the rich and can bear any amount of duty for revenue purposes without hurting anybody at all, while those fruits are almost put upon the free-list in the Senate bill. Nobody but the rich people can eat them. They are excluded from the consumption of the great mass of the people. They are things that nature grows upon the islands of the West Indies and in Central America. Nature, with her prodigal hand, without even the presence of a human being, spreads the forests with the golden orange and the ripe banana, with their beautiful colors, and they come here with nothing but the cheap cost of transportation, in an untaxed ship, and they are frequently smuggled into our country, and even for the purpose of keeping the smugglers off the highest duties that could be imposed would be a benefit.

So it is that the Senate bill in all its provisions, in my judgment and opinion, is a fatal mistake, a mistake that concerns the rich people of the country quite as much as it does the poor, and it is unfortunate for the manufacturer as for the others, as unfortunate for even a moderate protection, which is all that the country needs.

NOT A CONSPIRACY BUT A PROTEST AGAINST THE STARVATION OF WORKINGMEN.

It is not a Southern conspiracy. The South has but little to do with it. It is an uprising of the intelligent thought of the world, indicating the course of economic policy and which indicates that you must make distribution, for, as this book of Edward Atkinson says, the economies of distribution and the economies of saving are the great agencies to bring comfort—economies in the supply of coal and fuel, economies of transportation which will limit the power of corporate organization to impose artificial prices on the people. Everything must look in that direction—the comfort of the great mass of the people. The idea that you can make a man's clothes cheaper to him by taxing or that you can make his wages higher when the fact appears in all these statistics that the best paid labor in this country is the labor which has no protection whatever and which belongs to no protected industry.

Mr. President, I again say I am in favor of a reasonable tariff. There is no question of free trade here. There is a question of what method of taxation as to the thing taxed is the best for the people of this country, for the poor man, whether it be upon the necessaries of life or whether it be upon the luxuries of life. I am for taxing the luxuries of life for the support of the Government to the highest extent possible and exempting the necessaries of life from taxation.

HOW SHALL TAXES BE REDUCED?

This is the question and the only question before the people in this election. Shall the taxes be reduced and how reduced?

Shall the amount each man is required by law to pay be paid in such way as will reduce the cost to him of his clothes, his food, his house-rent, or by reducing the cost of the whisky and tobacco which he consumes? Is it better for the comfort and the progress, and the accumulation of the savings of the great body of the people, that the taxes of the country and the tax that each man pays shall be levied on the food that he and his family eat, the salt that he seasons his own and his wife and children's food, the sugar with which he makes it pleasant to the taste and nutritious to life and health, the coat and vest and pantaloons which he and his children wear, the dresses which his wife and daughters wear, the material out of which his house shall be built, the cooking utensils necessary to prepare the food for himself and his family and t e furniture which he uses? Shall taxes be so levied and collected that if a man shall wear two coats or give his wife and child two coats and dresses, or shall consume two pounds of salt or two pounds of sugar, he shall pay a greater tax for the support of Government than if he used one? Or, in other words, shall the taxes which support the Government be so levied that they will be paid most largely by those who use the luxuries of life or by those who use the necessaries, so as to increase the price of the necessaries of life or so as to increase the price of the luxuries of life?

Or, to state the question in another form, shall the taxes be so levied that each laborer or tax-payer shall be required to give two days or two months or two years or twenty years of the labor of himself and family for the support of government, when one day or one month or one year or ten years of his labor is amply sufficient for all legitimate and proper needs and purposes of government?

ACCUMULATION NOT DANGEROUS.

We need not fear the accumulation of property or riches in the hands of a few men under a proper system of distribution of the aggregate production of a country.

If there be a Lucullus there will also be a Maecenas. If a Julian who buys the Roman purple, there will also be a Julius Cæsar who wins and wears it for the good of mankind. A St. Just who spends his wealth and ancestral fame in self-sacrifice for noble if unattainable hopes of human happiness and prosperity, and a Washington, a Jefferson, and a Franklin, who, with spotless fame, devote themselves to institutions for the preservation of liberty, prosperity, and happiness.

INEQUALITY OF FORTUNE OR DISTRIBUTION.

So far as regards the necessary clothing and food and utensils of cooking and furniture, each one of these sixty-five millions consumes an equal quantity, age, sex, and occupation being considered; and yet how vastly different the proportion of distribution in value, quantity, and quality.

And yet we live in a country of equal right before the law. Each man, we are told, has equal rights before the law; and this is intended to mean equal opportunities before and by the law. We are told by all political parties and all philosophers that no exercise of the powers of government can be permitted which will give to one man or one class or any number of persons a larger part of the production of all than to another. We can have no law of primogeniture or entail. We can have no tying up of property beyond three lives in being and twenty-one years. We can have no involuntary servitude except for crime. We can have no titles of nobility. We are even told by some zealous friends of equality in distribution and in fortune that the faithful public servant who gives his life in the service of the people must leave his family to want, and be forbidden to have any recognition of his services to the people in the most moderate provision for them after his death, for fear that a civil list will be created, which will be burdensome and oppressive to the people. We are required then to consider whence comes this enormous inequality—how, in defiance of law and public policy, is this accumulation into the hands of a few of the great, much the larger, portion of the production of the labor of the people?

This great power over the lives of the people, in other times and governments was created by law based on armed force. Is it with us the result of individual and personal character making use of superior intelligence, superior economy of production and transportation and exchange, or is it the result of the exercise of legislative power, or is it the result of both of these causes? If it be the result of legislation, the Democratic party, the party of the people, demands the reform of this legislation.

If this inequality of distribution in these vast differences of proportion be true—that is, fifteen millions of people with nothing but an inadequate amount for the necessaries of life and a few hundred thousand with nearly all of the natural product as the result of its labor—then we stand in the presence of an important fact which demands of us our most serious consideration—a fact, if it be true, that will force its own consequences.

TAX ON ARTICLES OF NECESSITY.

The tax on all the necessaries of life—the increased price, if there be one—the tribute levied on the many laborers in the interest of the few wealthy persons, if such be the fact, is levied by a duty or tax on imports, collected at the custom-house. This tax or duty averages 47 per cent. now, and it is proposed to make it 42 per cent. under the Mills bill.

It is true that this average does not represent the amount on each separate article, and that many considerations important to the public depend on the amount levied on each particular article; but it still remains true that this average does represent the exactions on the labor of the country; does represent that tribute, if there be such, and is therefore the question with which we are chiefly concerned at this time.

The law, then, is that every man shall pay nearly a half dollar at the entrance into the country for the privilege of selling a dollar's worth of all the necessaries of life. Now we are to consider the nature of the law; second, its effects and operation; its direct and indirect results. The law, we will say, for illustration, requires if you have a coat which you have bought for $1 to pay 47 cents for the right to sell it. The first effect of this law is that you pay the Government the tax and it goes into the public Treasury. The next effect is that you have a coat to sell which before cost you a dollar and after the payment of this 47 cents it has cost you $1.47.

DIRECT AND INDIRECT EFFECTS OF THE LAW.

The next question is, what price can you afford sell it for? Can you sell it for less than it cost you and continue to sell other coats? The law, then, forces you either to sell this coat at $1.47 or quit selling coats, for you can not continue the business of buying and selling coats for less than they cost you, and the law has fixed a cost on this coat, namely, the original price of making it, the value of the labor of the person who made it, the taxes paid on it. This is a natural law which has no exceptions. A man can not give his whole time to the cultivation of a piece of ground unless he can grow from it enough to replace the corn and meat and other things he has necessarily consumed while working it, and something over to meet other and future wants. He may do it once, but he can not do it twice, for starvation then comes. In other words, all work, all production must be self-supporting.

This is a natural law which can have no exception. If, then, you must sell the coat for $1.47 the man who buys it must pay this dollar and forty-seven cents. Another person, seeing that a coat can be sold for $1.47 because the natural law has made it cost $1 in material, time, and labor and the municipal law has added 47 per cent., concludes that he can make and sell a coat at $1.47, and in doing so finds that he has a profit, and whether he work at home or abroad he has the same inducement to reduce the cost at which he can make the coat, so that the portion of the $1.47 which he shall receive as profit may be larger.

When he finds that he can make the coat for $1, and that he has no tax of 47 cents to pay, will he sell his coat for $1, or will he say that the law forbids coats to be bought when sold by another man for less than $1.47, and I will charge that price for my coat? But at this time other persons, seeing that you can sell coats at $1.47, and are guarantied that price by law, engage in the business, and other coats are offered, and the theory is that two coats being for sale when there was only one the price will be reduced. This result can only follow when there are three persons, each of whom want a coat, and not until there are three coats for two persons will the price of necessity be reduced by the desire of the two persons owning the two coats to sell, bringing them into competition. But suppose the men having the two coats are under a necessity to sell to support life, and the men who need coats are not under a necessity to buy for the protection of life. Here we perceive a new element enters into the demand and qualifies and limits it, and a new element enters into the supply and forces it, and both of these are natural conditions, such as belong to every-day life. But suppose the two men having the two coats to sell, on which they have paid no tax of 47 cents, shall say that the law requires all other men having coats to sell except themselves to pay 47 cents for the right to sell them, and shall also see that by agreeing be-

tween themselves no coats can be bought for less than $1.47, will they not so combine and make this agreement? And if their necessities shall be so great as to compel them to sell, will there not be some other person who, seeing this situation, will say here are only two coats that can be sold without paying 47 cents over the cost of them, and here are three men who are compelled sooner or later to have coats, and these two men owning these coats are under such necessity that they are obliged to sell; now, I will supply the necessities of these men and take two of these coats and sell them to these three men when they are compelled to buy and either divide the profit of 47 cents with the men who have made the coats or keep it all for myself. We perceive, therefore, that while the fact is true that the law in imposing a tax on certain persons to pay 47 cents for each coat sold in the first instance makes it necessary for that man to pay 47 cents more, it also renders it necessary for the man who buys it to pay 47 cents more for it, and that the second result of inducing other persons to engage in the making of coats, and thus reducing the price, is met by opposing conditions of combinations in the natural and unavoidable course of business to intervene between the necessities of buyers and sellers, or producers, and retain the price at the standard fixed by law.

LAW FIXES MINIMUM OF PRICE AND LIMITS COMPETITION.

The law thus fixes the price at cost of the article and the tax added as the minimum of price, and imposes it on the buyer—the man who requires coats—but does not fix the maximum of price. The law also fixes the limits of competition between producers, and requires that the only competition shall be by reducing the cost of material and labor, makes the cost of the coat, its material and labor, and the tax added the conditions of sale to one set of persons, and the cost of materials and labor without the tax to another. Thus the latter can only compete with the former by reducing the cost of material and labor. And the persons who are permitted to sell without the tax can only compete with each other by reducing the cost of labor and material, and all the inducements of profit encourage them to reduce the cost of labor and material—that *is*, the wages of workingmen.

But if the persons who are allowed to sell without paying the tax can not supply all the coats that are required and the persons who can only sell by paying the tax have to furnish some of the coats, then what will be the effect? Will the home producer, who sells without tax, sell his coat for a less price than the person who has to pay the tax, and if so for what reason will he do so? He is protected by the law against the competition of the men who have to pay the tax before selling, and he is protected by an inadequate supply and an unsatisfied demand, against competition from men like himself who can sell without paying any tax.

PEOPLE DEPEND ON WILL OF SELLER FOR NECESSARIES OF LIFE.

If he shall sell his coat for a smaller amount it will be because of charity; because he chooses to do so against his own interest. We then establish as a principle of conduct by law that the people must depend for the necessaries of life, for their clothing, on the generosity of the seller against his own interests relieved and protected from competition. We propose by law to establish this principle, namely, the dependence of the great body of the people on the voluntary generosity and sense of justice of a small number of persons acting against their interest. Now let us look at this subject from another point of view. We propose to create a home market. We say it is better that our people should make everything possible at home in our own country. What are the means by which we propose to do this?

PRIVILEGE OF SELLING UNTAXED GOODS.

We have, then, a law creating a privileged class of persons to produce and sell. It is true that this law is not in terms confined to any particular man or set of men, as former grants of privilege have been in both monarchies and republics, but it is open to all. Any man or set of men who choose and have the money may enter the privileged class of the untaxed seller of untaxed goods, but still the fact remains that he becomes one of a privileged class created by law, and possessing as the gift of the Government a privilege of great value.

I propose now to examine the value of this privilege, its effects on public policy and private fortune and the mass of the people, and to endeavor to see how far it is possible for the great body of the people to subsist under it. While doing this we must bear in mind that without trade, commerce, or exchange between men there can be neither government or taxation or values of any kind. That is a primal law of man's nature—resulting from his powers of speech and his natural senses and faculties—and all governments, whether despotic or free, have agreed in the general on the proposition that restrictions in trade were hurtful, and have only used them as a means of obtaining revenue, and our modern theories of their use for other purposes are mere devices, serving at times useful purposes, but in the main hurtful. They may at times defend us from an invasion of commodities which may unsettle and destroy our productive agencies, and may be properly used for this purpose, but the question is, how and when, by what methods that are safe to the people can this sometimes useful but always great and dangerous power be exercised—a power of fixing the price which a man shall pay for what he consumes, and fixing it so that he shall pay not the least amount that he can obtain it for, the least amount of his labor, but so that the price or the amount of labor he gives for it shall be greater, and this burden be imposed on him for the benefit of particular persons or classes, to the end that as a matter of public policy the aggregate production of the country may be increased and the country furnished with manufactures and products? This is a wise, proper, and necessary object of public policy for every state, but one not to be attained by sacrificing, oppressing, and impoverishing the great body of the people.

The aggregate wealth or production of a country, the result of all its industrial power, is a standard for comparison of their economical and industrial forces with those of other peoples, and its quantity determines the comparative efficiency of these powers in respective countries, and the harmony or co-operation, either forced or natural, of their adjustment in relation to each other, or what is termed by Mr. Edward Atkinson progress of the nation; but great national productions and a forced adjustment of all the forces of production are consistent with each other, and with the misery, want, and discontent of the great body of their people. Natural fertility of soil, superior economies of husbandry, efficient methods of industrial employment, careful economies of supply, developments of inventive skill and mechanical forces, and well-adjusted methods of transportation—these are the Titans that move the colossal developments of production in modern days.

COEXISTS WITH POVERTY OF THE PEOPLE.

But it is obvious that these may all coexist with poverty in the masses, and with the progress of poverty in the aggregate. None of these great forces in themselves touch the question of the supply of each individual's necessities and wants. This is well illustrated by an article in the October Forum, "The Progress of the Nation," and a table and chart which he has prepared, showing, first, average wages of mechanics, engineers, carpenters, machinists, and painters connected with mills and works, treated in volume 20, United States Census, in Eastern, Middle, and Western States; second, average of one day's supply of food, fuel, material for clothing customarily used by such mechanics at retail prices; third, purchasing power of three hundred days' wages in equal portions of same kind of food, fuel, and cloth as above given; fourth, quantity per capita of coin, bank notes, and legal-tender notes in circulation or use as money at the respective dates. This chart shows a greater power of purchasing for fuel, cloth, and food of same amount of labor of these classes, an increase of wages of these classes since 1860—from $1.50 per day to $2.50—a variation in the amount of bank notes, coin, and legal tender in the proportion per capita of $14.06 in 1860 to $27.28 in 1886.

Admitting these computations to be correct for present purposes, although they do not include the cost of ready-made clothing and dresses and material and house rent and transportation of each person, it is quite evident that they show nothing of the quantity of each person's supply either of the necessaries or the comforts of life. They show nothing of of the wages of labor for the great mass of laborers, the great body of consumers, for the people, the bone and muscle, the seven millions of men who live next the soil and are attached to it, and the millions who are dependent on them. These are the people whose wants must be supplied to some extent, or, failing this, sooner or later comes discontent, violence, and strife.

WISE ECONOMIES, EQUAL DISTRIBUTION TO ALL.

All wise public economies and policies of state, whether in a republic like ours or in a monarchy where the people are kept in subjection by armed forces, must center in such economic forces as will result in such a distribution of the results of labor, of aggregate production, as will give to each man all the necessaries and as much of the comforts of life as may be possible.

This is well expressed by Mr. Edward Atkinson in his article "Must humanity starve at last?" "If the functions of government were admitted to be to give each man an equal opportunity to make use of the benefits which science and invention place at his disposal, and to do through the intervention of government only such actual work as can not be done by society in its corporate capacity better than individuals can do it for themselves, most of the obstructions which legislation has placed in the way of mutual service would soon be removed and the true law of human progress would then develop itself; wages would then increase to the maximum within the limits of a product attained under the most favorable conditions."

THE POINT OF DANGER.

Here, then, we have the great central point of a necessary public economy. This is the point of perpetual danger, the safety-valve through which the discontents arising from inequality of fortune from greater luxury and accumulations of some over others will pass harmlessly away—a just and equal distribution in which mutual service will make the exchanges unrestricted by legislative interference. We discover, if these observations be true, a power of great magnitude and determining force in the fortunes of men and the public policies of states which inheres in and is incident to the methods of taxation, a power the abuse of which may impoverish great numbers of the men, women, and children of a state and enrich others, and at the same time increase the aggregate production and coexist with the greatest development of inventive skill and of advancement in learning and in all the

arts and sciences, a power which may change the whole internal autonomy of states, convert a republic of equality, of individual right and privilege into a people of classes, of privilege and peculiar right, and thence into a monarchy or aristocracy. This power is legislative interference with the distribution or exchange of the products of labor through mutual service.

LEGISLATIVE INTERFERENCE WITH DISTRIBUTION.

Its developments must by a law greater than human laws, a law of cause and effect in the inevitable chain of natural order, produce the result of inequality of classes, superior power and influence of one order over others—a caste, an aristocracy, a plutocracy, in which some are made vastly rich by the labor of others, and the great body of the people are poor from the exactions imposed on them by law in favor of others.

How long can this condition continue? We have seen that this is the necessary result of a grant of a privilege of selling untaxed goods to a portion of the people and the imposition of a tax for selling or exchanging goods on others; and that the system of the exclusion of goods from sale subject to special taxation is nothing in its nature but the grant of a right or privilege created by law in those who use this privilege to make a forced levy on the time, labor, and savings of other persons, and that all the available means of the people will be drawn into the business of selling untaxed goods subject only to such limitation as may be imposed by combinations and repressive influence of those enjoying this privilege and possessing the largest means and the greatest facility of combination and of exercising a power of repression.

In all countries and in all times the struggle has been to obtain this advantage of some over others, and it has been always known that it was necessary to limit the concession of such advantages by law and restrain it in the interests of the great body of the people to avoid their impoverishment and consequent revolution. The struggle for advantage in opportunity either by law or without it has always existed and will perhaps always exist. To restrain and direct it is a necessary object of a wise public policy. It has its uses, and when given by law it has been for the purpose of giving stability to government and fostering art and education and religion; but we are now considering whether it has not developed into proportions so great in our country that it is now about to produce its necessary result in the impoverishment of the people and a continuous discontent, which must either overthrow the powers of government or be suppressed by armed force. This is our question, and not the question whether American industries shall be protected, fostered, and encouraged; whether the invasion of our country by foreign labor and foreign goods to the detriment of our own employment and people shall be permitted or not. We may agree that American industries shall be fostered, encouraged, protected, and that the American laborer shall be protected, rewarded, and made comfortable, educated, and respected. All wise public policies must be in this direction, and to this end; and he would be an unwise statesman who in prescribing the public policy of a state should fail to make this the chief object of all his legislation. But we may agree to all this and yet not touch the merits of the question now presented. How shall we best meet the condition with which we are now confronted, and what is that condition?

We have seen, if these statements and this reasoning is correct, that we can not accomplish these objects by a law giving to a part of the people the privilege of selling untaxed goods and imposing all the burdens of Government on those who sell taxed goods.

PRINCIPLE OF TARIFF PROTECTION.

The principle of protection is that a tax on products of foreign labor sold in our own country protects the product of American labor against being sold for less than the tax and the cost of the foreign article by forcing the consumer to pay this amount for it, and that the consumer, together with the whole country, is benefited by the employment of labor in new industries and by an additional demand for labor, and in the end by a home competition which will reduce the price below the foreign cost and make the protective tax unnecessary. This is the proposition on which this public policy is founded. It proposes to levy a tax on all the necessaries of life and to increase the price of them to all the people for the purpose of encouraging their production of them at home.

I have upon a former occasion endeavored to trace and analyze the principle of endeavoring to effect a diversity of labor and production by imposing a tax on the sale and the person who sells certain kinds of goods and of granting to others the privilege of selling the same kinds of goods without the payment of a tax. I will now submit to the Senate, and place in the RECORD without reading it, the remarks I made upon that occasion. (See appendix B at the close of these remarks.) I may speak on this subject impartially, because the productions of the State of Florida are chiefly of those articles of luxury which will bear and, under the proper system of revenue, receive when imported from abroad the highest rate of taxation for revenue purposes. Oranges, bananas, pine-apples, fruits generally, and cigars are articles of luxury, consumed for the most part only by those who are independent in fortune, except in small quantities, and should therefore bear the highest rate of taxation required for revenue purposes instead of being placed on the free-list as they are by the Senate bill.

What is the condition of the people? This is the only true test after twenty-five years of the policy of giving by law the privilege of selling untaxed products to a part of the people and collecting all the taxes from those who sell taxed goods, and besides a surplus of over $132,000,000 last year, do we find the people generally in a condition of comfort and prosperity? Has every man, woman, and child employment at such wage or compensation as will purchase for them the occupation of a comfortable home, an abundance of healthy food, comfortable clothing, and all the absolute necessaries of life? Are the great majority of the people in this condition? Is the distribution of the product of labor fair and equal and easy everywhere and amongst all the people? If we find this to be true, then no fault can be found with the system of policy.

A thoughtful and able man, Mr. Atkinson, in the July Forum, expresses a truth of great significance and one rarely appreciated in these words:

> In the last analysis it will appear that there is no such thing as fixed capital; there is nothing useful that is very old except the precious metals, and all life consists in the conversion of forces.
>
> The only capital which is of permanent value is immaterial—the experience of generations and the development of science. It is not given to material capital to save any one generation from the work of getting its own living. All that it can accomplish is to lighten labor. The condition in which it attains its own income is that it render full service for all that it receives, and that it also render the general struggle for life less severe.

If our public policy has done this, or is doing it, then we are in the line of improvement; if it has failed, then we are in the line of ultimate ruin. The forces of natural law are being converted by a power which is immutable to our ruin.

What, then, is the condition of our people, of the great body of them, in respect to the supply of their wants?

In this inquiry we should follow the natural order of cause and effect. If we shall reason on this subject we will examine carefully the effects, the facts within the range of our observation and knowledge, and then endeavor to ascertain their cause.

If our observation of facts shall be correct, we shall not fail in our endeavor to trace these facts to their true and ascertained cause.

CONDITION OF PEOPLE.

What is the condition of the people in respect to their supply of the necessaries of life—of the average portion of each individual of the production of all the industrial forces. Are the facts within our reach and susceptible of proof? The following facts present themselves to us: $839,593,902 in gold and silver coin have been produced and issued by the Government in the last thirteen years. In the twenty-three years, from 1860 to 1883, the farmers of the country have produced and sold in European markets eight thousand millions of dollars of agricultural and farm products.

In 1880 of textile fabrics there were exported $24,000,000. Assuming this to be an average of the last twenty years we have about five or six hundred millions of dollars of textile manufactures exported as against eight thousand millions of values from the farmers. The exports of gold and silver have been for the same period of time, say, between six and seven hundred millions of dollars from the mines, as against eight thousand millions of dollars of farm products.

The question for us to examine is, what has become of this great production? Has it been distributed amongst the people fairly; has it made them comfortable and given them abundant food and clothing and comfortable homes to live in? Has it furnished the means for universal industrial education?

If that is not the present condition of our people, then the cause must be in a failure of the public policy and the laws under which it has been produced. Whether that failure is the result of a cause impossible to be overcome or not, it is evident that there has been a failure. The results of general prosperity have not been reached.

Let us then examine into the facts which show the present condition of the people, the comfort of their homes, the abundance of their clothing and of all the necessaries of life, and the compensation for their labor. On page 653, United States Senate committee report, is the testimony of Charles J. Chum, jr., of Somerville, Mass.:

> I am a currier, and work at it for a living. I am a member of the Tanners' Union of Massachusetts. There are about two thousand of them in the union. The average pay of a currier would be about $3 per week, or a dollar a day.

The Cleveland Herald of 6th of July, 1884, a protectionist newspaper, contains the following:

> For some time past all sorts of stories have been circulated in reference to the suffering of the miners and their families along the Pennsylvania Railroad between this city and Allentown. These people have had their wages reduced from time to time until they are now only getting from 60 to 70 cents per day, or an average of about 65 cents. These reports have excited considerable comment, and in order to verify them a Herald correspondent visited the mine. George Schock, residing in a log hut, was called on in the evening. The picture was one of extreme pity—the children, four in number, were all huddled about the stove, they were thinly clad and three suffering with measles. The floor was carpetless, the furniture old and showed hard usage. The bed-room adjoining the kitchen contained two beds, in which the entire family slept. Two of the window-panes were broken out and stuffed with old clothes. Mr. Schock works in one of the mines 5 miles distant, and did not reach home until 7 p. m.
>
> Supper had been prepared, and consisted of bread and molasses, mush and coffee. A stiff breeze was blowing from the northwest, and the cold air whistled through the cracks of the old structure.
>
> "Will you give me an insight into your daily life, Mr. Schock?"
>
> "Well, to tell you the truth, it is a tough one. I get up at 4 o'clock every

morning and leave here half an hour later in order to reach the works at 6 o'clock."

"What are your duties?"

"I am a loader, and with another man load from sixty to seventy cars a day. I get 62 cents per day."

"How do you manage to live with that amount?"

"Oh, we manage to just hang together. We can not afford meat but once a week. Bread and molasses constitute our chief diet, with a few potatoes and corn meal thrown in."

"How much did you earn in January?"

"Eleven dollars and thirty-eight cents. I made a little over eighteen days."

"How much did it cost you to live?"

"My earnings did not quite cover the bills, and the grocer told me that hereafter none of the men would be allowed to exceed their earnings. I have not handled a cent since December 1."

"How is that?"

"Why, you see, after the grocer is paid, nothing is left."

That is the story of a dozen or more, and with the exception of one or two cases, all tell the same story.

Berville Eck, employed as foreman in the mines of Kaufman & Co., at Alburtis, said: "I have been employed in the mines over twenty years and get $30 per month. I live 4 miles from here, and generally get up about 4 o'clock in the morning. I am a married man and have three children. I do not know how the men live, but judging from what I see here bread and molasses are the chief articles of diet."

The substance and effect of the policy of granting a privilege of selling untaxed commodities to some persons and imposing a tax on others for selling the same kind of commodities when the sale of both the taxed and untaxed commodities is necessary for the supply of the people is illustrated and proved beyond possibility of doubt, cavil, or question.

Here, then, we have the condition of the people, and we find that it corresponds with the conditions which naturally and logically result from the law requiring each consumer to pay 47 per cent. of his labor to the producer and seller of untaxed goods.

APPENDIX A.

Savings banks of New England, 1886-1887.

[From the Report of the Comptroller of the Currency, 1887.]

States.	Number of depositors.	Estimated population June 1, 1887.	Population for each depositor.	Amount of deposits.	Average to each depositor.
Maine	114,691	667,400	5.8	$37,215,071	$324.47
New Hampshire	132,714	371,100	2.8	50,822,762	382.94
Vermont	53,810	333,700	6.2	15,587,050	289.67
Massachusetts	906,039	2,056,600	2.3	291,197,900	321.40
Rhode Island	119,159	326,200	2.7	53,284,821	447.18
Connecticut	266,888	694,300	2.6	97,424,820	365.04

Classification of deposits in 104 savings banks in Massachusetts for last three months of 1873.

[From Fifth Annual Report Massachusetts Bureau of Statistics of Labor.]

Totals and classes.	Average amount of each deposit.	Per cent. of number of deposits.	Per cent. of amount of deposits.	Number of deposits $300 and under.	Amount of same.
Aggregate of all deposits, $24,663; aggregate amount of same, $3,870,227	$152.91	.....	.....	20,901	$1,496,274
Class I—Day wage receivers	121.72	57.7	44.8	12,770	868,162
Class II—Salary receivers	129.50	11.0	9.1	2,397	142,434
Class III—Professional persons	225.85	2.9	4.2	565	50,438
Class IV—Use or interest of money*	232.27	28.3	41.8	5,169	435,240

Totals and classes.	Per cent. of number of deposits $300 and under.	Per cent. of amounts of deposits $300 and under.	Number of deposits above $300.	Amount of same.	Per cent. of number of deposits above $300.	Per cent. of amounts of deposits above $300.
Aggregate of all deposits, $24,663; aggregate amount of same, $3,870,227	.....	.....	3,762	$2,373,953	.....	.....
Class I—Daywage receivers	61.1	58.0	1,472	865,341	39.1	36.4
Class II—Salary receivers	11.5	9.5	319	209,292	8.5	8.8
Class III—Professional persons	2.7	3.3	164	114,213	4.3	4.8
Class IV—Use or interest of money*	24.7	29.1	1,807	1,185,107	48.0	49.9

*Trading and capitalistic class, including trust companies.

APPENDIX B.

[Speech of Hon. WILKINSON CALL, of Florida, in the Senate of the United States, Saturday, February 17, 1883, on the bill (H. R. 5538) to reduce internal-revenue taxation.]

Mr. CALL said:

Mr. President: The amendment of the Senator from Ohio [Mr. SHERMAN] proposes to increase the rates of duty in the metal schedule upon all manufactures of iron. The importations under that schedule last year reached $605,000,000 of values. It is a matter which interests the whole country in the sum total of its annual production. I therefore avail myself of it as a proper occasion upon which to submit some remarks touching the principles and the theory upon which not only the amendment but the bill is based.

FIVE THOUSAND MILLIONS OF MANUFACTURES PAID FOR BY THE PEOPLE.

Mr. President, the production of manufactures in the United States in the last fiscal year was more than $5,000,000,000. This vast amount was used and consumed under our tariff system by the laborers of the United States at prices the minimum of which to some extent were fixed by the Government, and which we are now asked to increase from 40 to 45 per cent. It is surely an object worthy of Congress to consider carefully whether this amount of $5,000,000,000 annually levied on the production of this country is an equitable and reasonable amount, and whether it is advantageous to the manufacturing interests that it should be increased or diminished or continued.

For one I commence this inquiry with the admission that no amount of taxation is too great to be paid for the development of manufactures and diversified production, provided only that it is within the means of the country to pay.

I am persuaded also that this vast amount represents the energy and capacities of a body of men—the great manufacturers and their employés—who have a right to the respect and gratitude of their country, who have done a great work in the past and are now doing a great work for the improvement of the condition of their countrymen and of the world.

NO CONFLICT BETWEEN AGRICULTURE AND MANUFACTURE.

There is probably no more capable body of men than those who represent, direct, and control this vast American manufacturing interest. I am satisfied, also, that there is no conflict between the interest of agriculture and manufactures, but that the two harmonize, and whatever is best for the one is best for the other. In seeking, therefore, to find out what is necessary for both, I am prepared to vote for any measure, whether it be for protection or not, which, within the limits of revenue and constitutional power, shall be found necessary for the support and maintenance of this great interest, both in the States where it is and for the extension and establishment of manufactures and diversified production in every other State and Territory.

VALUES MUST NOT BE GREATER THAN PEOPLE CAN PAY.

The inquiry, therefore, which I propose to make is equally in their interest and for their benefit, as it is for that of the consumers, for it is manifest that the levy of five thousand millions of dollars annually on the production of a people must harmonize with the economic conditions of that people. It can not be done at arbitrary values and without reference to the production of the country in agriculture. The portion of agricultural production taken for this great interest must not be so great as to leave nothing of profit for that and other interests.

It is evident that it is to the interest of the sagacious and capable men who control this great interest that they should have customers who are able to pay, and that the home market which by law they propose to reserve for themselves should be a good one, and shall not be burdened beyond its means of payment. I have no doubt, therefore, that the capable men who control and direct this vast and increasing manufacturing interest are willing to accept any just conclusion which results from a fair, impartial, and truthful investigation of the principles of economic law and of public policy which result therefrom.

TAXES REST ON LABOR AND ITS FRUITS.

All taxation, whether collected through a tariff on imports or by internal taxation, rests on labor and its fruits. This is apparent when we consider that production and its distribution comprehend the whole of our values, whether by manufacture or agriculture. Commerce and exchange are only the agencies and means of distribution, and inventions and mechanics are only the auxiliaries of production and distribution, and are only of value as useful to these ends, and derive all their profits from production.

It might be curious and profitable and pertinent to this subject to consider and trace the relations of arbitrary values, or fixed capital as it is termed, to real values or production, and to consider it in its nature and relations to the end that we might consider this subject in all its just relations to the people, to production, whether in manufacture or agriculture, but, Mr. President, I shall not weary the Senate by any effort to enter at large into this part of the subject.

The principles which should direct the imposition of taxes, whether by taxation on imports or on internal production, are the same; they should be so levied that they will rest equally on the distribution of production or the fruits of labor, so that those who have much should pay much, those who have little pay little. They should be so levied that they shall encourage and not discourage production.

And here commences the inquiry which opens the whole subject of protection, which claims that taxation should be so levied that it will encourage production and not discourage it. Hence the question arises whether production is encouraged by the levy of taxes, and the extent and manner of the encouragement to be afforded. The proper determination of this question can only be obtained by a careful consideration of the principles of economic law which control and direct it and upon which labor, its sole factor, depends.

Many Senators have discussed the subject of the tariff in its economic and political relations in the light of experience and on the basis of certain assumed formulas of principle and fact.

I propose to endeavor to consider and analyze the economic principles involved in these questions, and, if possible, to advance step by step from one proposition to another to a final conclusion, in order that we may see where the truth may be found, assured that if we follow the path of a truthful induction, I shall not fail to reach a just conclusion.

ECONOMIC PRINCIPLES OF HIGH AND LOW TARIFF.

The school of protection under high-tariff rates and discriminating duties and the school of low rates and duties for revenue only both claim the object of their theories and the necessary result of them to be the protection of American labor. American labor includes all labor—agricultural and mechanical. The high-tariff theory claims that protecting manufacturing labor protects agricultural and mechanical and scientific labor.

Let us examine their respective claims by the rules of abstract reason before we seek to apply to them conclusions drawn from an imperfect and limited induction. The first question is whether it is more advantageous for a people to be all engaged in agricultural production or all engaged in manufactures, and this may be considered also as to whether it is more important or useful to one man or many men that he or they should have nothing but agricultural productions or nothing but manufacturing productions.

If we start with the individual man and let him have nothing but agricultural labor, he will have nothing but agricultural productions; he will have plenty to eat, but nothing to wear. So if he has nothing but manufacturing labor, he will have much to wear and much to exchange, but nothing to eat.

Hence it is clear that in the first case the agricultural laborer will convert himself into a manufacturer and give a part of himself to manufacture and a part to agriculture, and so of the manufacturing man.

Therefore it is apparent that both manufacture and agriculture are necessary to the individual man, and it is also apparent that this necessity does not disappear when one man becomes many men—a community or a nation.

The next question is whether it is better for each man to be both an agricult-

urist and a manufacturer, or whether the labor had better be divided and one man be an agriculturist and another a manufacturer. This is also apparent because of the economy of labor and the better quality and quantity of production which come of greater practice and skill in any one thing over less practice and skill.

We arrive, then, at the conclusion that a division of labor is necessary to supply the wants of the individual man, and also and equally necessary to supply the wants of an aggregation of men—a community, a state, or a nation.

So far the argument demonstrates only a necessity for a variety of production, both agriculture and manufacture, and a division of labor.

But suppose a single family composed of several persons divide labor and production among themselves; one is an agriculturist, one a manufacturer. So far as the division of labor is concerned, they are as competent as any number of persons to supply their wants. All the causes which pertain to skilled labor, which render a division of labor an economical factor, exist here. What hinders, then, this small community of a family of skilled laborers from supplying all their wants from their own midst? Manifestly, if these wants relate only to the range of production local to them, this may be done.

DIVERSITY OF PRODUCTION AND SKILLED LABOR OF DIFFERENT COUNTRIES.

But there is a diversity of production, of climate, and location in a country and in many countries; and as the circle of observation is extended so as to embrace the temperate and the torrid and the frigid zones, these diversities of production increase. The warm and genial air of Ceylon produces the spices and coffees and the perfumes of far-famed Cathay and the isles beyond; the frigid regions of the Poles, of Siberia and Greenland and North America, the furs and robes with which luxury protects itself from even the moderate inclemency of milder climes. Hence we find diversities of production in widely separated localities limit and affect the supply of the individual and the aggregate needs by limiting and affecting the supply of the material for manufacture or the necessary articles of subsistence for exchange. Hence it is manifest that diversity of production renders a division of labor between manufacture and agriculture in a small community of a single family, or even of many families, or of even a single country, inadequate for the complete supply of the wants of the family, the community, or the country.

We have, then, two essential factors in this economical problem, which belong to the region of calm and philosophic science. These are diversities of production in nature, diversities of labor and skill and development in mechanical science and art; upon these two factors a third and still more powerful factor, though purely artificial and related by no necessary connection, has erected a colossal fabric of power and even absolute and arbitrary dominion. This third factor is the diversity of capacity and knowledge among men, and the empire which these qualities have erected and still maintains, with no evidence of weakness or decay or failure, is the power of commerce and exchange. Hence we find in this economical problem diversities of natural production in agriculture in different and widely separated regions of the country, and diversities of capacity and character and development in man. Of the latter the Hottentot and the Terra del Fuegan, and the civilized, educated, and skilled artisan, machinist, and laborer of America and Europe, furnish the evidence and the example. The problem of the development of man by artificial means, by education, by invention, has been demonstrated in every age, but has never yet attained the plane of equality.

The problem of the development of an equality and identity of natural production in the materials for manufacture has made but little progress and has taken no steps toward an equality of educated and skilled labor. It is manifest that skilled labor, with its better economies, its larger and better production, will assert a supremacy over unskilled labor, even when in contact with natural production: and it may be said that skilled labor and the triumphs of commerce and exchange have, in every age of the world, accomplished the problem of removing the manufacture of raw material from the place of production to the place of residence of skilled labor.

But we are considering the expediency of developing the diversities of production, of manufacture and agriculture, within different countries or of creating an equality of skilled labor, invention, and mechanical power.

MECHANICS—INVENTION, MANUFACTURE.

Assuredly there can be no question of the almost unlimited advantage of the highest degree of skilled labor, of mechanical power, of invention, and manufacture within a State.

As to the abstract value of knowledge of skilled, educated labor, we can not measure it, we can not overestimate it. "The merchandise of it is better than the merchandise of silver and the gain thereof than fine gold. She is more precious than rubies, and all the things thou canst desire are not to be compared unto her. Length of days is in her right hand and in her left hand riches and honor."

There can be no question of the incidental advantages to agricultural production, of manufacturing production, in contact with and alongside of it.

First. It gives a home market for labor which otherwise would be engaged in agriculture.

Second. It stimulates skill in agriculture.

Third. It stimulates and produces invention and new appliances of mechanical power in agriculture.

Fourth. It enriches the state and contributes to the general prosperity by whatever it may obtain from abroad by the sale of its products. It creates competition with foreign nations. To such extent, then, as may be practicable the development of manufactures may be assumed to be of great and inestimable importance.

So far, I take it, all schools of political economy, all theories of politicians and statesmen will agree. But the differences will begin to arise when the inquiry commences.

HOW AIDED BY PUBLIC AUTHORITY.

Within what limits and to what extent and by what means is it wise and practicable to develop diversities of labor and production, whether in manufacture or agriculture, by the aid of public authority, by the exercise of the powers of government?

This question depends on a great many factors, and opens a broad range of inquiry, which it seems to me to a large extent to be foreign to all practical questions of state or public policy—under existing circumstances. But as it has been largely entered into here and is now occupying the thoughts of the ablest minds of our country, it requires careful and earnest study by those who are charged with the high duty of exercising the powers of government.

Within what limits is it wise and practicable to develop this diversity of production in a country? Certainly not beyond the extent when they become an onerous burden upon the existing industries of the state, nor beyond the extent to which the natural and climatic conditions of a country under wise economic conditions render easy of accomplishment, nor beyond the extent to which its commercial facilities and its power of exchange render easy and practicable.

Thus it could scarcely be concluded that any system of government aid could wisely develop industries which must depend on commerce and exchange for their value when there is no commerce and exchange and no possibility of it.

It is also apparent that no amount of tax on importations and no amount of bounty bestowed on manufacture among the Hottentots or the Terra del Fuegans would result in the development of manufacture unless by infinitesimal degrees or at some remote age.

The extent to which such industries should be developed by the aid of the public powers certainly ought not to be beyond the point at which they are profitably self-sustaining.

This conclusion seems so obvious that it is unnecessary to enforce it by any statement of the reasons why it is so. If it is not true, it follows that a privileged order of industry may wisely be created to which all other industries must pay tribute; not to the end that new and profitable industries may be either created or continued, but to the end that those engaged in them may be enriched beyond others.

This proposition would surely be indefensible under any condition of economic law, and also unsupported by any of the arguments by which different orders in a state are defended. In brief, it has no support on any ground of reason, under any condition of society or any theory of government, much less under a government such as ours, which with some degree of ostentation boasts of an absolute equality of men, of privilege, of right, and of opportunity.

By what means can the public authority, the powers of government, be wisely used to the end of developing diversity of labor and production in manufacture, in agriculture, in mechanics, in art and invention, in commerce and exchange, for we can not in just reasoning confine the inquiry to manufacture or to agriculture or to mechanics or to commerce? All depend on the same ground, the same principle, and must stand or fall together. If it be wise for the state to foster by any public policies or by any exercise of the public powers one of these for the object of diversifying labor and production, of enriching the state as a whole, the argument reaches all the others and can be measured in its wisdom only by the extent of the burdens required to be borne and the extent of the beneficial results to arise from it.

We all acknowledge that the first and greatest factor in creating diversity of labor and diversity of production, whether in agriculture, manufacture, or mechanics, or commerce and exchange, is education—the diffusion of knowledge. For this we impose taxes under our State laws, and in our national capacity we make donations of land which represent money, and we are now considering the wisdom and expediency of making large appropriations of the public money directly to this object.

Another factor in creating diversity of production and labor is commerce and exchange. For many years we have granted exclusive rights to American-built ships, a monopoly of our coasting trade, and given bounties to vessels engaged in the ocean fisheries, to the end that we might create ships and encourage sailors. We have given a monopoly to inventors to exact from the public for themselves all they can get for the use of every useful invention. We have given empires of territory, of land, and vast amounts of money and exclusive right of taxing all other industries to individuals as a bounty to induce the construction of railways as highways for commerce and exchange. We have created a vast monopoly, an exclusive right to corporate banking credit in individuals, to the end that we may facilitate and extend commerce and exchange with a sound and safe currency.

Indeed, it seems as if the habit and the theory of Government had been to create exclusive rights, monopoly, in every department of industry, and to limit by arbitrary law the field of competition; but this only relates to precedent, and does not advance us anything in the argument toward ascertaining by what means the Government may wisely use the public powers for the encouragement of diversity of production and manufacture. The limit and the direction of this policy must certainly be to such extent as it may benefit, the interests of labor in the aggregate industries of the country, and in so far only as it is consistent with their well-being; and in all cases this must depend on the extent of the burden imposed and the amount of the benefit to result.

No arbitrary rule or principle can ascertain and fix this amount. The policy of this Government, whether wisely or unwisely, has become established in favor of a revenue so far as practicable from customs, and no party or combination of men are strong enough to change this, or even seriously propose it. There are many reasons which demonstrate the greater equality and fairness of a direct over an indirect tax, which latter, when excessive, is felt only in the decline of industries, and not by the individual, and the influences which control the powers of this Government may some day see it in this light; but we are now concerned with the question of the adjustment of the customs in the tariff.

There are many reasons which demonstrate that if encouragement or aid is to be given by Government to any industry or interest in the state it is better to do it directly by grants of the public money, by bounties, or in some way separated from the methods adopted for raising revenue for the support of the Government; but what party will propose it, what statesman will advocate it? It is said if a revenue is to be raised by a tax on imports, let it be imposed on such articles as may be manufactured or produced at home, so as to encourage their manufacture or production. To this proposition I do not see that there can be any answer. Certainly it is wise to consider the incidental effect of a tax, and to see that its indirect effects are not hurtful, quite as much so as to see that its direct effects are not hurtful. But this conclusion will demand that the imposition of the tax shall not be upon articles that are necessary to enable manufactures to exist here, for you can not wisely encourage one manufacture by means which will discourage others, unless one be much more useful than the other.

NOT A QUESTION OF FREE TRADE.

We reach, then, the necessary conclusion that the question before us is not of free trade; not of a system of unrestricted exchange or barter which is to proceed from and be controlled by purely natural causes unaided by Government policies or Government aid or encouragement, or by the aid of powerful individual combinations of credit or exchange, which in most important respects relating to the means by which commerce may be extended is the same. But the question before us is of the duties we are to impose, the articles on which they are to be imposed, and the rate of duty which is to be levied.

It will be observed that under our system there is no place for prohibitory duties. Such duties are certainly without authority in any system of revenue, and if imposed must be upon a different system and under a different authority. If such duties are authorized under our system of government the authority must be found in the power to regulate our commerce with foreign nations, and by regarding the word regulate as extending to prohibition. We have found no difficulty with men of all parties in so regarding this word in connection with Chinese commerce, and if prohibitory duties may be authorized in the power to regulate commerce our friends of New England may derive some comfort in their sorrow over the successful assault of this measure on the universal brotherhood and the absolute equality of man in the constitutional warrant which the example gives of prohibition for protection.

We are brought then face to face with the existing tariff and its alleged advantages and defects, the necessity for its reform; and here we come upon the ground from which the Senators from Kentucky, Mr. BECK and Mr. Williams, and from Texas, Mr. COKE, and from North Carolina, Mr. VANCE, and from Mississippi, Mr. Lamar, send out their powerful array of facts in demonstration of the necessity for tariff reform. I do not understand that the argument goes further than this. I do not understand that any of these Senators deny that if England or France or China should by arbitrary law force their people to labor fourteen hours a day and refuse them all compensation except necessary subsistence—that these Senators contend that it would be unwise in us to protect ourselves, if we could, against the hurtful cheapness of the results of their labor.

TAXES ON CONSUMPTION.

But, Mr. President, what is this tariff, and what the evils which grow out of it?

It has been estimated that there are no less than from fifty to one hundred men in the United States whose average income is over $1,000,000 a year; there are about 2,000 whose income is $100,000; there are 100,000 whose income is $10,000 a year; there are 1,000,000 whose income is $1,000 a year; there are 14,000,000 who work for the support of their families whose average income is less than $400 a year.

Under a revenue system derived through taxes upon consumption, it is certainly true that the 14,000,000 who are only supporting their families will pay nearly all the taxes for the support of government, and the fifty or one hundred men who have $50,000,000 a year will pay little or nothing.

Let us consider, then, the ideas that justly belong to this subject. We have reached the conclusion that the policy of Government may be wisely used for the encouragement or creation of diversity of production, inclusive of skilled labor and of manufactures, whenever this result can be better and more completely attained with Government aid than without it.

DIVERSITY OF PRODUCTION AND CHEAPNESS.

In brief the formula of reason would seem to be diversity of production is necessary to the prosperity and welfare of an individual, a family, a community, a nation, in agriculture, in manufacture, in mechanics. The natural stimulus of want, of demand, does not of itself create supply, educate skilled labor, produce spontaneously the efficient causes which are requisite for the combination of credit and educated labor upon which manufacture, mechanics, and diversified agriculture must depend. This truth is demonstrated by the absence of skilled labor and diversified production in many parts of our country. These proceed either from Government aid or from powerful combinations of individuals having large credit, and the latter are dependent upon the profit to be derived from the sale of the manufactured article. If advantages of location and education or other causes producing cheapness prevent such combinations from deriving a profit, it is evident that they will have no motive to be made and will not be made.

We have, then, the proposition to consider whether admitted cheapness of an article in itself is more advantageous to an individual and a people than the direct and indirect advantage of producing it. Let us examine with care and patience this proposition, for upon it depends many of the conclusions which in reason determine this question—cheapness to the consumer, to the individual, to the people; the least degree of labor and effort necessary to obtain it is the essential need, the paramount object to be attained at all times and under all circumstances it is a controlling fact. If a person can at all times be assured of purchasing or obtaining any article at the smallest possible cost of labor or effort on his part, he has certainly reached in respect to such article the most advantageous economic condition possible; and as the consumer must, except in agriculture, be far greater in number than the producer, the cheapness of production will always be the essential object of economic effort.

But this cheapness to the individual, to the family, to the community, to the State, or the nation of States must be measured by reasonable standards, and not by nominal and delusive ones. They must be standards which correctly measure the effort and labor which is necessary to be given for the article, and therein the certainty and the regularity of its supply, and including in this the means of payment, whether in the labor of the consumer directly or in his or their labor after passing through many exchanges into different productions, each bearing its own cost of exchange and transportation.

It is needless to pursue this branch of the inquiry further; it is evident that this fixedness of price, the certainty of supply of any article, can not be relied on. War, pestilence, and famine, the ever new and ingenious combinations of commerce and exchange, causes both natural and artificial, combine to prevent this necessary element of cheapness from being a certain quantity in the price of any articles of production.

We reach, then, the conclusion that permanent cheapness of production is dependent on causes which increase in uncertainty as the extent of the regions from which the supply comes increases—and in exact proportion to all the economic conditions of the country from which it comes, on the extent of its taxation, on the condition of its finances, on the modes of its transportation, on the skill and invention of its people, on all the social and political causes which constitute good or bad government. We must therefore leave out fixedness of price or permanent cheapness as a controlling consideration in the argument, for the reason that it is an impossible result, and seek for the causes which secure it approximately.

What, then, are the causes which produce cheapness of production? They are the same without reference to the subject to which they are applied. Abstract truth, whether in mathematics or in morals, is the same without reference to its application. It does not vary with the subject to which it is applied.

What are the causes, then, of cheapness of production and the cheapness of price of commodities? They are supposed to be cheapness of labor, cheapness of material, skill of labor, and the relations of supply and demand. These results are supposed to be produced by competition; whether foreign or domestic its influence is the same. Let us examine, then, and see what is competition and from what source it comes and what laws govern it. What is the extent and limit of its influence? Does it respond like the barometer to the temperature? Is it of natural growth, or is it the result of foresight, of educated intelligence? Is it the child of commerce and exchange and without life until they breathe into it the power of being? If it is itself the creature of foresight and preparation, then we shall not find it unless we supply or create this foresight and preparation.

Manifestly, if we are to reason on this subject, we will agree that diversity of production, namely, agricultural, manufacturing, mechanical, is absolutely necessary to an individual, a family, a people, as they are to mankind. We will agree that educated skilled labor is essential to this diversity of production, and that this skilled educated labor is no more of natural, spontaneous growth than other kinds of knowledge and skill, but is the result of care, effort, foresight, of causes which are artificial and the outgrowth of long-continued human effort, and of policies of state and economies of business. We will agree that this care, effort, and foresight must be provided either by public or private effort.

Entering, then, upon another point of view, we will seek to find out whether a family, a community, a state, a nation of states may with greater comparative advantage rely on the supply of articles of manufacture, of diversified agriculture, and mechanical skill from other families, communities, states, nations of states. We will agree that the essential economic test of this comparative advantage or disadvantage of local, family, community, state, or national production and supply, as contrasted with other production or supply, is the permanent cheapness and certainty of supply of the products of skilled labor.

We will agree that this permanent cheapness of supply is dependent on causes which increase in uncertainty with the extent of the circle of the sources of supply. We will then have reached a conclusion upon which we can base some reliable inductions. To this we may add that competition within certain limits is a factor in reducing the cost or securing cheapness of commodities in some proportion to the cost of production; that this competition is itself the creature of effort; and that after its birth it is subject to many artificial causes which regulate and control it both at home and abroad; that the extent and power of individual combinations to control and limit competition, both in production and in transportation, and in commerce and exchange, has become so manifest and is so potential as to control the exercise of the powers of government; to overthrow its declared policy, and create privileged orders or classes in the state, with all the characteristics of the nobility of other countries, and with all the power, pomp, and prestige of other times. We shall see in the future policies of state which the public good shall require that we will be dealing upon false economic conditions if we shall assume in our laws that this diversity of production, this development of manufacturing and mechanical production which is absolutely necessary alike to the individual man and to every aggregation of people, will exist without artificial aid or some inducing cause greater than the mere want or demand for it, or that it will exist without public policies in aid of it.

If we shall assume that competition, whether foreign or domestic, will be an efficient and sufficient cause to secure cheapness of commodities, or to regulate equitably the division of production, whether of agriculture or of skilled labor in manufactures or mechanics, we will be acting upon false premises, and the conclusions which we draw from them will be false conclusions, not founded on an induction from facts. We will be attempting to chain a Samson with the green withes of the Philistines when we seek to deal with this great question, which creates and overthrows governments and institutions, upon false premises and unsound inductions. This question of the supply of the needs of man, of the family, the community, the state, the nation of states, is a giant capable of overthrowing all powers that fail to satisfy his wants. We can lead him and direct him by superior intelligence in the paths of abundance and contented comfort, but we can not chain him to want and poverty and destitution with the gossamer web of a false logic.

Foreign production and home production, whether in agriculture or manufactures or mechanics, in art or science, in everything that brings to every family abundance of the things necessary to human life and comfort, and everything that enables man to use these necessaries of life so as to increase his capacities for enjoyment and for usefulness, are parts of one harmonious whole. In economic law it is true as in all other things that "one touch of nature hath made all mankind of kin."

The protection of American labor against foreign labor is a solecism and has no foundation in truth. American labor and foreign labor, by economic law which no statutes can change, work together for the benefit of each. The protection of American labor from foreign labor has no connection with the protection of American labor from poverty, want, and insufficient wages by securing to him reasonable compensation for his labor and the power of purchasing an abundant supply of the comforts and luxuries of life.

Cheapness of things necessary for use to every individual and abundance of supply and the means of purchase are all questions of economic supply on which the just rights of labor depend, and these are themselves dependent on the increase and diversity of production and the facility and cheapness of transportation and on a proper system of regulation of commerce and exchange or distribution. This great question of the abundant supply of the wants of labor—that is, of each member of the community—it is evident is the great question of enlightened government to-day and in future time. Abundance and diversity of production and equal and just means of distribution are the factors on which it rests.

To a consideration of these agencies in all their vast field of influence the intelligent mind must address itself. To exclude productions, to increase the price of commodities, to create scarcity and dearness of commodities, to increase the nominal wages of particular or all classes of labor, and to decrease in still larger proportion the capacity of his wages to supply the wants of the individual, the family, the community, the state, the nation, must be false ideas and of no influence in bringing about the abundant supply of the laborer with the comforts and needs of human life.

It is also evident that in a consideration of the means and agencies by which diversity of production in agriculture and mechanics and manufactures and skilled labor is created, stimulated, and encouraged, the great combinations of credit, the great corporate enterprises which bring the power of combination to their aid, are similar in their influence to the aid of government to a public policy founded on law.

The power of government is only the power of combination. It is of no importance whence the power comes or what causes it if it is power in its influence and effect.

DEMAND AND SUPPLY.

We have seen that this diversity of production, this manufacturing labor, this educated and skilled labor does not grow spontaneously, that it requires artificial aid for its development either in the established combinations of great agencies of credit or the influence of government. That the natural law of demand and supply, as it is termed, is itself the creature of foresight and preparation and great combinations of credit, and a high order of economic civilization which applies the power of combination of established powers to this end, similar precisely to the aid of government, both in its character and effects. In brief, that there is no natural law by which supply is immediately born of demand.

That the uneducated and unemployed men, women, and children of many parts of our country have wants—demands which do not bring to them supply of the things they want—but that they live, as they have lived for hundreds of years, the just and proper subjects for the protection of such agencies or causes, be they what they may, as will create this supply for their wants which in the long ages has not come in answer to their demands, even when this demand was in an agonizing appeal to protect human life from beggary, from starvation, from disease and death. All history attests that supply is not born of demand, but that its third factor is the beneficent influence of intelligence, of long effort, of skilled and educated labor, and this factor is the creature of public policy and of a high civilization. We then come to consider the character of the aid which government may properly give to the development of diversity of productions in agriculture, in manufactures, and mechanics, to the end that it may be efficiently given and that it may produce the result of abundant and cheap production and the development of skillful and educated labor.

GOVERNMENT AID TO PRODUCTION.

In what form shall this Government aid be given? By what measures shall we legislate to the end that production may be diversified; that it shall be abundant and cheap to all consumers; that skilled labor, educated labor, its necessary factor, shall be created?

Let us examine this question in its own form and measure it in its own proportions. Let us regard it in its own great majesty, its all-sufficient strength, and not seek to decorate it with meretricious ornaments and defend it as the protector of American against foreign labor, but simply as a chief factor in the general prosperity, and as absolutely essential to the laborer whether foreign or domestic, and as the strength and glory of States.

Diversified production—skilled educated labor—is necessary to the supply of the wants of each person of the 50,000,000 of the people of the United States, and therefore of each family, community, State, and of the nation of States.

It is then of such importance as to demand the earnest thought of the statesman, and of such importance as to demand that the powers of Government shall be so adjusted as to embrace it. Let us then examine the means by which this Government aid, this public policy, shall be effectually and justly used to the end of causing diversity of production and the creation of skilled labor.

There are several methods in which production, whether in agriculture or manufactures, may be encouraged by governments. One method is by such an exercise of the powers of government as will build up, foster, and extend commerce and exchange, and create and regulate the institutions of credit, which are its proper and efficient auxiliaries; another is by grants of money as a consideration or inducement for any particular production; and still another

is a grant of an exclusive right to a particular production or manufacture. This grant may be either a direct grant of the exclusive right to a particular production or manufacture, or indirectly by a direct prohibition of the production or manufacture by any other person; another by indirect prohibition of the production or manufacture by imposing on all production or manufacture, except the privileged class, the obligation of selling at prices above a certain minimum and fixing this minimum at such a price as will secure a certain profit to some producers over others; that is, by requiring by law the consumer to pay for it a price not below a certain minimum or by increasing the price of the article to the consumer.

TARIFFS AND THEIR EFFECTS.

This latter method is the means adopted in the tariff system; that is by collecting a revenue out of certain articles for the purpose of increasing the price of such articles to the people, to the end that persons may be induced to produce or manufacture them.

The system then is an increase of the price of the commodity to the consumer that a profit may accrue to a producer that production may be created, with its direct and indirect advantages.

Competition must be limited—by an imposition of higher price upon the production of all competitors, except those confined to certain localities—to the end that competition in a designated locality shall ultimately reduce price.

Price of commodities to the people shall be increased to the end that profits may be secured to the producer, and that ultimately prices shall be reduced by domestic competition.

It will be obsrved that there can be no correspondence between the amount that will be obtained by a tax on consumption and the amount that may be required for the encouragement or creation of any particular production or manufacture; as, for instance, if any species of cotton is manufactured abroad with foreign labor and machinery at 10 cents a yard, and the proper and necessary cost of manufacture in this country is 20 cents a yard, the amount charged to the consumer in the aggregate will bear no proportion nor in any wise be related to the amount necessary for the encouragement of the manufacture or production. The aggregate amount paid will be measured by the amount of consumption, and all of the excess of consumption over the amount of home production will be unnecessarily paid.

If a million of yards is the extent of home production and 10,000,000 the home consumption, and 10 cents the duty, just double the cost of its production by this class of manufactures, it is evident that so long as 9,000,000 yards shall be supplied by the manufacturer, who is not within the privileged class, the consumers, the whole people, will pay 10 cents a yard or $900,000 merely that $100,000 may be paid to the producers of the million of yards for the development and encouragement of his home industry.

It is evident that $900,000, or nine times the amount necessary to be produced, is a very unwise and unjustifiable mode of raising a hundred thousand dollars, and that the only proper way would be to raise the $100,000 and appropriate it directly to the producer of the million of yards of cotton; or, in other words, that a tax on an indefinite and increasing consumption of any or all production is a wasteful and hurtful and unnecessary and excessive method of raising any particular sum of money. The tax in this instance and under this system seeks to find its justification in the fact that while $100,000 of the given amount of the tax is appropriated to the necessary purpose of encouraging the home production, the other $900,000 of excessive cost becomes revenue.

The object of the impost, the tax, or the discrimination, it does not matter which you term it, is to develop the home industry by securing 20 cents a yard to the home manufacturer; and under all circumstances the inseparable incident of such a tax or tariff is that an amount exceeding by indefinite and great proportions the amount necessary either for the encouragement of the manufacture or production sought to be aided and the amount required for revenue will be collected.

This system, it is evident, is the least hurtful when the impost or tax is adjusted at such an amount as will not be prohibitory, but is so carefully adjusted that competition will exist between all producers, both foreign and domestic. So long as this balance is nicely adjusted and this competition exists the price imposed on the people is limited by the competition; but when the duty becomes prohibitory the purchasers, that is, the people, are left to the unrestrained will of the producer, except as home competition is developed, because this local competition must be developed, not only by local demand but also by experimental success. The burden of such an imposition on the labor of the people then becomes onerous, oppressive, and ruinous, and the public object of developing and continuing the diversity of production and manufacture is lost in the eager pursuit of their personal pecuniary interest.

The method, then, in which the public policy may be wisely directed to the end of producing this necessary diversity of production, this educated and skilled labor, this abundant supply of all the comforts and necessaries of life, this division of labor which relieves any one branch of production from superfluity of labor, this competition between home and foreign industries which shall cheapen comforts and necessaries and render it possible for other wise public policies to bring these comforts and necessaries within the reach of every man, woman, and child, is evidently that which shall most directly apply the necessary amount of aid to the direct encouragement of the production, continuing only so long as is necessary to make this industry self-subsisting.

But we are precluded from the consideration of any other method of encouraging or, as the phrase is, protecting or developing diversity of production, except by a tariff for revenue. It is evident that such a system is by no means the best or most efficient for the purpose of creating American manufacture, and that it has nothing to do with the distribution of the profits of manufacture. The profits of manufacture and the distribution of the profits of manufacture or production on which the wages of workmen and the protection of American labor depend are two different subjects. The ratio of distribution of the profits is not determined by the abundance of the profits in any other sense than it is necessary to make a profit before there can be any distribution of it, whether fair or unfair.

Our inquiry here is confined to the question whether a diversity of production, whether agriculture, manufactures, mechanics, skilled labor, should be encouraged, aided by public law, or whether they should be left unaided to chance or natural causes; whether they should be left to struggle into existence against established combinations of credit or to remain unborn. If we answer these questions in favor of a public policy that will furnish this aid, we then approach the question, in what form, whether by direct aid or by a tariff, we shall furnish it. In this inquiry we are confined to the policy of a tariff, to an impost or customs; and however objectionable and unequal and imperfect and oppressive this method of aiding American industry or of diversifying American production in agriculture is, and is liable to be made, we are brought to the alternative of leaving manufactures and mechanics and diversified productions in agriculture either to chance or the slow development of purely natural causes, or to harmonize the objects of revenue with the development of diversity of production in the United States under a tariff. In this alternative there is not and never can be any choice. The necessity of a supply of the wants of mankind; the necessity for comfort and abundance to every family; the inadequacy of purely natural causes to produce this diversity of production; the necessity of whatever means will produce the result of cheap and abundant supply of the comforts and necessaries of life to every family, will assert itself, whether under a tariff or otherwise, and will mold and direct the policy of every enlightened government. Our duty now, one to which we are restricted not alone by the traditions and opinions of the past generations, but by a policy now established and fixed in the interests and opinions of the country, is to harmonize the interests of revenue under a tariff, and by means of it, with the interests of manufacture and agriculture, and with the interests of an abundant and cheap supply of the comforts and necessaries of life, and of everything that is included in and the result of diversified production and skilled labor in a country.

Let us address ourselves, then, to the principles on which this harmonious adjustment may be made under our revenue system. We will commence this investigation with the knowledge that a tariff is in itself of all modes of collecting revenue the most hurtful and oppressive to all the industries and consumers of a country; that it is a Chinese wall, and its admitted and desired effect is to create local competition by excluding foreign competition, to create home invention by excluding foreign invention; that its means and entire power of effecting any object is by increasing the cost, by rendering commodities dear; that it is not only a tax on consumption, but that it first renders the things consumed dear to the consumer; that while the path of intelligent effort in this advanced period of human history is to make inventions by which labor shall be saved, by which the forces of all the elements are made to relieve man of labor, and to enable the least amount of labor to procure the largest comfort, the system of tariff imposition is to diminish supply in order to increase it, to increase the price of the comforts and necessaries of life in order to diminish it, to increase the price of all labor without any correspondence or proportion or relation to the value which wages shall bear to the value of the commodities increased in value; that its theory is to create exclusive right, power, or privilege in one or many men, and thus enable them to obtain contributions from the labor of a large number and thus aggregate values; that it assumes that it is the nature of this exclusive right and power to distribute this aggregation of values beneficently and with proper regard to the necessities and interests of others; that it fails to recognize the fact that there is no natural law which makes fair and just compensation for labor result from the accumulation of its proceeds or from control over production; that its whole influence in respect to labor is based on the ideas that abundance and cheapness of production must precede abundance and cheapness of supply, abundance and cheapness of the means of production (including both material and labor) must precede abundance and cheapness of production, and that, although each of these are essential conditions to the others without which they can not exist, and neither are sufficient of themselves to produce the other any more than the human faculties, although present everywhere with all men in all climes and conditions, will as a necessary consequence of their possession develop themselves into their greatest capacity and power; yet it fails to recognize the essential fact that the abundance and cheapness of supply depend on commerce, exchange, and transportation, and on its equitable distribution or the just compensation of labor according to its value and capacity of production.

Let us, then, approach this question of the adjustment of the tariff with a full knowledge of the extent of its power for good and the extent of its power for evil, perceiving always that while a tariff may by limiting competition and increasing prices, encourage and stimulate production in manufactures and in agriculture and invention, and while in the absence of the established combinations of credit which are assimilated to Government aid the protection or encouragement afforded by a tariff may be a preferred alternative to the absence of diversity of production, to the absence of manufactures and of skilled labor, yet that it is properly subject to the objections which we have stated.

Suppose a community is supplied with agricultural productions to such an extent only as is sufficient for their wants, and the demand is so nicely balanced as to be only equal to the supply, and the question arises whether the producer of the supply of necessaries should be protected from a supply of these necessaries from some other community which would so cheapen them as to prevent the home producer from continuing this production, what would be the advantage or disadvantage of protecting the community against this supply, or against competition by keeping up the price of the necessaries of life, and what would be the disadvantage of giving the protection?

The wants of the community we will suppose are all supplied from their local or home productions. Any interference will disturb this economic adjustment, and the preservation of it by protection, by prohibitory duties, would be the proposed object of public policy; but the prohibition might soon develop the home supply beyond the home demand. The consumers would then have the advantage in the cheapness of commodities, and might demand legislation prohibitory of exports on the same ground that the producers demanded it, namely, on the ground that their employments would be made unprofitable by increasing the cost of subsistence. The theory of protection or proper Government aid in such a case would be to do that which would best promote the general interest or good of the community.

The question would arise whether the general good would not be best promoted by such an exercise of the public powers as would neither sacrifice the producer nor consumer, but would secure employment and reasonable compensation to each. The consumer might justly say that to render dear the necessaries of life would be an injury to the majority without any advantages to the state, the producer; that to allow his labor to be unremunerated would be to deprive him of the power of production and to transfer the production to others; that employment for many persons would be taken away, and by the extent of his loss the aggregate injury would be measured.

All this would doubtless be true, and in just such a community, with balanced interests so nicely adjusted, if it were possible to harmonize not only the present relations of demand and supply, but also the future, the object of economic effort would be attained in everything except the development of new industries. The community would be an Arcadia of simplicity, abundance, and contentment, and all that would be needed would be the law of prohibition to place the angel with the sword at the entrance of this Eden.

LABOR AND CHEAPNESS AND ABUNDANCE OF PRODUCTION.

But if we alter these conditions so as to represent a community with a supply of the necessaries of life inadequate to demand, but with the larger part engaged in pursuits which make them consumers of the necessaries of life, and a part only in the production of these necessaries, what will be the effect of legislation which shall make the necessaries of life dear to labor?

Is it not true that even the farmer who produces articles of subsistence for sale is not benefited by increasing the dearness of those articles which he produces, unless he produces with his own labor alone all of his supplies? In that case the greater the value of his superfluity the greater his profit. But if he relies on labor of others the greater the unnecessary cost of this labor because of the dearness of subsistence to it the greater his unnecessary expense, and if he is dependent on other communities for the purchase of his commodities, the greater his loss in competing with those who are not burdened with an unnecessary element of expense. It may be assumed as a principle of economic law that dearness of the necessaries of life are not an advantage to the producer or the laborer; that as all production depends on labor and labor on subsistence, whatever relieves labor of unnecessary cost increases the net profits of labor and production, and that the net results to each is to have a larger amount of surplus of production in the results of labor in everything. But this general principle of economic truth has doubtless its qualifications when applied to the relations of communities with each other. And while it is certainly true that the foundation of all economic law is the abundance and cheapness of production, and the abundance and cheapness of supply, and the abundance of de-

mand, and the facility of exchange as a necessary factor, there is no place in its whole system for the unnecessary and superfluous cost of anything, and nothing can be made cheap by its being made dear.

To reason on this subject of the relations of cost, of commodities, of what is termed price; to understand and give meaning to the terms so often reiterated, that the greater cost of living here the greater cost of labor, requires greater compensation, let us consider what does cost or price mean. It means the amount of labor, the quantity of human effort which is requisite to exchange for labor and effort of another and different kind. It means the amount of the production of all kinds that can be obtained by a given amount of labor. The expression and measure of this quantity in dollars and cents, in the denominations of money, for reasons which are obvious, but which it would be tedious to mention here, is delusive and altogether inadequate to represent this quantity.

Commerce and exchange are the means by which the fruits of labor are exchanged and transferred from one to another.

How can the laborers between whom these fruits are exchanged be benefited by diminishing the quantities which either or both shall receive?

How shall either party of laborers in this exchange of the fruits of their labor be benefited by increasing the amount of their labor required to be expended in the production of the fruits of their labor?

How shall either party of laborers in this exchange be improved by the greater amount of labor required to be expended by the other in obtaining the fruits of their labor?

If the Englishman has to work three days for the amount of production that the American laborer obtains for one day's work, how does it injure the American to obtain in the exchange two days' labor of the Englishman for one of his own?

It is evident, therefore, that there is a false condition here, and that the laborer is not injured by the cheapness of labor and the cheapness of productions elsewhere, but that to all every progress in the line of reducing the amount of labor necessary to be expended for production is a benefaction, commencing with the man who saves so much of his labor and extending to all others whom he can, if he chooses, allow to enjoy the fruits of his production for a correspondingly smaller amount of their labor.

But the proposition is that the cost of labor, its cheapness and dearness, must be measured by another standard, namely, the cost of subsistence to himself, the amount of his labor which he must give for his subsistence. If one man can live on one-half as much as another laborer and do the same amount of work of the same kind, his work is cheaper by that much. Another standard, therefore, intervenes here, namely, the value of the laborer in respect to the cost of subsistence and the scale of the comforts of life used by the one or the other. In this point of view, while this as much as any other element of cheapness inures to the benefit of all other laborers in cheapening production and increasing the amount of the production of others which each day's labor will buy, it is evident that all laborers who require the greater amount of the comforts of life are disadvantaged as compared with those who labor under privation and in destitution and for an amount of subsistence not measured in any degree by any just rate of compensation. This, it is true, is an arbitrary and artificial factor and bears no relation to economic law; but still it is a real factor, and the laborer who requires comforts can not compete with those who require none, and if it is desirable to a country to have the laborer, the fruits of such labor can not be thus antagonized, but must in some form be protected by a just exercise of the powers of government. The existence of this labor and the fruits of it, and the abundance, regularity, and cheapness of its fruits, are, as we have shown, necessary to the state and to all of the people of a state; and the comfort and just compensation of labor are also essential to good government and prosperity. But it must be considered here that the injury which may be done to labor in one country by the labor of another country working under conditions of want, privation, and suffering is only temporary.

The conditions of comfort, of abundant subsistence, of pleasant and healthy surroundings, are the conditions of health of body and mind, and of the most efficient exercise of their faculties; and the efficient exercise of the mental and bodily faculties of the laborers is the condition of the most abundant and the most excellent quality of production, and this latter is the condition of the greatest cheapness of production; and whenever we shall arrive at such a condition of law as will inseparably connect the comfort and well-being of the laborer with the skill and intelligence and efficiency of his labor, when we shall supply the moral force in place of the physical, which will require the persistent effort to acquire, and apply the faculties of intelligent and healthy labor, we shall have left no room for the competition of inferior labor or its productions.

These are public objects which concern all the people, and the body of the State may well afford to be taxed in whatever form may be least hurtful for this public object. I reach the conclusion, then, that in the adjustment of a tariff for revenue, if it is to be so raised, its incidental effects should, if possible, be directed to the end of securing employment and just compensation to all persons living under our laws.

INSTANCES OF PROHIBITORY DUTIES AND OF FOREIGN COMPETITION.

Let us suppose that a million of people are settled in some country under the most favorable conditions of soil and climate, and that they comprise within themselves all the different kinds of skilled labor and the arts and sciences. They adopt the policy of imposing taxes on consumption for the purpose of encouraging the different industries, and they do it in the form of prohibitory duties of a high protective tariff, which prohibit importation. This would be the perfection of the policy of a tariff for protection.

Let us examine, then, carefully this instance and develop and analyze it.

The soil is prolific, the climate favorable, their knowledge of agriculture advanced, all the economies of labor excellent. An abundance of subsistence is produced for the whole population, fruits and flowers abound for all.

The whole population is engaged in agriculture and horticulture. A wise statesmanship, exercising the powers of government, carefully ascertains the part of this labor necessary to produce abundantly the subsistence and fruits necessary for an abundant supply for all. The remainder is divided and assigned to all the several employments necessary to supply the wants and luxuries of the whole body of the people. The carpenter charges at will, without competition, except from his home competitors. The manufacturers of clothes charge at will; the furniture dealers the same; the house-builders also; the railroads the same. They are left to the law of competition among themselves to regulate their exchanges

It is evident that the farmer who has a superfluity will desire to exchange it for such things as he requires but does not produce, for all articles of comfort and luxury, and that this exchange will be limited only by the wants of each and the imperative needs of each. The relative quantities of each which will be exchanged for the others will be determined only by their necessities and tastes and by the abundance of supply. Then will come the force of combinations between those who have similar interests to keep up prices, but this force can operate only temporarily, and not permanently, against superfluity of production.

But supposing all branches of industry within the close community to produce a superfluity, a new division of labor will have to be made, and still another part be applied to the higher arts and to the supply of wants developed out of this superfluity of production.

This instance would represent a condition of economic law which would be fair and equal as between themselves. No objection could be made that because the Government had apportioned the amount of labor to each pursuit and had excluded all productions outside of the State the agricultural part of the community were imposed on. They could only complain that the productions of the outside world were excluded and insist that the abundance of production, and its cheapness of supply and the just distribution and compensation of all was due not so much to the exclusion of foreign productions as to the proper division of labor.

But let us compare this State with another with a population of a million of people similarly located in every respect, and in which there is no prohibitory duty and no protective duty, and find the difference. In both a small part of the people are adequate to produce a superfluity of subsistence; in both a wise public policy divides labor and directs it into new productions; in both skilled labor, art, and science abound. In this latter State a tax is imposed on all the people for precisely the amount necessary to sustain and compensate those engaged in the new division of labor until it becomes self-sustaining. No tax upon consumption is imposed; foreign productions and inventions come in free and unimpeded, and the standard of price and value in all things is fixed by this competition, except in so far as the ingenious combinations of commerce and exchange may still introduce an unnatural and arbitrary factor to control prices.

If more highly skilled labor and better economics of well-fed and well-clothed, contented labor, wisely distributed into different employments as the wants of the people and the extent of production, or demand and supply require, has produced an abundance of supply on the cheapest possible terms as to price; if labor-saving inventions have reduced the amount of human labor requisite for any given amount of production to the minimum in this latter state, there will be no room for competition by the products of more costly labor.

This result will be reached by the competition between the fruits of labor in all parts of the world, in which contest the cost of production has been constantly lessened and the contest left to rest upon the progress of invention and the greater efficiency of labor, in which struggle the advantages of better fed labor and more contented labor and better machinery have been the factors relied on.

With productions thus increased and cheapened, with an industrial system resting on the economic truths that the intelligence of the laborer directs the use of his faculties better than his ignorance, that it improves his habits and his strength and his health, that better intelligence and better habits and labor-saving inventions produce more abundantly and more cheaply than inferior labor the production of the state where competition has been excluded and prices made dear by the opportunities of combination to keep prices down will be at a fatal disadvantage.

It is evident that the superfluities of production from the state where values have been increased by arbitrary law can not compete in outside markets with production reduced in its cost, not only by skilled labor and by a wise exercise of the public powers in the constant division of labor, but also by competition from the outside world—both in labor-saving machinery and in invention and from natural advantages.

We perceive, then, that to the producer, whether a farmer or a manufacturer, the only law that will measure the value of his production in exchange is the amount of labor and the cost of labor as measured by the amount and the cost of labor of the object to be exchanged, and that the chief agents in increasing or diminishing the cost will be the greater or less skill and efficiency of the labor, and that all the elements beyond these that enter into the price are those of commerce, of exchange, of transportation, and of credit, which are the subject of the enterprise and commercial sagacity of a country.

But we are considering the laws of production, and not of distribution and exchange. We must confine our attention to the subject of the means by which production of a country may be diversified and the wants of all the people supplied—the subject of the agency of skilled labor in this result and of a division of labor—the subject of the effect and influence of foreign and of domestic competition.

We have seen that it would be possible under a system of entire seclusion of a people from all foreign production so to adjust the economic conditions by proper divisions of labor as to produce a superfluity of productions and of all things susceptible of production and manufacture there, and that in such a case the increase of values between the abundant production would only be the wants, necessities, and tastes of the people, the cost of transportation, and the reasonable cost of exchange.

We have observed that in this instance in any exchange the amount of labor required to produce it would be the first element of cost, then of transportation, and then of exchange, and this amount would be a strictly equitable mode of exchange, in which no hardship would exist. There would be no estimate of comparative values of their production estimated by any other standard of values. The producer of wheat could not say that wheat in another country will bring so many dollars a bushel, and that this sum represented more than he could obtain for it at home, for he has received the value of his production by an equitable and just standard of compensation, which is equal and just to all.

What do you do, then, when you adopt another standard and introduce the value of production as fixed by other countries, a standard fixed by what you term the law of competition, the law of supply and demand? Do you adopt a standard of value fixed by any just and equitable rules, by any standard based on just compensation to all the agencies engaged, on a compensation based on a just division of the value of the things produced in proportion to the agencies of production, to the skill of the laborer, and the amount of his production? For this is unquestionably the just and compensating law of values, until the elements of transportation, of commerce, and of exchange are added, and competition is only of value in so far as it is a means of reaching this end.

You adopt a standard of price and a quality of excellence measured and fixed by great combinations of credit, which are themselves the creature of the exercise of the powers of foreign governments.

The truth of this conclusion will appear from a consideration of what are the elements of value in any article of foreign production. What is it that fixes the price abroad?

First, necessary cost of production, including subsistence and compensation of labor, cost of material and transportation. To this must be added the cost of exchange and credit used in effecting it. To this absolutely necessary cost must be added the amount which may be added by speculative and artificial considerations, such as speculation, such as purchase and concentration of the whole supply; such as result from the control of credit; such as result from the great associated capital of these industries, which enable them to put on the market just such amount of the supply of these commodities as will not destroy the price; such combinations as will enable them to limit and prevent competition.

If Mr. Keene could make a combination which enabled him to control the entire production of a great staple like wheat; if Mr. Vanderbilt can make a combination which will control the rates of railroad transportation for such vast production and travel as that of the fifty millions of the people of the United States, what will prevent the concentrated credit and capital of Great Britain from making the foreign standard of value by which American production is to be measured altogether arbitrary, and in what respect is such a standard of values a better one for American interests than one fixed by our own Government and by our own people? And in what respect can such a standard of values more truly measure the proportions of compensation of labor in our own country than a standard of our own?

But, it is replied, that this theory, and it is confronted with a fact to which

it must give place; that fact is this, to-day you can exchange American productions for gold values, and with that you can buy foreign productions, foreign manufactures, notably articles of clothing and necessary use, in Great Britain, of equal excellence, for from one-half to one-third less than in the United States. This is certainly a fact which can not lightly be set aside, but must be carefully weighed and taken for its true value, for we are not in search of error, but of truth; we wish to go wherever reason leads us. What does this fact import? Equal if not superior excellence of quality, abundance of production, and greater cheapness of supply, measured by a standard common to both countries. It imports a superiority in all the agencies of manufacturing, production, and of transportation, commerce, and exchange. It imports vast and powerful combinations of credit and finance, the creatures of government aid and public policy, well established and long pursued. It imports that government aid and public policy which established and maintained the East India Company, and which for hundreds of years has fostered trade and commerce. It does not import that these vast interests which have enabled England to rule the world have been built up by independence of the fiscal agencies of her government, but it does import a dependence for hundreds of years, which finds its expression in large measure in her present enormous public debt.

Let us examine this question of the foreign standard of value by an instance of fact: A farmer sells a hundred bushels of wheat, or pounds of butter, or bales of cotton. If there is a foreign demand the price will be fixed at the foreign standard for all that is sent abroad or that is supplied for this purpose. This foreign standard of value will be the result of the causes we have mentioned, peculiar to the economics of the foreign state, whether pauper labor, combination of credit, or skilled labor. The wheat, butter, and cotton bought for export and valued at the foreign standard, when turned into money is required by law to be invested in manufactured production at from 25 to 40 per cent. more than its price in the market; that is, the value of the money received for the wheat, butter, or cotton, is diminished by law just the amount that the duty requires him to pay in increased price for the articles he is required to buy. We will suppose this difference to be 25 per cent. That is, every dollar he receives for his wheat or butter or cotton is diminished just one-fourth; that is, he receives 75 cents for every dollar, and this by force of law. Now, this is the necessary effect of a duty, for as soon as the competition has made the home price the same or less than the foreign price the duty has no effect and no office to perform. What benefit then does the producer receive for this one-fourth of his wheat, butter, or cotton?

Why should the law require him to give one-fourth of his labor to the support of others?

It is said to promote the general welfare; to educate skilled workmen; to develop educated labor; to diversify production; to divide labor; to relieve overburdened industries. It is admitted that if it is necessary to this end that this producer shall be required to contribute the fourth of his labor for this purpose it would be wise that he should be made to bear all the burden of these great ends. But let us see if it is either a necessary or proper means to that end.

Why is it necessary for a whole people to be required to pay 25 per cent. more for any article of consumption than they can buy it for otherwise, in order to give a profit to those who make such articles, when the 25 per cent. thus paid by the whole community aggregates vastly more than the amount necessary to give the profit to the producer or manufacturer? Why would it not be better and wiser to pay the producer of the articles a bounty of whatever sum his business requires to equalize or make his profits superior to the foreign manufacturer or producer?

If the account shall show that the manufacturers can be supported and a large rate of profit can be given by an appropriation of one-fourth less than the amount now taxed for their benefit directly to them, then it can not be maintained that diversified production is really dependent on the prohibition of foreign imports or on high duties. This is certainly true in all cases where the protected interest with high duties supplies only a fourth or a half or two-thirds of the amount consumed in the country, for in these instances it is apparent on the very surface that all over and above the amount produced in the country, whether it is a half or a third or two-thirds, does not go to the manufacturer or producer, and is therefore unnecessarily paid so far as protection is concerned.

It is therefore evident that skilled labor and educated workmen and manufacturers and diversified production are not dependent on a tariff for protection; but if public aid is necessary to the support of these great interests this public aid can be given much more economically by a direct appropriation of a much smaller amount of money.

DEPENDENCE ON FISCAL EXPENSES OF GOVERNMENT.

The honorable Senator from Mississippi, with the great ability that always belongs to his efforts, commanded the attention and interest of the Senate while he grasped the whole of this great subject in the two propositions, that diversified production was not dependent in any wise for its full and proper development on the aid of Government or on public policies which create and foster these great agencies of business, to-day levying greater tribute on production than any and all other causes.

Second. That dependence in the fiscal agencies of the Government was destructive of the Government and the healthy exercise of its functions. Let us examine these propositions. If true, they determine this question entirely. However important diversified productions may be, if natural causes are adequate to produce it, then the aid of Government or of any public policy established by it is altogether unnecessary and besides injurious in the highest degree.

There can be no question that any dependence of the great interests of a country on the exercise of the powers of government creates an inducement and a motive for influencing and controlling and directing such powers and those who exercise them.

No doubt a powerful influence is thus created to influence the government of the country. But, Mr. President, how will you divorce the power of government from both a direct and an indirect influence over the great values of the country? It seems to me that it will not answer the demands of production at this day to affirm that its dependence on the proper exercise of the fiscal powers of a government is a fatal objection to the just and equal exercise of these powers in its behalf.

Shall the power which aggregates greater revenue than the government itself does from the franchise to tax all production and all locomotion given by the government to individuals be declared independent of all the powers of government? Is not all production absolutely dependent on this power? Does not their combination give them absolute control over the great body of the people? Are we quite sure that entire independence of control from the public powers best consists with the interests of the great body of producers of the country? Shall transportation, the perpetual right to tax locomotion and transportation, be left entirely beyond the reach of the powers of government?

As population increases and the magnitude of production is enlarged, will these great interests adjust themselves into harmonious relations with each other without any directing power?

Are there no forces which evolve themselves outside of law to aggregate power in the hands of a few and to subject the interests of the majority of the people to the control of a minority?

PRODUCTION AND DISTRIBUTION MUST BE FAIR AND EQUAL.

Mr. President, the day has come in which the question of production and its distribution, so as to supply subsistence and comfort to all the people, and the agencies both public and private, natural or artificial, by which this end can be effected properly must be used, and the necessity for this end will make itself felt.

It may well be considered whether there are not some rights of the people that are human rights—other than the mere right to be protected against violence or the wrongful deprivation of property which they do not possess; whether it is not a proper object of government to establish such policies as will secure to the people opportunity to engage in pursuits which will enable them to obtain subsistence and comfort and the healthy exercise of their faculties, and which will secure abundance and cheapness of the things necessary for a healthy, vigorous, and intelligent people, and reasonable remuneration for their labor.

Theories of Government which are confined to the proposition that the functions and limit of the powers of government must be the protection of the individual from unlawful violence and robbery, without exercising any influence toward securing to him a fair opportunity for the employment of his faculties and for their remuneration in the fruits of labor, may well be questioned when we see that as density of population and magnitude of production increase there are forces evolved which subject the great majority of the people to an absolute dependence on a very small minority for the necessaries of life, and that the amount of labor which is required to obtain the absolute necessaries of life increases precisely as population and production increase.

TARIFF SHOULD BE FOR REVENUE.

The tariff should be adjusted to the revenue standard. It should be, so far as consistent with revenue, taken off of the articles of necessity for the people; it should be distributed under the revenue standard between those articles which are of domestic manufacture and production, but it should never be more than sufficient to equalize the cost of production in this and other countries. It should never be continued to such a point as to become onerous and prevent a fair competition from foreign production.

EVILS OF PRESENT CONDITION.

Somewhere in our present system there is a great fault which needs the correcting hand of a wise statesmanship. Whether it is in our system of banking credits, our transportation, our methods of trade and exchange, or in our tariff, it should be the subject of careful thought. Our municipal, county, State, and national taxation has become an enormous burden, bearing very unequally on the great majority of the people. Prices measured by labor constantly increase in great disproportion to the remuneration of labor. In many parts of our country there is no diversity of employment; women and children are often in a state of great destitution for want of employment. An intelligent correspondent writes me as follows:

"The sixteen Southern States have bought for their consumption in the ninety-five years more than $1,500,000,000, being $12,000,000 for each Congressional district, amount of the domestic manufacture and mining products of Pennsylvania, New Jersey, New York, and the six New England States, appreciated in prices one-fourth of said amount over and above what they could have bought it for in the open markets of the world at prices 25 per cent. less than they paid these nine States. This money tribute amounted to $375,000,000 in the last fiscal year given these States, and a proportional amount in the Western agricultural States.

"The cry of competition with the pauper labor of Europe is not true. It is machinery *vs.* machinery. More than 80 per cent. of the labor entering into the production of cotton cloth, etc., is the work of machinery, less than 20 per cent. manual labor. The quotations of middling cotton are 11 cents. The cost of producing the best grades of cotton shirting which such middling cotton turns out is less than 2 cents per yard, 36 by 28 inches, 4 yards to the pound of cotton, which sells at 10 cents per yard, 40 cents. First middling cotton, 11 cents; cost of manufacture, 8 cents (cost of 4 yards), makes 19 cents. Now, view it in the Southern section. Dealing direct with Pennsylvania, New York, New Jersey, and New England States, manufacturers receiving 4 yards of cotton cloth for the same, at 10 cents the yard, 40 cents. In fact, he has sold the 1 pound of cotton at 11 cents, which the manufacturer has rendered into 4 yards of cloth for 8 cents, 19 cents, and profited 21 cents.

"These figures cover the facts of the transaction and are proven by the fact that he could go to the British manufacturer with his pound of middling cotton and buy sheeting, equal in quality, at 2½*d.*, or 5 cents per yard, for which he pays here 10 cents. These manufacturing States bought of the last crop, say, one and a half millions of bales of cotton from the Southern States and paid for the same the net proceeds of three-quarters of a million of bales of the same cotton in full satisfaction therefor. This has continued for ninety-five years."

Mr. President, these statements are from a merchant of many years' experience and of much and accurate information. Whether they are exact or not they serve to show the unequal operations of our revenue system. They also serve to show how production is constantly burdened with unnecessary cost, which to some extent increases price to the consumers, and that this increase to the agricultural producer carries with it no increasing remunerations to labor in other pursuits. Indeed I do not think it would not be difficult to demonstrate that it decreases the wages of labor and lessens the beneficent results of diversified productions to the people at large.

Nevertheless, Mr. President, I should not regret the payment of this vast sum of money by the sixteen States from which it has been taken—I shall not regret, but regard with pride and satisfaction the great prosperity and the immense capital of the Northern States, if the result had been or shall be to establish diversified productions in every county of the States from which it was taken. I would be willing that these States should contribute this vast sum, if its distribution was such as to create diversified production, the arts and manufactures, skilled labor among their own people, even *pari passu* with the manufacturing States.

Mr. President, I am aware that it will be replied that the system is equal, that there is no prohibition by law of their industries and has been none in any of these States, and they might have adopted such policies as would have developed these interests among them and relieved them of the inequality complained of.

I think this is true; but still as the fact is and as they have chosen to devote themselves to agriculture and its kindred pursuits, it is eminently just that even on this lower ground of the argument the revenue system should be so adjusted as to relieve them of all unnecessary cost and give them for the articles which they consume the benefits of competition on fair terms in the markets of the world.

But, Mr. President, the effect of a tariff, whether for revenue with protection or protection without revenue, is not in itself sufficient to encourage the development of industries or diversified production throughout the country, but the advantages of concentrated credit, of skilled labor, of machinery, of the better economies of business, appropriate its advantages and profits and concentrate manufacture in particular localities. Hence we have had manufacturing States. And the great contest which arose between Calhoun and McDuffie and Webster and Clay in the early days of the Republic may be regarded as arising out of this fact. Suppose the one thousand and five hundred millions of dollars extra price which is estimated to have been levied on the agriculturists of sixteen States, without reference to that imposed on the West and Northwest, had been applied directly to the encouragement of manufactures and diversified productions in the States by which it was paid, then no doubt much of the force of the argument against it would disappear.

It would be a curious subject to examine and consider what would have been

the effect of the appropriation of $1,500,000,000 during the past history of the Republic to the direct encouragement of manufacturing industries and to diversified agricultural production within the States which paid it.

THE TRUE PUBLIC POLICIES.

What wide-spread prosperity, what general contentment, what increased and diversified production? How contented and happy a people the vast and varied resources of these States would have developed by this time. I will not pursue this subject further at this time. It is evident that the public policies which produce diversified production are the established combinations of credit which result from a sound and equal and just system of currency and exchange, from a commerce free from unnecessary burdens and restrictions, from systems of transportation wisely regulated, from all agencies of exchange fostered and adjusted and protected by wise economies; from a fair and just competition, both foreign and domestic, from general education, and schools of art. A system of revenue, however raised, should be adjusted with reference to these conditions as the established commercial policy of the country and without interfering with them any further than might be necessary for the protection of its great interests against sudden and temporary causes.

The future necessities of this country, with its rapidly increasing population, will soon demand a conformity to the economic laws which control the questions of supply and demand. The necessities of the great body of the people, the necessary conditions of human life in a dense population will have to be supplied under a new state of things. The bounties of nature in a country where an unoccupied soil and untouched forests furnish subsistence to a people with but little or no labor will soon have been exhausted, and it will no longer be possible to supply their wants without a true adjustment of the economic conditions of the country, without a just equation in the exchanges of the fruits of labor, without increasing and cheapening production and increasing and cheapening distribution and the means and facilities of exchange. Whatever policies of state effectuate this end will be those which are necessary for the Government and will force themselves into observance. Certainly they will not be such as increase the cost of commodities and limit and check commerce and exchange.

A TARIFF FOR REVENUE BEARING EQUALLY ON ALL THE STATES.

In my votes, Mr. President, I regard the present question as one of adjustment and not of the adoption of a system. So long as it exists I shall endeavor, as others will, to obtain as large a share of the supposed advantages for the people of my own State as possible. Whenever it is in my power to aid in adopting a system which shall establish fair and just relations between the agricultural and mechanical and manufacturing labor of this country, which shall relieve commerce and exchange of unnecessary burdens, which shall cheapen the cost of subsistence to the people, which shall at the same time diversify their employments and protect manufactures, not by giving unreasonable profits to capital, not by increasing the cost of the manufactured article, but by protecting them from sudden and powerful foreign combinations by temporary means, and opening and widening the area of consumption and the markets of the world, I shall gladly do so. I believe such a system to be possible, a system of free trade and also of protection under wise policies of government, under a revenue tariff with its incidental and reasonable protection.

SPEECHES

OF

HON. JOSEPH WHEELER,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 18, *and Thursday, July* 19, 1888.

The House being in Committee of the Whole, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. WHEELER said:

Mr. CHAIRMAN: When this discussion commenced it was asserted that all American industries were to be destroyed. We have spent three months in this debate, most of which has been carried on by gentlemen on the other side of the House in opposition to this bill, and no one has yet shown that a single industry will be even harmed, much less destroyed.

Now, about the cotton-ties, the duty on which has been under discussion this morning. A tariff commission appointed by the Republican party, every member of which was a protectionist and the special champion of some protected interest, took some testimony on that subject, from which I quote.

Mr. English, in his testimony, says: "When the cotton is landed in Liverpool and sold, 6 per cent. is deducted for the tare, just as 10 per cent. is deducted for tare on sugar." Then the question was asked him: "The 6 per cent. that is deducted in Liverpool is the tare on the ties and bagging?" His answer was, "Yes, sir." Then he was asked this question: "So that in fact the cotton is sold in Liverpool by its net actual weight?" To which he answered, "Yes, sir."

Again, on page 306 of the report, I find that Mr. Ranlett testified in these words:

By Commissioner AMBLER:

Q. Is not the price of cotton in this country fixed by the price of cotton in Liverpool?

A. Of course.

Q. I am speaking of Liverpool; do they not strip the cotton, taking off ties and bagging, and weigh it?

A. American cotton is bought in America by agents of English houses in Liverpool. The Liverpool merchants have a knowledge of the way cotton is sold in this country, so that when they give an order for 1,000 bales they know it means with the bagging and ties around it (gross weight), and they calculate so much for the packing and pay so much less.

Q. So that in Liverpool they pay for the cotton they get, and although apparently they pay for the bagging and ties, yet in regulating the price here they allow for the bagging and ties?

A. Yes, sir; and the American producer loses it.

From the same report we learn that the pretense that the proposed increase of duty will not result to the advantage of the workingmen, but is purely and simply a bonus to the manufacturer.

I read from the testimony of Mr. Edgerly, on page 2261:

There are only ten mills in the United States which make cotton-ties, and they employ only a small proportion of the workers in iron. I call special attention to that fact. It has been stated that the necessity for increasing the tariff is that it will benefit an enormous number of people employed in the manufacture of these ties in this country. That is a fallacy. The entire consumption of the United States is never more than 30,000 tons, which would only occupy 300 men, making 1 ton a day 100 days.

This testimony shows that every cent paid for bagging and ties is a dead loss to the cotton-planter, and it seems to me that this loss should not be augmented by increasing the duties on ties, which the manufacturer will add to his price for an article of prime necessity to the planter.

[Here the hammer fell.]

Thursday, July 19, 1888.

Mr. WHEELER. I desire to occupy the committee but one moment for the purpose of correcting some erroneous impressions which I see have crept into this debate. It is now more than one hundred days since this bill was reported to the House by the distinguished chairman of the Committee on Ways and Means. It is more than three months since the debate was opened by the speech made on this floor by that distinguished gentleman. Since that time more than one thousand speeches have been made upon this bill, more than three-fourths of which have been by gentlemen who have opposed its passage. They have been very——

Mr. LEHLBACH. I desire to ask a parliamentary question. Am I not to get a vote upon my amendment now?

Mr. WHEELER. I have risen to oppose the amendment.

The CHAIRMAN. The gentleman has risen to oppose the amendment.

Mr. WHEELER. It will be beaten after I get through.

Mr. BUCHANAN. Do I understand the gentleman to say that this amendment will be beaten?

Mr. WHEELER. It will depend upon the vote, but I think it will be defeated.

Mr. BUCHANAN. It is in order to obviate the competition of Austrian prisons if you want to beat it.

Mr. WHEELER. The House will vote with great consideration and good judgment. It has been said that this bill is destructive of the iron interests, and I want to call attention to the fact that the reduction upon the metal schedule hardly affects in the slightest degree any industry in this country. Of the $18,000,000 reduction by the additions to the free-list, some sixteen millions are upon tin-plate; then there are three hundred thousand on needles; there are two hundred and forty thousand on iron-ties, which have almost ceased to be manufactured in this country. Then on quicksilver and copper ores and antimony and the balance of the metal schedule we have had in the past an importation which amounts to $267,000, upon which a tax is collected of near $36,000. I think I am correct in stating that no intelligent manufacturer or employé engaged in the iron industry has protested against or suggested that they objected to or were opposed to any of these clauses of that schedule which includes this $267,000. For the last twenty-five years every Secretary of the Treasury, every President, and every platform of every party has demanded a reduction in the tariff.

Now, in regard to the dutiable schedule. The largest reduction proposed to be made in the duty on any article, except wool, has been made on sugar, and we have heard no complaint from the sugar industry on that score; but if it does affect them they recognize that all the industries should in some manner contribute to this necessary reduction which must be made in our revenues. The largest reduction is upon wool, and the State of Texas and other Southern States produce much more raw wool in proportion to population than any other portion of our country. No protest has come from them, excepting those few protests which are sent here as political measures and for political purposes, and not as the expression of the opinions or feelings of the protestants regarding any economical business principles.

[Here the hammer fell.]
